Kindersley*),
Whicher—30.

Michael A. Measures,
Clerk of the Committee.

¹ Replaced Messrs. Cyr and Yanakis on October 10, 1968.

² Replaced Mr. Lind on October 15, 1968.

³ Replaced Mr. Borrie on October 17, 1968.

ORDERS OF REFERENCE

HOUSE OF COMMONS,
TUESDAY, October 8, 1968.

Resolved,—That the following Members do compose the Standing Committee on Agriculture:

Messrs.

Barrett,	Howard (<i>Okanagan-Boundary</i>),	Moore,
Beer,	Korchinski,	Muir (<i>Lisgar</i>),
Borrie,	Lambert (<i>Bellechasse</i>),	Peters,
Côté (<i>Richelieu</i>),	La Salle,	Pringle,
Cyr,	Lefebvre,	Smith (<i>Saint-Jean</i>),
Danforth,	Lessard (<i>Lac-Saint-Jean</i>),	Southam,
Douglas,	Lind,	Stewart (<i>Okanagan-Kootenay</i>),
Foster,	Major,	Thomson (<i>Battleford-Kindersley</i>),
Gauthier,	McKinley,	Whicher,
Gleave,		Yanakis—(30).
Horner,		

THURSDAY, October 10, 1968.

Ordered,—That the names of Messrs. Cobbe and Clermont be substituted for those of Messrs. Cyr and Yanakis on the Standing Committee on Agriculture.

TUESDAY, October 15, 1968.

Ordered,—That the name of Mr. Roy (*Laval*) be substituted for that of Mr. Stewart (*Okanagan-Kootenay*) on the Standing Committee on Agriculture.

Ordered,—That the name of Mr. Stewart (*Okanagan-Kootenay*) be substituted for that of Mr. Lind on the Standing Committee on Agriculture.

WEDNESDAY, October 16, 1968.

Ordered,—That, saving always the powers of the Committee of Supply in relation to the voting of public moneys, the items listed in the Revised Main Estimates for 1968-69, relating to Agriculture, the Canadian Dairy Commission, the Canadian Livestock Feed Board and the Farm Credit Corporation, be withdrawn from the Committee of Supply and referred to the Standing Committee on Agriculture.

THURSDAY, October 17, 1968.

Ordered,—That the name of Mr. Lind be substituted for that of Mr. Borrie on the Standing Committee on Agriculture.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

MINUTES OF PROCEEDINGS

THURSDAY, October 17, 1968.

(1)

The Standing Committee on Agriculture met this date at 9:40 a.m. for purposes of organization.

Members present: Messrs. Barrett, Beer, Borrie, Cobbe, Clermont, Côté (*Richelieu*), Danforth, Douglas, Foster, Gauthier, Gleave, Howard (*Okanagan Boundary*), Lambert (*Bellechasse*), LaSalle, Lefebvre, Lessard (*Lac-Saint-Jean*), Major, McKinley, Moore (*Wetaskiwin*), Muir (*Lisgar*), Pringle, Smith (*Saint-Jean*), Southam, Stewart (*Okanagan-Kootenay*), Thomson (*Battleford-Kindersley*), Whicher—(26).

Also present: Mr. Whelan, M.P.

The Committee Clerk attending and having called for 'nominations, Mr. Côté (*Richelieu*) moved, seconded by Mr. Borrie, that Mr. Beer be Chairman of the Committee.

Mr. Beer, having been elected as Chairman, took the Chair and thanked the Committee for the honour conferred upon him.

Mr. Barrett moved, seconded by Mr. Clermont, that Mr. Lessard (*Lac-Saint-Jean*) be Vice-Chairman of the Committee.

On motion of Mr. Danforth, seconded by Mr. Lefebvre,
Resolved,—That nominations be closed.

Mr. Lessard, having been declared Vice-Chairman, thanked the Committee for the honour conferred upon him.

On motion of Mr. Muir (*Lisgar*), seconded by Mr. Lefebvre,
Resolved,—That 750 copies in English and 350 copies in French of the Committee's Minutes of Proceedings and Evidence be printed.

On motion of Mr. Clermont, seconded by Mr. Lefebvre,
Resolved,—That the Sub-Committee on Agenda and Procedure be comprised of the Chairman, the Vice-Chairman and four other members of this Committee appointed by the Chairman after consultations with the Whips of the different parties.

On motion of Mr. Clermont, seconded by Mr. Côté (*Richelieu*),
Resolved,—That the items listed in the Revised Estimates for the fiscal year ending March 31, 1969, relating to Agriculture, the Canadian Dairy Commission, the Canadian Livestock Feed Board, and the Farm Credit Corporation, they having been referred to the Committee, be printed as an appendix to Issue No. 1 of the Committee's Proceedings. (*See appendix A*).

On a suggestion of Mr. Lefebvre, it was agreed that the following subjects be referred to the Sub-Committee on Agenda and Procedure:

- (a) tour of eastern Canada by the Committee;
- (b) the speed with which French Proceedings are produced.

During a discussion of matters of interest to Committee members, it was agreed that the Minister of Agriculture be invited to make a statement at the Committee's next meeting.

Further, the Chairman advised that suggestions made in the discussion would be considered by the Sub-Committee on Agenda and Procedure.

At 10.30 a.m., the Committee adjourned to the call of the Chair.

Michael A. Measures,
Clerk of the Committee.

HOUSE OF COMMONS

First Session—Twenty-eighth Parliament

1968

STANDING COMMITTEE

ON

AGRICULTURE

Chairman: Mr. BRUCE S. BEER

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 2

TUESDAY, OCTOBER 29, 1968

Revised Main Estimates (1968-69) relating to Agriculture

WITNESSES:

The Hon. H. A. Olson, Minister of Agriculture; *and from the Department of Agriculture:* Mr. S. B. Williams, Deputy Minister, and Dr. J. C. Woodward, Assistant Deputy Minister (Research).

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE

ON
AGRICULTURE

Chairman: Mr. Bruce S. Beer

Vice-Chairman: Mr. Marcel Lessard

Messrs.

Barrett,
Clermont,
Cobbe,
Côté (*Richelieu*),
Danforth,
Douglas,
Foster,
Gauthier,
Gleave,

Whicher,
¹Yanakis—(30)

Michael A. Measures,
Clerk of the Committee.

¹ Replaced Mr. Major on October 23, 1968.

ORDER OF REFERENCE

WEDNESDAY, October 23, 1968.

Ordered,—That the name of Mr. Yanakis be substituted for that of Mr. Major on the Standing Committee on Agriculture.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

MINUTES OF PROCEEDINGS

TUESDAY, October 29, 1968.

(2)

The Standing Committee on Agriculture met at 9:40 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Barrett, Beer, Clermont, Côté (*Richelieu*), Danforth, Douglas, Foster, Gauthier, Gleave, Horner, Howard (*Okanagan Boundary*), Korchinski, La Salle, Lefebvre, Lessard (*Lac-Saint-Jean*), Lind, McKinley, Moore (*Wetaskiwin*), Muir, (*Lisgar*), Peters, Pringle, Roy (*Laval*), Southam, Stewart (*Okanagan-Kootenay*), Thomson (*Battleford-Kindersley*) —(25).

In attendance: The Honourable H. A. Olson, Minister of Agriculture; and from the Department of Agriculture: Mr. S. B. Williams, Deputy Minister; Dr. J. C. Woodward, Assistant Deputy Minister (Research); Mr. W. E. Jarvis, Assistant Deputy Minister (Production and Marketing); Dr. R. P. Poirier, Assistant Deputy Minister (Economics); Mr. C. B. Grier, Director, Financial and Administration Branch.

The Chairman reported that members of the Sub-Committee on Agenda and Procedure, other than himself and the Vice-Chairman, had been appointed as follows: Messrs. Danforth, Gauthier, Gleave, Pringle.

The Chairman welcomed the Minister and called item 1 of the 1968-69 Revised Estimates relating to Agriculture, namely

Departmental Administration, etc.\$8,520,375.

The Minister introduced those others in attendance and gave an opening statement.

The Minister was questioned, assisted by Mr. Williams and Dr. Woodward.

From time to time during the questioning, matters of interest to the members were discussed.

It was agreed that the Committee would adjourn at 11:30 a.m. this day.

The questioning continued and having been completed, the Chairman thanked the Minister for his attendance.

It was agreed that item 1 would stand.

Copies of an organization chart of the Department of Agriculture were distributed to the members.

At 11:40 a.m., the Committee adjourned to the call of the Chair.

Michael A. Measures,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Tuesday, October 29, 1968.

The Chairman: Gentlemen, if we can come to order we will start the meeting.

Before we do I would like to announce the names of members of the subcommittee on Agenda and Procedure. In appointing these people we have tried to be as broadly representative as possible. Mr. Pringle from British Columbia will represent the Liberal Party on the Steering Committee.

We are particularly happy to have the Minister with us this morning. Mr. Olson, we are grateful to you for coming and also for bringing with you a number of your departmental officials.

The first item of business, of course, is Item 1, the Estimates of the Department of Agriculture.

On Item 1.

1 Departmental Administration including the Canadian Agricultural Services Co-ordinating Committee, contributions to the Commonwealth Agricultural Bureaux, and a contribution to the Agricultural Economics Research Council in an amount equal to one-half the contributions to the Council from other sources during the fiscal year but not exceeding \$50,000 \$8,520,375

The Chairman: We would be honoured, sir, if you would make an opening statement to the Committee, which would be a guidance for us as we continue our deliberations in the weeks to come.

• 0940

Hon. H. A. Olson (Minister of Agriculture): Thank you very much, Mr. Chairman. I want to say at the outset that I appreciate having received an invitation from you on behalf of the Committee to appear before the Standing Committee on Agriculture this morning to begin the examination of the 1968-69 estimates.

With your permission, Mr. Chairman, I will introduce the officials from the Department who are here with us this morning, particu-

larly for the benefit of the new members of the House of Commons.

On my immediate right is Mr. S. B. Williams, the Deputy Minister of Agriculture. Next is Mr. C. B. Grier, the Director, Financial and Administration Branch. Next to him is Dr. J. C. Woodward, Assistant Deputy Minister (Research) and next to him is Dr. R. P. Poirier, Assistant Deputy Minister (Economics) and then Mr. W. E. Jarvis, Assistant Deputy Minister (Production and Marketing).

I would like to make a statement. It will probably take me 10 to 15 minutes. After that I will be prepared to try to answer any questions. May I also say at the outset that the gentlemen who are with me today are the senior officials in the Department of Agriculture. However, from time to time, as we go through the estimates, we are prepared to ask other officials to meet with the Committee on specific items that may come up for examination as we go through the votes of the Department.

I would also say that I would like to be here as much of the time as is possible. However, I am afraid I cannot give an undertaking to be here for every meeting. I have other duties, such as attending Cabinet meetings, which require my attention, too.

The 1968-69 Main Estimates for the Department of Agriculture proper, excluding the Canadian Dairy Commission, the Farm Credit Corporation and the Canadian Livestock Feed Board, total \$225.8 million compared with the corresponding Main Estimates figure of \$221.1 million for 1967-68 as presented in the Blue Book, an apparent increase of some \$34.7 million. However, to improve the basis of comparison, I point out that Supplementary Estimates an contingency allocations in 1967-68 brought the total for that year to approximately \$283.6 million. Government reorganization which in the current fiscal year transferred PFRA, Retail Inspection Services and certain elements of administrative support out of the Department of Agriculture, is reflected in a reduction of approximately \$25.4

million from the base Estimates for 1967-68. The Canadian Dairy Commission and the Farm Credit Corporation, now shown separately, accounted for \$4.1 million in 1967-68 and should be deducted. Therefore, the comparative total for 1967-68 is \$254.1 million and the current year increase approximately \$1.7 million.

Increased provision is made in the current year for the Agricultural Stabilisation program and the expenditures for crop insurance premiums will continue to increase as more provincial schemes come into operation under this legislation and more farmers obtain basic protection from the risk of crop and income loss. Reduction has taken place mainly in the area of payments to provinces under the shared-cost programs of emergency assistance to farmers who suffered income losses due to adverse weather conditions. Hog premiums are reduced, cheese premiums eliminated and capital programs in the Research Branch and the Board of Grain Commissioners have received lesser allocations.

• 0945

The Department of Agriculture has responsibilities in all aspects of the industry, as evidenced by some thirty statutes administered by the Department. Under the authority of these acts, the Department conducts research, grades and inspects farm products, prevents and controls diseases and pests of crops and livestock, conserves soil and water resources and carries on a great many other activities to help solve production and marketing problems for the farmer. To perform these numerous functions, the Department employs approximately 9,000 people, of whom about 2,000 are professionally trained in agriculture or related sciences. It operates some 200 separate establishments with a total of 1.5 million acres of land and more than 2,500 laboratory, farm and office buildings. Late in 1966-67, the several Branches and Divisions of the Department's Administrative Headquarters at Ottawa were brought together, with the opening of the new Sir John Carling Building at the Central Experimental Farm.

Objectives

The Department continues to address itself to economic, technical and social improvement in the farm sector, having designed programs which aim to increase the level and stability of farm income, and to provide

farmers with the opportunity for returns comparable to other sectors of the economy for comparable investment of capital and effort. In the field of agricultural production it fosters improvement in quality of farm products and helps the industry as a whole (suppliers, producers, processors and distributors) to improve quality, quantity and efficiency of food production. Increasing efforts are made to ensure maintenance of present markets and to stimulate the development of new markets both at home and abroad for the products of Canadian Agriculture. In a world of continual change, the Department strives to facilitate the adjustments which must be made by farmers in improving the structure of agriculture, in making technological advances, safeguarding the productivity of agricultural resources and ensuring the optimum use of land, water and manpower. The achievement of these objectives depends upon the leadership of the federal government to stimulate effective planning at all levels of the industry, maintain a continuous review of Canadian farm policies and develop the agricultural potential of Canada as an integral part of the national economy.

Programs

The Department's operations are framed in several major program areas: Administration, Research, Production and Marketing, Health of Animals, and the Board of Grain Commissioners, in addition to the activities on the special agencies: and they are the Farm Credit Corporation, the Canadian Livestock Feed Board and the Canadian Dairy Commission, to which it is assumed this Committee will devote attention in the course of the Main Estimates discussions.

• 0950

In the Administration Program, the Economics Branch research and analytical activities make a significant contribution to the formulation of policy toward the achievement of greater efficiency in farm management, production and marketing. Without indulging in a detailed analysis of the Economics Branch program, I would draw particular attention to the development of a *National Farm Management Service* which I believe will bring substantial benefits to agriculture. Farm management involves the use of economic and business principles in determining the combination of land, labour and capital inputs on the individual farm

which will yield maximum income. It is therefore a key-factor in achieving the government's declared objective of raising the income of farmers to compare with that of urban workers. Technological research has produced a vast array of alternative production techniques the economic feasibility of which depends on soil type and fertility, farm size, management skills and availability of markets at remunerative prices. Farm management research assesses these factors through business studies to determine the most profitable practices and organization for farms of certain types or recommend alternative combinations of enterprises and farm practices. In the development of a National Farm Management Service, which is expected to expend some \$250,000 in the current fiscal year and to commence actual operations in 1969 or early 1970, the main emphasis has been on the implementation of a modern yet simplified record keeping and analysis system through the use of the computer. Such a system will not only permit farmers to keep more accurate records for such purposes as income tax, unemployment insurance, workmen's compensation and pension plans but, more important it will encourage a more sophisticated approach to farm business management, show profitability of enterprises within a farm business and identify, diagnose and solve some management problems for individual farmers.

I have spoken of the government's purpose in making a comprehensive assessment of agriculture in Canada with particular reference to farm income and productivity and the development of long range goals and policies for the industry. To this end, an *Economic Task Force*, established late in 1967 under the Chairmanship of Dr. David L. MacFarlane, is making excellent progress with its work under the following terms of reference:

1. The Task force will make a comprehensive assessment of Canadian agriculture in terms of its contribution toward the achievement of national goals. Particular recognition will be given to the income and welfare of farmers. In the above work, concern will be with the productivity of the agricultural industry in the context of the adjustments to new technology and maintaining the industry in a strong competitive position in domestic and international markets.

2. It will study and make recommendations concerning agricultural policies

required to achieve long range national and agricultural goals, taking account of the interests of farmers and consumers.

3. To accomplish the above objectives, the Task Force will use existing research results and conduct a series of other research projects.

In addition to the co-ordination and independent research of the five Task Force Members, the Force has some 20 research projects under contract with the consulting organizations and institutions and has met for consultations with the Ministers of Agriculture for all provinces, the Canadian Federation of Agriculture, National Farmers Union, Canadian Agricultural Economics Society, the Union Catholique des Cultivateurs and many other farm and industry agencies and representatives. The preliminary report of the Task Force, to be presented late in 1968 will be the basis of the documentation for a *National Conference on Agriculture* which we hope will be convened in the spring of 1969, perhaps in March; but the exact dates has not been set down as yet. This conference, although convened and directed under the aegis of the Federal Department, will be held in full collaboration with the Provincial Ministers of Agriculture and with participation by national organizations and other representative associations to whom the formation of long range agricultural policy is of vital interest. It is hoped that this meeting, together with the final report of the Task Force, will contribute to establish agricultural goals and directions which over a period of years will serve to integrate agriculture as an equal partner with other important sectors of the Canadian economy and which will serve as a framework within which governments at all levels, agricultural organizations, and all other segments of the agricultural community may develop policies and programs.

• 0955

Experts generally agree that one of the greatest potential problems facing mankind to-day is the world shortage of food and, as a major food source, agriculture must bear most of the burden of increasing food production. Canada is a food surplus country and is one of the world's major suppliers of the food-deficient areas. Canadian products such as wheat, potatoes, dairy products, dairy cattle, swine, poultry, beef and pork products have gained world recognition. The Canadian

economy leans heavily on the export of these commodities, and quality must not only be maintained but constantly improved if this leadership is to continue. These goals can be met on-a continuing basis if the industry is supported by an energetic and responsible research program, but the rising unit cost of essential inputs is also a major limiting factor.

Since 1961, research operating expenses have risen some 36%. Similarly, the combination of technical inputs and unit cost increase in scientific equipment and laboratory buildings has forced capital expenditures upward in recent years.

The objectives of the Production and Marketing program are the provision of quality controls in major items purchased by farmers, information and assistance on production, inspection and/or grading of agricultural products, protection against the dissemination of plant diseases, information and assistance on the marketing of agricultural products and forms of assistance and protection against crop failure.

A significant part of the Production and Marketing Program is carried out under the Agricultural Stabilization Act which operates to stabilize the prices of agricultural products to assist the agriculture industry in realizing fair returns for labour and management and investment. Funds provided in the 1968-69 Estimates for this purpose total \$144.5 million as compared with \$139.7 million in 1967-68 including Supplementary Estimates. Of that total—that is of \$144.5—\$134.8 million is allocated to the Canadian Dairy Commission for the purpose of stabilizing the price of dairy products, in particular butter and manufactured milk.

Also in the area of the farm income maintenance is protection for the farmer against crop loss risks. This protection is provided under the Crop Insurance and the Prairie Farm Assistance Acts. An amount of \$4.7 million is included in the Estimates to cover the contributions by Canada to federal-provincial crop insurance schemes in the provinces of Alberta, Saskatchewan, Manitoba, Ontario, British Columbia and Prince Edward Island. In addition, under P.F.A.A. direct payments are made to farmers operating farms in areas where average wheat yields drop below specified levels. In the 28-year period ending July 31, 1967, farmers were paid a total of \$361 million or an average of some \$13 million per year over the

period. In the same period farmers, through a one per cent levy on grain sales, contributed to the cost of the program which is operated through the Prairie Farm Emergency Fund, a total of approximately \$186 million, or an average of \$6.6 million per year. Net costs per year for the 28-year period have therefore been \$6.4 million. It is expected that a heavy demand, currently estimated at something around \$22 million, will be placed on this Fund this year resulting from the very unfavourable prairie crop harvesting conditions.

We shall be discussing the Estimates of the Board of Grain Commissioners and the Canadian Government Elevators as they pertain to inspection, weighing, handling and storage of grain. In this regard, I am pleased to advise that construction of a new one-million bushel annex to the Prince Rupert elevator has been completed, providing facilities by which the flow of grain through this port can be handled with greater speed and efficiency.

• 1000

In the field of grain policy, members are no doubt aware of the Prime Minister's recent announcement of the Government's action toward the establishment of a National Grains Council. Very productive discussions on terms of reference and other related matters were held in Winnipeg on October 16 and I place strong confidence in the proposed Council as an agency which can improve co-ordination in the developing and operating programs, to promote research in all aspects of the grain and livestock industries, to establish effective liaison between industry and government, and to assist in the promotion of exports. These and other ways will bring into focus the consensus of the complex industry as a whole, and we hope it will ensure the best co-ordinated effort not only to improve Canada's share of world markets but also to explore and develop all avenues of effective utilization of our national grain supply.

Gentlemen, that completes some of the details that I wanted to make in the opening statement. I want to say also before we turn the meeting back to you, for questions, Mr. Chairman, that there are no doubt a number of other immediate problems facing Canadian agriculture of which we are all aware. We know that we are now in the stage of bringing to fruition some of the negotiations that

went on several months ago in our international relations with our neighbours. This has caused us much concern over the years with respect to marketing agricultural products, but we hope that we have made some progress recently in this area, and while it is certainly not perfect at the moment I think we should take advantage of the progress we have made and try to move on to a greater co-ordination of marketing the total agricultural supply within the Western world. Thank you, Mr. Chairman.

The Chairman: Thank you, Mr. Minister. We are grateful to you for coming to our meeting this morning and for the very comprehensive statement you have given to the Committee. In spite of the fact that it is quite comprehensive, I am sure there will be a number of questions, and perhaps there will be more questions because it has been comprehensive. We also appreciate very much your willingness to attend our meetings when time permits, and may I say that I am sure you will be more than welcome at any time and all the time if that is convenient.

The Minister has graciously consented to be available this morning for questioning. I have three gentlemen who have indicated that they wish to have their names put down. If you will please indicate to me that you wish to speak—and not all at once—I shall try to recognize you in order.

I recognize Mr. Danforth from Kent-Essex.

Mr. Danforth: Mr. Chairman, this is the first meeting of the Standing Committee on Agriculture, other than the organization meeting, of a new Parliament and we have just heard the statement of the Minister of Agriculture who outlined, of necessity rather briefly, the scope of the Department over which he is now the Minister, its aims and objects for the next year, and an indication of the expenditures required to administer that Department.

I hope you will permit me, Mr. Chairman, to make just a brief statement at this time on behalf of the party I have the honour to represent, because of the fact that agriculture does seem to be facing a stage in its evolution that is somewhat drastic financially. Many farmers are finding the trials of making a living under these circumstances very difficult indeed.

• 1005

I want to make my remarks more or less of a general nature to some degree but very specific in others. Now, in this crucial time in agriculture, I think the Standing Committee on Agriculture in its studies, in its deliberations and its recommendations to government, can play a most important role as representing the feelings, the suggestions and the problems of agriculture to government.

I must say that we in the Conservative Party are very pleased indeed with the total composition of the membership of the Committee because we are of the considered opinion that every man here is conscious of his obligations not only to the farming community he represents, but to the industry on a national basis.

I should like, if I may, to make personal remarks in regard to the Chairman and the Vice-Chairman. The Chairman I have been privileged to know for a great many years, and I have the greatest admiration and respect not only for his direct knowledge in all fields of agriculture, but for his personal interest in the problems of agriculture and his personal desire to do something about it.

The same, I believe, holds true for the Vice-Chairman, so I say to this meeting, Mr. Chairman, let us make a determined effort to see if we can keep as far away from partisan considerations as possible; that whenever any member feels that there are, or could be, transgressions in this particular field, it be referred to the steering committee so that these matters might be settled outside the committee room itself.

I hope, through the Minister, Mr. Chairman, that permission will be given to the distinguished representatives of the Department of Agriculture to speak freely and openly without curtailment in any way, for it is only through this means that we will be able to obtain the necessary information on which to base our conclusions.

I hope that the Minister will find it possible to make available many more from the Department of Agriculture than the committees have seen in the past because I think it serves a most useful purpose, not just to question these learned gentlemen, but to enable us, as Committee members, to know these gentlemen personally, to know the fields over which they have jurisdiction, so that we can obtain more readily the essential information

so far as our constituents are concerned, and work in closer harmony with them.

Now, the first suggestion I would like to make following the Minister's speech this morning is for the direct benefit of each of the Committee members. I am going to request, if it is at all possible, that each Committee member be provided—through you, Mr. Chairman—by the Government, with a graph setting out the construction of the Department of Agriculture, with the names of the men who are directly responsible for each of the departments. Although the Minister did in some degree in his opening remarks give an indication of the scope of the Department, its jurisdiction and the numbers of experimental stations, laboratory facilities and so on, I think it would be much clearer to us, as members if we did have this in a short concise form or in graphic form, whichever the Department could facilitate for our direct benefit.

• 1010

We in the Conservative Party, Mr. Chairman, in the consideration of these estimates, hope that we will be given the greatest leeway, not only to scrutinize the expenditures of the Department, but to have some indication from the government over the changes proposed in the set-up of the Department, both from an administrative standpoint and from a practical standpoint because every member here is aware that there have been, during the last two or three years, changes in responsibility and the shifting of various segments of the Agriculture Department to other departments of government.

I think it is only fitting, as we do represent the agricultural industry, that we be given the greatest detail about the proposed shifts and the reasons behind them in order that we might be satisfied that these are for the best interests of agriculture. We should like an indication of the government's policy in more detail and an opportunity to examine it to a great depth in what we consider specific fields that are very crucial at the present time.

We should like to go into the matter of research. The Minister has indicated that there are going to be some curtailments in capital expenditure on research. We should like to question the Minister on this in detail to satisfy ourselves that this is going to benefit the industry and discover what alternates the government might propose in this field.

Naturally we are most concerned about the marketing field because this is, of course, the lifeblood of the industry—the development of the markets, because if we cannot hold at least 30 per cent of the world market for our agriculture production, so far as our country is concerned we are in trouble. We all realize that.

So, Mr. Minister, I hope that through the Chairman I have indicated to you what we hope to accomplish in the sittings of this Committee and I assure you, Mr. Chairman, that we will, as a party, endeavour to keep our representation on the Committee at full strength because we do realize how important it is to have a quorum, especially when we are inviting from time to time members of the Department to take part in our deliberations.

We hope to make our questions direct and purposeful and we hope, working together with the other members of the Committee, that in this Parliament this Standing Committee on Agriculture will undertake its full share of responsibility on behalf of the agricultural industry.

The Chairman: Thank you, Mr. Danforth. I shall read the list of speakers in case I may have missed someone. I now have Mr. Muir, Mr. Horner, Mr. Douglas, Mr. Howard, Mr. Gleave, Mr. Clermont, Mr. Gauthier, Mr. Moore and Mr. Roy.

May I say that we have the Minister here of whom we may ask questions, and in order to provide him with an opportunity of answering them may I ask you to make your opening statements as brief and to the point as possible terminating, if possible, with a question so that we may be able to avail ourselves of the Minister's understanding of his Department to explain its workings to us. Now I recognize Mr. Muir (Lisgar).

• 1015

Mr. Muir (Lisgar): Mr. Chairman, before I start I should say that it is going to be very short, but I should like to join the member for Kent-Essex (Mr. Danforth) in telling the Minister that we are very pleased with the Chairman that we have. We think he is a man who will be fair and will handle the problems of the Committee in the way they should be handled. I should also like to welcome as our Vice-Chairman, Mr. Lessard.

Having said that, the Minister in his opening remarks touched on various problems with which I think the Committee will wish to deal over the next few weeks. I am going to keep to one question today. I notice the Minister placed a great deal of stress on the establishment of a farm business service and that a fairly large sum of money has been allocated for that purpose this year to initiate the program.

Now, the Minister will probably remember—I think it was back in 1957—that the University of Manitoba initiated, I believe, what was probably one of the first farm business programs in Canada—I may be corrected on that—and since that time several other farm management groups have been established in Manitoba.

I should like to ask the Minister how, under the federal farm management scheme, they intend to reach the farmer initially? Will it be done through regional offices, are they using this year to recruit the staff and how do they intend to set up a direct liaison with the farming community?

The Chairman: I think we should provide an opportunity for the Minister to comment after each speaker and then we will go on to the next question. Mr. Minister do you have a comment to make?

Mr. Olson: Well, I suppose I should respond to Mr. Danforth's question about making available organizational charts. We are prepared to do that. Obviously those that were printed some time ago are slightly out of date but we are prepared to bring them up to date. We have sent out for a supply of some that we already have and we will bring them up, but I am informed that these do not include the specific names of the personnel, but we also have that and you will get them.

We are looking at the other question concerning a chart or graph showing in graphic form the whole structure of the Department. I think it would not be too difficult to set this out.

Replying to Mr. Muir's question respecting the farm management service, I should inform him that we hope it will be integrated with the pilot projects—if you want to call them that—that have been started in Manitoba and in other provinces some time ago, but are now being developed under joint federal-provincial auspices and university as well. We want to be sure of the co-ordination.

The other part of the question was, how do we reach the farmers? We hope this can be done through the efforts of the provincial agricultural services because, as you well know, they have some men in the field. This would be part of their responsibility, although all these details are not worked out yet. As I mentioned there are \$250,000 in the estimates for this year to work out a comprehensive program that we hope will be operational, as I said, by late 1969 or 1970. However, a great deal of work has to go into this so that the mechanics of it do in fact provide the service we hope it will.

Mr. Muir (Lisgar): This is a short supplementary. Is it the purpose then to work through the provincial departments of agriculture or through the universities?

• 1020

Mr. Olson: Both.

Mr. Muir (Lisgar): Both.

Mr. Olson: But there is—I am not sure if you could call it extension service; it is not quite that but it is the direct contact...

Mr. Muir (Lisgar): It has to do with extension service.

Mr. Olson: Yes, the direct contact with the farmers to provide us with the information that we would need, to go into the various individual farm records and accounts if you like, would, we hope, be a service that the province could provide to our computer system. I think I am right in saying we will have the hardware, but the gathering of information and passing it back would be the responsibility of the provinces.

Mr. Muir (Lisgar): In other words you would not set up regional offices?

Mr. Williams: Well, maybe regional computer offices.

Mr. Muir (Lisgar): Regional computer offices.

Mr. Williams: Excuse me, sir, if I might interrupt. This point is not completely settled yet, but I think it is reasonable to assume there probably will be regional offices of some type. These may involve suboffices of the computer installation and pre-processing of certain documents that would be handled at a central data bank.

Mr. Muir (Lisgar): Thank you Mr. Chairman.

The Chairman: Gentlemen, may I remind you to speak into the microphone as much as possible when addressing your questions to the Minister. I now recognize Mr. Horner of Crowfoot.

Mr. Horner: I too, Mr. Chairman, would like to compliment you as the chosen chairman of this Committee. I know that you will be fair, and at times perhaps we will test you very fully but I know that you will do a very good job and I have no doubt and no hesitation in saying that I congratulate you on your being chosen Chairman.

I say to the Minister and to the Committee that my first disappointment is the reduction of members on this Committee down to 30. There used to be, not too many years ago, 60 members on this Committee, then membership was reduced to 45, now it is reduced to 30. We in the Conservative Party have, I think been shortchanged even out of that 30 down to 8. We should have got 9. We have had a difficult time in trying to reduce our members interested in agriculture down to 8 members, so throughout the study by the Committee do not be surprised if there are changes from time to time. We have to work in all members who are very interested in agriculture in their districts and areas, and all across Canada. That is the first point I attempt to make that this arbitrary figure of 30 was not necessarily a good one. It should have remained at least 45 or 40.

My second point is that I think it is the duty of the Committee to examine, if necessary to criticize, to spur on the Department to greater service, to greater work and greater concern for the people engaged in the agriculture industry. I say that not only for my party, the Conservative Party, or myself, but for every member here. I say to Mr. Williams, Mr. Grier, Dr. Woodward, Dr. Poirier and Mr. Jarvis, if at times we appear to be critical we are doing a job of examining your work and we hope in the net return you work a little harder and take a little greater concern for the people you are serving. We are not in any way engaged in any personal battles or anything like that at least from my point of view. However, I do think this is the prime purpose of examining the estimates of the Agriculture Department; it is not to merely check them over and say, "Well, there has not been a dollar misspent and the accounting

is fairly good". No, that is not the purpose as I see the Agriculture Committee. It is to examine, to criticize and to spur you on to greater service. I make that opening remark and then immediately point out that in the expenditures, for example, of the Health of Animals Branch there has yet to be devised a policy for the importation of Charolais cattle; who gets the permits, how they are awarded and so on. It has been turned into a millionaires racket and certainly in this Committee, Mr. Chairman, I think some time before we are through the estimates, we want the people before us who are in charge of granting these permits, of regulating the importation, and who brings cattle over; so we can thoroughly examine the whole policy.

While last year a policy of the three year waiting period for these cattle to remain in Canada was implemented it is a well-known fact that practically all the cattle will go or have already gone, to the United States. It is now very difficult to buy semen from some of the great Canadian bulls that were brought over from France. They are now in the United States. Semen now is very difficult to buy from these bulls which should have never been lost to Canada. While mistakes have been made in the past I believe it is not too late to halt this continual drain with a policy which was a good one to start with but which I believe we did not take full advantage of in the agricultural industry.

• 1025

Second, while I am speaking about cattle, the beef grading system is under a thorough examination. I would like to see, when we are into that particular item of the estimates, this Committee give serious study to the whole question of grading beef cattle, even, if necessary, touring the slaughter plant over at Hull, with government graders, to see how cattle are graded. There is a great deal of concern all across Canada about the grading system, and whether or not the packers are given the edge, or the farmers are given the edge, or just who is getting the benefit of it, and whether or not a fairer system could not be devised.

I can only say that I have deep regret that the PFRA was taken out of the Agriculture Department Mr. Minister. I know that perhaps you share that regret with me but cannot necessarily say so. I cannot let that pass. You mentioned it in your remarks, and I cannot let it pass. It is with deep regret that I

see it is gone. I certainly hope that in its passing from the Agriculture Department to the Department of Forestry and Rural Development, PFRA will continue to do an effective job of conservation of land and water on the Prairies. Certainly we will examine that in another committee.

The Task Force was set up over a year ago. I was interested in the Minister's remarks when he said it is going to report later this year. I think at some time during the study of the estimates we should have the Task Force before us, if possible, to fully examine their ideas.

Now the Minister and some of the Committee members might wonder about that remark. The Task Force, as I remember it, consists of basically university professors, and forgive me for saying this gentlemen, no real grass-roots farmers in the whole group. I have nothing against professors in any way, shape, or form, but I do have a great deal of respect for the practicality of a given policy and I believe that in the Agriculture Department this has to be kept in mind: whether or not the policy is practical and whether or not it will be used. As I say gentlemen, too many policies, too many programs, have been devised, too many research ideas have gone to waste in the past because they have not been sold to the farmers from a practical point of view. I know that many men in the Department must realize this too. They must say, "Well, why was not this good idea picked up?" Perhaps because it was not too applicable in the way it was approached from a practical point of view.

I might add that because of the Economic Council of Canada's report and the dismal picture they painted for agriculture it is also the Committee's duty to thoroughly examine the research aspect of grains. I do not believe, for example, that there has been enough study of the various strains of triticale. A couple of strains, or several strains were tried and they were found, a year ago, not to be too productive, not to be much better than wheat, or not to be much better than rye. Now this year more study is being done and an interesting strain is being developed which may be a heavy yielder of feed grain. But certainly the Economic Council of Canada pointed out very vividly that Canada has not kept pace with a lot of other countries. If we do our job in this Committee diligently we will have to examine the whole research aspect very closely.

The Minister mentioned the National Grains Council. My first question to him is: who is going to share the cost of this National Grains Council? Is it going to be the Eastern feed buyer, or the Western grain grower, or is it going to be the Department of Agriculture, or some other department in the government? While he held up great hopes for it, it is to me, another board that has to prove itself. From the preliminary evidence which I received from the studies done in Winnipeg, they did not know just where they were going or what they were going to do. They did not know how big a secretariat they were going to need, but they were going to hire people, and they were going to take taxpayers' dollars.

• 1030

I have firmly convinced myself that the taxpayers are aware of their dollars, and they want dollar for dollar service. So this is another board that is going to have to be thoroughly examined by this Committee, maybe at a future date after it is set up—but it will have to be examined very, very thoroughly to see whether or not it has a purpose; and whether or not its purpose is solely to bring about an understanding or an agreement between the Western farmer and the Canadian Wheat Board, whose duty is to sell their grain at the highest possible price, and the Canadian Livestock Feed Board, whose duty is to buy that grain at the lowest possible price. Is it the National Grains Council's duty to bring about an agreement between these two groups? I do not know, but certainly we will have to examine it.

I am going to end with the Canadian Dairy Commission. The Canadian Dairy Commission is another commission which has been set up and which has remodelled the whole dairy industry to quite a large extent. I can only say that I have some doubt about whether or not they were really concerned with the dairy farmer when they attempted to reduce the subsidy to the small farmer.

They attempted to bring about a reduction in the production of butter, and this year we are told we are, perhaps, going to have to import more butter again in the spring. To me there is no need for Canada to import butter; no need whatsoever. It may be that a diversion payment on milk from the cheese factories to the butter plants will have to be made, but there is no real need for Canada to import butter. If it is necessary for us to do

so then I place the blame on the Canadian Dairy Commission for failing to regulate that industry in such a way that enough cream is not diverted into butter production.

Their main job as I see it is to divert the production of the dairy industry into the commodities that can best serve the Canadian people. Surely there is enough cow's milk in Canada to supply us with butter, and if we are importing butter, then they have failed in some way or another. I can only say that categorically, without thorough examination. Therefore, I believe, that before this Committee is over, we will have to have the Canadian Dairy Commission before us and examine the problem I have pointed out.

In summary, I think we will have to examine very, very closely the Research Branch, the Health of Animals Branch which brings in the charolais cattle, the Canadian Dairy Commission and the Farm Credit Corporation. We were told the Farm Credit Corporation will come before the Department, but they can very well come before us when we study the estimates; when we go into the vote which deals with the Farm Credit Corporation. We will have to give it a thorough examination particularly because of the new legislation which perhaps tends to drift money away from the small farmer into the hands of the big corporate enterprises.

The Chairman: Thank you, Mr. Horner.

Mr. Olson: Well, I am not quite sure, Mr. Chairman, whether Mr. Horner wanted me to comment on his comments or whether he gave notice that he intended to ask some questions later. I am prepared to respond in either way that you wish, Mr. Chairman.

Mr. Horner: No, I just served notice of what I thought the Committee should be doing and what I particularly would be interested in during examination of the estimates.

Mr. Barrett: Did you ask for the meaning of the word "brief". Is that one of the questions that may have been answered?

• 1035

Mr. Horner: It is relativity that counts.

The Chairman: I am afraid your comment went by because you were not close to the microphone, Mr. Barrett. I recognize Mr. Douglas (Assiniboia).

Mr. Douglas: Thank you, Mr. Chairman. I will not be the first to congratulate you and the Vice Chairman on your election to this important work. The Committee will be well served by you and by the members of the steering committee whose names were announced this morning.

I want also to congratulate the Minister of Agriculture. Someone mentioned all the new people we had on the Committee, the Chairman and so on, and I think one of the most important new additions we have in agriculture, is the new Minister of Agriculture. I know he is very conversant with all kinds of agriculture in various parts of Canada, and I am sure that it augurs well for agriculture to have a man of his ability and calibre as our Minister of Agriculture.

I am going to take the opportunity of making a few comments and I will probably end up with a question. As we have the Minister here today, and he has mentioned something about policy my comments will have more to do with policy than with the estimates.

First of all, I would like to say that I think everyone will agree that markets are the most important requirement for all phases of agriculture in Canada, and particularly in Western Canada with the wheat and in Eastern Canada with the corn. There is a problem of quite large proportions right now, and I do hope that the Department of Agriculture will work very closely with the Department of Industry, Trade and Commerce in developing and maintaining good dependable markets for our farm products.

Along with markets, of course, price is a very important feature and they probably go pretty well hand in hand. If we have good markets, usually we soon have good prices; poor markets are accompanied by poor prices. I think these two go hand in hand and must be developed together.

There has been a lot of discussion about a two price system for wheat, and this is something I hope we can investigate further in this Committee. If not, certainly the appropriate agencies of government, the Department of Agriculture, or the Department of Trade and Commerce, will investigate its possibilities. It may be that the Task Force is doing this right now; I hope they are, because it is an urgent matter and it is something, I think, well within our control here in Canada, and something we could do without too much cost to the government, or to the taxpayers of Canada.

I am interested in this National Grains Council and I suggest, in setting up this Council, that adequate representation be given to producers and producers' organizations. I agree with one of the former speakers, that we need practical people on these committees and councils, and I hope that this will not be overlooked.

Now the Minister mentioned the world shortage of food. This is something that we have heard a lot of in the last few years, and farmers have built up their operations to sort of help overcome this projected world food shortage. At the present time either the forecasters were wrong or the farmers were over-enthusiastic in their response, but we have built up surpluses in many lines of agricultural products and I would like to suggest that we need research, not only in production of agricultural products but we certainly need research in markets with respect to not only the quantities but the kinds of products that are needed and can be sold.

Another thing that I think needs to be researched a little better is the weather forecasting in this country. We found in the West this year that the weather forecasts were very, very wide of the mark and it makes it a little more difficult for farmers who hope to put some reliance in these forecasts to find they are them leading them astray.

• 1040

The next thing I would like to mention is PFRA. I would like to associate myself with the speaker who said he thought that PFRA should be retained as an important part of our agricultural picture. I would have liked to have seen it stay with the Department of Agriculture too, but I do not think it really matters that much as long as it is administered by people who are concerned with the welfare of the farmers and that it is maintained and kept in useful service.

The Minister mentioned something about the port facilities at Prince Rupert. There has been a lot of talk about the new port facilities at Vancouver and I would hope that adequate steps are being taken to make sure that our agricultural products will be handled in a most efficient manner in this new Roberts Bank port, which I assume will eventually be used for agricultural products.

The last thing I want to mention is crop insurance. The Minister mentioned this in his remarks. I think crop insurance is a very important thing. I am just disappointed that

more farmers in Western Canada at least are not availing themselves of crop insurance. I do not know what the experience has been in Eastern Canada. In Manitoba, where all parts of the province are eligible for crop insurance, I believe that only a fraction of the farmers—I am not sure, around half I believe, or even less than half—avail themselves of crop insurance. The federal government does pay 25 per cent of the premium cost of crop insurance and they also pay half of the administration cost along with the provinces, which pay the other half. I think a very good case could be made for the federal government paying 50 per cent of the premium cost of crop insurance in one way or another to encourage more farmers to take advantage of this, and to protect them and the country against the disasters that we are facing in Western Canada at the present time as far as harvest is concerned. In many areas there are other disasters such as hail, drought, and so on. I think there is a very good case for greater participation by the federal government in this crop insurance scheme. Many employees in Canada, including the employees of the federal government, have many schemes available to them: unemployment insurance, the Canada Pension Plan and several other things to which their employers contribute half the cost. I think this is a very good case for the people of Canada contributing half the cost of crop insurance to the farmers. My question would be is the government or the Department considering any changes in the crop insurance program.

The Chairman: Thank you, Mr. Douglas.

Mr. Minister, I have one question. Is the Department considering any changes in the crop insurance program?

Mr. Olson: There are some changes going on. It is not so much in the over-all program as the fact that there are more and more provinces coming in. As I am sure Mr. Douglas is aware, Manitoba was one of the first provinces that embarked on a crop insurance scheme and this was in co-operation with the provinces. Since then there has been a steady increase in the number of provinces who have come on. We now have P.E.I., Ontario, Manitoba, Saskatchewan, Alberta, British Columbia and Quebec. I think on the basis of the experience that we gain, and certainly we do not yet have all the necessary knowledge

to say that we have a perfect or even a near perfect crop insurance scheme, that there will be changes from time to time, but if the question was specifically addressed to the point that was made, whether we are contemplating moving from 25 per cent to 50 per cent of the premium on crop insurance, I would have to say that that is not contemplated at this time. However, there are many changes that come in on the basis of the experience that we have for one year following the next. Crop insurance of necessity must apply differently to different commodities. For example, the same kind of system for wheat does not work for apples, and so on. I have some statistics here, if the members of the Committee would be interested in having me read them.

In Prince Edward Island this year we had 152 contracts. In Ontario there were 1,861. In Manitoba there were 14,469 contracts. Saskatchewan had 12,500. Alberta had 16,000. British Columbia had 701. We are not quite sure of the exact number, but there were about 20,000 in Quebec. That, of course, requires some additional explanation because there are parts of it that are outside the program.

• 1045

In any event, Mr. Chairman, there is a total coverage, including our estimate for Quebec, of \$188,166,000 for all of Canada. The premiums paid were \$12,493,000 and the total administrative costs were \$3.8 million.

Mr. Gleave: Can you break that down in percentages of farmers, or is it not broken down there?

Mr. Olson: No. For Manitoba, where I think crop insurance is now offered in all areas, about one half of the insurable farmers took it. I am not sure that we have figures for the other provinces, but we can get them for you.

Mr. Gleave: Would you do that?

Mr. Olson: Yes, we will try.

The Chairman: Thank you, Mr. Minister. Gentlemen, I am in the hands of the Committee. Our meeting was called for 9.30. I think you are to be complimented in turning up rather promptly this morning. I think if we meet for two hours and give of our best that that would probably not be a bad time to adjourn, but I am completely in your hands. Is it agreed that we will adjourn this meeting at 11.30?

Some hon. Members: Agreed.

The Chairman: All right. I will recognize Mr. Howard of Okanagan Boundary.

Mr. Howard (Okanagan Boundary): Thank you, Mr. Chairman. If I were asked what job in Canada I wanted the least I would say the job of the Minister of Agriculture in Canada. I feel that it must be one of the more difficult jobs that government people have to do. I have great admiration for the man that fills the job at the present time. I think he does an admirable job. The thing that worries me about our deliberations in this field of agriculture is that I wonder if we do not sometimes skirt the main issues. We examine all the details of the expenditures on research, on marketing, on subsidies and on all the programs there are in regard to agriculture, and yet underneath there is still a basic discontent among the farmers in Canada in that they feel they are not getting a fair share of the economy of the country. This concerns me very much because I talk to a great many farmers.

I also talk to city people, who say "What is the matter with the farmers? They never had it so good." They are all convinced that farmers spend the winter in the southern states enjoying the sunshine and that they must be making vast amounts of money. The farmer himself who is well aware of how much money he is making and how much difficulty he is having, is very resentful of the conditions that exist whereby he feels he is getting such a small share of the consumer dollar in Canada. He is well aware of the fact that his share of the consumer dollar is not increasing. In fact, that his percentage of the dollar is actually going down as others get more of the consumer dollar.

• 1050

At one time we had a free enterprise system in agriculture. We certainly do not have it today. The system is now so filled with subsidies, special assistance programs, and so on, that we have a very complicated arrangement of agriculture that is a long way from free enterprise. I do not know what to do about this. I merely pose this as a problem that I think this Committee should examine during the year ahead of us. I do not know whether it requires a special committee. I think perhaps it is something that should be in the background of all the deliberations that this Committee pursues. I think it is very

important to realize that when farmers get on their tractors and travel all the way to Ottawa they do not do so unless they have a very deep feeling of discontent with the position in which they find themselves.

These are general remarks and suggestions and I feel we must examine this basic question in our agricultural discussions in this Committee. I feel if we are to do this we should look at the long-range planning in the field of production and marketing in Canada. It has been suggested that we have been planting and reaping for the benefit of world food shortages that do not seem to have materialized, at least as far as our marketing is concerned, and we now find ourselves with great surpluses. I wonder what long-range planning we are doing and where the government expects Canadian agriculture to be five, ten or twenty-five years from now.

Those are my general remarks. I also have two short items I want to discuss. I want to ask a question concerning my own area. I want to know about the codling moth control program that has been under production in the Okanagan for some time. I want to know if that is to be continued. I want to know if the budgetary commitments are to be made for this coming year that are necessary in order to finish that program off. I understand that it is going to require a budget of approximately \$35,000 to complete that program.

The second item I want to mention, and the last one, is that I have had some experience with problems of tariff adjustments in Canada and specific problems that come up in relation to aid programs for farmers. I have noticed that on these occasions the greatest difficulty for the farmers is the length of time that it takes for government to act, on these problems. I do not necessarily say that it is anybody's fault. Very often there are many departments of government involved in arriving at a solution and I feel that we must do something in our administrative program to allow for a much quicker response to some of these problems, that exist. I can cite one problem we had recently, which was a potato tariff problem. We got action on it but it was a very laborious process to get that action and I am concerned that in the future similar problems might not get action merely because of administrative breakdown, the time that it takes to get all of the people together to make a decision.

The Chairman: Mr. Minister?

Mr. Olson: Yes, Mr. Chairman. In respect to the specific question respecting the codling moth, I am going to ask Dr. Woodward to reply to that. My information is that it will continue. However I would have to qualify that by saying that the Estimates for 1969-70 have not yet been approved and therefore it would be unwise for me to give you a commitment for the expenditures during that year. Mr. Chairman, may Dr. Woodward give a more detailed answer to the question now?

Dr. J. C. Woodward (Associate Director General, Research Branch, Department of Agriculture): Mr. Chairman, the codling moth program is part of our over-all study of the integrated control of pests in the fruit growing areas of the Okanagan Valley. After a number of years of laboratory studies and some small field trials we have made plans—which are projected in our 1969-70 Estimates—to proceed with a large scale pilot experiment on the release of sterilized codling moths. This plan is proceeding in co-operation with the British Columbia Department of Agriculture and the B. C. fruit growers. During this fiscal year we are establishing facilities for mass rearing of the codling moths for release.

• 1055

Mr. Howard (Okanagan Boundary): I am glad to hear that.

Mr. Olson: As to the other part of the question, where Mr. Howard suggested that we could improve the service to farmers by having faster or quicker response in some of the marketing problems that we run into, he directed his attention particularly to the potato problem that came on about midsummer. I know that it was a long and laborious procedure to do something to correct this matter. It is also true for corn. I would also like to have the facilities if you want to call them that, to respond much more quickly to these problems, but we have to recognize—and it is not always easy to do so—that we are a signatory to international agreements and without those international agreements we would have chaos in marketing agricultural products. They are not perfect, but we have to respect these agreements and the positions of other countries with which we are dealing.

So far as potatoes were concerned, there was a problem of statistics that did not correspond. In other words, some of the so-called “facts” respecting price lists and market prices—the asking prices, if you like, or

sale prices—of potatoes at various points were checked out and they did not correspond with some other information that we were getting. I think we resolved that to some extent. In any event, I would like to assure hon. members of the Committee that I would hope that ways will be found, in keeping with the international trade peace with other countries, whereby we can respond somewhat more rapidly. However, it is not easy, believe me.

The Chairman: Thank you. I recognize Mr. Gleave of Saskatoon-Biggar.

Mr. Gleave: Mr. Chairman, the same problem that faces agriculture was stated by the Department of Agriculture more accurately and in greater depth than I could possibly do it but there was one thing I was wondering about, I read some of it into record last night, and the fact of the matter is that those engaged in agriculture are lacking in income equal to other sectors of the economy and I think this should be the first concern of this Committee.

The Chairman: Is the microphone not working?

An hon. Member: It is now.

Mr. Gleave: I am sorry if you lost all those words of wisdom, but it probably will be said over again before this Committee ceases to meet.

But I think this is something that we should be first concerned about.

More specifically, I hope that we call before this Committee the Canadian Dairy Commission to find out why it costs \$138 million a year to keep the dairy farmers in business. It always shakes me a bit when I find that the fairly affluent Canadian society apparently cannot pay for the food that it consumes day by day.

I think we should call before this Committee the Canadian Wheat Board and the Canadian Livestock Feed Board. I saw a news item in the press the other day in which one Manitoba farm spokesman said that 2 million bushels of feed grain a year are being bootlegged into eastern Canada; and was corrected by another spokesman from western Canada who said that it was not 2 million but 10 million bushels a year.

I have talked with certain people from Quebec who are in this House and they say they are still paying exorbitant prices for feed grain. We have two boards, the Canadi-

an Livestock Feed Board and the Canadian Wheat Board. Surely between them they should be able to organize an efficient transportation of feed grain as between the producers of western Canada and of Eastern Canada, so therefore, those two boards should come before this Committee and we should try to find out the facts.

• 1100

I hope that we will have some of those involved in the International Wheat Council and the International Grains Arrangement to tell us how effective this new International Grains Arrangement is and whether or not it is going to be effective. These are some of the areas in which we may find some of the answers to the income problem.

I hope we will have those who are responsible for the operations of PFRA, and certainly those from ARDA, before this Committee to tell us what they are doing.

ARDA has come under some very severe criticism, justified or unjustified, and I think we should have an opportunity to check. I agree with the previous speaker that we should know what PFRA's future is, because it has made very important contributions to agriculture west of the Great Lakes.

I think that the kind of trade policy we are going to have will be very vital. What kind of a farm community do we think we are trying to build anyway? We have tremendous forces of production available in this country. If anyone ever turned them loose and gave them a price incentive I do not know how much we would produce. Do we go by fits and starts?

I hope the task force will produce its report fairly soon. I am sorry that the Government of the day did not see fit to have at least one member from one of our farm organizations on it, but they apparently did not.

There are perhaps two questions that I would like to ask the Minister. I do not have a copy of his statement, but I took notes and if they are correct he twice said that we should develop an agriculture which is integrated with the Canadian economy; and, again, he said that we should integrate with other sectors of the economy. I would like to know what he means by this statement and what the trend of his thinking is. I always thought agriculture was tied in pretty closely. This is one of the questions that faces us.

When we see National Grain deciding to go into business with, I think it was, 25,000 hogs

a year down on the west coast then I think we ought to know what effect this is going to have on the market for hogs. They also said they were planning more in western Canada. This is direct competition with the farm producer. It is direct competition for resources and for markets.

Perhaps we should also think of asking National Grain to appear before the Committee to tell us how far they are going with hog production and moving into the farm field.

• 1105

Perhaps it is not fair to cite this one particular industrial complex. There are other areas where it occurs as well. I would, however, like the Minister to say what he is thinking of when he talks about developing an agriculture integrated with the Canadian economy; and I would like his comments on my suggestion that these different organizations, both government and otherwise, be called before this Committee so that we can try to find out what direction agriculture is taking and perhaps hope to plot something in the future.

The Chairman: Thank you, Mr. Gleave. Mr. Olson?

Mr. Olson: Mr. Chairman, I would like to quote what I said when I used the word "integrate" in reference to agriculture. This is perhaps not precise, because these are just notes, but I think I spoke of the "integration of agriculture as an equal partner with other important sectors of the Canadian economy; all of which would serve as the framework within which governments at all levels and agricultural organizations—the other sectors of the agriculture community—may develop programs and policies.

This, too, I think, was part of the comment I made under the general heading of the National Conference on Agriculture.

Perhaps this will answer your question directly and also that, I believe, of Mr. Horn-er who was somewhat critical of the fact that we did not have a practical man—I think that the phrase—he used on the task force. The task force has been asked for an interim report by the end of this year, and that will be used as the basis for a national farm conference which will be representative of all sectors, including the producer groups; and presumably there will be many practical, practising farmers in those groups, as well as others. They will be able to consider the

interim report of the task force and test their opinions against those of other people in the agriculture community; as well as, in a constructive way, to criticize or add to these reports. Therefore, the final report of the task force can be written after it has been subjected to this test in a national agriculture conference.

On the other question of whether or not we could call the Canadian Dairy Commission, the Canadian Wheat Board, the Canadian Livestock Feed Board and other groups such as PFRA before this Committee, if the Committee desires to have members of the Canadian Dairy Commission appear before it we will make them available. I think it has been the practice to refer the annual report of the Canadian Wheat Board to the Agriculture Committee, notwithstanding the fact that the Minister of Industry, Trade and Commerce reports to Parliament for that board. We can also call representatives of the Feed Board before this Committee. Of course it will be up to the Committee to decide from time to time about that. One other point that was made was the matter of the Farm Credit Corporation. If the Committee wishes to examine the Farm Credit Corporation under the vote in the Estimates, that is fine, but I have already given an undertaking that after the completion of the Estimates I will be prepared to refer the report of the Farm Credit Corporation to this Committee so that it can make a detailed, in-depth examination on the operations of the corporation over a number of years.

Indeed, I think they would welcome appearing before the Committee to give an explanation of their activities since they were established, because my information is that they have not been called before this Committee at anytime during their existence, since 1959, I believe.

The Chairman: Thank you, Mr. Olson.

Mr. Gleave: May we also have, as soon as possible, the make-up and the finance—the terms of reference—of this proposed National Grains Council?

• 1110

Mr. Olson: Yes; in so far as we can go. But all of the final, detailed structure of the National Grains Council, including such things as the composition and the structure of the secretariat and of the executive committee, and so on, have not finally been worked out.

What we have to do is to try to get this organization launched, or born, if you like, and then have a meeting of it so that they can work out these final details themselves. I would be pleased, however, at some time to give you what I think is a consensus from the meeting in Winnipeg on the structure of the National Grains Council, subject, of course, to the qualification that this is not final, and will not be so final until the Council itself meets to determine it.

We do have some details, Mr. Chairman. A question was asked about the percentage of farmers in the provinces who took out crop insurance. If you would like that answer now, the number of farmers, by provinces, who purchased crop insurance in 1968, expressed as a percentage of the number of commercial farms, as reported by the 1966 census, was: Prince Edward Island, five per cent; Quebec, 48 per cent; Ontario, three per cent; Manitoba, 52 per cent; Saskatchewan, 18 per cent; Alberta, 32 per cent; British Columbia, eight per cent.

The Chairman: Thank you, Mr. Olson. I recognize Mr. Gauthier.

[Interpretation]

Mr. Gauthier: I thank you very much, Mr. Chairman. I shall try to be as brief as possible.

In the first place, I should like to congratulate you for your appointment as Chairman, and also, I would like to congratulate our Minister of Agriculture. I have worked with him for six years, and I hope that we are going to get along well together. This is not the first time that he is going to hear about the problems of Quebec and the Eastern part of the country. We have discussed them with him for six years, as well as with Mr. Williams, whom we have known for quite a number of years and who is always at our disposal when we ask for information.

I am coming now to the questions, because I believe that the Minister has been hearing about the West for quite a while. I would like to call his attention to the Eastern part of Canada and particularly to Quebec. It will change the atmosphere here.

The crucial problem as far as we are concerned, Mr. Minister, at the present time, is the question of quotas. If the production in the West consists mainly of cereals, you know that in our case it is the dairy production which is the most important. And as long as we will not have settled the dairy industry

problem in the province of Quebec, and especially in my region, I believe that our farmers will go on complaining about the government and claim that an injustice is being committed. I believe this injustice is due to the fact that the matter has not been studied.

And I would like to ask the Minister to study most particularly the question of quotas in the region. I am glad to hear that members of the Canadian Dairy Commission will attend this Committee and I hope that the Chairman will have them called as soon as possible.

But there is a crucial problem here regarding quotas, because many of our farmers have changed their production. They have dropped natural milk and have come back to industrial milk. And this change does not enable them to obtain quotas, because they were not milk producers in 1964, 1965 and 1966. I think that the Minister should draw the attention of the Commission to these producers along with producers of manufactured milk who, for the past three years, mostly, have had to reestablish their herds.

You know that in our region, we have had three years of lean cows, as the saying goes, because of rain, frost and so forth. As a result, 50 percent of our farmers—Mr. Williams is well aware of this—have been compelled to eliminate their herds.

Over the past three years, they have been busy reconstituting these herds, but the trouble is that they cannot receive the quota premiums because these are not to be increased and, generally speaking, it is quite normal for the Commission to establish such a regulation. However I believe that our region should be dealt with as a special case and that the Department should be made aware of this, so that those people who, in 1964, had a herd of about 100 head and have had to reduce it to 40 or 50, may, if they want to, reconstitute it to 100 head. The Canadian Dairy Commission should definitely take these factors into account to enable these farmers to rebuild what they had four or five years ago.

• 1115

This is the second case; the first case as I just mentioned, concerns those farmers who were compelled to switch from natural milk to industrial milk because of the decreasing natural milk market caused by a surplus of this product.

There is a third case: the producer who sells 15 or 20 percent of his production in the form of industrial milk and, since it is considered as

natural milk, he cannot obtain subsidies granted to industrial milk producers. I believe that the Minister, who has heard this many times, will discuss this problem even before the people from the Commission come here, because this is a very urgent question as far as our region is concerned.

There is also the matter of production costs. In view of milk subsidies granted by the Canadian Dairy Commission, some will state that \$5 for 100 pound should be all right for the Montreal area producers. But if you study the whole province, you will see that there are four regions where production costs differ greatly.

Last year, I discussed this with Mr. Côté. While prices were fairly reasonable in Joliette and around Quebec, in our region, the cost of producers was 20 to 25, and sometimes as much as 40 cents higher than in those regions. As things stand, our producers cannot compete with the other regions of Quebec, and therefore, they cannot reach their level. I am not comparing them with the rest of Canada, just with Quebec as a whole. There are so many divergencies in the various sectors of Quebec that I feel it necessary to draw the attention of the Minister and of Mr. Williams to these conditions.

Today, we have another problem the mechanization, modernization of agriculture. Ten years ago, our agriculture was marginal—part farming, part lumbering—and over the past ten years, we have been getting back to more intensive farming but we must mechanize; the size of farms has to be increased.

Since last fall, processors, or even processing factories have called on farmers to accept cooling tanks... This is another problem as far as our farmers are concerned. And I would ask if the minister and Mr. Williams, whether it would be possible to study this problem in order to help all these farmers who are now almost forced to accept these cooling tanks... because if they cannot instal them within a year they will be in a bad way.

● 1120

I believe that the Department should look into the possibility of helping them by a grant of, let us say, 5 p. 100 of price of such a cooling tank. Well, the farmer has to instal this cooling tank, which costs him \$4,000 or \$4,500. This means that it will be two years before he can return to normal production. Wouldn't be possible to consider an amend-

ment to the act? We have the ... legislation to assist agriculture on the prairies could we not have similar legislation for agriculture in the east or Quebec? It could take the form of a direct modernization grant... of say... 50% the cost of these cooling tanks. This would help our farmers out of their present difficulties.

The minister has mentioned research and information offices and Mr. Williams talked about provincial offices and possibly regional offices. But I would like to ask the minister if these offices would be run as a joint programme, that is to say are the provinces going to be managing them and be responsible for them, and will the federal government only send the necessary information or pay as it does in the case of certain plans without participating in the actual administration. I would be very interested to know what federal government's responsibilities in this are would be since this is a question we will be asked.

Well, Mr. Minister, I think I will stop here. I had other questions but I said I would be brief. I'll come back again later.

[English]

Mr. Olson: Thank you. I would like to say at the outset, in response, that I hear a great deal from eastern as well as from western farmers. The correspondence we get and the representations to the Minister of Agriculture and to the Department generally are certainly not exclusively from western Canada. We hear from all over. The Parliamentary Secretary, Mr. Côté, will be able to verify that we have a great many communications from Quebec and eastern Canada.

I would not like to attempt to answer all of the questions you have raised, but one that you asked was on this matter of some direct assistance in modernizing dairy farms for tanks, and that sort of thing.

We believe that it is probably better to provide subsidies by way of holding up the price structure so that the farmers themselves can decide what kind of modernization they want to do. Otherwise, one would get into all kinds of problems. What does one do, for example, with farmers who have already bought a tank or modernized to some extent? It seems to me that these decisions can better be made by the individual farmers than by the Government or by any bureau.

● 1125

Our responsibility—and it has been a rather expensive one, to the tune of something

over \$130 million—is to try to hold up the price so that these decisions can be made by the farmers themselves.

Now there are some details of the joint programs in the management services, but we do not have them all worked out. We hope that it will be a co-ordinated program between the federal and the provincial governments, and although the details are not all available what we are doing now is working out the mechanics of providing the kind of service that we hope will be useful to farmers.

The Chairman: Thank you. I will call two speakers, and I would ask them to be brief. Those who are still on the list will retain their order for Thursday's meeting.

I will recognize Mr. Moore, Westaskiwin.

Mr. Moore (Westaskiwin): Thank you, Mr. Chairman. I wish to add my congratulations to you and the vice-chairman.

I have a surprise for the member for Roberval, Mr. Gauthier. I am going to talk about dairying, too. And I come from western Canada. This affects every province in Canada. I will try to be brief.

One of the top priorities with which this Committee should concern itself is a close examination of the dairy policy—and this, of course, before the next dairy policy is enunciated late in March. The number of dispersal sales in recent years must point to the fact that the policy is certainly not entirely successful.

There are discriminations in the present dairy policy, and I would like to refer to one in particular. This refers to an announcement from the Canadian Dairy Commission that no new subsidy quotas will be granted to new dairymen starting up, be he young or older—but I refer especially to younger dairymen—with one exception, that he can purchase a herd, and if this herd has an established subsidy quota he can take over this quota. This is all very well, but I do feel that very few young dairymen would ever want to invest that type of money; it is not feasible. I think the policy is dictatorial in this respect and is a discrimination against young dairymen. I do not think it is practised by any other industry in Canada and I think it is wrong in principle.

I would like to see the need for subsidies eliminated, but at present, of course, they are a fact of life. Surely the Dairy Commission

does not set up the policies; they are guided by the Department of Agriculture. Therefore, although I feel it to be important that we have the Dairy Commission or their representatives appear before us, I think that we can have some say in the policy beforehand.

I think, too, that in this Committee the whole question of dairy substitutes which I will not refer to today must be examined at some time.

That is all I have to say.

My only question is whether I am correct in my interpretation of this announcement that there is only the one way to obtain a new quota?

Mr. Olson: That is right, Mr. Chairman; no new quotas were established except those that were transferred from one herd to a new one. The reason for that is that we have a situation where we are producing against surpluses of milk powder, cheese and so on, and it seemed wise to rationalize the industry for those people who are already in it before we made allowance for new quotas to be established by coming into an industry where there was production already in excess of market demands.

Mr. Moore (Westaskiwin): Does this not put an artificial value then on the subsidy quota? It is bound to. It has happened in the fluid milk quotas.

Mr. Olson: I do not question that, but what I am saying is that in over-all policy it seemed to me it would be advisable to rationalize the situation for those people who are already in it rather than allowing more in it which would aggravate their position, not for the sake of the Canadian Dairy Commission, but for the people who are already in the industry trying to make a living there. I want to emphasize that this is for this year only. There will be a new policy announced in light of current conditions before the new dairy year starts.

• 1130

Mr. Moore (Westaskiwin): If this is so then it is not as serious as I thought. It was my understanding that this was in the foreseeable future and this is the way everybody interpreted it.

Mr. Olson: The announcement was for one year.

Mr. Moore (Westaskiwin): You do not have a quota?

[Interpretation]

Mr. Roy (Laval): Mr. Chairman, I would like to congratulate the Minister on his appointment; we are very proud to have a man with such experience in agriculture. I would also like to congratulate Mr. Côté, his parliamentary secretary who has a wide experience in the field of agriculture. I will be very brief as I have only a few remarks to make. First of all I was very surprised by the popularity of agriculture in the House of Commons. The Agriculture Committee is the one with the greatest number of members. I am sure all members are aware of the present problems but, however difficult these may be, we must unite our efforts to find solutions.

Agriculture is highly specialised and each detail is very important. As far as production is concerned I am not a man to ask for subsidies. I congratulate you for devoting a large part of the budget to research and bringing the results to the attention of the public. In Quebec we are mainly dairy producers and we wonder why we have herds producing an average of 6,000 pounds of milk when we should have at least a production of 9,500 or 10,000 pounds. Even if we were to ask for a higher subsidy we would first have to tackle the basic problems and try to improve and increase your milk production.

Twenty per cent of our piglets never get to the weaning stage. It is really through popular education and general dissimulation of technical knowledge that we must attempt to aid our farmers. I believe we should co-ordinate all research projects on farms to avoid duplication of this kind of research.

Here I wanted to mention a problem we will have to face. I refer to the competition of dairy substitutes. We should study this situation very seriously and we should plan our dairy production to take into account these substitutes which will be on our market eventually.

There is another question I want to discuss—the question of market gardening. Near Montreal, we have an important market for flowers and we should study our import laws. In June and July and August when we have intensive production, we should protect our producers against imports of tomatoes and other vegetables.

Now there is also another point, which is of great concern to me and I shall be very brief. So far as Production and Marketing are concerned there was a reduction of \$5 million in

the budget. For example, dairy industry, cheese subsidies, there is a reduction of \$1.6 million.

Another matter, Mr. Minister, which should create some difficulties, is the elimination or reduction of pig grading—there is a decrease of about the order of \$3 million in the grading bonus.

I wanted to stress this here. This reduction of \$5 million for Production and Marketing is something which is of great concern to me.

In conclusion I suggest that if we could develop a policy of vegetable production in Quebec, and in the eastern provinces it would be very profitable indeed and it would be better to produce than live on subsidies. With regard to fertilizers I will read verbatim the following article on potash:

• 1135

[English]

Potash production in Saskatchewan rose in volume but declined in value during the first six months.

The department of mineral resources said volume produced was 1,542,407 tons, compared with 1,160,989 for the first six months of 1967. Value declined to \$43,-187,000 from \$43,525,000.

[Interpretation]

I believe that if we could have potash in the East at more reasonable prices—potash usually costs more than \$55 to \$60 per ton—we could have a viable production policy. It would be very important for our farmers to be able to buy this potash which is in surplus in the West and this could definitely improve our production policy in the East.

Mr. Minister, Deputy-Ministers, it was with this in mind that I wished to contribute my viewpoint. I believe that in our Committee meetings we shall have to be very objective. We should forget party considerations and study everything with an objective point of view. Thank you.

[English]

The Chairman: Thank you, Mr. Roy.

As indicated, we will try to adjourn at 11.30. Is it agreed that Item 1 stand?

Some hon. Members: Agreed.

The Chairman: I would like to give notice that we will call Item 5 at our next meeting on Thursday morning at 9.30. If you can all be here promptly at 9.30 we will try and get you out promptly at 11.30. The meeting is

adjourned unless the Parliamentary Secretary would like to say a few words.

[*Interpretation*]

Mr. Florian Côté (Richelieu) Parliamentary Secretary to the Minister of Agriculture: Just one minute please. Mr. Chairman, in order to hasten the Committee's work, would it be possible, once all speeches have been made, to proceed according to debates rules? Mr. Chairman, it will be very difficult for you to call us to order at times. We could authorize you to call us to order when necessary. This would prevent us from losing too much time. I am afraid we have too much talk, and we don't do enough home work. I am just trying to help you, Mr. Chairman, because I know that you are in a difficult position.

[*English*]

The Chairman: Thank you very much. This is our first meeting, and we wanted to allow

some latitude for our opening statements. We may endeavour to apply relevancy at the next meeting a little more stringently.

[*Interpretation*]

Mr. Côté (Richelieu): What are the standards? I think it is three minutes per speaker. Is there a limited time to put questions? Mr. Chairman, is there a committee rule or standard in this regard?

[*English*]

The Chairman: We have the Steering Committee. I think that Committee should meet between now and Thursday morning and make recommendations to the meeting here.

We now have the charts of the organization of the Department, and you may pick one up as you leave.

HOUSE OF COMMONS

First Session—Twenty-eighth Parliament

1968

STANDING COMMITTEE

ON

AGRICULTURE

Chairman: Mr. BRUCE S. BEER

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 3

THURSDAY, OCTOBER 31, 1968

Revised Main Estimates (1968-69) relating to Agriculture

WITNESSES:

From the Department of Agriculture: Mr. S. B. Williams, Deputy Minister; Dr. J. C. Woodward, Assistant Deputy Minister (Research); *and from the Department's Research Branch:* Dr. K. Rasmussen, Associate Director General; Dr. D. G. Hamilton, Assistant Director General (Eastern); Mr. J. P. McCrea, Chief, Property and Finance Section.

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE
ON
AGRICULTURE

Chairman: Mr. Bruce S. Beer

Vice-Chairman: Mr. Marcel Lessard (*Lac-Saint-Jean*)

and

Mr. Barrett,	Mr. Howard (<i>Okanagan</i>	Mr. Peters,
Mr. Clermont,	<i>Boundary</i>),	Mr. Pringle,
Mr. Cobbe,	Mr. Korchinski,	Mr. Roy (<i>Laval</i>),
Mr. Côté (<i>Richelieu</i>),	Mr. Lambert (<i>Bellechasse</i>),	Mr. Smith (<i>Saint-Jean</i>),
Mr. Douglas,	Mr. La Salle,	Mr. Southam,
Mr. Foster,	Mr. Lefebvre,	Mr. Stewart (<i>Okanagan-</i>
Mr. Gauthier,	Mr. Lind,	<i>Kootenay</i>),
Mr. Gleave,	Mr. McKinley,	Mr. Thomson (<i>Battleford-</i>
² Mr. Gundlock,	Mr. Muir (<i>Lisgar</i>),	<i>Kindersley</i>),
Mr. Horner,	¹ Mr. Noble,	Mr. Whicher,
		Mr. Yanakis—30.

Michael A. Measures,
Clerk of the Committee.

¹Replaced Mr. Danforth on October 30, 1968.

²Replaced Mr. Moore (*Wetaskiwin*) on October 30, 1968.

ORDER OF REFERENCE

WEDNESDAY, October 30, 1968.

Ordered,—That the names of Messrs. Noble and Gundlock be substituted for those of Messrs. Danforth and Moore (*Wetaskwin*) on the Standing Committee on Agriculture.

ATTEST

ALISTAIR FRASER,
The Clerk of the House of Commons.

MINUTES OF PROCEEDINGS

THURSDAY, October 31, 1968.
(3)

The Standing Committee on Agriculture met at 9:42 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Beer, Clermont, Cobbe, Douglas, Foster, Gauthier, Gleave, Horner, La Salle, Lefebvre, Lessard (*Lac-Saint-Jean*), Lind, McKinley Muir (*Lisgar*), Noble, Peters, Pringle, Roy (*Laval*), Smith (*Saint-Jean*), Thomson (*Battleford-Kindersley*), Whicher, Yanakis—(22).

In attendance: From the Department of Agriculture: Mr. S. B. Williams, Deputy Minister; Dr. J. C. Woodward, Assistant Deputy Minister (Research); *and from the Department's Research Branch:* Dr. B. B. Migicovsky, Director General; Dr. K. Rasmussen, Associate Director General; Dr. D. G. Hamilton, Assistant Director General (Eastern); Dr. E. J. LeRoux, Assistant Director, General (Institutes); Mr. J. P. McCrea, Chief, Property and Finance Section.

The Chairman introduced Mr. Williams who, in turn, introduced the others in attendance.

Mr. Williams referred to the following three documents, all of the Canada Department of Agriculture, which were distributed to the members:

1968 Directory of Personnel;
Organization and Activities, publication 1123, 1967;
Research Branch organization chart, October, 1968.

The Chairman called items 5, 10 and 12 of the 1968-69 Revised Estimates relating to Agriculture, namely—

RESEARCH

item 5	Administration, Operation and Maintenance, etc.	\$ 34,965,600
item 10	Construction or Acquisition of Buildings, Works, etc.....	\$ 5,571,300
item 12	Grants, etc.....	\$ 800,400
		<hr/>
		\$ 41,337,300

Dr. Woodward gave an opening statement in the course of which he invited the members to visit the Department's Animal Research Institute at the Central Experimental Farm, Ottawa.

Mr. Williams and Dr. Woodward were questioned, assisted by the others in attendance.

On a suggestion of the Chairman, it was agreed that the Department would provide a chart comparing Departmental research expenditures with farm income, by product categories.

The questioning continued and having been completed, the Chairman thanked those in attendance.

Items 5, 10 and 12 were carried.

At 11:39 a.m., the Committee adjourned to the call of the Chair.

Michael A. Measures,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday, October 31, 1968

Mr. Clermont: Thank you.

The Chairman: Gentlemen, if you will come to order we shall begin our meeting. I have quite an array of departmental officials on my right who will be available for questioning. The Deputy Minister, Mr. Williams, is second on my right, and I will ask him to present the departmental officials to you at this time.

Mr. S. B. Williams (Deputy Minister, Department of Agriculture): Mr. Chairman and gentlemen, this morning we are concerned with Vote 5 which is administration, operation and maintenance, including the costs of publishing departmental research papers as supplements to the *Canadian Entomologist* under the over-all heading of Research.

Before I introduce the officials who will be answering your direct questions, there are two pieces of information that were asked for at the last meeting of the Committee, one in respect of the organization activities of the department and the other in respect of the staffing. We do not as yet have an up to date chart showing the names. We have, however, brought with us this green book called Organization and Activities of the Canada Department of Agriculture. There is a supply available on the window and we have a Directory of Personnel that covers Department of Agriculture personnel all cross Canada. It is a 1968 ope. However, I must assure you that there are changes going on at all times but it is quite up to date.

In addition to that, Dr. Woodward will be handing around a more detailed chart of the organization of the Research Branch showing not only the breakdown by organizational sectors but also some of the more senior personnel by name.

Now, I should like to introduce Dr. Woodward, who is the Assistant Deputy Minister, Research, who has the responsibility for policy direction under the Executive...

Mr. Clermont: Mr. Williams, have you any French copies?

Mr. Williams: I must apologize, but at the present moment this is in the process of being translated.

Mr. Williams: Dr. Woodward, as I said, is the Assistant Deputy Minister, Research, who has the responsibility for policy direction under the Deputy Minister and is part of the senior executive of the Department for all aspects of research within the Department. With him he has Dr. Migicovsky, who is the Director General of the Research Branch, Dr. Rasmussen, who is Associate Director General, Dr. Hamilton, who is Assistant Director General, Eastern, and Dr. LeRoux, who is Assistant Director General in charge of Institutes. Also with us we have Mr. Jim McCrea, who is the Chief, Property and Finance Section.

I think if we pass around these documents at the present time, Dr. Woodward, it will give the gentlemen a chance to see where these people fit into the various fractions of the organizational structure. Thank you, Mr. Chairman.

The Chairman: Thank you, and may I say we welcome you gentlemen. There are two or three new members present this morning. I think Mr. Smith is new this morning. Am I right, Mr. Smith?

• 0945

Mr. Smith (Saint-Jean): No, I have been here before, Mr. Chairman.

The Chairman: You were here? Mr. Thomson, I believe, is new. Are you new today, Mr. Thomson?

Mr. Thomson (Battleford-Kindersley): No, I just was not here for all of the last meeting.

The Chairman: I see. Mr. Noble is new. It is nice to have you here, Mr. Noble. Are there any other new members here this morning?

Mr. Whicher: I was not here for the last meeting.

The Chairman: We welcome you all, but we welcome you new members in particular.

Mr. Pringle: Mr. Chairman, Mr. Bruce Howard of Okanagan Boundary, phoned me yesterday and asked me to express his regrets at his inability to attend this morning, and he hopes that it will be so noted as he is very desirous of attending the meetings and wishes to apply his interest.

The Chairman: Gentlemen, as I mentioned last week, we did permit considerable latitude. We have Dr. Woodward and other members of the Department here for our edification, and if we stick to the agenda as outlined and question our witnesses I think this is the best way to become familiar with the operation of the Department and make the greatest use of their presence here this morning.

I will read Items 5, 10 and 12 and then I will introduce Dr. Woodward who will make a brief opening statement.

Department of Agriculture

Research

- | | |
|---|--------------|
| 5 Administration, Operation and Maintenance including the costs of publishing departmental research papers as supplements to the "Canadian Entomologist"..... | \$34,965,600 |
| 10 Construction or Acquisition of Buildings, Works, Land and Equipment..... | 5,571,300 |
| 12 Grants as detailed in the Estimates and Canada's fee for membership in the International Society for Horticultural Science..... | 800,400 |

These are the items, gentlemen, to which we want particularly to direct our attention this morning and I am pleased to introduce and call on Dr. Woodward for an opening statement at this time. Dr. Woodward?

Dr. J. C. Woodward (Assistant Deputy Minister, Research, Department of Agriculture): Mr. Chairman, we have just tabled the organizational chart for the Research Branch and it is the major research arm of the Department. Its operation and maintenance is covered in Vote 5, its capital in Vote 10, and Vote 12 deals with its support of extramural research.

The objective of the program is to improve the efficiency and quality of production of agricultural products and to develop and modify products to meet current and future market requirements. Activities include problem-oriented research of soils, plants and animals and agricultural products. As you see by the organizational chart, the program is carried out at 26 research stations located geographically to involve them in the agriculture of the various regions in Canada.

The resources of these 26 research stations include a number of experimental farms and currently over 100 rented project farms, and centralized support and service is supplied through the 8 research institutes and the 3 research services.

The primary factors affecting estimates are increasing costs and these include higher pay scales and increasing prices. Thus though we have estimated for an increase of 21 man years over the 1967-68 level, our total man-year input will be considerably less than, for example, 1961-62.

Now, in the time at your disposal I am sure that you will prefer to examine us rather than have me provide you with complete information on our comprehensive and diversified program.

We do hope that each of you will take advantage of any opportunity you may have to visit our establishments and examine our programs at first hand. More immediately, we are in the process of re-establishing our central research on animals and poultry at a site in the Ottawa Greenbelt. We will be highly complimented if you, Mr. Chairman, will arrange for this Committee to visit the site to study the program, as well as the advances in the efficiency of housing and management of animals and birds.

• 0950

The Chairman: Thank you, Dr. Woodward. We thank you for the invitation included in your opening statement to visit the research arm, if this is the proper term, at a time convenient to the Committee to be arranged with your departmental people.

Dr. Woodward: At your convenience.

The Chairman: I have a number of gentlemen who have indicated that they wish to question the witnesses. I now have on my list Mr. Clermont, Mr. Lefebvre, Mr. Whicher, Mr. Lessard, Mr. Lind, Mr. Douglas, Mr. Pringle, Mr. Gleave and Mr. Noble.

Gentlemen, may I ask you to observe the terms of reference and question the witnesses concerning research. Mr. Clermont?

[Interpretation]

Mr. Clermont: Mr. Chairman, Mr. Woodward, I notice that under the item research directorate administration, provision is made under the heading of professional and special services, 1968-69, for \$260,700, as compared with \$80,000 in 1967-68; \$405,000 compared with \$350,000 in 1967-68. My question is this. When you speak about professional and special services, what does that cover?

[English]

Dr. Woodward: I will ask Mr. McCrea, our Property and Finance officer, to answer this question. He can give you detailed answers.

Mr. J. P. McCrea (Chief, Property and Finance Section, Research Branch): The professional service allotment in the Research Branch is devoted principally to char services for the maintenance and cleaning of our buildings and to protective services supplied by the Canadian Corps of Commissionaires.

There are also other things such as chick-sexing and veterinary service for our animals. That is to say, we hire, or call in, practising veterinarians to take care of sick animals.

For the most part that covers the field—the char service in the buildings, protective service provided by the Canadian Corps of Commissionaires and smaller amounts for chick-sexing and veterinary service.

The Chairman: Does that answer your question, Mr. Clermont?

[Interpretation]

Mr. Clermont: This question is difficult to understand. I notice also that at items V, X, and XII, you make provision for overtime. As item V, under Administration you show \$13,600 in overtime, and under Institutions, Stations, etc., you show \$272,500 in overtime. I notice that this is the same for all districts, Mr. Williams. Might this overtime be paid to full-time employees. Would it be possible, instead of paying that overtime, to offer advantages to the young people coming on the labour market...

[English]

Mr. Williams: I hope I understand the question correctly, Mr. Clermont. I must apologize; I was trying to listen to the interpretation and to you at the same time. I am not sure that I did.

My understanding is that you are inquiring whether, instead of paying overtime, it would be possible to increase the number of positions in order to give employment to younger people, in particular on the farms and in the service of the Department?

Mr. Clermont: That is my question.

Mr. Williams: Basically, we try to keep our overtime to a minimum and try to establish positions. However, sir, you will realize that the Department is controlled, not only in dollar expenditure but also in number of positions.

Even more important, many of these over-time functions are carried on by quite specialized people, and it does not really follow that you could replace

them if the money were thrown free and additional positions were provided.

• 0955

For example, as I am quite sure you appreciate, in times of crop harvest or planting it is necessary to try to run your tractors 12 hours a day instead of the eight, which is our standard work day, and we do not believe it would be practical to eliminate overtime.

However, I think we agree fully with the principle you have enunciated.

[Interpretation]

Mr. Clermont: I am not asking you to dispense entirely with overtime. I know that with the Department of Agriculture it is impossible to suppress overtime entirely. I think you have understood the sense of my question. As much as possible, I think it preferable to provide work on a permanent basis, and I also believe that, in the long run, it will cost less.

[English]

The Chairman: Thank you, Mr. Clermont.

I will recognize Mr. Lefebvre.

Mr. Lefebvre: Thank you, Mr. Chairman.

I have three questions to ask. They are of a somewhat local nature, but they may be interesting to other Members of the Committee. I have had a lot of correspondence lately with a group of farmers in my area of western Quebec who wish to improve their stock by having loaned to them, preferably, a Charolais bull. Are bulls of this type loaned to farmers in this area? So far they have not been successful, but they are still carrying on quite a bit of correspondence with the Minister and other officials. They have hopes of convincing you that this should be done, and so have I.

Could you give us a brief explanation of your policy on this type of help to cattle breeders in this area?

Mr. Williams: In direct reply to your question, Mr. Lefebvre the loaning of purebred sires, whether they be cattle, sheep, swine, or horses, is not administered, in general, by the Research Branch but rather by the Production and Marketing Branch.

It is a type of policy in which we are no longer as active as we used to be, and the basic premise on which sires are loaned is on a share-and-share basis, with groups of farmers who are operating what might loosely be called organized community pastures; that is to say, in areas where people get together and graze animals co-operatively, or on some type of a co-operative basis.

We do have a program—and I must say it is not a very large one at the present time—under which the actual graziers are required to put up half the number of the bulls and the Department endeavours to supply the other half.

This is an area, however, that is largely being taken over provincially. This is not true everywhere, but it is one out of which we are moving and into which the provinces are moving.

• 1000

Mr. Lefebvre: In other words, this group of cattle breeders in this area do not have much hope of acquiring this service from the federal Department of Agriculture?

Mr. Williams: I would like to reserve my answer on that question, sir. I will look into the problem and will reply to you later in more detail.

Mr. Lefebvre: In some of the answers they have received they were told that they should investigate the possibilities of artificial insemination.

They have explained to me that these cattle are outside for most of the year and that they would find this a very, very difficult way of improving their stock. That is the reason for their insisting on getting a loan of one of these types of bulls which are better than those they have. Could I say that there is still some hope and that they will just have to keep pushing? Do I have to confine my questions to research this morning, Mr. Chairman?

The Chairman: As far as possible, Mr. Lefebvre, because you will have other opportunities of questioning other witnesses dealing with other phases of the departmental work.

Mr. Lefebvre: I will pass then, thank you.

The Chairman: I recognize Mr. Whicher, Bruce County.

Mr. Whicher: Mr. Chairman, I have two questions. We have under "Research" an expenditure of almost \$35 million which, even today, is a great deal. I want to ask what co-operation or what liaison the Department of Agriculture in Ottawa has with the provinces if they work together in their various projects. My reason for asking this question is that I found that the departments at the political level fight like hell. That is, they take credit when the prices go up, and pass the buck when prices go down. I would like to know if there is better liaison between the civil servants from Ottawa and the provinces than there is between the politicians.

Secondly, inasmuch as we have an expenditure of \$35 million, I would like to ask this question: is there any specific job, any product of research this year that you can say was an absolute success, that you can be proud of and say that because of the expenditure of this money, we have done something definite in research for the farmers of Canada?

Dr. Woodward: Mr. Chairman, in answer to the first question, we have a Canadian Agricultural Services Coordinating Committee chaired by our Deputy Minister which includes all the provincial Deputy Ministers of Agriculture. There are two subcommittees under this main committee, one of which is involved with research, education and extension, and in addition, there are subcommittees of CASCOC at provincial and regional levels which include the Deputy Ministers of Agriculture, the Deans of the faculties of Agriculture, and the directors of our research stations. This is the formal liaison with the provinces. There is a great deal of informal liaison, because we encourage our people at the regional level to co-ordinate and collaborate in the solution of the agricultural problems of the province or region. Our officers give first priority to serving on university or provincial or regional committees which are established for such matters as fertilizer recommendations, recommendations for the control of pests and crops, and any recommendations involving the management of crops or animals. Then, of course, we had a long-continuing and very productive co-operation with the provinces and the universities in the study of our soils in Canada under our Canadian soils survey. If we want an example of something that has been put to great use in this past year, it is the work that has been done co-operatively under the leadership of this Research Branch in evaluating the soils of Canada, and in leading up to land-use policies and the real inventory of our land on a use basis.

• 1005

Mr. Whicher: May I just ask one question. Probably I am ignorant of this and I am speaking strictly as a layman. When we talk about the evaluation of the soils of Canada, we have been in this business for a long time. Do we not know what types of soils we have all around Canada now? Do we have to do this year after year? This is an expensive proposition, and I would have thought that by now we would know what type of soil there is, let us say, in Southern Ontario or in the Province of Alberta.

Dr. Woodward: In answer to your question, we have a reconnaissance survey and a good survey. I think that Canada is one of the leading countries

in its knowledge of soils resource. The kinds of survey we are focussing on today are of land for the particular end-use of the land. In the last year or two we have got a great deal of useful information on our organic soils of Canada because we have not as much organic soils as we have mineral soils, and our earlier work was focussed on mineral soils. Now, in specific advances that we have made, that have come to fruition in the last year—and research is a long-time operation—we have got the study of the codling moth in the Okanagan Valley, which I mentioned the other day, to the point where we are ready for a field trial, and I think this is a real breakthrough. In our work with swine, our research has brought us to the stage that this year, on January 1, we can introduce a new hog-grading system based on the results of research which was largely an outcome of work at our Lacombe Research Station.

Mr. Whicher: Is hog-grading accepted in British Columbia the same as it is in Ontario or right across Canada?

Dr. Woodward: It is a national policy.

The Chairman: I think the question directed to Dr. Woodward is whether or not there is more co-operation between civil servants at the federal level and with the provinces than there is among politicians, and I think Dr. Woodward has been very fair in answering only the one side of it. I think, if I might add, I can supplement his answer a little bit, having worked for the federal Department of Agriculture and also for the Ontario Department of Agriculture, and now being involved as a politician, is like comparing lambs and lions, and I think Dr. Woodward's answer was most complete from the departmental side of it. I will now recognize Mr. Lessard.

[*Interpretation*]

Mr. Lessard (Lac-Saint-Jean): Thank you, Mr. Chairman. I have a few questions to ask about experimental farms. I see from the list that in the Province of Quebec there are some experimental farms, one of which is in the Lake St. John district, at Normandin. For a few years, we have not heard much about this experimental farm. It does not seem that it has progressed or that much research work has been done there and I wonder if your Research Department has a project to develop the Normandin experimental farm, which is well located in an agricultural district. Unfortunately, we have the impression that it is completely ignored in the area. Is there any work done there? If so, there is no publicity about it or very little publicity, little contact between the farmers and people who are working at that experimental station

And I wonder, therefore, if it is not one of the reasons why today, in our area, the provincial government is now constructing in Alma an agricultural laboratory and that last year we built, at St. Leon, in the same district, a research station on blueberries.

[*Interpretation*]

Does your department take part in this agricultural laboratory in Alma? Does it cooperate effectively? Does it participate also in the research station on blueberries? Four million dollars have been invested for blueberry farms. Nothing has been done in the field of research before. Research is now being carried out. What is your opinion on this?

• 1010

[*English*]

Dr. Woodward: Mr. Chairman, after a complete study of a federal program for the Province of Quebec, in collaboration with the Quebec Department of Agriculture, we suggested that we required three major research stations supported by appropriate project farms in the Province of Quebec. One of these was to be centred out of Quebec City for Eastern Quebec with supporting experimental farms at Normandin, La Pocatiere and at Caplan. As you know, we are in the process of establishing ourselves on the campus of Laval University. We therefore expect to be more effective in Eastern Quebec than we have been since we contributed 17 of our key staff members to Laval University when the Faculty of Agriculture was established. At Normandin in 1965-66 we had an appropriation of \$186,000. In 1966-67 it was \$189,000, and in 1967-68 it was \$200,000 expended at Normandin. The installation at Alma is actually a provincial service laboratory. This is a provincial laboratory, and part of our over-all understanding with the Quebec Department of Agriculture is where we would have our principal research stations and how they would support and extend the findings of research for the use of the farmers in various areas. You know as much and perhaps more than I do about their organization, but they have organized into specific regions and services for those regions. In the blueberry developments in Quebec these have been projects established through the ARDA program, so they are joint. The leadership is coming from the province with support from the federal government.

Mr. Lessard (Lac-Saint-Jean): Are you involved in research on blueberries?

Dr. Woodward: Yes, sir. We have blueberry research principally at Kentville, Nova Scotia, our horticultural research station. We have some field work in Newfoundland and some in New Brunswick, but the work in the Lake St. John district is under

ARDA and it is a co-operative project between the federal and provincial governments.

Mr. Lessard (Lac-Saint-Jean): Thank you.

Mr. Lefebvre: I have a supplementary. I believe when you mention \$4 million we should underline the fact that the federal government paid 50 per cent of that \$4 million to ARDA, even more perhaps.

Mr. Lessard (Lac-Saint-Jean): That is why I put that question.

[Interpretation]

Mr. Lefebvre: But this is an ARDA program administered by the province but with 50 per cent paid by the federal government.

[English]

Mr. Lessard (Lac-Saint-Jean): Thank you very much.

[Interpretation]

Mr. Gauthier: A supplementary question, Mr. Chairman. To follow up Mr. Lessard's question, we have just been told by him that his services have increased the amount spent in the Normandin Experimental Farm. Would you please explain why you have decreased the staff?

[English]

Dr. Woodward: Mr. Chairman, the increase in expenditures is as I outlined in my opening remarks, with our increasing salaries and costs and also in conjunction with our over-all livestock research program for the Province of Quebec, which is actually centred at Lennoxville. We have had part of this work going on at Normandin where we have had expenditures for livestock feed.

Mr. Whicher: A supplementary on this ARDA situation. These ARDA projects are opened up inasmuch as you are supplying 50 per cent of the money. I know that the provinces do much of the work, and so on. They spend your money. That is what they do, really. But when these things are opened up, I notice that in Ontario anyway, the Ontario officials are there and I do not blame them for taking the credit. They are proud of these things, but are you told when these projects are being opened? And if you are told, why is not somebody from your Department there to explain the part that you have played in this particular affair or whatever it may be?

Mr. Williams: First of all, I would like to make it clear that in so far as the Department of Agriculture is concerned, we are solely advisers to the Department of Forestry and Rural Development in

respect of ARDA affairs. I am afraid that I am not in a position to answer for the Department of Forestry and Rural Development, sir, as to their representation at these affairs. We do participate quite actively in many of these. We have continuing officers in this Department who are engaged in liaison with provincial committees, some of them on a full-time basis, in the development of ARDA programs. But in respect of your specific question, I am afraid I am not in a position to answer it.

The Chairman: Thank you, Mr. Williams. Mr. LaSalle, a supplementary.

[Interpretation]

Mr. La Salle: Yes, I think that in the interest of all the emmbers of the Committee, before we go any further at the level of research, could the witnesses assure us that first and foremost, there is excellent co-operation between the provinces with respect to research. And, I think that if there is no such collaboration, then there is a risk of duplication of effort and this would mean of course waste, a waste of work and research. Are they in a position to tell us that there is excellent collaboration which would avoid duplication of certain kinds of work or certain kinds of responsibilities?

• 1015

[English]

The Chairman: Dr. Woodward.

Dr. Woodward: Mr. Chairman, this is a very important subject and I question if there is any perfection. I will say that in the Province of Quebec in addition to CASC, the co-ordinating sub-committee which includes the Deputy Minister of Agriculture, the Dean of the Faculty of Agriculture at Laval University and the directors of our research stations, we have a Quebec Agricultural Research Council upon which we are represented and we have frequent informal meetings on an ad hoc basis on particular problems with the Quebec people.

Mr. Williams: I might add a word. As Dr. Woodward points out, I think this is an extremely important question that has been raised. I think I could say almost categorically that we have excellent co-operation. I would, however, have to qualify that statement by the fact that whenever one is dealing with resources that are in limited supply, various people have different ideas about priorities.

I do not believe we have ever been in the position where we have not been able to resolve our differences of opinions in respect of priorities through the mechanism that Dr. Woodward explained earlier. I may say that the Deputy

Ministers of Agriculture and our top research men on both sides meet very regularly and try to thrash out all these problems, but I would not be in a position to say that we do not have arguments and we do not have discussions, but I must say that we do have a very clear understanding of each other and excellent co-operation.

Another point I would like to add is that I think probably in all areas of work, research probably is the least likely in which one might find duplication of effort. If there is anything that a research officer does not want to do is duplicate somebody else's work. Research officers the world over, I think you will find, search the literature very thoroughly before they embark on any type of work to see that they are, in fact, not duplicating somebody else's work because they are quite a jealous crowd—that is to say, jealous of their own abilities—and they are not the faintest bit interested in simply repeating somebody else's work.

Now, by that I am not saying that we do not need formal methods of avoiding duplication and formal methods of co-ordination, but we do have a very strong built-in safety factor in respect of the attitude of research officers.

[Interpretation]

• 1020

Mr. La Salle: A last question, Mr. Chairman, about Quebec—and I imagine all the members are equally concerned their territories. Could I ask the witnesses, whether they are getting satisfactory co-operation from Quebec at all levels of research?

[English]

Mr. Williams: I think possibly we could ask Dr. Hamilton; he is basically our research co-ordinator for Eastern Canada. I think possibly the best answer we can give you is ask to Dr. Hamilton, who works actively with these people on a day-to-day basis, to give you his views on this matter.

[Interpretation]

Dr. D. G. Hamilton (Assistant Director General (Eastern) Department of Agriculture): Co-operation between the federal government and all the groups of the province of Quebec, this co-operation and all the work that we do together is little short of magnificent. Right now it is hard for me to express myself fully in French. If you will allow me, I will continue in English.

[English]

Yesterday I spent all day in Quebec City. Our co-operation, our exchange of views about today and where we are going in the future, there is not one thing to keep it in as good shape as it is any-

where in Canada. I think it is excellent on a man-to-man knowledgeable basis. We are working together for the same group of people, each with his own responsibilities, his own ideas and, without a bit of exaggeration, it is very, very well co-ordinated between our stations, our federal people and the provincial research organization, which is quite large, and also with Laval University.

These three groups, I think, are in as complete harmony as they possible can be, as humans can be, in going forward and trying to do the best things for Quebec agriculture.

Mr. Whicher: Mr. Chairman, a supplementary question...

The Chairman: Gentlemen, there is a danger here of your interjecting supplementaries and then becoming the main questioner. I do have a list to follow and I am going to have to ask for your co-operation in recognizing that.

I now recognize Mr. Lind from Middlesex.

Mr. Lind: Thank you, Mr. Chariman. Dr. Woodward, one of the problems in Southwestern Ontario that has come to the fore quite recently is the corn problem. One of the problems the milling people and the people that use corn tell us is that during the period from September 1 to October 15 it is very difficult for them to obtain a supply of suitable corn to fill their milling needs for feed and also, if we want to go to the special corns, the cornflake companies.

• 1025

For this purpose, we in Canada import a considerable amount of U.S. corn. My question to you is, at what stage are we in research in the Department of Agriculture to provide a 70- or 75-day corn that will yield approximately the same amount of bushels as the longer-day corn? Have I made myself explicit? Do you understand what I am driving at?

Dr. Woodward: Well, sir, genetically we have a negative correlation between yield and days to maturity, so that we have corn in our experimental work that is yielding much higher than corn yielded a few years ago, and actually our yields compare very favourably with the corn yields in the cornbelt of the United States.

However, because of the genetic relationships between early maturity and yield, if we get a crop that will mature earlier, usually it will not compete favourably in yield with a crop that has a longer growing season.

Mr. Lind: Well, how much are we spending at the present time and how many people are engaged in experimenting with this for our agriculturists, to produce these shorter-day, higher-yield corns?

Dr. Woodward: In Ottawa, sir, we have a substantial team on corn breeding and particularly in producing inbred lines and testing them, their crossing ability for hybrids, and we have a corn program at Harrow and then, for the members from the West, we also have a corn breeding program at Morden.

Mr. Lind: Now, one of the areas I touched but did not enlarge upon is the corn used by such companies as Kellogg's for making cornflakes. Have we developed a square-kernel corn and is seed available for our farmers if they wished to grow this crop?

Dr. Woodward: I cannot answer that, sir. The information I have from my experts is that we have not.

Mr. Lind: We have not? Is there any intention on the part of the Department to go into this, because we import a million bushels of corn a year for this purpose?

• 1030

Dr. Woodward: I would be very glad to look into this, sir, and give you the information.

Mr. Lind: That will be fine, thank you.

I have one further question. Do we co-operate in this area with the officials of the United States Department of Agriculture? They seem to have developed the short day strings of corn with a high yield?

Dr. Woodward: Yes, sir. Our research officers and those such as Dr. Lorne S. Donovan in Ottawa and our senior research man at Harrow are working very, very closely with them and have available to them all the information and materials that the American researchers have.

Mr. Lind: In our research department do we go into the problems of transportation and research into cheaper methods of transportation, or is this in an entirely different field?

Dr. Woodward: We do not have any program in transportation, sir, in the Research Branch.

Mr. Lind: Thank you very much, Mr. Chairman.

The Chairman: Thank you, Mr. Lind.

I recognize Mr. Noble of Grey-Simcoe.

Mr. Noble: Mr. Chairman, I wish to direct this question to Dr. Woodward. What is the specific scope of the responsibility of the Research Branch? Is it confined to Government projects only, or does it do any research in animal husbandry for individuals with problems of disease and disaster which need some research?

Dr. Woodward: Mr. Chairman, our program is mission-oriented and relates to problems. We do not, of course, do research under contract or agreement with a single individual, but the problem may often arise as the results of the experiences of a single individual.

Mr. Noble: If they had a serious problem, Dr. Woodward, and appealed to your division would you look into the possibility of doing something?

Dr. Woodward: Yes, sir, we would.

Mr. Noble: Is it the responsibility of the Research Branch to check on the safety of food for humans and animals?

Dr. Woodward: Not actually to check, sir; the actual final control is with the Department of National Health and Welfare. Certainly, in all our research one of our objectives is to produce safe food, because if we do not we cannot market it. Therefore, we work very closely with the Department of National Health and Welfare in this area.

Mr. Noble: Is there any other government division that does research on foods or meats?

Dr. Woodward: We do the research, sir, and the control is under the Food and Drugs Act. There is continuous research in the Food and Drug Directorate of the Department of National Health and Welfare and we certainly have a Food Research Institute. We also have food research, in support of our agricultural products, going on at Kemptville, Summerland, Morden and Lethbridge in addition to our central Food Research Institute.

Mr. Noble: I have one final question, sir. Has any meat been rejected during the last 12 months because of an accumulation of residue from stilbestrol?

Dr. Woodward: I cannot answer that question, sir. I could get that information from the Department of National Health and Welfare.

Perhaps the Deputy Minister may be able to say something on that, sir.

• 1035

Mr. Williams: All I can say is that I do not know either. I do not know of any.

I think I would have known had any been rejected by our Health of Animals Branch. We certainly can get that information and give it to you.

The only problem that I can recall in respect of stilbestrol during the past year was one associated with an export to a specific country which required a certification that it was stilbestrol-free. We were able to negotiate with this country and they accepted a certification that in Canada meat of this

type was obtained from a class of livestock to which it was not normal practice to feed stilbestrol-containing compounds.

Mr. Noble: Is any routine check made on the residue from stilbestrol in meat?

Mr. Williams: Not by this Department, sir. That falls under the Department of National Health and Welfare.

Mr. Noble: That would be the responsibility of the Department of National Health and Welfare?

Mr. Williams: The Food and Drug Directorate of the Department of National Health and Welfare.

Mr. Noble: Then they must have a research branch that does this outside your jurisdiction?

Mr. Williams: It is a control branch as opposed to a research branch; it is an analytical branch, yes. They have quite extensive laboratory facilities in support of their control operations.

Mr. Noble: Thank you, Mr. Chairman.

The Chairman: Thank you, Mr. Noble.

I now recognize Mr. Douglas of Assiniboia.

Mr. Douglas: Dr. Woodward, I was interested in the discussion of a few moments ago about co-operation in research. I would like to observe, relative thereto, that it seems to me that although it may be important that there be no duplication of research, from the point of view of money and time, the more important aspect to the farmers is that adequate coverage be given to all fields of research; that nothing be overlooked, in other words. That is merely a comment I wished to make.

I would now like to discuss the overall fields of research, or question it a little. No doubt you have read a recent report of the Economic Council of Canada which rather took us to task in Canada for our agricultural research. One thing they mentioned, as I recall, was that a large proportion of the research money was spent on horticulture rather than on agriculture. I have not been able to find a breakdown of these figures that indicates how the money is divided between these fields. It is, however, indicated that there is an expenditure of \$800,000 plus for membership in an international horticultural science group.

My questions are: How is the money divided between horticulture and other agricultural research, and is the budget of \$35 million or \$40 million adequate to provide the amount of research advisable, or desirable, in the field of agriculture research, in new varieties of research on markets, which may not involve your Department, and

also weather, which also may not involve your Department?

Dr. Woodward: Altogether, roughly \$14,900,000 is expended on crops. Of that about \$3 million are on cereals; about \$2.8 million on forage crops; about half-a-million dollars on oil-seed crops; half-a-million dollars on tobacco; on tree fruits, about \$2.4 million; \$836,000 on small fruits; and about \$2.7 million on vegetables.

You must remember that we have a great many species of horticultural crops to deal with and that there arise a great variety of problems that are of concern to the farmers of Canada.

It comes back to what I think was your former suggestion, of getting coverage on all the problems and of having sufficient expertise that we can concern ourselves with the problems of agricultural production.

• 1040

The Chairman: Have you finished, Mr. Douglas?

Mr. Douglas: I have finished asking questions, but I hope he has not finished answering them.

Dr. Woodward: Sir, I do not think that we will ever—although perhaps I should not say “ever”—I do not think we ever have had adequate total facilities for agricultural research, considering our own and those of the universities and provinces, to exhaust the possibilities of having really efficient returns from our research input. That is, we have never come close to saturation, if you like.

Mr. Douglas: Do you have research on markets?

Dr. Woodward: Yes, we have research, but not in this branch, sir. It would be in the Economics Branch.

Mr. Douglas: And weather, too? . . .

The Chairman: Mr. Williams will comment.

Mr. Williams: The question was asked whether we had comparable figures on the values of crops broken down into roughly the same category. Of the total farm income for the last complete year that I have here, which is 1966, the revenue from grains amounted to—I am rounding these figures—to \$1.2 billion; oil seeds, \$127 million; other crops, \$487 million; livestock, \$1.3 billion; dairy products, \$582 million; poultry and eggs, \$392 million and all others \$96 million. Basically the figure that I gave for other crops by and large covers horticultural crops.

The Chairman: What was the figure for other crops?

Mr. Williams: It was \$487 million out of a total of \$4,164,000,000. There are crops other than horticultural crops included in that figure—I think you appreciate that gentlemen—but they are largely horticultural crops. This is a gross breakdown.

If you are interested I could read what the other crops include. They include corn, sugar beets, potatoes, fruits, vegetables, tobacco and other crops.

The Chairman: I wonder if it would be too much to ask of our witnesses today that they provide us with the amount of dollars spent and the amount of revenue received in these various departments so that we might be able to express some considered opinion on whether we were top heavy one place or another. I am just commenting offhandedly, but it seems to me that we produce a lot of livestock and livestock products and I assume that our research is in keeping with the overall production in these various areas. However, I think we all would like to be assured of that. Do I express the feeling of the meeting?

Some hon. Members: Agreed.

The Chairman: Would that be possible, Mr. Williams?

Mr. Williams: Yes, and I would suggest, Mr. Chairman, that in addition to the items covered in this vote, it would be more useful to the Committee if we were also to include expenditures made under the Health of Animals Branch in respect of livestock disease research because livestock disease research is carried on under a different vote entirely, whereas crop disease is carried on under these votes.

The Chairman: Is it the wish of the Committee that the Department provide the Committee with this type of information? Am I correct?

Some hon. Members: Agreed.

Dr. Woodward: Mr. Chairman, if I could make a comment on this item for the horticultural science—The International Society for Horticultural Science. This item covers Canada's membership fee of \$400 in this international society.

• 1045

The Chairman: Are you finished, Mr. Douglas?

Mr. Douglas: Yes, thank you.

The Chairman: I recognize Mr. Pringle (Fraser Valley East). I will then recognize Mr. Horner of Crowfoot and Mr. Gleave.

Mr. Pringle: Mr. Chairman, first of all I would like to ask a few questions about the research

being carried on at the present time with regard to poultry. Poultry breeding in the turkey end of our business, of course, has practically disappeared from Canada as far as strange Canadian strains are concerned even though we were the first ones to develop a Broad Breasted Bronze. As a matter of fact, it was developed originally in my constituency many many years ago. We are entirely dependent on and are using American strains which are doing a good job for the turkey industry in Canada.

Now, in egg production stock, it seems to me, we have reached the point where we only have about one breeder in Canada who really is doing a job on egg production breeding and world distribution. Of course, egg production breeding, as you may agree, has now become so highly specialized that unless it is a world-trading operation it is pretty difficult to find the money to continue. We are still doing, I presume, considerable research at considerable cost in egg production and I wonder if you feel this is still a valid way to approach egg production or have you considered the fact that we may get a little more sophisticated and flexible and try to go a step further and spend some of that money on further processing—further processing of poultry, poultry products and even dairy products, although I am not referring at this time to filled milk, but to other legitimate items such as some sophisticated types of breakfast drinks which are invading our markets—which is becoming a very important part of the agricultural industry. I believe our people in the poultry industry would find this of great assistance because those plants involved in processing poultry throughout the country find it quite difficult to get into this business rapidly enough and to catch up with the other research.

As a matter of fact my question was inspired by Mr. Williams' statement that is it not their intention to duplicate work, but it seems to me that the other research work in egg production being done mainly at the private enterprise level has really surpassed us and properly so. To qualify this remark I would like to say I have a great deal of respect for the Poultry Division in the Department of Agriculture. I think they have led the world, over the years, in practical production at the farm level, but now that it has become so highly specialized, there are other larger areas that could overtake us.

I wonder if any consideration has been given to research in further processing of poultry, poultry products and some other items with the aim of helping these people?

There is one other topic I would like to mention very briefly dealing with the difficulties in processing vegetables on Prince Edward Island.

I know P.E.I. is a long way from my constituency, but a company in my constituency happens to have built a processing plant on Prince Edward Island and they are having considerable difficulty with certain products, such as brussels sprouts with rot and one thing and another. Would it be possible for your Department to look into this problem?

I might say that the co-operation between the Federal Department of Agriculture and our boys on Prince Edward Island is excellent, but I wanted to bring this up today because I think Prince Edward Island is an area in which we are all interested. I know the Inspection Division is doing a very rigid job. Perhaps it is considered to be slightly over-militant in some ways, particularly with regard to consistency of inspection as compared to some areas on the mainland which might be looked into, too.

Those are my two questions this morning.

• 1050

Dr. Woodward: Mr. Chairman, I am certainly pleased that we are getting some support for food in research in the field of processing and development, because we have been endeavouring for the last six or seven years to increase our facility in this area. We have now a Food Research Institute of which we are very proud. You are all invited to come and visit our Food Research Institute and I am sure if you visit it, you will be impressed with what is going on. You may be a bit shaken by some of the ideas of what our director feels should be done in this field. We have worked, for example, on poultry products. Our turkey roll is on the market now, a product that came out of our Food Research Institute. But now to answer the question on poultry breeding, I would like to call on Dr. Rasmussen, Mr. Chairman, if I may.

The Chairman: Dr. Rasmussen?

Dr. K. Rasmussen (Associate Director General, Department of Agriculture): Mr. Chairman, I might say this is an area that has been of considerable concern to us in recent years in evaluating our program because of the developments that have taken place, as was indicated, in the large industrial development of poultry breeding. But we still feel there is room for a certain amount of research in poultry breeding in order to develop new principles that can be applied. We want to provide our Canadian breeders and others that may develop with information that will help them to stay competitive. We feel there is still room for a certain amount.

Now we have in fact been reducing the amount of poultry breeding we have been doing at some of our establishments and swinging over more to manage-

ment aspects which we feel have immediate application in various areas.

As far as the turkeys are concerned, we have not recently been involved in turkey breeding. The University of Guelph particularly, as far as I know, is involved, and here again it is a matter of avoiding duplication and working with them in certain aspects of work. We have turkey nutrition going on, but the breeding aspect is being taken care of by others to a large extent.

The Chairman: Do you have a supplementary, Mr. Roy?

Mr. Roy (Laval): Is your work more on the breeding or on the feeding and nutrition level?

Dr. Rasmussen: In poultry?

Mr. Roy (Laval): Yes.

Dr. Rasmussen: We have a fairly well balanced program in poultry, a fairly strong nutrition section here in Ottawa particularly, and also at Lethbridge. There is some small amount of work going on at Agassiz, but this is more in the management field than in the nutritional field. Therefore I think our balance is quite good, actually.

The random sample test is not under the Research Branch. It comes under production and marketing and is not part of our research program. But we advise in terms of the procedures that are used, and I think I can say it is being conducted on a very satisfactory basis.

The Chairman: Mr. Pringle, are you finished?

Mr. Pringle: I think that is all. I do not wish to use any more of your time. Thank you very much, gentlemen.

The Chairman: Thank you, Mr. Pringle. I recognize Mr. Horner from Crowfoot.

Mr. Horner: My question has to do with research in cattle and livestock feeding. The Department has purchased some Simmental cattle for research into growth, growth rate, and rate of gain. Am I right in that assumption?

Dr. Woodward: Yes, sir.

Mr. Horner: Where are they located? What research station?

Dr. Woodward: They are at Lacombe.

Mr. Horner: Why were Simmental chosen? Was there any particular reason over Charolais, for example, or over some other European breed?

Dr. Woodward: Mr. Chairman, they were chosen after a study by our most knowledgeable officials of the information available on the productivity in

terms of lean meat, of what they consider the leading breeds in Europe. The Charolais had already been introduced to Canada. Much information was coming out of private enterprise on the Charolais. There were two other breeds about which we were particularly interested in getting information, and one was the Pie Rouge or the Simenthal and the other was the Limousin, which is a breed we now have at Grosse Ile in quarantine and which will go to Brandon. There will be an integrated program in evaluating these breeds, both as breeds themselves and their ability to produce in a cross-breeding program. We have quite a comprehensive project being set up between Lacombe and Brandon on the evaluation of these breeds.

Mr. Horner: The Department has also bought some Charolais cattle. Are they testing them, or are they using them for the distribution of semen? What is the purpose there?

• 1055

Dr. Woodward: We have not bought any.

Mr. Horner: Not even this last year? You do not have a permit for Charolais cattle in Grosse Ile now?

Mr. Williams: No, the Department does not own any Charolais cattle, at least none that I am aware of, unless possibly there are some that were bought under PFRA programs which of course are not in the Department now, but perhaps were bought when they were in the Department for some of their pasture work. But these would not be the French importations. They would be the Canadian Charolais.

Mr. Horner: I was speaking of the French importation.

Mr. Williams: No. I am quite certain we do not own any Charolais cattle coming from these recent French importations.

Mr. Horner: Has the Department taken a look from the research point of view at the Italian cattle called the Chiana. It begins with a "Ch."

Mr. Williams: I am afraid I am no better than anyone else at pronouncing that. I think it is called Chiana, or some name such as that.

Mr. Lefebvre: That is a wine.

Mr. Williams: It comes, Mr. Lefebvre, from exactly the same district. Possibly that is why the Department is having a look at them.

Mr. Horner: Has the Department taken a look at them from the point of view of comparison with the rate of gain and conversion of feed to lean beef, and so on?

Mr. Williams: I might say that the look that the Department has taken has been only a very cursory one. We have had one official visit to the largest herd in Italy to form some opinion on it. I think you will appreciate that this is a matter of opinion at the present time and can be nothing else. It was simply because this breed had come to our attention in our over-all evaluation of European beef available. Unfortunately at the present time it is not possible to bring this breed to Canada because of health restrictions.

Mr. Horner: I see. In the testing of the Simenthal and the Charolais, is there any test being made with regard to the conversion rate, not necessarily the lean beef, but the conversion rate of grain to beef?

Dr. Woodward: Yes, sir.

Mr. Horner: How do the Charolais or the Simenthal stand up to what would commonly be called our standard breeds or the British breed?

Dr. Rasmussen: I might say that at the present time the Simenthal have not advanced to the stage where we have any information. They were brought in only last year, and this is the first year in which they have been used for breeding. So that we will not in fact have any information on them for a year or two.

The Charolais have been used along with a number of other breeds in a major cross-breeding project that we have in co-operation with a rancher, "The Three Walking Sticks" in Alberta, and some of the preliminary information that we have from the conversions there indicate they will possibly do a bit better than some of our common breeds. This is in the cross-breds only. We have not tested any of the purebreds.

Mr. Horner: With regard to your test at "The Three Walking Sticks Ranch" in Alberta, are those cattle carried out in a beef-testing feeding program, or are your conversion rates only with regard to growth rate on grass?

• 1100

Dr. Rasmussen: The crossbred steers are brought into Lethbridge to a feed-lot test, and they are put on normal feed-lot rations. Therefore we will have information on that basis, and obviously we will also have information on them up to weaning time on grass.

Mr. Horner: Do you have reason to believe that the conversion rate of the crossbreds is better, because of the Charolais strain, or is it solely because of the highbred factor coming into play?

Dr. Rasmussen: Mr. Chairman, this is possibly a bit of a tricky question to answer in the sense that it is extremely difficult to distinguish between the two. In other words, you normally get the highbred effect regardless of breed. You can then evaluate if you have several breeds being tested. You can measure the difference between them in terms of what is simply highbred and whether there is a breed effect as well.

Mr. Horner: The point I am trying to make, Mr. Chairman, is that in the years ahead for cattle to remain an efficient producer of protein food for human beings they have to have a very good conversion rate and in order to ascertain correctly I would think it would be better if the Department first tested the conversion rate on the purebred strains rather than on the crossbred strains because in that regard, as you say yourself, you are in essence really guessing. Is there any thought of testing the purebred strains?

Dr. Rasmussen: At the present time no. We feel that in terms of ultimate efficiency the crossbreds are going to be the deciding factor because all the evidence to date is that you get higher efficiency in total by using crossbreds than you do by using any of the purebreds alone, and we feel that we can get the measure of the effectiveness of the breed in crossing without necessarily testing the purebreds.

Mr. Horner: Well, I think it would be wise to run a test on the purebreds too from the point of view that then you would know exactly what you are crossing. For example, if you were crossing a cattle strain or cattle breed with a low conversion rate, lower than some other strains, you would not really be placing yourself in an advantageous position, and I would recommend to the Department that they give some thought to running some tests on the conversion rate of purebred strains.

Mr. Chairman: I would like to leave the cattle question for a minute and go to the alfalfa problem which causes bloats, I think it is S-18. Have there been any further tests to try and develop a strain of alfalfa without the bloat-causing protein factor in it?

Dr. Woodward: Mr. Chairman, the isolation of this S-18 protein factor in alfalfa is an interesting project, it being the primary cause and agent of bloat. Methods developed now are going into use in our breeding programs. We have methods for determining this protein fraction. I might say that there has been a great deal of interest around the world in this development. One of our chemists who has been on this program is now spending a year in New Zealand where they have also had a great deal of experience with bloat. Their animals seem

to bloat up even easier than they do in Canada, so that it is an ideal place to study bloat.

Mr. Horner: Has there been a strain of alfalfa developed in the United States which is relatively pure? I think I read something somewhere—perhaps in Denver—about there being a strain.

Dr. Woodward: It has not come to my attention sir, but there is a screening going on using the methods that have been developed at Summerland.

Mr. Horner: I have one further question on this bloat problem. There is a block put out in the United States with a mixture of molasses in it and there is an anti-bloat factor in the molasses. Have any tests been undertaken by the Department to ascertain whether if these blocks are placed in an alfalfa field bloat will be eliminated?

• 1105

Dr. Woodward: Well there have been a great many antidotes for bloat, sir, over the last fifty years, and different management procedures have been suggested. We have tested and experimented with these but our principal effort has been to try to determine just what agent causes bloat and to get at the root cause.

Mr. Horner: I realize that, but from the point of view of the product doing what the manufacturer and the sale promotion people say it will do, has the Department taken a look at what I described as a molasses block with an anti-bloat factor in it?

Dr. Rasmussen: I cannot answer that specifically. We have been testing a number of bloat preventatives in recent years but I cannot be sure of this particular one.

Mr. Horner: This is a new one that has come out in the last two years, I would say. It has been used in the United States for the last two years and it came up to Canada last summer.

Dr. Rasmussen: Not that I know of.

Mr. Horner: Would the Department be interested in taking a look at it and running a test on it next summer? Of course, it would be pretty difficult to do now unless you had some real green alfalfa.

Dr. Rasmussen: Certainly, Mr. Chairman, we would look at it to see what we might be able to do.

Mr. Williams: I can say this, Mr. Horner, that we would be prepared to undertake to look at it both from the research standpoint and from the regulatory standpoint, as to whether or not there may be certain elements. I am glad you brought this to my attention. It may be that our people have already done so.

Mr. Horner: It may be.

Mr. Williams: We will report further on it.

Mr. Horner: Thank you. I have no further questions.

The Chairman: Thank you, Mr. Horner. I recognize Mr. Gleave, Saskatoon-Biggar.

Mr. Gleave: I note from this little book here that you record only one man at work on cereal breeding in the Province of Saskatchewan. That is Dr. Hurd at Regina. Is he presently at Regina or is he still in Nigeria?

Dr. Woodward: He is still in Kenya. He is in Njoro in Kenya.

Mr. Gleave: How long has he been in Kenya?

Dr. Woodward: Approximately two years, sir, one and a half to two years.

Mr. Gleave: Has he been replaced? Is there now a man of his calibre in Saskatchewan on wheat research?

The Chairman: Gentlemen, may I draw to your attention that we are losing our quorum. Would you be able to stay, Mr. Lind, for a few minutes?

I realize there is some competition from other committees that are important, but as agreed last week we will break off at 11.30, which leaves as another fifteen minutes or so. We will proceed with your question, Mr. Gleave.

Dr. Rasmussen: The answer to the question is that Dr. Hurd is not back yet. He is still in Kenya and possibly will be there for some time yet. We have recently recruited a new man. Actually, we are transferring the work on wheat breeding from Regina to Swift Current for various reasons, and we have recruited a new man—I am not sure if he is at Swift Current yet but he will be there very shortly—to strengthen our total program. On the return of Dr. Hurd we will then have this new man as an addition. So, about next year we will have two men in Swift Current rather than the one.

Mr. Gleave: You have come to the conclusion that one man in Saskatchewan on wheat breeding is not enough?

Dr. Rasmussen: Yes.

Mr. Gleave: I note by this book that in total you have one man on winter wheat and one on spring wheat in Alberta. On common wheat you have one man in Manitoba and one man on wheat genetics in Manitoba. Is there only one man working on wheat genetics in the three Prairie Provinces?

• 1110

Dr. Rasmussen: Strictly in terms of wheat genetics this is not quite correct, in that we have two cytogeneticists at Lethbridge and we have one cytogeneticist at Winnipeg, in addition to the men that I think you are referring to. So that, in fact, we do have a stronger complement working on the genetics of wheat than would be indicated by that one man.

Mr. Gleave: Of course, all these things are comparative, but the reason I am asking these questions is that the general information I have at home is that our program in basic research on wheat is far short of what is desirable. Of course, perhaps I would not be justified in asking you whether that is so. With all due respect, Mr. Chairman, he may suit himself whether he answers that question, but in my opinion it is far short of what is desirable, especially when we have been short one in Saskatchewan for this length of time.

Another question I would like to pursue is what work has been done or is being done on the development of a winter wheat testing and breeding program in the Province of Saskatchewan?

Dr. Rasmussen: Mr. Chairman, in answer to the last question on winter wheat, we do not have a major definite program on winter wheat for Saskatchewan as such. We have centred our winter wheat program in the West at Lethbridge. The material coming out of Lethbridge is being tested in Saskatchewan. So, there is new material coming in there and it is being tested in Saskatchewan, and we feel that in view of the acreage presently given to winter wheat and recognizing the fact that this could be increased with certain changes in the winter wheat, that this is all that we can afford at the present time.

Mr. Gleave: That is all that can be afforded. How long has this winter wheat testing program been going on in Saskatchewan?

Dr. Rasmussen: I am afraid I cannot answer that question, sir, at the present time.

Mr. Gleave: My information is that several years back there was a short period of testing at Melfort and this was dropped and now, Mr. Chairman, as the speaker says, it is being picked up again at Saskatoon. The reason I am interested in this question is that from very sketchy information I would think that it might be possible that we could use winter wheat in parts of Saskatchewan—surprisingly not the south but the northeast, but this work has not been done and I am concerned about it. There is talk of developing spring wheats that can mature fast and yield more, and so on. If a winter wheat could be developed it would be cheaper, it would fit our climate better and it

would give better yields. As to the yield factor, of course, I think generally with winter wheat you do better. I am concerned about the real lack of money going in. It is said that we cannot afford it. We cannot afford not to do this kind of research. I suppose in point of fact, Mr. Chairman, I may have pursued it as far as I can, but I hope that some real consideration will be given to this. I notice that there is no increase in these estimates for this kind of research and to expect our people to do a job without money just does not go. Would the officials agree that much more money should be spent on cereal research, especially—I would not say especially wheat; other crops are equally important.

• 1115

Dr. Woodward: Mr. Chairman, we certainly appreciate this support coming from Mr. Gleave and we are diverting some resources. There just are not extra resources, but we are diverting some resources, as Dr. Rasmussen pointed out, building up cereal research both in breeding and in physiology at Swift Current. If we can take the time I think Dr. Hamilton could give Mr. Gleave some historical information on winter wheat that might be useful.

The Chairman: Dr. Hamilton?

Dr. Hamilton: I would only say, Mr. Gleave, that I can remember back to 1950 or 1949—and certainly winter wheats were being tested in Saskatchewan then—and quite apart from your question on increases of money, I think the core of the whole problem in winter wheat in the West is, how do we get an increase in winter hardiness itself? I think until Lethbridge can locate whether it is from the wheats from Russia or the wheats from some other part of the world, or even by trying to wring it out of the different genetic combinations we can make ourselves and with the Americans, that the core of the whole problem, the key to it, is to get more winter hardiness that will then take us into other areas. I think if we got it you could not stop us, surely, from being all over the place seeing what this would do. The core of it is to get more winter hardiness and basic genetic ability into the wheat plant so that it can go farther afield than Southern Alberta.

Mr. Gleave: Thank you, and may I suggest also that I think a very considerable amount of attention needs to be paid to cultural methods; that is, there has not been the experimentation with the growing conditions. Now, you plant winter wheat on the bald old prairie on a piece of summer fallow and you have to be extremely lucky for it to survive, but I think there has not been enough experimentation to see what could be done in cultural methods so that winter wheat might survive in the areas where there is a record

of snowfall, where it is ridged into stubble and these sorts of things.

I think experimentation should be going forward on this level at the same time that it is going forward on development of varieties. I, of course, would have to agree altogether that the variety is probably of prime importance but also the environment is of importance.

The Chairman: I am sure we are all agreed that this an important point and that our witnesses have taken cognizance of the Committee's concern for this particular problem and will take it under advisement.

Mr. Gleave: May I ask one more question? We do not have enough men; other than that, is sufficient equipment available at these experimental stations and at the university to use efficiently the manpower that we have there?

Dr. Woodward: Mr. Chairman, I think we have made good use of the facilities at our disposal in development of methods of handling our cereal-breeding program—and we have devoted a considerable part of our engineering resources to introducing labour-saving types of equipment that would facilitate and permit carrying larger populations and broader investigations.

The Chairman: Thank you, Dr. Woodward. I now recognize Mr. Roy of Laval.

• 1120

Mr. Roy (Laval): Mr. Chairman, as you know we are using more and more vegetable protein products for animal feed. Is it the intention of the Department of Agriculture to push the industrial production of rapeseed, soybean and, as my other colleague mentioned, corn? Two years ago, I think, the Trade and Commerce department pushed the use of rapeseed.

Another question is about organic soil in the metropolitan area. We have lost a lot of acreage for vegetable production and, on the other side, we have 15,000 acres of organic soil that is not in production now. We have a station, the experimental farm at St. Clothilde, that has made a wonderful job on organic soil, but I think that station is now inoperative.

I think Dr. J. J. Jasmen now has another responsibility and I do not know whether you have replaced this man. I think we have another 50,000 acres of potential in this area and I am just asking whether it is the intention of the Department of Agriculture to push organic soil production in this area.

Dr. Woodward: We do not promote production. We do research in areas where we feel that there

is good potential to increase production so that we have a very comprehensive research program in our Department. Also we support research in the universities on rapeseed and we have been very much in the forefront in the development of the information which has lead to the great increase in rapeseed production.

Now, the same is true of corn. We have a program on soybeans. For example, in addition to our program in Southwestern Ontario at Harrow we have a program at Morden in the hope that if we could develop a soybean which would adapt itself to the long day length on the Prairies it could have great potential as an oil seed crop.

Mr. Roy (Laval): It is not production that I am concerned with but a soil test to determine whether this can be adapted for production of rapeseed in Quebec. Is the soil adaptable to this production?

Dr. Woodward: Yes, we can grow rapeseed in Quebec, sir, and we do. And we do adaptation tests on rapeseed and make the information available to the Quebec farmers. Now, concerning the horticultural program on organic soils, certainly our program over the years has shown that they have great potential and, as a matter of fact, the industry has now demonstrated that they have great potential in vegetable production. As you know, sir, we have established St. Jean as a horticultural research centre, and we have the substation at St. Clothilde and one at l'Acadie on mineral soils and we are, as fast as circumstances permit, building up a staff for all-round horticultural research at St. Jean.

One of the big limitations has been the availability of professional people but we have, for example, people like Dr. Hamilton there who is one of our outstanding soil scientists as well as a plant breeder who are working toward maximizing the use of organic soils in the production of vegetables.

• 1125

The Chairman: Thank you, Mr. Roy. Now, I still have two questioners on my list; Mr. Muir and Mr. McKinley. I was hoping that there might be some disposition of the Committee to conclude our consideration of these estimates—Votes 5, 10 and 12—this morning and then we might probably, between now and our next meeting, find an opportunity to accept your invitation, Dr. Woodward, and have a look at the research establishment. Would it be the disposition of the Committee to endeavour to do this this morning, if possible? I do not want to railroad. I am prepared to recognize Mr. Muir, Lisgar.

Mr. Muir (Lisgar): Mine is on this particular section, Mr. Chairman. I notice that under grants to the universities this year, you are going to spend

\$800,000. Last year it was \$625,000. This is the grants to all the universities across Canada, I imagine, as well as to other research institutes. And I am concerned about the comparatively small amount that has been allocated to research on grains. The reason I say this is because of the research that the University of Manitoba has gone into on the new variety of triticale. This research program has been going on over the past number of years, three or four years. I would hope that it was done through the co-operation of the federal Department of Agriculture. I am quite sure it is. However, it has been handled by the university extension, and extensive field work has been done on this particular variety. I think the time has come when it should now be possible to evaluate the program and to know to what extent it has been successful. My first question is, has a variety of this particular grain yet been developed that will show consistent high yields and, if so, will this variety be licensed for sale in Canada within the foreseeable future?

Dr. Woodward: Mr. Chairman, first on grants to universities, we had a five-year forecast of building up our grants to universities with the idea that these had two purposes. One was to integrate the national research program and to improve the balance of the program in relation to problems, and the other was to promote the education of research scientists in the fields in which we needed them. So that our increase from \$625,000 to \$800,000 represents our projected trajectory to achieve an increase of \$175,000 a year for five years. The development in regard to triticale has been of great interest to us all. The initial crosses for this development were made by the University of Manitoba and it is a University of Manitoba project. This is a cross between two species, the Durham wheat and rye. It takes a period, from this sort of cross, of from five to 10 years after the cross is made to select for desirable agronomic characteristics and for resistance to disease. These would be the overall limiting factors in the production of a crop, and in triticale we still have a great amount of diversity in material available and some disease problems. We are working very closely with the University of Manitoba in both testing all the available materials that there are on a very wide basis, and also in testing for agronomic characteristics in the yield. Also we are supporting research on the nutritive value of triticale, the relative value of it in livestock rations. I do not believe, sir, that we are at the stage today when we have a triticale which would be of superior value to our producers in relation to our other feed grain crops, but we are very optimistic that within the foreseeable future triticale will be

developed and selected at the stage where it will have a place among our other feed grains. 

• 1130

Mr. Muir (Lisgar): The question leading out of that then is, has it any value other than for animal feed? Is it possible that it could be developed into an exportable grain, as a bread grain?

Dr. Woodward: Yes, I think there are distinct possibilities here, sir.

Mr. Muir (Lisgar): Then, because of its very high yield and the value that it would be to the Western farmer, would it not be possible to push this program a little harder than we have been doing? I know it would take more money, but it is a comparatively small amount when you consider the value, if the thing is developed to the point where it could replace our bread grains on account of the very high yield. I think it is one area where—and I am not mentioning particularly your Research Branch—the people in Agriculture could do a service to Western Canada, if they developed this thing. You said 10 years. I would hope at least within the next three years.

Dr. Woodward: I would hope so, too, sir. There is much work going into triticales to keep abreast as fast as we can go in making the selections in our generations of the crop, and to my knowledge there are no selections that we have today that are really superior in yield—when we put it on an extensive test at a number of locations—to our other cereals. But I am optimistic that there will be.

Mr. Muir (Lisgar): Is this program being developed to the point where you are sending it to Mexico to be grown there during the winter?

Dr. Woodward: Yes, sir.

Mr. Muir (Lisgar): It is being grown in Mexico?

Dr. Woodward: I believe it is.

Mr. Muir (Lisgar): My final question, then. What are your hopes for this particular grain, as a marketable grain not only domestically but for export?

Dr. Woodward: Gentlemen, you know that research people are loathe to make predictions as to the success of research. The consensus is that there is potential there, and potential is worth mining or else we would not be putting so many resources, university and our own resources, into trying to make progress.

Mr. Muir (Lisgar): One question, I think, would be interesting to the Committee. What is the comparison, the protein content of this grain, let us say, in comparison to our hard wheat?

Dr. Woodward: It is a little lower in protein than our wheat.

Mr. Muir (Lisgar): Lower? I thought it would be higher. I was given to understand it was higher, but maybe my information was wrong.

The Chairman: I recognize Mr. McKinley from Huron for a brief question.

Mr. McKinley: First I would like to say, Mr. Chairman, that I, for one, appreciate the invitation that has been extended to us to visit the facilities out here, and I believe that we certainly should take advantage of it. I would also like to say to these gentlemen here, and especially to the Deputy Minister, that as a member I appreciate the assistance that we get from time to time with constituency problems. I have some questions concerning poultry diseases.

The Chairman: Could we deal with that under "Health of Animals"?

Mr. McKinley: I just wonder if it would be better under the Health of Animals branch?

The Chairman: If this is agreeable, we will give you a priority on "Health of Animals".

Mr. McKinley: If I happen to be away, could it be put off until I...

The Chairman: We will endeavour to co-operate with you.

Mr. McKinley: Thank you. I will let it go for today, then.

• 1135

Mr. Cobbe: I would like just one question to clarify the doctor's remarks. Did he indicate that time was a more serious problem with the triticales than the money aspect of it?

Dr. Woodward: Yes, sir, I believe the limiting factor today with triticales is the time required to do the research.

The Chairman: Thank you.

Mr. Muir (Lisgar): I used the wrong word, Dr. Woodward, I said protein instead of nutritional value. There is a difference. Do you know of the difference?

Dr. Woodward: There have been only a few tests. They were done just last year where we had triticales in sufficient quantities of any selection that we could evaluate.

Mr. Horner: The Hutterites in Western Canada grow a grain which is unsalable in Canada. It is

a kind of wheat, a cross between wheat and barley. Has the Department at any time taken a look at that variety? It is grown in and around the Bassano area and they sell it to the feedmill there and it is ground up.

Dr. Woodward: Dr. Hamilton, would you—

Dr. Hamilton: I do not know about it. I am really quite surprised; you said it was wheat and barley?

Mr. Horner: Well, I remember looking at it, and it was whiter than wheat and plumper than wheat as a kernel. It looked more like barley to me, but it did not have the rough husk that a barley kernel has. They claim it has a high yield.

Dr. Hamilton: I do not know what it is.

The Chairman: Maybe we could take that one under advisement and get a question before the member.

Mr. Douglas: There used to be a grain grown when I was young that was called spelts, and it sounds something like this. Emmer, I think, was another name for it.

The Chairman: Gentlemen, may I recognize Mr. Pringle for a quick question?

Mr. Pringle: This relates to my question regarding the vegetables in Prince Edward Island and especially Brussels sprouts. Is there anything being done regarding Brussels sprouts? There is a rot that develops in Brussels sprouts which is not visible to the naked eye until you cut it open, and it is creating a terrible problem down there. I was wondering if there was anything being

done on that and if that could be noted? That was all.

Dr. Woodward: We will certainly note it, sir. Dr. Hamilton, do you have anything to add to this?

Dr. Hamilton: I do not have any information on that particular disease, but our research station at Charlottetown is working very closely with the processing companies on the management aspects of Brussels sprouts and how to grow them, the fertility requirements. We certainly have people there who would be able to do something about this disease if it really is a problem that needs attention.

The Chairman: Gentlemen, on your behalf may I thank Mr. Williams, Dr. Woodward and the other officials of the Department who have graciously attended our meeting this morning. We appreciate very much your willingness to answer and discuss all matters concerning the Committee.

Items 5, 10 and 12 agreed to.

The Chairman: Gentlemen, I thank you very much. That concludes the business of the meeting for this morning. We will meet next Tuesday morning at eleven o'clock in room 209. We will advise you if we are able to arrange the trip to the research station before that, or in the meantime.

This meeting is adjourned at the call of the Chair. We will call the marketing items 15 and 17 next Tuesday morning—production and marketing.

Thank you, gentlemen.

HOUSE OF COMMONS

First Session—Twenty-eighth Parliament
1968

STANDING COMMITTEE

ON

AGRICULTURE

Chairman: Mr. BRUCE S. BEER

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 4

TUESDAY, NOVEMBER 5, 1968

Revised Main Estimates (1968-69) relating to Agriculture

WITNESSES:

From the Department of Agriculture: Mr. S. B. Williams, Deputy Minister; Mr. W. E. Jarvis, Assistant Deputy Minister (Production and Marketing); Mr. C. R. Phillips, Director-General (Production and Marketing Branch); Mr. W. R. Bird, Director, Crop Insurance Division.

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE

ON

AGRICULTURE

Chairman: Mr. Bruce S. Beer

Vice-Chairman: Mr. Marcel Lessard (*Lac-Saint-Jean*)

and Messrs.

Barrett,
Clermont,
Cobbe,
Côté (*Richelieu*),
Douglas,
Foster,
Gauthier,
Gleave,
Gundlock,
Horner,

Howard (*Okanagan
Boundary*),
Korchinski,
Lambert (*Bellechasse*),
La Salle,
Lefebvre,
Lind,
McKinley,
Muir (*Lisgar*),
Noble,

Peters,
Pringle,
Roy (*Laval*),
Smith (*Saint-Jean*),
Southam,
Stewart (*Okanagan-
Kootenay*),
Thomson (*Battleford-
Kindersley*),
Whicher,
Yanakis—(30)

Michael A. Measures,
Clerk of the Committee.

MINUTES OF PROCEEDINGS

TUESDAY, November 5, 1968.

(4)

The Standing Committee on Agriculture met at 11.16 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Barrett, Beer, Clermont, Cobbe, Côté (*Riche-lieu*), Douglas, Foster, Gleave, Gundlock, Howard (*Okanagan Boundary*), La Salle, Lefebvre, Lessard (*Lac-Saint-Jean*), Lind, Muir (*Lisgar*), Peters, Pringle, Roy (*Laval*), Smith (*Saint-Jean*), Southam, Stewart (*Okanagan-Kootenay*)—(21).

Also present: Mr. Whelan, M.P.

In attendance: From the Department of Agriculture: Mr. S. B. Williams, Deputy Minister; Mr. W. E. Jarvis, Assistant Deputy Minister (Production and Marketing); Mr. C. R. Phillips, Director-General (Production and Marketing Branch); M. W. R. Bird, Director, Crop Insurance Division; Mr. J. C. Moffatt, Director, Administration Division; and others.

The Chairman reported that arrangements had been made for members of the Committee to visit the Department's Animal Research Institute, Central Experimental Farm, Ottawa, later this day.

The Chairman called items of the 1968-69 Revised Estimates relating to Agriculture as follows:

PRODUCTION AND MARKETING

Administration

item 15	Administration, Operation and Main-tenance etc.	\$ 2,448,800
item 17	Grants etc.	144,750,000

Animal and Animal Products

item 20	Administration etc.	8,478,500
item 25	Grants etc.	7,908,400

Plant and Plant Products

item 30	Administration etc.	8,394,400
item 35	Grants etc.	130,000

The Chairman introduced Mr. Williams who, in turn, introduced those others in attendance.

Mr. Williams tabled a document as follows:

Vote 5, Research Branch, Estimates 1968-69 (Extracts to show relationship between estimate provision and cash value of crop.)

On motion of Mr. Muir (*Lisgar*),

Resolved,—That this document be appended to today's Minutes of Proceedings and Evidence. (*See Appendix B*)

Mr. Williams read two brief statements on, first, brussel sprouts in Prince Edward Island, and second, productive corn hybrids.

On motion of Mr. Barrett,

Resolved,—That the two statements be appended to today's Minutes of Proceedings and Evidence. (*See Appendices C and D respectively*)

Mr. Williams was questioned briefly.

Mr. Phillips gave a statement summarizing the operation of the Department's Production and Marketing Branch.

Mr. Williams was questioned, assisted by Messrs. Jarvis, Phillips, Bird and Moffatt.

The questioning having been completed, the Chairman thanked the witnesses and the others in attendance.

Items 15, 17, 20, 25, 30 and 35 were carried.

At 1.01 p.m., the Committee adjourned to the call of the Chair.

Michael A. Measures,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Tuesday November 5, 1968

The Chairman: Gentlemen, we have a quorum. First of all, I want to remind you of our trip to the Research Institute this afternoon, leaving the South door of the West Block at 1.30 p.m. sharp. I would hope that we might be able to conclude consideration of the estimates before us this morning by 1.00 o'clock in order that we might have a half an hour to have a bite of lunch and be ready to leave at 1.30 p.m. sharp.

We will be calling Items 15, 17, 20, 25, 30 and 35 of the estimates, which you have before you. We are pleased of course to have the Deputy Minister, Mr. Williams and a number of his departmental officials, and I would ask Mr. Williams to introduce the departmental officials to you at this time.

Mr. S. B. Williams (Deputy Minister of Agriculture): Thank you, Mr. Chairman. On my immediate right is Mr. Jarvis who is the Assistant Deputy Minister of Production and Marketing and Health of Animals; to his right, Mr. Phillips, the Director-General of the Production and Marketing Branch whose votes we are considering today; and to his right, Mr. Moffatt, the Director of Administration of the Production and Marketing Branch.

On the far side are the chiefs or directors of the various sections whose votes you are going to consider this morning. Starting at the end closest to me are Mr. Ken Savage, Director of the Dairy Products Division, and Mr. Grant, Director of the Fruit and Vegetable Division. Then we have two people from the Livestock Branch, Mr. Baird and Mr. Locking—one is Chief of Marketing and the other Chief of Production Services. Then we have Mr. Savage, Acting Director of the Plant Products Division; Mr. Clement, Director of our General Services Division; Mr. Davey, Director of the Poultry Division; Mr. Bird, who is Director of Crop Insurance and has the Ottawa responsibility for the Administrative Services of PFAA; and Dr. MacLachlan, Director of our Plant Protection Division.

The Chairman: Thank you, Mr. Williams. The witnesses are present, gentlemen.

Before we proceed to question the witnesses, there were two or three items of business left over from the last meeting. Certain questions had been asked and Mr. Williams assured us that he would endeavour to obtain the answer. I would ask Mr. Williams to give you those answers now.

Mr. Williams: We were asked by the Chairman to submit information in respect of our research vote and compare it with the cash receipts from farm operations falling roughly in the same area.

This is a statistical table and with your permission, gentlemen, rather than try to read it into the record I will simply submit it for the record.

The Chairman: Could I have a motion to have this statistical table appended to the Minutes of Proceeding and Evidence?

Mr. Muir (Lisgar): I so move.

Mr. Gundlock: I second the motion.

Motion agreed to.

Mr. Williams: A question was asked by Mr. Pringle of Fraser Valley East concerning Brussels sprouts and a disease condition associated with Brussels sprouts in Prince Edward Island. I will read this answer that has been provided by the Research Branch:

See Appendix C in this Issue.

Mr. Lind, Middlesex, asked a question concerning special use of corn and the possibility of the development of a shorter seasoned corn with higher relative productivity rates. The answer as supplied by the Research Branch is as follows:

• 1120

See Appendix D in this Issue.

The Chairman: Is it the wish of the Committee that these statements be appended to our Minutes of Proceedings and Evidence?

Mr. Barrett: I so move.

Mr. Pringle: I second the motion.

Motion agreed to.

Mr. Muir (Lisgar): Excuse me, Mr. Chairman, what sections do you intend to discuss this morning?

The Chairman: We are starting at Item 15, Production and Marketing, and going through to Item 35.

Mr. Muir (Lisgar): Thank you.

Mr. Williams: I have two questions that I wish to answer orally.

The first is an inquiry about the amount of meat that has been condemned in the past 12 months because of stilbestrol-content. The answer, as provided by the Health of Animals Branch, is that their records indicate that no meat has been condemned in Canada within the last 12 months due to the presence of this hormone.

The other question was one by Mr. Lefebvre about the possibility of the Department supplying bulls to bull clubs or grazing associations in Pontiac County.

Our answer to that question is that we do have a policy whereby if a bull club is set up we can loan one bull to a group of five or more farmers if none of these farmers have enough cows to warrant their maintaining a bull of their own.

In the event that a grazing association is set up, where a group of farmers works co-operatively in one area, we are able to provide one or more bulls based on the number of breeding associations, the number of breeding females in the association pasture, and the number of members with small herds—and we consider as small a herd of 25 cows or less. The Department provides the first bull and every second bull thereafter, up to the number required to provide adequate coverage.

We have had an application from a group of farmers in Pontiac County and the information we are passing on to them is that their application will be considered for next year.

Relative to the specifics of the breed of bull, the Department is somewhat concerned, for two reasons, about the choice of sires. One is the relative cost of bulls of this breed, and the other is that there are troubles associated with calving when these bulls are used on relatively small female stock. We feel

that these problems may be increased if farmers with small herds are faced with them, as opposed to those with larger herds who possibly are better set up to handle problems of this nature.

This does not mean that we are, at this point, refusing a bull of this breed, but we are taking this into consideration in reaching a decision. However, it is definitely under consideration for next year.

Mr. Lefebvre: May I ask a question of the Deputy Minister? Will you be giving a copy of this reply to this group of farmers who have applied, Mr. Williams?

Mr. Williams: Essentially this reply will go to them, yes.

Mr. Lefebvre: Thank you.

The Chairman: Mr. Gleave.

Mr. Gleave: Mr. Chairman, I want to ask for the benefit of those who are translating for us, when the proceedings of these meetings will be available? We have had two meetings and we have not as yet received any copies of the proceedings.

• 1125

The Chairman: The answer is soon. It is in the hands of the printers and translators and as soon as it is made available it will be in the hands of the Committee.

Mr. Gleave: Mr. Chairman, at the last meeting I asked certain questions about cereal research and some answers were given by the officials who were here. I wish to go further into that at some future time.

I would have raised it at this meeting but the transcript is not available, and in order to pursue it intelligently I would have to see the verbatim report of the answers I received. When the transcript is out would it be possible to have these men reappear before this Committee so that this matter can be pursued?

The Chairman: The research estimates have been carried, but we will be going back, as you will recall, to Item 1. That would be the opportunity for you to raise this question. If you give us notice in advance we will endeavour, with the co-operation of the Department, to have the appropriate officials present.

Mr. Gleave: All right; thank you.

The Chairman: Gentlemen, I will recognize you in order, in so far as that is possible. I am going to ask Mr. Phillips to make an opening statement, and then I have on my list Mr. Pringle and Mr. Muir.

Mr. C. R. Phillips (Director-General, Production and Marketing Branch, Department of Agriculture): Thank you, Mr. Chairman.

Gentlemen, we thought it appropriate to give you a brief rundown of the operation, and some of their activities, of the Production and Marketing Branch before we started.

This Branch is organized, under the Assistant Deputy Minister, into six divisions and two sections. The Directors of these divisions have been made known to you. We have the Dairy Products Division, the Fruit and Vegetable Division, the Livestock Division, the Poultry Division, the Plant Products Division, and the Plant Protection Division. In addition, we have the Markets Information Section and the Consumer Section. The General Services Division, which we had, is now on its way out, with the transfer of the Retail and Inspection Section to the Department of Consumer Affairs.

The main activities of the Branch are the grading and inspection of agricultural products; the control of quality of major items of agricultural input, such as seeds, feeds, fertilizers and pesticides; the protection, against the introduction of insects, pests and diseases, of field crops; and the recording of performance programs in the dairy, beef and swine areas.

Another activity in livestock has to do with stockyards, and these are generally the terminal stockyards, the agents of which we control. There is also assistance to agricultural exhibitions and fairs, and quality premiums on hogs and lamb.

In the poultry area we have a central test station for testing both the egg and meat breeds of poultry. We have another program in developing breeding strains of poultry, and, as indicated, we have the Markets Information and the Consumer Section.

The establishment in the current year is about 120 less than a year ago. Apart from the area of stabilization the funds provided this year are slightly over \$4 million less than a year ago, although the stabilization funds have been considerably increased.

• 1130

Thank you, Mr. Chairman.

The Chairman: Thank you, Mr. Phillips.

I recognize Mr. Pringle (*Fraser Valley East*).

Mr. Pringle: Mr. Chairman, we are on Production and Marketing and I really do not have any questions this morning with regard to production because it is my opinion that production has been very, very well taken care of—as a matter of fact, especially well—by the Canadian Department of Agriculture over the years.

Part of my question, which has to do with marketing, has already been answered. The Department of Consumer Affairs appears to have absorbed the Agricultural Marketing Division. That is a pretty broad statement and I am just wondering whether we should clarify it a little bit more and find out just what part of the Marketing Division has been absorbed, and if the decrease of \$712,400 is based on this. If so, I am wondering if this decrease in money is justified in view of the possible increase in the cost of administering in the interests maybe of producer affairs. The term “consumer affairs” seems to have slipped in. It is our understanding that the interests of Canadian farm producers are correctly under the wing of the Department of Agriculture and I am wondering if a reappraisal of the policies governing producer protection is now justified to enable producers to serve consumers without losing their shirts, so to speak.

Then I would like, if I may, to ask a question or two about the Agricultural Stabilization Board. I think that there are indications that show that the farmers are finding government subsidies, with a few justified exceptions such as manufactured milk, are becoming less popular. I would like to point out, if I may, that I am referring here to products which lean heavily on the domestic market and are not for export. It seems to me that there is a division which we should really consider. There are farm products which must depend on the export market and there are those which have to depend mainly on the domestic market, and I am wondering if sometimes we really take this into consideration.

Are subsidies not becoming less popular as a concept of stabilization, and is it not a fact that government subsidies as such have really

failed to stabilize prices? They have contributed heavily to costly surplus production and have in fact encouraged to a degree under price supports corporate farming which takes advantage of a guaranteed profit because of a floor price. As I understand it, a floor price is one under which a man can operate.

As a result of the transition from diversified to specialized farming, is it not a fair assumption that farmers are now leaning heavily toward the concept of planned production, quality control, consumer acceptance and sales promotion to establish their prices more in line with prices that are based on cost of production and competition in other comparable foods rather than continuing to produce a surplus and by so doing accept the prices that are offered to them by secondary industry?

Another subject I want to raise has to do with international competition. If I may, I would just like to read from page 81 of the report of the Economic Council of Canada:

Despite this massive reduction of agricultural employment, the volume of agricultural production has not declined...

in Canada.

Indeed, over the past two decades, the volume of total agricultural production has increased...

in Canada.

...by roughly 50 per cent. This...has resulted in a tripling of output per worker in the agricultural sector.

Now on page 86, it says,

Over the past two decades, output per farm worker...

Although it has tripled.

...has been consistently lower in Canada than in the United States.

And it continues:

In terms of net value of production per worker, Canadian farmers produce on the average 25 per cent less than U.S. farmers. In terms of gross value of production, the disparity is about 35 per cent."

• 1135

I am relating this to the international competition. My question relates to the fact that there is really very little disparity between Canada and U.S.A. related to technological

exchange. In fact in turkey production almost 100 per cent of the breeding stock is imported into Canada annually. And is it not evident that the real problem contributing to this disparity, as explained above, is the disproportionate volume of production and consumer population? Since the disparity is reduced to dollars and cents above would not the usual principles of business cost accounting reveal that in order to narrow the economic gap, and I say it facetiously, it would be necessary either to increase Canadian population to 200 million or decrease the United States population to 20 million, or establish a program of equalization through tariff adjustments?

The Chairman: Thank you, Mr. Pringle.

Mr. Williams: The questions that Mr. Pringle has raised are very far-reaching ones and I think we are going to have to try and segregate them somehow in order to try and arrive at those answers which we can provide at the present time.

I believe one of the first points that Mr. Pringle raised was a factual one in respect of transfers from our production and Marketing Branch into the Department of Consumer and Corporate Affairs, and I think I would ask Mr. Phillips to give the factual answer to that question.

The Chairman: Mr. Phillips.

Mr. Phillips: On the question of transfer of personnel to the Department of Consumer and Corporate Affairs, effective November 1 a portion of the Retail Inspection Section—not Marketing—which is part of the General Service Division, went to the Department of Consumer and Corporate Affairs. Now that section of ours was set up to do work on behalf of farmers in the inspection area at the retail level and by using this class of inspector we felt that we were reducing costs because we could have what we call ambidextrous inspectors looking after numerous commodities in the retail stores. In examining the number to go we retained that portion of the section which gave assistance to other divisions on work other than retail inspection. The net result was that 91 positions were transferred to Consumer Affairs with a budget of about \$637,000. It is not in the marketing area per se, Mr. Pringle, it was in the retail inspection.

Mr. Pringle: And that accounts for part of the \$712,000 decrease, does it?

Mr. Phillips: Yes, \$637,000 of that was a transfer that will appear in the Blue Book under Consumer Affairs.

The Chairman: Are you finished, Mr. Phillips?

Mr. Phillips: Yes, thank you.

The Chairman: Thank you, Mr. Phillips. We will refer back to you, Mr. Williams.

Mr. Williams: I might take a little try at the question that Mr. Pringle raised in respect of the Agricultural Stabilization Board and its operation. I think that the questions that Mr. Pringle raised are very well chosen and very apt. These are problems that the Stabilization Board has been engaged with at the present time and has been over the past years. If I could try and summarize it, Mr. Pringle, I believe you raised the question as to whether or not the actions of the Agricultural Stabilization Board tended to increase surplus production and to increase the facility with which corporate farms might be developed. I think that my answer would have to be that while there may be some minor tendencies along that line the way that the Agricultural Stabilization Board is trying to administer its programs with the exception of a very few where we are in a great deficit position in this country, is through quotas or maximum limitations on production. The two exceptions at the present time are the support on wool and the support on sugar beets, in one of which we produce approximately 8 or 9 per cent of the total requirement in Canada, and in the other somewhere between 15 and 17 per cent of our total requirement in Canada.

● 1140

For the other active programs, up until recent years the dairy support program had been an open end program; it no longer is, and it really is the last open end program in which there appeared to be danger of producing surplus to Canadian requirements.

The same sort of answer applies to the question about corporate farms. I should say that "corporate farms" is capable of many definitions. If we call a corporate farm a non-family farm and, basically, a very large farm, our policies in the past, and currently, have been, in general, that these limitations on total subsidy payable to any individual entity tended probably to correct the situation that Mr. Pringle raised.

Mr. Pringle asked questions about international competition and planned production. I am going to ask Mr. Jarvis to say a word on that.

He also raised a question about the output per worker, and the relative productivity of Canadian agriculture as compared to that of the United States.

I would be the last one to wish to take issue with the Economic Council of Canada, but I would be less than fair to our farmers if I were not to say that there are many ways of measuring productivity. Possibly where we stand at the present time is perhaps somewhat less important than how fast we are trying to improve our position, or how fast our farmers are improving their position.

In this connection, I think it would be of interest to you gentlemen to know that a study done within the Department itself and published in 1966—and I will quote directly from that study—has used a different basis to arrive at this measure of productivity. This is a report that was published by Dr. I. F. Furniss in *Canadian Farm Economics* of April 1966, and I quote:

The rate of growth in Canadian farm productivity since 1935 has been 2.2 per cent annually compared with 1.6 per cent for United States farming. Since 1946, the rate of growth in productivity has been somewhat higher in Canada, about 2.6 per cent as compared with 1.4 per cent in the United States. In contrast with the slightly declining trend in Canadian farm inputs, United States farm inputs have increased fractionally over the 30-year period, about 0.3 per cent annually, but since 1946 there has been virtually no change in the volume of United States farm inputs.

And "productivity" in this case is defined as: ...the ratio of the index of output to the index of inputs with both indexes based on constant dollars.

Dr. Furniss, in doing this work, used 1949 as the base year. Basically what I am saying here is that these differences can be measured in different ways, and have different meanings depending on the way they are measured, but, irrespective of the position we may be in at the present time, we are making faster progress than possibly the Canadian farmer's counterpart in other countries of the world.

I have asked Mr. Jarvis to say a word about this question of international competition and the over-all area of planned production.

Mr. W. E. Jarvis (Assistant Deputy Minister—Production and Marketing): Mr. Chairman, Mr. Pringle has mentioned a particular trend towards more and more planning on the part of producers and towards more planning of production, promotion and quality control.

• 1145

In this general area I am certain that we can agree with Mr. Pringle that the primary emphasis in the trend, which is a very definite one amongst producers across the country, has been on the development of producer-marketing boards, or marketing commissions, in the various provinces. It is also quite accurate to say that among producers across the country there has been a considerable increase in the establishment, by one means or another, of national marketing boards and national marketing commissions.

As a matter of interest, it is worthy of note that there are some 54 marketing boards across the country which currently have in their possession a delegation of authority from the Canadian Department of Agriculture and the Agricultural Products and Marketing Board to give them the authority to exercise in interprovincial export trade the same powers that they can exercise within their own province or area of authority.

Similarly, six boards have authority to collect levies to assist them in their marketing programs.

Certainly this supports the notion that there is an increased direction and movement among producers and an increased consciousness of quality of production and of the necessity of getting together to serve markets adequately with a quantity of quality product. This certainly relates to our ability to compete in our own and in international markets.

That is my only comment in that regard, Mr. Chairman.

The Chairman: Thank you, Mr. Jarvis.

Mr. Pringle has a supplementary.

Mr. Pringle: My question relates to production cost. If I may say so, I am in agreement with the Deputy Minister that Canadian farmers are doing an excellent job, with the help, as I said at the outset, of the Canadian

Department of Agriculture which has done a fantastic job in assisting in the production of products in Canada. The farmers have responded.

I am concerned however, about whether we are applying the right judgment to the disparity between the fantastic volume of production available in the United States and the fantastic consumption available to consume this volume in the United States as related to our Canadian counterparts.

Do we not really require definite study and definite action to ensure that we are properly equalized? This we can only do, as I understand it, by a rather difficult negotiation period spent on tariff schedules. Can we have an answer to that question.

Mr. Williams: Mr. Pringle, perhaps I had better describe my reply as a comment rather than an answer.

The point you have raised is a very important one. I would like to add to it, however, that although it is true that their total productivity in the United States is approximately 10 to 12 times as great as that of Canada, we must also remember that because their population is approximately that much greater than Canada we have that much greater opportunity for a market.

There are certain segments of our agricultural industry that benefit greatly from the proximity of that market. Conversely, there are segments of Canadian agriculture that are from time to time adversely affected by the proximity of that huge amount of agricultural supply.

As you quite rightly point out, sir, it is a question of striking balances and of reaching some determination of what commodities we are best able to produce and compete with on the North American market, and what products have to be handled in a different manner.

You mentioned the point of increasing work being undertaken on this. This is one of the areas of work that the Canadian task force on agriculture has undertaken and I am very hopeful that as a result of their studies we may be able to present to Canadian agriculture some more definitive ideas or suggestions on this very important point that you have raised.

The Chairman: Thank you, Mr. Williams.

I recognize Mr. Muir (Lisgar).

Mr. Muir (Lisgar): I propose to address my question to Mr. Williams, Mr. Chairman, because as former chairman of the Stabilization Board I am sure he has all the answers.

• 1150

I notice that the amount to recoup the Agricultural Commodities Stabilization Board account is \$100 million for 1967-68 and \$144.5 million for 1968-69; and there is also another loss in the Agricultural Products Board of \$250,000 this year. What is the difference between these?

Mr. Williams: Between the two Boards, sir?

Mr. Muir (Lisgar): Yes.

Mr. Williams: First of all, I wish I could agree with you, sir, about my being the former chairman of the Agricultural Stabilization Board. I am still the chairman. The major difference between these two Boards is that they work to complement each other.

Under the Agricultural Stabilization Act there are nine mandatory commodities, and the Act requires that once a support program is put into effect in respect to these mandatory commodities it must be at a fixed level and must be in effect at that level for a minimum of 12 months. Under the Agricultural Products Board Act there is no such a restriction.

Possibly I can illustrate the use of them by an example. We have a support program for eggs. Under it the price at which eggs are to be supported by a deficiency payment is 34 cents a dozen. That 34 cents a dozen, once established, had to remain in effect for 12 months. However, because of local situations, and particular situations that arise from time to time during the year, it was considered desirable to further support the market by *ad hoc* purchases.

Under the Agricultural Products Board it is possible for the Board to be authorized to make purchases of agricultural commodities from time to time at any level at which the government might wish to make them, and they do not have to remain in effect for any length of time. Under the egg support program, when eggs reached a certain level the Agricultural Products Board could buy them at any location at any price that was authorized by the Governor in Council.

Therefore, one has the advantages of built-in guarantees in terms of levels and time and the other has the advantage of flexibility; and they are both used.

The Agricultural Products Board, incidentally, has further authority in that it is authorized to make purchases on behalf of the Government for government purposes and to implement inter-governmental agreements. For example, we sometimes purchase under it for food aid and then resell.

The Chairman: Have you a supplementary, Mr. Gundlock?

Mr. Muir (Lisgar): First of all, I would like to apologize, Mr. Williams. I had just promoted you to Deputy Minister. Having become that I thought that you had given up the job as Chairman of the Agricultural Stabilization Board.

What products are supported under the Agricultural Stabilization Board as of today?

Mr. Williams: There are the nine mandatory commodities that are under support at the present moment. Whether it is an active program or not, they are all supported at the minimum required by law, which is 80 per cent. These are wheat, oats and barley in areas other than those covered by the Wheat Board Act; and cattle, sheep, hogs, butter, cheese and eggs.

Additionally, there is at present a program on sugar beets...

Mr. Muir (Lisgar): Wool? Ontario corn?

Mr. Williams: We consider wool to be part of the sheep support. We have support for wool and for lambs but we consider it to be under the mandatory part for sheep. We have a program, which is still being terminated, for potatoes. That was under the Agricultural Stabilization Act, as well.

I think those are the only active ones at the present moment.

Mr. Muir (Lisgar): Under what act, then, is Ontario corn supported, or is it?

Mr. Williams: The action that has been taken by the government in respect of Ontario corn is under value for duty under the Customs Act, not under an act administered by the Department of Agriculture.

• 1155

Mr. Muir (Lisgar): What criteria do you use to support any additional products that producer organizations feel should be supported, at least temporarily, to overcome what may be a serious development that could, in a

relatively short time, wipe out that particular segment of agriculture?

Perhaps, I should go a little further and give, as an illustration, the old oil-seed industry of Western Canada. This industry, particularly the sunflower-seed industry in Manitoba, has been supported once since it was set up in Manitoba. At that particular time it cost the Federal Government approximately \$44,000, but it saved what I consider to be a very viable industry that has become one of the main cash crops to the farmers of Southern Manitoba.

This particular industry is in serious trouble at the present moment because we are allowing the importation, mostly from the USSR and the satellite countries, of vegetable oils and vegetable oil seeds. They are set down in Canada at below our cost of production.

I do not think this particular situation can last too long, so far as the industry is concerned, because if it goes on for another year there will be no oil seed industry left in Manitoba.

Can anything be done under the Agricultural Stabilization Act, or by the Department of Agriculture, to save this very important industry for that province?

Mr. Williams: Possibly my best approach to this, Mr. Chairman, is to try to answer the question relative to the particular commodity that Mr. Muir has raised as an example.

I think you will appreciate that the criteria used by the Agricultural Stabilization Board in determining what recommendations it is prepared to make on support programs will depend greatly upon the commodity. I may say that not only are sunflower seeds affected but also rapeseeds and soybeans.

The Agricultural Stabilization Board received representations from the industry in respect to support for these programs. The problem, as the Agricultural Stabilization Board assessed it, lay not with depression in prices caused by internal factors but because of external factors for the remedy of which other legislation probably existed. This was the view of the Agricultural Stabilization Board.

The Agricultural Stabilization Board therefore recommended that an interdepartmental committee be formed to study the entire question and to try to resolve this problem which, as you have described it, is depression

in prices brought on by the import of products at prices that bear a rather poor relationship to the prices that had existed in Canada previous to that time and, as a matter of fact, anywhere else in the world, I would presume.

This question is still under consideration and we are very hopeful that it will be resolved shortly. However, it did not appear to the Agricultural Stabilization Board that it was appropriate to use an indirect method of solving a problem for which a direct solution could be available to the legislation, if the facts were as the Agricultural Stabilization Board understood them. This, of course, is the reason, for the Agricultural Stabilization Board's recommending that an interdepartmental committee be set up; because the legislation that the Agricultural Stabilization Board felt was applicable was not legislation that was administered by the Department of Agriculture.

Mr. Muir (Lisgar): Are you thinking of value-for-duty legislation, or something like that?

Mr. Williams: Something related to it, Mr. Muir.

The Chairman: Thank you, Mr. Muir. I will acknowledge one supplementary. Mr. Gundlock indicated that he had one.

• 1200

Mr. Gundlock: I would like to ask Mr. Williams, Mr. Chairman, what are the criteria for maxima in support and what are the criteria for establishing a minimum? I think we all are, or should be, concerned with the minima. For example, if I do not produce so many dozen eggs, so much milk I get no support. It is the same old story—one side of the fence or the other. What are the criteria for the minima?

Mr. Williams: Mr. Chairman, one of the criteria that are used in establishing minima under the Act is the effort to assist producers although I should not say "assist";—it is probably the wrong word—to try to move the bulk of the support to the areas where, in the view of the Agricultural Stabilization Board, it is most needed; that is, to the areas that more closely approximate commercial production.

In the case of the minimum restrictions that the Board have put on, it has felt that there are two things involved. One—and this is of lesser importance, in the view of the

Board—is the actual administrative cost associated with making very, very small payments to people—payments that probably would be of little or no significance to them; and, secondly, the more important factor, that it wished to put the weight of its support where it believed it would do the most good in terms of stabilizing prices.

You will appreciate that the minimum that has been set by the Board for wool, for example, is 20 pounds, which represents the wool from perhaps three or four sheep; and I think it is difficult to reach the conclusion that a person with three or four sheep is really in the sheep business. In respect of eggs it is 1,000 dozen. I do not recall at the moment how many hens that represents, but it is not very many.

Mr. Pringle: About 400 hens, I think.

Mr. Williams: We can work that out. I thought it was considerably less than that.

However, those basically are the criteria that are used.

The Chairman: Thank you, Mr. Williams. A supplementary, Mr. Lind?

Mr. Lind: Through you, Mr. Chairman, to Mr. Williams.

You quoted a support price of 34 cents a dozen on eggs. Is there a support price on eastern oats, barley and wheat?

Mr. Williams: We will provide the answer to your question.

Mr. Lind: One further question. Is there any subsidy paid on rapeseed and sunflower seed that is brought into Eastern Canada to the railroads as far as transportation is concerned?

Mr. Williams: I am sorry, I did not hear the question.

Mr. Lind: Is there any subsidy paid on subsidizing of transportation for rapeseed and sunflower seed from Manitoba, shall we say, that Mr. Muir was talking about, to Eastern Canada?

Mr. Williams: Rapeseed, I believe, is eligible for the Crows Nest Pass rate and the sunflowers are.

Mr. Lind: They are both considered at Crows Nest Pass rate?

Mr. Williams: Yes, both get the Crows rate.

Mr. Lind: Thank you.

Mr. Williams: Your question in respect of support. At the present time the support price which is 80 per cent of the base price, which is the requirement of the Act for the current year for wheat not coming under the Canadian Wheat Board, is \$1.41. For oats it is 59 cents, and for barley 93 cents. All bases are numbered 2CE or better.

The Chairman: Mr. Douglas of Assiniboia.

Mr. Douglas: I had a question with regard to the Markets Information Section. I am wondering if that section has any responsibility for setting guidelines, you might say, for production. I know that there was some effort made to set guidelines at conferences from time to time. I think there is some concern among farmers that these guidelines are not either sufficiently reliable or sufficiently well researched to give them information accurate enough to base their production plans upon. I was wondering whether your Department has the responsibility for that sort of thing.

• 1205

Mr. Phillips: Mr. Chairman, the Markets Information Section is a section which receives market information from the individual commodity divisions of the Branch and assembles the information in conjunction with the Economics Branch. They make some comments with respect to the market, but they do not set guidelines per se for production. I believe you might have reference to our outlook conference which is held in November in which the federal and provincial officials meet and go over situation and outlook papers, and put out outlook information. These then go to the provinces and are used by the provinces in their own outlook conferences.

Mr. Douglas: It seems to me that we need better market information. I am thinking particularly of export markets for grains and cattle and so on, to give farmers a better idea of what they should be trying to produce. In Western Canada at least, and I think to some degree in Eastern Canada too, we have been led astray by some of the forecasts over the past few years, and I would hope that something could be done to improve the forecasting.

I have another question, Mr. Chairman, if I may.

The Chairman: Yes.

Mr. Douglas: It has to do with Vote 15 on the Prairie Farm Assistance Administration. I believe it comes under this. I have heard some discussion with regard to the possibility of the Prairie Farm Assistance Administration being phased out. I was wondering if anyone could comment on this or answer that question, if you could call it a question.

Mr. Williams: Mr. Chairman, I think I would have to say in reply to that last question that this is a policy matter and I do not think it would be quite appropriate for officials to comment on it. I could say, however, that I know of no plans at the present time to phase out P.F.A.A.

In respect to the other question you raised, if I might take the liberty of making an observation, I think one of the problems with outlooks is that if it accomplishes its objective, it actually fails. The objective of any outlook is to persuade people to change their production patterns, either to meet a high market or a low market. Now when I say to meet a low market—to avoid a low market or take advantage of a high market—if you persuade enough people to change their plans because they believe your outlook, this means that that high market did not occur nor did the low market occur, because the production was changed to meet it. So that basically the function, as I see it, of an outlook is to bring stability to it, and allow people to take advantage of these high markets. But of course if you persuade enough people, the high market does not occur, other than, as you quite rightly point out, probably in international markets where the volume we produce may be of lesser significance and may not change the price because it may not have that much impact on the total supply. But there is a basic problem here.

Mr. Douglas: I would just like to pursue that Prairie Farm Assistance a little bit more. The vote that we are talking about here is only for the administration of it, apparently, and it is a little higher than it was the previous year. But I have not been able to find where the payments—there must be a place somewhere for the payments that are made—a deficit, you might say, between the 1 per cent collection and the payments accounted for.

Mr. Williams: In the current year's estimates there are funds in the fund, and no item is put in the Estimates. If further funds

are required, they will be provided through supplementary estimates. It is a question of estimating procedure.

Mr. Douglas: Oh, I see.

The Chairman: Mr. Gundlock.

• 1210

Mr. Gundlock: Mr. Chairman, I think Mr. Williams may answer this question. It has to do with the procedure in establishing or putting into effect a subsidization payment. I have in mind a particular year, and I think you will recall the case. What are the rules and regulations, and are they the same as they have been in the past? For instance, a stabilization for the price of land. I think you will recall. Someone has to order that. Is it still the same? Is it the Minister? Is it you as chairman?

Mr. Williams: The actual procedure is that if the support level is established at 80 per cent, the Board must act to maintain it at that level with no further directions from anybody. If it is established at above 80 per cent—since this is a mandatory commodity, at least sheep are a mandatory commodity and the Board has interpreted that as support for wool and lamb—if it is maintained at above the support level, the Agricultural Stabilization Board make recommendations, the Minister recommends them to the Governor in Council, and the Act provides that with Governor in Council approval, levels higher than 80 per cent can be established. The Board then is instructed to apply the level of support that the Governor in Council approved.

Mr. Gundlock: Was that the case in the instance I am speaking of? I think you recall it.

Mr. Williams: I am not certain I recall the exact details.

Mr. Gundlock: Was it above support level at that time?

Mr. Williams: I think they have always been. Wool certainly has always been above the mandatory level, and lambs have always been above the mandatory level.

Mr. Gundlock: Thank you.

The Chairman: I recognize Mr. Roy.

[Interpretation]

Mr. Roy (Laval): Mr. Chairman, Mr. Minister, last week we were taking decisions on the research estimates. I think this item was most important and brought us to study the production markets. So I think here that normally the marketing and production implies the implementation of research which is being done this year. It is very important to know and define the objectives of the Department.

I am slightly concerned. I do not know if I am right but I think there is a reduction in the staff of the Department of Agriculture or so it would appear from the estimates. I would like to know the Department's policy with respect to the introduction of milk substitutes which eventually will probably create problems in the marketing of dairy products. I have an example here and I do not know whether the Department is already aware of this situation. Right now it seems that the well-known Oka Trappist Cheese Plant is about to close down and this will create new problems for the milk producers of Argenteuil county and another milk product will disappear from the market. With the increase of milk substitutes at the present rate the position of dairy products will be very bad. Now I have another comment to make here under the vote with respect to Production and Marketing. I would like to know why we cut the subsidies for cheddar cheese which represents rather an important source of income for our dairy producers. Last year the subsidy was \$1,642,000 and we are allocating \$50,000 for this year. I would also like to learn from the Department, why we have changed the policy on quality premiums for pork and lamb. You show here a decrease of \$8,514,000 to \$6,150,000. On the other hand I see there is an increase in subsidies under allowances and subsidies. It was about \$100 million while this year we are increasing it to \$144 million. So, is the policy of the Department to lean towards a price support policy? Or, are we going to do away with the quality premium policy now? I would like to know the reasons from the officials of the Department and also if possible I would like to know what premiums were paid last year with respect to the nine products which are subsidized right now?

• 1215

[English]

The Chairman: Thank you, Mr. Roy.

Mr. Williams: Once again, I will have to try to answer this in part.

The first question asked was one on departmental policy in respect of substitute dairy products.

I doubt that I can summarize this too well other than to say that we have met on several occasions with producer organizations. At their request the department has been developing an over-all policy for Canada.

The reason for this is that basically the authority to control the production of substitute dairy products lies with the provinces.

At the request of the provinces, we have been working to develop a national policy that all provinces will, by agreement, undertake.

I think the provinces are all concerned that they may go diverse ways, as happened with margarine, you may recall. They wish to try to avoid a repetition of the situation that happened with margarine, that is, that it was legal in some areas, illegal in others and partially legal in some others.

Therefore, we are working with the dairy farmers of Canada, the farm organizations and the provinces to develop a national policy because the basic authority lies in the provincial area.

The Federal Government can involve itself only if it comes under the pure food laws, that is to say, in respect of whether or not it is harmful as opposed to whether or not it should, or should not, be produced. That is the situation in that respect.

A question was also asked about support programs and whether the Department was moving away from quality premiums toward support programs.

Perhaps I should say one word of explanation here. The item that is printed for 1967-68 was an estimate item and was put in very much ahead of time. You will note that just to the left of that in your copy of estimates it shows our estimated expenditure for 1967-68 at \$143 million. In other words, the \$100 million figure was an estimated figure that was put in very much ahead of time, and that was the item provided in the estimates for 1967-68.

The actual estimated expenditures at the time this was printed were \$143 million. The difference between the levels of support in the two programs is not nearly as great as would appear on the face of it, because the

remainder of that was provided later by supplementary estimate. It is a question of the form in which they are printed.

Turning to the question you raised about the two programs in which, in one case, quality premiums were eliminated and in the other reduced, it is simply a case of programs having been in effect for some time and having apparently accomplished their objectives.

• 1220

In the case of the hog premium the situation was that this program had been in effect for, I believe, 25 years. The government had spent very large sums on it and the percentage of Grade A hogs had essentially reached a plateau and no further improvement was forthcoming. It had ranged at something slightly over 40 per cent for some time, but it did make remarkable gains in the first portion. When the program first came into effect I think we were only getting about 28 per cent Grade A hogs and it had increased to that but then levelled out. You will recall, of course, that I mentioned at the previous meeting that the entire system of grading hogs has been changed so as again to put more emphasis on quality.

In the case of the cheese premium the situation is somewhat more complex, but it actually quite closely parallels the other one. I do not have the figures with me here, but I will be glad to provide them. The quality of cheese increased very sharply in the early years that the premium was paid and after that reached a plateau and had been at that plateau—which was a very high level, incidentally—for a great deal of time. It was therefore decided that this program had served its purpose, namely, of increasing cheese quality, and was disappearing.

Perhaps I should also say that at the same time some of the provinces brought in quality programs for their milk, and the Canadian Dairy Commission has made the same announcement, which should tend to serve the same purpose.

The Chairman: I recognize Mr. Howard.

[*Interpretation*]

Mr. Roy (Laval): Could we review the premiums for the nine products of last year? Could you give us I mean the amount for the nine products?

[*English*]

Mr. Williams: Go ahead with another question.

The Chairman: All right; we will come back to it later.

Mr. Williams: No; I have it here.

[*Interpretation*]

Mr. Côté (Richelieu): Mr. Chairman, on the same topic, sir, I would like to direct a question to the Deputy Minister. How will elimination of the premium—which appears justifiable—affect the producer and the middleman? Will this same classification enable the producer to recover the difference which he was deprived of because of the premium was taken away from him?

[*English*]

Mr. Williams: Mr. Chairman, I am afraid I cannot answer that question until we know, first, the level at which hog premiums will be set in the forthcoming year, and, second, exactly how the policy of premiums based on the market value works; and we have not been involved in it as yet.

The Chairman: May we come back to the first supplementary?

[*Interpretation*]

Mr. Roy (Laval): Will the prices be related with this quality which is supposed to be higher than the prevailing quality right now ... with this new classification?

[*English*]

Mr. Williams: Under the new, or proposed, pricing system—it is not new yet; it is to come into effect on January 1—each hog will receive an index number. These numbers range, I believe, from something like 69 to 112.

The price that is quoted to the farmer will be for a hog having an index of 100. If his actual hog, because of its excellence, has an index of 110 he will receive 10 per cent over the quoted price for it.

Perhaps I could give an example. Let us say the price quoted today for hogs having an index of 100 is \$30.00. If you have a hog with an index of 110 the price you will get per hundredweight for that hog will be \$33.00. If, on the other hand, it has an index of only 90 the price that the farmer will get for that hog will be \$27.00 per hundredweight. Therefore, between 90 and 110 you have a 20 per cent difference in value per pound.

• 1225

Mr. Peters: Does he get this in the market place?

Mr. Williams: He gets this in the market place. Any hog premiums that may be applicable in the new year will be over and above that.

The Chairman: I now recognize Mr. Howard (Okanagan Boundary).

Mr. Howard (Okanagan Boundary): Mr. Chairman, I have some questions about the various assistance programs that are permanently under way.

May I have the total figure of the cost of all of these assistance programs, including the Prairie farm advance grain payments, and the projected figure for the next five years?

I would also like to discuss the over-all policy of the Department on the various stabilization programs. I am concerned about the fact that so many of the items being stabilized or assisted in various ways seem to be on a permanent stabilization program. It appears to me that our agricultural policies are failing if we have to many products that have to be assisted on a permanent basis. Surely other methods are available to us to rationalize production, to equate production with demand, rather than a continual program of subsidy.

I look, for example, at quality premiums on lambs on page 27 in the list here; and an item on quality premiums on high grade hogs and lamb carcasses. You mentioned that you thought this hog premium was going to be eliminated, but everything that I read indicates that lamb and sheep production in Canada is less than an economic proposition. Yet we find, in our aid programs, or our subsidy programs, that we are assisting a commodity which the economists tell us—which you yourself will tell us—is not a viable commodity in Canada.

I am questioning the long-range philosophy involved in the aid programs. I want to make it very clear that I recognize the necessity of stabilization programs for various products. It is not this principle of it that I am questioning; it is the principle of a continual program, with apparently no end to it, for many of these commodities. I would like to have some discussion on that.

Mr. Williams: To reply to the original part of your question, first of all, the law requires that nine commodities be supported, or that

there be programs, at least, at the 80 per cent level.

Now, that beggars the question you have raised, that many of these are supported well above that level, but the basic premise is that we have in this country nine commodities that the Parliament of Canada has said must have some price guarantees.

I may say that when payment was made these, other than wheat, oats and barley produced in the specified area, represented somewhere between 75 and 80 per cent of the total value of all agricultural production in Canada; and you will recall, of course, that wheat, oats and barley produced in the specified area do have the price protection of the initial payment.

On the question of the rationalization of these programs, I suppose that of all the programs we have there is no doubt whatsoever that the major one in terms of expenditure is the dairy support program.

In recent years, through the Canadian Dairy Commission, we have taken major steps forward in an effort to rationalize that industry. These steps consist largely of applying a quota-eligibility figure for the phasing out of payments to those who we do not believe have any hope of continuing, or who, by their own decision, reach the conclusion that they do not wish to continue, in dairying, and of applying once again the funds that are available through these quotas to assist those who move towards more economic production and more economic size.

• 1230

The policy enunciated by the Canadian Dairy Commission has been to re-allocate quotas to those who will improve the size of their operation and move towards a more efficient operation, with the eventual hope that the need for subsidies at the level at which they are currently being provided may become less.

The Canadian Dairy Commission is not providing subsidies to new farmers who wish to move into the business other than if they propose to take over a farm that presently is considered to be of a reasonable size.

One could get into endless debate on whether or not the sizes chosen are appropriate, but many other factors have to be considered in reaching a decision on size.

You specifically raised the question of the sheep industry, and I think you said that I would agree that sheep farming is not an economic proposition in this country. Being an old sheep man myself, I am afraid that I could not bring myself to agree that it could not be an economic one. I must agree however, that many of the aspects of sheep farming in this country are not economic at the present time. I think one is dealing with a somewhat different problem here that, by and large, sheep farmers in many parts of Canada are the ones who probably need price support in the broadest sense of the word; but once again we are arguing against the premise that you raised, that these should be used to stimulate economic production.

That, Mr. Chairman, is all I would care to say at the present moment in respect to this, unless there are other questions.

Mr. Howard (Okanagan Boundary): I also asked you about the figures as projected for five years in the future.

Mr. Williams: We will have to take that question as notice.

We have all the information here. Trying to predict these figures in advance presents a major problem. We have enough problems trying to predict them for one year let alone for several.

The reason here, of course, taking sugar beets as an example, is that we are tied in our support program to the world price for sugar. If I were able to predict for even one year in advance what the world price for sugar would be able to do, I would not be working for the Government of Canada, I am certain. If I could predict for five years, it would be a miracle.

Therefore, while we do have rough estimates on many of these items, accurate figures are not available, for example, in respect to PFAA payments; it depends upon climatic conditions and once again they are very difficult to predict. We have predictions for a year and two years ahead, but I am afraid these predictions are repetitions of experience rather than predictions in the best sense of the word.

Mr. Howard (Okanagan Boundary): The total figure that we are spending this year...

Mr. Williams: The total figure that we are spending...

Mr. Howard (Okanagan Boundary): ...on these support programs?

Mr. Williams: There is the Stabilization Account, which is \$144,500; there is the Agricultural Products Board Account which is \$250,000; there is the Crop Insurance where administrative costs and 25 per cent of the premiums are paid which amounts to \$4.7 million; there are grants to fairs, exhibitions and things of that nature which amount to about \$1.3 million; there are quality premiums on hog and lamb carcasses which amount to \$6.1 million; there are miscellaneous small grants to associations and things of that nature as detailed on page 27, all of which amount to just under \$300,000; there is \$130,000 in Vote 35 and then there are some smaller items which are related to compensation for animals slaughtered and things of that nature which I do not think are quite appropriate to put under that same heading.

• 1235

Mr. Howard (Okanagan Boundary): The point I want to make is that this is a very large sum of money. It is a very considerable portion of our total budget.

Mr. Williams: That is correct.

Mr. Howard (Okanagan Boundary): Without a long-range philosophy as to where our support program should be going, we could be heading in a very dangerous direction.

Mr. Williams: So far as the support programs are concerned, of the total provided under Agricultural Support—\$144,500,000—I think \$135,485,000 of that is the dairy support program which does have a definite direction. The other major item within that is sugar beets and it is announced government policy that depending on the eventual result of the International Sugar Agreement the government will reassess its position there, but the sugar beet assistance was being provided because of the unsettled world conditions attributable in part at least to the breakdown of the International Sugar Agreement.

Mr. Howard (Okanagan Boundary): Thank you, very much.

The Chairman: Thank you, Mr. Howard.

[Interpretation]

Mr. Marcel Roy (Laval): An additional question on Item 17. I believe that the amount voted was \$100,000,000 and now it is \$143,000,000 which means an increase by \$43,000,000. Is that right?

[English]

Mr. Williams: On the basis of the figures available there, the answer is yes. However, a changed procedure was introduced for estimating. Formerly we did not make any prior estimates for the reasons that I explained earlier about difficulties in estimating in terms of world prices and things of that nature. We did not make any prior estimates, but all Agricultural Stabilization Accounts were recouped by supplementary estimates after the magnitude of the program was known—after the total cost was known.

In that year, an item of \$100 million was introduced. This has to be put in. I think you appreciate, gentlemen, that our estimates for the 1969-70 year are now in front of Treasury Board. The dairy support program is not decided until some time in March. The Department had to put in a nominal figure—and that is all it can be at the time it is required; it is a nominal figure—which indicated that the expenditures and the level of support would be much higher than that and, therefore, supplementary estimates in the amount of the \$43 million that is indicated over on the left-hand side were required in 1967-68. The 1968-69 figure presumably is closer to fact than the one that was submitted in 1967-68 originally.

The Chairman: I recognize Mr. Lessard.

[Interpretation]

Mr. Lessard (Lac-Saint-Jean): I shall be brief, Mr. Chairman. Two points essentially: the Quebec farmers, within their association, U.C.C., recently supported strongly in a brief the establishment of an agricultural commodity marketing board. What would the position be with regard to the constitutional issues that we are presently facing in Canada? Has the federal government the power to take over control of the marketing of various farm commodities? Do you presently have agreements with all provinces? How far have we got in the negotiations with the provinces to bring about the establishment of such a body?

[English]

The Chairman: Mr. Jarvis will answer this question.

• 1240

Mr. Jarvis: Mr. Chairman, I should like to comment on this question in terms of the jurisdictional and constitutional aspects of marketing that you have raised. The prov-

ince, or in this case the provincial marketing agency, has really complete jurisdiction over the marketing of the product within the province. The products were produced within the province and marketed within it. The federal government, on the other hand, has control over the product in interprovincial and export trade.

Now, there have been general discussions of this whole matter with the provinces, particularly relating to the current proposal on egg marketing which has been made by egg producers and as to how a national marketing scheme may be set up within this jurisdictional framework. I can indicate that we have had two meetings now with provincial officials for the purpose of discussing this matter and some progress might be made in this area, but I think this answers your question basically.

Mr. Lessard (Lac-Saint-Jean): Thank you very much. I still have two more points.

[Interpretation]

In vote number 30, you talk of honey policy and maple policy. Are we importing honey and the maple products into Canada at the moment? And are we indeed supporting these two lines of production, so they suffice to meet our market requirements? What precisely is done to help the producers in these two fields?

[English]

Mr. Phillips: In the area of maple products first, there is no support program for maple products but, on the other hand, almost annually assistance is given through the Agricultural Co-operative Marketing Act which provides to producers of other commodities the same type of assistance that is provided to Western grain producers under the Wheat Board Act. It provides through agreement with the Minister for the guaranteeing of initial payments on the commodity. It allows them to store the commodity and phase their marketing over a longer period and, as I say, almost annually there are groups in the province of Quebec who have utilized this legislation for the marketing of maple products.

In addition, in the Kennedy Round negotiations there were concessions obtained from the United States with respect to duties on maple products going into the United States which should be of extreme benefit to the maple producers.

Turning to honey, yes, there are imports from time to time from the United States and Argentina mainly, and we are net exporter of honey.

Mr. Lessard: Thank you, sir.

The Chairman: Thank you Mr. Lessard. I recognize Mr. Clermont of Gatineau.

[Interpretation]

Mr. Clermont: Mr. Chairman, vote 17 mentions crop insurance. Last year, the province of Quebec established its crop insurance programme. What was the agreement—if any—that was made between the federal authorities and the province of Quebec authorities regarding this crop insurance?

[English]

The Chairman: Mr. Bird, would you like to take this question, please?

• 1245

Mr. W. R. Bird (Director, Crop Insurance Division, Department of Agriculture): Mr. Chairman, no agreement has been completed as yet with the Province of Quebec. The situation at the present time is that we have been negotiating with officials of the Quebec Crop Insurance Board and the Quebec Department of Agriculture and Colonization, and at present we are awaiting a final decision by the Province of Quebec as to the makeup of the regulations which will govern the operation of the Act. I think once they are in a position to complete an agreement we should be able to have it completed in a matter of probably three or four weeks.

[Interpretation]

Mr. Clermont: Mr. Williams, is it contemplated that the province will be able to have a reinsurance in case losses are high in a given year?

[English]

Mr. Williams: No, Mr. Clermont, it does not mean that. I was going to add a word of explanation. Mr. Bird is perfectly correct. There is no formal agreement signed as yet. However, there is authority to enter into the agreement. The problem is that the regulations have not reached such a stage in development in the Province of Quebec. However, funds are provided in our estimates for the current year, and presuming the agreement comes along fast enough the Canadian Government has agreed to pay half the administrative costs and 25 per cent of the premium costs of the type of program that Quebec has in effect in 1968.

[Interpretation]

Mr. Clermont: Another question, Mr. Chairman, regarding overtime. I shall give three examples only: under item 20 on page 23, under the Chapter on the Cattle Division, you have listed as permanent staff, part-time employees and others, 530 people earning a total of \$3,096,700, and \$36,000 in overtime. Under item 40 on page 32, under permanent staff, you have 2,002 employees earning a total of \$13,236,700 and \$1,250,000 in overtime. Can you give an explanation of this, even if item 20 for the Cattle Division, only shows 530 employees or 25 p. 100 of the staff of item 40, under the chapter entitled Sciences and Professions directorate?

[English]

Mr. Williams: Under the current program for the 1968 season there is no reinsurance provided. The assistance that is being provided is outside the Act and will be provided by special vote.

[Interpretation]

Mr. Clermont: Does this mean that presently, for 1968, the farmers of the province of Quebec will not receive the Federal 25 per cent premium subsidy?

[English]

Mr. Williams: The situation here is that under normal circumstances professional employees and classified fulltime civil servants normally within the Department of Agriculture obtain time off in lieu of overtime. Therefore, in the livestock division, and I would stand to be corrected by Mr. Moffatt in that, I am almost certain that the \$36,000 there is payable only to prevailing rate employees.

On the other hand, in Vote 40, which is the Health of Animals Branch, when our veterinary inspectors are employed in meat packing plants, we have a standing arrangement that any hours they work over 40 are paid for by the plants. However, as an accounting procedure those funds accrue to the returnable revenue of the government and we provide the funds in here. So there is an off-setting revenue item somewhere to cover this.

• 1250

[Interpretation]

Mr. Clermont: Thank you, sir.

[English]

Mr. Williams: Or almost all of it at least. There probably is some prevailing rate overtime included in this as well.

Mr. Douglas: May I ask a supplementary, just a short one?

The Chairman: Yes.

Mr. Douglas: On this overtime. There is a problem with veterinarians I understand on signing papers for export of live cattle to the United States and southern Saskatchewan at least that has not been resolved yet that I know of.

Mr. Williams: I think the problem here is complicated at the present moment by the fact that the veterinary group within the Public Service have just signed a contract with Treasury Board and there are many contractual items in there. As a matter of fact, at the present moment we have a group of our district supervisors in Ottawa who are working through the actual administration of these new contracts because it is a rather new area for us to be engaged in. We hope, however, under this to be able to overcome some of the problems that you have raised here.

The Chairman: I recognize Mr. Southam, Qu'Appelle-Moose Mountain.

Mr. Southam: Thanks very much, Mr. Chairman. I believe that I had fairly high priority on the number of questioners for the last meeting of our Committee, which was to be held last Thursday, but unfortunately, Mr. Chairman, due to a serious illness in my immediate family I was not able to be present. I had prepared a number of questions and comments, but in view of the fact that it was mentioned here earlier that we do not have a record of the votes and proceedings of the last meeting, I am going to forgo that at the moment because I might be trespassing on the Committee's time. But I would like to take this opportunity, as it is my first chance to make a few comments, to congratulate you, Mr. Chairman, and your Vice-Chairman, on your appointment to your official capacity in connection with this Committee. I am sure with your wide experience that our deliberations will be very helpful from the contribution that you will be able to make. I would also like to put on the record, although the Minister of Agriculture is not able to be here this morning, my congratulations to him. I

am sure that he, with his activity and experience in agriculture, will be helpful. And with the help of our Committee and all the efficient members of our Department of Agriculture here we will be able to make a great deal of progress. At least, I express this hope, for the meetings that are ahead of us.

Now, coming back to a question at the moment, I was quite interested in the topic introduced by Mr. Pringle this morning with regard to comparing the farm output and the base formula, and so on, that was used in comparing our farm output in Canada, say, with the United States. But in my travels across Canada, and having been engaged in agriculture myself at one time, I am interested in the wide disparity of production between one sector of Canada and another. I would just like a comment from Mr. Williams or some official in his Department as to what steps are being taken on the basis of an educational program or any activity in that line to try and bring a more or less uniform standard to our production in the various sectors of agriculture. Another question I would like to deal with—or have one of the officials here deal with—is the problem of the use of pesticides. In the technological advance in agriculture in the last few years, of course, chemicals are playing a very great part and the use of pesticides is now creating quite a problem so far as the contamination of foods both human and animal is concerned and I was wondering what steps are being taken to rectify this problem and the question of compensation for losses due to the use of them?

Mr. Williams: I think we shall ask Mr. Jarvis to say a word on the question of regional disparity and Mr. Phillips to reply to the question about pesticides.

Mr. Jarvis: Concerning the matter of achieving greater uniformity of level of income in the various areas of Canada, particularly as it related to agriculture, this is a consideration, certainly, in the manner in which programs are undertaken particularly, I think, in the area of marketing and handling of commodities and products.

Particular marketing schemes are geared to particular areas and particular commodities associated with those regions and while this does not totally answer the very critical problem you mentioned from the point of view of the farmer, it directs some assistance in this manner. On this point I think we should men-

tion that the Department is putting forth a great deal of endeavour to develop a farm management scheme in association with the provinces by which farmers in all parts of Canada will be able to participate in that rather sophisticated but very practical farm accounting system and farm business analysis system.

I mentioned that this is a joint federal-provincial program but it will be geared to work closely with the farmers in the particular regions and perhaps help them to know better some of the problems in their own particular business and find means of expanding their income from their farm enterprise; I have mentioned these two factors in commenting on this question.

• 1255

Mr. Southam: Supplementary to that, Mr. Jarvis, I presume, then, that the policy and principle behind the ARDA program is being injected into this field too. I am thinking now in the sphere of uneconomic units such as smaller farmers, say, that we have in eastern Canada where, under the ARDA program, they are trying to enlarge them and get a certain number of people out of that field into perhaps vocational technical training and increasing the size of farm units. Would this be a correct assumption too?

Mr. Jarvis: I think it is fair to say that the government's primary endeavour in this area at achieving more rapid adjustment in the farm sector and this kind of thing is being carried forward with the greatest emphasis in the ARDA program and related programs in this area but certainly, as I above indicated, these problems are a consideration in the development and administration of these programs within the Department of Agriculture as well.

The Chairman: Thank you, Mr. Jarvis.

Mr. Phillips: Mr. Chairman, in terms of the questions asked about pesticides and pesticide residue, two departments are involved in their control. In the Department of Agriculture we administer the Pest Control Products Act which controls the pesticides per se, and in the administration of that Act we assess a commodity in relation to its recommendations for use to determine whether when, used according to directions, it will not leave a residue in foodstuffs. We work with the Food and Drug Directorate of the Department of

National Health and Welfare in determining the safety of these commodities.

Now, indeed, in the operation of this work we started, I believe about 10 years ago, by putting in the legislation of agriculture a requirement that in order for a product to be registered under either the Pest Control Products Act or the Feeding Stuffs Act, we must assure ourselves that it will not leave a residue contrary to the Food and Drugs Act and we have administered it in that fashion.

In order to co-ordinate this work of the two departments we have recently reached agreement on the streamlining of the administration of the operation of both for this accomplishment. In the area of compensation for pesticide residues you may have noted that there is a resolution on the Order Paper respecting this matter, and I do not think I should comment on the details.

The Chairman: Thank you, Mr. Phillips. Gentlemen, that concludes our questioning unless you have a brief question, Mr. Lind?

Mr. Lind: I want to ask before we proceed to vote on these Votes, when would be the time to ask a question about the cost of transportation of supplies of fertilizer produced in the West to Eastern Canada and the difference in cost between the United States price and the Canadian price?

The Chairman: This could be dealt with, Mr. Lind, when we return to Vote 1. It would be quite appropriate at that time.

Mr. Lind: Thank you, very much.

The Chairman: Gentlemen, I am sure you would wish me to express the appreciation of the Committee to Mr. Williams and the other officials of the Canada Department of Agriculture who have so willingly answered our questions this morning in a most informative way. We are grateful to you, gentlemen. We appreciate your presence here.

Gentlemen, I am hoping, of course, that there might be some disposition to conclude our consideration of these estimates.

Shall Items 15, 17 and 20 carry?

Some hon. Members: Carried.

Items 15, 17 and 20 agreed to.

The Chairman: Shall Item 25 carry? Is there a question?

Mr. Roy (Laval): We have lost over \$4 million and I think we should have more infor-

mation on this. Even if the quality were better the price would not be better for the farmers. I think since we cannot have a national price for all that is going to be O.K.—a federal law for the quality but the price will not be the same all across the country. I think that on this new we have lost over \$4 million and I think it will be a very unpopular situation for our producers.

The Chairman: Can we agree that more time will be devoted to that when we come back to Item No. 1? Would you be satisfied?

Mr. Roy (Laval): On this item? Yes.

Mr. Chairman: Thank you.

Item No. 25 agreed to.

Shall Item 30 carry? Mr. Peters?

Mr. Peters: I am interested in two questions that were asked today, and I am not sure what section they come under—perhaps under Item No. 1. I am interested in the question that was raised about the total amount of price of supports in Canada, and second, the relationship that has to our developing marketing legislation of a national nature without this great emphasis on provincial duplication of legislation. It is more or

less a philosophical discussion but I think it is one we should have. Would that be on Item No. 1?

The Chairman: I would think, Mr. Peters, that could very appropriately be discussed under Item 1 when we come back to it.

Mr. Peters: You intend to stand Item No. 1?

The Chairman: Yes, it has been stood. Gentlemen, shall Item 30 carry?

Some hon. Members: Carried.

Item 30 agreed to.

The Chairman: Shall Item No. 35 carry?

Some hon. Members: Carried.

Item No. 35 agreed to.

The Chairman: Thank you. Gentlemen, I simply conclude by reminding you of our trip to the research institute this afternoon leaving at 1.30 p.m. at the south door of the West Block. I thank you for your attention and for the completeness of your questions. We will deal with the Health of Animals Branch at our next meeting which will be on Thursday. The meeting is adjourned to the call of the Chair.

APPENDIX B

VOTE 5 — RESEARCH BRANCH,
ESTIMATES 1968-69

(Extracts to show relationship between estimate provision and cash value of crop)

	Total estimate provision (\$000)	Cash receipts from farm operations 1967 (\$000)
Cereals	2,996	1,208,178
Oilseeds	448	111,721
Fruits	3,289	81,778
Vegetables	2,762	93,908
Tobacco	495	156,740
Dairy	1,112	732,667
		(dairy products)
Sheep	382	8,257
Swine	680	408,283
Poultry	1,413	373,388
Beef	841	922,333
		(cattle & calves)

In examining the above data, it should be borne in mind that cost-benefit from research relates to the promise of the program in adding to the value of a crop and preventing crop losses; to the promise in making possible greatly increased economic production; e.g. rapeseed, corn; to the promise in meeting market (domestic and export) requirements; e.g. golden nematode-free soils, storage of apples for year-round marketing; and to the fact that there is widespread taxpayer interest in horticultural crops which include annuals, biennials, and perennials, and a great number of species which, together, lead to a multiplicity of problems.

In considering research expenditures on livestock and poultry, it should be remembered that the Animal Pathology Division (Estimates—\$1,629,600) is part of the Health of Animals Branch.

APPENDIX C

November 1, 1968

Brussell sprouts is now an important crop on P.E.I. Practically the whole acreage is seeded to the Jade Cross variety. In this variety there is too wide a range in the date of maturity of sprouts, along the stalk, with the result that the bottom ones are over mature when the top ones are reaching maturity. Bacteria which attack mature tissue frequently enter the bottom sprouts and cause an

internal rot. There is no known way of preventing it other than searching for a variety where all the sprouts mature at about the same time. There is reason to believe that such a variety can be found and, in 1968, 40 varieties were tested on P.E.I. It has been determined at the Research Station, Charlottetown, that there is no connection between the rotting problem and fertilizer or management practices.

APPENDIX D

November 1, 1968

Productive corn hybrids, presently grown, require 80 or more days to mature. Within the next five years, Canadian corn breeders expect to release productive hybrids which will mature at about 75 days. This should

help to increase the supply of corn available for milling during the September 1—October 15 period when stocks are normally at a low point. Some hybrids have kernels more or less rectangular in shape, but our corn breeders know of no stocks whose kernels could be described as being more or less square.

HOUSE OF COMMONS

First Session—Twenty-eighth Parliament

1968

STANDING COMMITTEE

ON

AGRICULTURE

Chairman: Mr. BRUCE S. BEER

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 5

THURSDAY, NOVEMBER 7, 1968

Revised Main Estimates (1968-69) relating to Agriculture

APPEARING:

The Hon. H. A. Olson, Minister of Agriculture

WITNESSES:

From the Department of Agriculture: Mr. S. B. Williams, Deputy Minister; *and from the Department's Health of Animals Branch:* Dr. K. F. Wells, Veterinary Director General; Dr. R. J. McClenaghan, Director, Contagious Diseases Division; Dr. C. K. Heatherington, Director, Meat Inspection Division; Dr. J. Frank, Director, Animal Pathology Division.

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE
ON
AGRICULTURE

Chairman: Mr. Bruce S. Beer

Vice-Chairman: Mr. Marcel Lessard (*Lac-Saint-Jean*)
and Messrs.

Barrett,
Clermont,
Cobbe,
Côté (*Richelieu*),
Douglas,
Foster,
Gauthier,
Gleave,
Gundlock,
Horner,

Howard (*Okanagan
Boundary*),
Korchinski,
Lambert (*Bellechasse*),
La Salle,
Lefebvre,
Lind,
McKinley,
Muir (*Lisgar*),
Noble,

Peters,
Pringle,
Roy (*Laval*),
Smith (*Saint-Jean*),
Southam,
Stewart (*Okanagan-
Kootenay*),
Thomson (*Battleford-
Kindersley*),
Whicher,
Yanakis—30.

Michael A. Measures,
Clerk of the Committee.

MINUTES OF PROCEEDINGS

THURSDAY, November 7, 1968.

(5)

The Standing Committee on Agriculture met at 9:44 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Beer, Cobbe, Côté (*Richelieu*), Douglas, Foster, Gleave, Korchinski, La Salle, Lessard (*Lac-Saint-Jean*), Lind, Noble, Peters, Pringle, Roy (*Laval*), Smith (*Saint-Jean*), Southam, Thomson (*Battleford-Kindersley*), Whicher, Yanakis—(19).

Also present: Messrs. Ritchie and Whelan, M.P.'s.

In attendance: The Honourable H. A. Olson, Minister of Agriculture; *and from the Department of Agriculture:* Mr. S. B. Williams, Deputy Minister; Mr. W. E. Jarvis, Assistant Deputy Minister (Production and Marketing); *and from the Department's Health of Animals Branch:* Dr. K. F. Wells, Veterinary Director General; Dr. R. J. McClenaghan, Director, Contagious Diseases Division; Dr. C. K. Heatherington, Director, Meat Inspection Division; Dr. J. Frank, Director, Animal Pathology Division.

The Chairman reported briefly on the visit of Committee members last Tuesday to the Department's Animal Research Institute, Central Experimental Farm, Ottawa.

Mr. Olson invited members of the Committee to lunch next Tuesday at the Sir John Carling building and thereafter to visit other parts of the Central Experimental Farm, Ottawa.

On motion of Mr. Pringle,

Resolved,—That members of the Committee accept the Minister's invitation and that places to be visited include research of plant products and food.

The Chairman called items 40 and 45 of the Revised Estimates relating to Agriculture, namely,

HEALTH OF ANIMALS

item 40 Administration, Operation and Maintenance, etc..\$17,000,000

item 45 Grants, Contributions and Subsidies, etc. 1,766,600

The Chairman introduced Mr. Williams who, in turn, introduced those others in attendance.

Dr. Wells gave an opening statement on the Health of Animals Branch.

Mr. Williams and Dr. Wells were questioned, assisted by Mr. Jarvis and by Dr.'s McClenaghan, Heatherington and Frank.

With the questioning continuing, items 40 and 45 were allowed to stand.

At 11:01 a.m., the Committee adjourned to the call of the Chair.

Michael A. Measures,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday, November 7, 1968

• 0945

The Chairman: Gentlemen, permit me to say I see a quorum.

We are particularly happy to have with us for a few minutes this morning the Minister of Agriculture.

May I just say at the outset of this morning's meeting how pleased we were with our tour of the Research Institute Farm last week. An invitation has been extended to us to tour the Central Experimental Farm next week, if the Committee felt so disposed, for the purpose of reviewing some of the research work that is going on in plant products and in food.

I am going to just leave it at that point and ask the Minister to say a word. He may want to embellish this whole invitation a little bit and, if so, then we will discuss whether or not we will be in a position to go.

Hon. H. A. Olson (Minister of Agriculture): Mr. Chairman, I would like to issue an invitation to the Committee to visit the Central Experimental Farm and the John Carling Building next Tuesday, if you can find it convenient to come. Perhaps it would be a little more convenient if you would like to come for lunch at noon and then we could arrange to tour some of the laboratories that are there or whatever else you would be particularly interested in seeing, the showcase herd or whatever you would like.

I understand that you are not having a formal meeting next Tuesday.

The Chairman: No, Mr. Olson.

Mr. Olson: If you would like to come at noon on Tuesday we would be very happy to make whatever arrangements that are necessary to meet your convenience. I am sure that you will not be able to see the whole place in the time that you will have at your disposal but we will arrange the tour to those areas of greatest interest to the Committee.

The Chairman: Thank you, Mr. Minister. I throw the question open for a brief discussion. What is the attitude of the Committee?

Mr. Cobbe: Mr. Chairman, the last visit was very educational and I would thoroughly enjoy a visit to the Central Experimental Farm. I think that such a visit would possibly cut down on a lot of the questions that otherwise would come up at the meeting, and it would give the Committee a far greater opportunity to see what is really taking place.

The Chairman: Could I have a motion to that effect.

Mr. Pringle: I move that the Committee accept the invitation to visit the Central Experimental Farm to observe the research work into plant products and food on Tuesday afternoon, November 12, if it can be arranged with the House Leader.

Mr. Southam: Mr. Chairman, the last tour was a relatively short one but I found it very interesting educational. I think it would be very productive to take another tour.

I would be pleased to second the motion, Mr. Chairman.

Motion agreed to.

The Chairman: Thank you, Mr. Minister. We will endeavour to arrange this through the House Leader and accept your kind invitation.

Now, gentlemen, we are going to consider the estimates of the Department of Health of Animals, Votes 40 and 45.

We are pleased to have with us this morning the Deputy Minister, Mr. Williams. I am going to ask the Deputy Minister to introduce the Departmental officials and then we will hear your questioning.

• 0950

Mr. S. B. Williams (Deputy Minister of Agriculture): Mr. Chairman and gentlemen, this morning we are going to consider the votes applicable to the Health of Animals Branch of the Department. We have with us here this morning the Assistant Deputy Minister responsible for Production and Marketing and the Health of Animals, Mr. Jarvis,

whom you have met earlier. We have also Dr. Wells, the Veterinary Director General, and Dr. Frank who is the Director of our Animal Pathology Division.

We anticipated that other officials would have been here much earlier than this but perhaps they have been delayed by the very severe storm. The other officials will be Dr. Heatherington who is the Director of the Meat Inspection Division of the Health of Animals Branch, and Dr. McClenaghan who is the Director of the Contagious Diseases Division. You will note that you have these names on your organizational chart which is in front of you. In addition to those, Mr. MacMillan who is in charge of Administration will be here.

Dr. Wells has prepared a very brief statement on the broad outlines and the functions of the Branch. With your permission, Mr. Chairman, I would like to ask Dr. Wells to present this statement prior to the questioning.

The Chairman: Thank you. We would be happy to hear Dr. Wells.

Dr. F. K. Wells (Veterinary Director General, Health of Animals Branch, Department of Agriculture): Mr. Minister, Mr. Chairman gentlemen, the Health of Animals Branch of the Department of Agriculture is the veterinary agency of the Department of Agriculture and is, in fact, the oldest agricultural agency of the Department, having been established in 1869 by the first piece of agricultural legislation, the Animal Contagious Diseases Act, considered by the Parliament of Canada following Confederation in 1867.

The Branch is divided into three divisions—the Contagious Diseases Division, the Animal Pathology Division, and the Meat Inspection Division—each with their separate responsibilities.

Branch responsibility includes preventing the introduction of animal diseases to this country, controlling and, where possible, eradicating animal diseases already in the country and the certification of international trade of our livestock and livestock products. Also, the responsibilities include the animal disease research essential to the health status and economic development of our livestock industry, along with the diagnostic facilities for the maintenance of a high health status, together with providing the National Meat Inspection services.

The Contagious Diseases Division is responsible for preventing the introduction of animal diseases. This is accomplished through inspection and quarantine of all livestock and livestock products capable of carrying the causative agents of disease. For this purpose, livestock quarantine stations are maintained and Branch officers are stationed at all international ocean and air ports for the purpose of enforcing the regulations.

Control and eradication of diseases within the country is carried out through a system of programs for specific diseases, such as Tuberculosis, Brucellosis and Hog Cholera, and a general investigational service with respect to suspected outbreaks of serious diseases, together with the necessary provision for eradication, should any serious diseases be uncovered.

Certification of livestock and livestock products for export is an important function in that it is only with such certification ensuring a general high health status that our livestock and livestock products are accepted in international markets. As an example, this year we have exported approximately 37,000 breeding cattle to 17 countries and we were required in some cases to conduct up to twenty-five individual tests for each animal exported. In addition to the above, during the same period, we have exported to the United States of America approximately 100,000 beef cattle for feeding and slaughter purposes.

The Animal Pathology Division, concerned directly with disease research and diagnostic facilities, must not only be prepared at any time to conduct complicated tests to establish the identity of a suspicious disease occurring in Canada, but must be equipped to handle thousands of routine diagnostic tests and, at the same time, conduct sufficient animal disease research to keep abreast of animal disease developments and problems throughout the world.

The main research laboratory is at Hull, Quebec, with five other research laboratories located at Sackville, N.B., Macdonald College, Quebec, Guelph, Ontario, Lethbridge, Alberta, and Vancouver, B.C. In addition, there are three diagnostic and service laboratories located at Grosse Ile, Quebec, Winnipeg, Manitoba, and Regina, Saskatchewan.

The Meat Inspection Division is responsible for providing the National Meat Inspection System in Canada, together with controlling imports of meat and meat food products to

ensure that they meet our National standards, and certifying the export of meat and meat food products to foreign countries.

There are 571 meat slaughtering, processing, rendering and storage plants registered under the Canada Meat Inspection Act. It is a requirement that all meat and meat food products shipped across a provincial border or out of the country must be processed and produced under the provisions of the Canada Meat Inspection Act. In addition, we have a federal-provincial agreement with the province of Manitoba to provide a domestic meat inspection service within that province. In this case, the province reimburses the Department for the approximate cost.

While each Division has separate responsibilities, all are integrated so that they provide animal disease control, animal disease research and wholesome meat and meat food product supplies. As an example, the suspicion of a new disease may first be reported through our Meat Inspection Division to the Contagious Diseases Division who, in turn, carry out field investigations and will be dependent upon the laboratory services for research and diagnostic procedures. Similarly, the Contagious Diseases Division report to the Meat Inspection Division and the Animal Pathology Division new field findings which may involve new meat inspection procedures and additional research.

The health status of Canadian livestock is among the highest in the world and this must be maintained if we are to eliminate as much as possible the disease factor in the cost of livestock production and, at the same time, have our products acceptable on the world markets. Today, we can ship our livestock and livestock products to more countries in the world than any other individual country.

In order to carry out all of these functions, in addition to having a thorough national veterinary organization, we must and do maintain close and regular contact on an international basis with veterinary affairs throughout the world.

Thank you, Mr. Chairman.

The Chairman: Thank you, Dr. Wells. Mr. Jarvis, did you wish to make any comment at this time?

Mr. W. E. Jarvis (Assistant Deputy Minister of Agriculture (Production and Marketing)): No, Mr. Chairman.

The Chairman: Gentlemen, we will proceed in the same way as we have done in the past: I will recognize members who wish to ask questions.

I have on my list at the moment Mr. Roy (Laval) and I will recognize him.

[Interpretation]

Mr. Roy (Laval): On a point of order. In the record of the first meeting of the Agriculture Committee on page 19, it is said that I had spoken of an important market in the Montreal area, and the idea was a market for vegetables rather than for flowers. Page 19. I would like the required change to be made, you will find this on page 19.

[English]

The Chairman: May I say that this error will be noted and corrected.

Would you be so kind as to provide the Clerk of the Committee with a statement of correction showing the page and location of the error.

I recognize Mr. Gleave (Saskatoon-Biggar).

Mr. Gleave: What does Municipal or Public Utility Services, the last item on page 32, include?

• 1000

Dr. Wells: Mr. Chairman, it includes electricity, gas services, sewer services and those things necessary for the maintenance and operation of laboratories.

The Chairman: Does that answer your question?

Mr. Gleave: Yes, Mr. Chairman. There is a practice followed in the stockyards, at least in Saskatoon, of vaccinating feeders, when you pick them up, for shipping fever. In my experience, this is ineffective—they all get it all over again when you get them home anyway and you have to dope them. Why is this practice followed? Do you find it effective?

Dr. Wells: A single vaccination is not particularly effective. However, if the animals are vaccinated some time prior to coming to the stockyards, then it is usually effective. However, this is done by private practitioners and not by the Department. This is the choice of the individual buyer or seller.

Mr. Gleave: The Department makes no recommendations in this regard?

Dr. Wells: Some years ago we did a very thorough study on the shipment of livestock from the West to the East or from stockyards back to the country, and our recommendations at that time which still hold would be for either double treatment ten days apart prior to coming in for slaughter which would be effective or, if this is not done, the treatment of the animal subsequently by the use of antibiotics.

Mr. Gleave: Then in short, what you are saying is that a single shot in the yards, in the observation of the department, is simply not effective?

Dr. Wells: It is not totally effective, sir.

Mr. Gleave: Further, in compensation for animals slaughtered, in the case of an animal purchased from the yards and condemned before it comes out of the yards, do you give any compensation to the purchaser under these circumstances?

Dr. Wells: Yes, for tuberculosis and brucellosis inasmuch as the total country is now under the programs for both tuberculosis and brucellosis, and therefore all free movements of these animals operate under the provisions of the regulation. Prior to the time when the total country was completely tested for tuberculosis and brucellosis, yards were excluded from the area. That is, shipping yards were excluded from the actual tuberculosis and brucellosis controlled areas, and under those circumstances compensation was not paid. But now that the disease is under total eradication procedures throughout the country, all animals are paid for.

Mr. Gleave: Thank you.

The Chairman: Does that conclude your questions?

Mr. Gleave: Yes, for now.

The Chairman: May I ask a supplementary question, Dr. Wells. Following up Mr. Gleave's question that if you are purchasing some feeders in Lethbridge, Alberta, and moving them to Ontario and these calves are inoculated two days before loading in Lethbridge and you say that it should be a double treatment, if there is a treatment there and a treatment on arrival at the farm in Ontario, is this effective? Does this work if both treatments precede the shipping?

Dr. Wells: Mr. Chairman, if you are discussing vaccination with a vaccine then both vaccinations or both injections should precede the shipment. But, in fact, if you are discussing inoculation with antibiotics, then one at the time of leaving the stockyards in the West should carry the animal through to its destination.

The Chairman: Thank you. May we interrupt our proceedings to introduce the gentlemen from the Department who have come in.

Mr. Williams: Mr. Chairman, the new arrivals are Mr. R. D. MacMillan who is the Director of Administration in the Health of Animals Branch; Dr. W. A. Moynihan who is Program Co-ordinator; Dr. J. U. G. Girard who is in the Contagious Diseases Division, Dr. C. K. Hetherington who is Director of the Meat Inspection Division, and Dr. R. J. McClenaghan who is Director of the Contagious Diseases Division.

• 1005

The Chairman: Thank you, Mr. Williams. I will now recognize Mr. Southam of Qu'Appelle-Moose Mountain.

Mr. Southam: Thank you, Mr. Chairman. I would like to say, Mr. Chairman, that I am pleased to see Dr. Wells with us this morning and I am sure we all appreciate the excellent work that he and his officials are carrying on in this very important Health of Animals Branch. I would like to ask the doctor and Mr. Williams, have there been very many representations made in recent months with respect to the rate of compensation scale for animals slaughtered under the Animal Contagious Diseases Act? I feel, in looking at statistics, and I have had this brought to my attention on several occasions, that with the high standard and quality of livestock and particularly of purebred breeding stock that we are now handling in Canada and, in some cases, some losses among herds, that the people involved with these animals that have been caused to be slaughtered feel they are not getting a proper compensatory rate, that we should revise it upwards. I would also like to ask Dr. Wells about the policy as far as rabies are concerned. We just recently had an outbreak of rabies in Saskatchewan and I know one man brought this to my attention. I have heard of several instances since where animals have had to be slaughtered because of rabies. As I understand the legislation, it is

only enabling. For a person having an animal slaughtered for this cause, if in a province which has not brought in enabling legislation, there is no compensation, and this seems to me to be an inequity that should be rectified. I would like to hear Dr. Wells' comment on this.

The Chairman: Who is taking the question? Mr. Williams.

Mr. Williams: The first part of it that was directed originally to the Minister, only unfortunately the Minister had to leave, I would be prepared to answer. The question was related to the levels provided for compensation under the Animal Contagious Diseases Act. The question was asked as to whether the Department had received many representations. I find it difficult to define "many", sir, but we certainly have received representations along this line. You may recall, sir, that there is a resolution standing in the name of the Minister of Agriculture to amend the Animals Contagious Diseases Act, to remove from the provisions of the Act the establishment of the exact maximum level of compensation. At the present time this is established and cannot be changed without an amendment to the Act. The resolution standing in the name of the Minister of Agriculture provides that the maximum payable for compensation for the diseases covered under this Act will be removed from the Act and the authority changed to Order in Council, so that it will be much easier to amend the maximum levels. In making this statement, however, I should point out that there is a matter that many of our producers fail to realize and fail to appreciate when they look at the figures—the figures at the present time are \$140 for purebreds and \$70 for grade animals as a maximum—and that is that this is the amount paid over and above the salvage value of the animal. In other words, the farmer has the salvage value of the animal.

The question was also asked in respect of rabies, and I will ask Dr. Wells to answer that portion of the question.

Dr. Wells: With respect to rabies, Mr. Chairman, we do provide two-fifths of the cost of animals which have died from rabies when such moneys have been paid, when the valuation has been paid by the province to the owner of the animals which have died. At the moment, the only two provinces involved are Ontario and Quebec but, of course, the

option is available to any other province that wishes to become involved in this program.

Mr. Southam: Am I to understand then that Saskatchewan has not come into this enabling legislation?

Dr. Wells: Yes, this is correct.

Mr. Southam: In our area two years ago we had a quite serious example where a small herdsman lost quite a percentage of his herd, animals slaughtered from being affected by rabies. I was rather surprised to think that we were dragging our feet in this respect in Saskatchewan. But as I understood it, the provincial government was taking steps to rectify this. This has not been done yet?

Dr. Wells: No, sir. Not yet. Excuse me, just a moment. Saskatchewan is included. Excuse me, sir, my apologies.

• 1010

Mr. Southam: Thank you. I am glad to hear that.

The Chairman: Does that conclude your questions, Mr. Southam?

Mr. Southam: Yes, thank you, Mr. Chairman.

The Chairman: I recognize Mr. Lind on a supplementary.

Mr. Lind: When these animals are condemned, they are slaughtered and they are completely unfit for human consumption. I suppose they go to dog food or something. In the old days it used to be that tuberculosis—when they said they went to the tank—what compensation do they get paid then for the meat?

Dr. Wells: Where an animal is ordered slaughtered for disease and the owner is awarded compensation, if upon post mortem—ante mortem and post mortem inspection at the packing plant—the animal is totally condemned as unfit for food, the Department then pays to the owner, in addition to the compensation awarded, the food value, that is the amount that the animal would have had for food value had it been passed for food.

Mr. Lind: This is a change.

Dr. Wells: No, this came into being in 1958-1959.

Mr. Lind: Thank you very much.

Dr. Wells: Now, concerning the other question with respect to what happens to these animals that are condemned, they go into the cooking and rendering tank and are not permitted to be used for any purpose whatever until after they have been totally rendered in the rendering operations of the plant as condemned material.

Mr. Lind: Thank you.

The Chairman: I recognize Dr. Foster, Algoma.

Mr. Foster: Mr. Chairman, I would like to preface my questions by a couple of general comments concerning the Health of Animals Branch. I do not believe that many Canadians are familiar with how successful the Canadian Department of Agriculture has been in controlling the diseases, especially the ones the Health of Animals Branch looks after that are listed under the Animal contagious Diseases Act.

Many countries adopt the procedure of living with the disease and controlling it through vaccination. In Canada we have used the test and slaughter method for the control of hoof and mouth disease, hog cholera and recently brucellosis, and this has been very successful and I think that we probably have one of the best records in the world. Although it seems expensive actually to slaughter the animal that is infected at the time rather than just having some type of prophylactic system, in the long run it is the cheapest method.

I have a couple of questions. Concerning the grant to the Western School of Veterinary Medicine, I understand that in 1967-68 there was a grant of \$750,000 and in 1968-69 there was \$1,050,000. I wonder what the total amount of grants has been and is anticipated to be.

In this connection, the Ontario Veterinary College at present is planning an expansion program and, as most members of the Committee are aware, the Ontario Veterinary College has provided most of the veterinarians for Canada outside of Quebec, and I think we are all pleased that a school is being established in the West now with their first graduates, I believe, next year.

There is a modernization program being anticipated at Guelph and I understand that requests have been made to the Department for more funds, or for some federal grants, because of the fact that the Guelph school

provides education for the Maritimes and some of the students from Manitoba and, indeed, from all provinces. I wonder what the Department's approach will be towards this.

• 1015

I understand that the President of the University of Guelph has been thinking in terms of supplying education to Ontario students first unless the school is expanded to the 110 students, I believe it is, that they would like to expand it to from the present 70 students. I wonder what the Department's feeling towards federal grants to the Ontario Veterinary College will be.

Also, I notice an item for the brucellosis vaccine and I wonder whether this is going to continue to be made in the future and how fast this program will be phased out? Most provinces are not paying for this now and I wonder whether there is a plan to phase this out in the immediate future.

Mr. S. B. Williams (Deputy Minister of Agriculture, Canada Department of Agriculture, Health of Animals Branch): The first part of the question with respect to the Department's views and position concerning federal grants to veterinary colleges referred to the total size of the grant to the Western School of Veterinary Medicine. The Department has been authorized to include in its estimates a total of 37.5 per cent of the cost to the college, up to a maximum of \$3 million. It is divided over the different years, depending on the progress of construction and the rate of expenditure made by the university during the construction.

Mr. Foster: Is this a total federal grant of up to \$3 million?

Mr. Williams: This is a total grant from the Department of Agriculture, that is correct, up to \$3 million, subject also to the provision of a maximum of 37.5 per cent of the total cost. In other words, if 37.5 per cent of the total cost is more than \$3 million, the grant will still be limited to \$3 million.

Mr. Foster: Yes.

Mr. Williams: Concerning the other portion of the question, the President of Guelph University has met with Mr. Olson, the Minister of Agriculture, and without making any commitment Mr. Olson has instructed the Health of Animals Branch to meet with its counterparts at the Ontario Veterinary College to examine this entire question.

Mr. Foster: I had a couple of other questions.

Dr. Wells: With respect to Dr. Foster's question on brucellosis vaccine, we started in 1951 with between an 8 to 9 per cent brucellosis infection in this country. At that time we commenced a federal-provincial combined program for the vaccination of as many calves as possible against brucellosis. During the period from 1951 until 1957 we reached the stage where we were vaccinating practically 90 per cent of the female replacements. The Department bought, paid for, and distributed to the provinces, all the *Brucella Abortis* vaccine that was used.

In 1957 we started the eradication program for brucellosis and the national infection rate for brucellosis is now down to less than one tenth of 1 per cent. The time has therefore come when brucellosis vaccine must gradually be de-emphasized. Now, it is not the intention of the Department to prohibit the use of *Brucella Abortis* vaccine, but in actual fact we are on the road to successful eradication of the disease and there is no object in maintaining a perpetual cost of vaccination when the disease does not exist in the country.

In addition to that, of course, vaccination with *Brucella Abortis* does cloud to a limited issue the problems of testing for the disease. Therefore, we are gradually de-emphasizing the use of vaccine, but not in any way intending arbitrarily to prohibit its use for some years to come until the disease has been totally eradicated from this country.

In addition, of course, there are some countries where there is a heavy infection of the disease and want cattle vaccinated; therefore, for this purpose vaccine will be continued for some time at the owners' wishes.

The Chairman: May I recognize Mr. Lessard on a supplementary and then come back to you, Dr. Foster?

[Interpretation]

Mr. Lessard (Lac-Saint-Jean): Dr. Wells, in the province of Quebec, you just said that you have made a lot of progress, because the rate of herd infection has gone down from 8 or 9 per cent to 0.1 per cent but in the Province of Quebec, in recent years, we have been badly affected specially in Saguenay and Lake Saint-John areas. I know owners whose herds were completely destroyed by brucellosis, and I am wondering if the Federal Government also furnishes treatments to prevent brucel-

losis in the Province of Quebec? Have you joined in a program for preventing the disease or do you merely detect it and slaughter the animals affected? What success have you had in the Province of Quebec? You talk of success of .1 of 1 p. 100 of cows attacked, but when you apply this to the province of Quebec, what is the situation there?

[English]

Dr. Wells: The situation in the Province of Quebec is exactly similar to that of the rest of the provinces in the country. The Province of Quebec did not come into the original Federal-Provincial Calfhood Vaccination Program as early as the other provinces but did come in about three years later than the others, and at the same time the general eradication scheme of 1957 started in the Province of Quebec as it started in all other provinces.

Today in Quebec there are 78. The province is divided into 78 areas and all of these 78 areas have been tested. We have tested just under two million cattle in the Province of Quebec, and 64 of those 78 areas are certified. Fourteen of the areas, in fact, have gone beyond the certification point to the point of freedom from brucellosis, so that the Province of Quebec has the same status as the rest of the country and is coming along just as well as any of the other provinces.

● 1020

Mr. Lessard (Lac-Saint-Jean): Did I understand you correctly when you mentioned that you were paying \$140 per cow when it had to be slaughtered? Is that what you are paying?

Dr. Wells: Yes. The compensation payable when animals are ordered slaughtered is a maximum of \$140 for purebred registered animals and a maximum of \$70 for grade animals. That maximum is not paid in all cases as it depends upon the age of the animal, the condition of the animal, and her state of pregnancy.

Mr. Lessard (Lac-Saint-Jean): What would the average be—\$100.00?

Dr. Wells: The average compensation is \$58.00, including all of the calves, of course, plus the slaughter value of the animal which the owner receives when the animal is slaughtered.

Mr. Lessard (Lac-Saint-Jean): Is this paid directly to the farmer or through the provincial governments?

Dr. Wells: It is paid directly from the Department of Agriculture to the farmer. It is under the provisions of Sections 11 and 12 of the Animal Contagious Diseases Act.

Mr. Lessard (Lac-Saint-Jean): Thank you very much.

The Chairman: We will return to Dr. Foster.

Mr. Foster: My next question concerns research. The Minister mentioned in his opening statement a week or two ago that there were plans to make cuts in the grants and money spent on research, and I wonder if any of these cuts are in the field of animal health research.

As a practitioner, it seemed to me that in dairy cattle our greatest losses from disease were due to infertility and mastitis. I would say that at least a third or half of the cows that were shipped out as no longer being profitable enterprise had these two diseases. I wonder if the federal government is planning to do anything in this area, either in research or in a disease prevention program.

• 1025

Dr. J. Frank (Director, Animal Pathology Division, Department of Agriculture): To answer your question about the areas of research, namely mastitis and infertility, we do have a program of infertility research which we have had for a number of years with Dr. Douglas Mitchell. We have added recently a physiologist who will be working with him in this area because a number of the problems involve physiological dysfunction, and this is one area that we are pursuing rather actively.

In mastitis we are doing only limited research as most of the work in mastitis is being done at the provincial level. We are doing and have done work on the effect of various viruses in the udder and the role that they play in stimulating or fostering infection.

The Chairman: I think Mr. Williams had a comment. I am sorry, did I interrupt you?

Dr. Frank: No, I had finished.

The Chairman: Mr. Williams had a comment concerning part of your question.

Mr. Williams: Mr. Chairman, unfortunately I do not have in front of me the transcript of the first meeting but I thought I should correct what possibly might be a misunderstanding,

and maybe a misunderstanding on my part. I believe Dr. Foster in prefacing his last question indicated that the Minister had stated that there would be a cutback in research.

Mr. Foster: Yes, this is what I understood.

Mr. Williams: I think that possibly there is some misunderstanding here. I will read the statement that he made in respect of this. I can easily see where the misunderstanding might well arise. He stated, and I will not give the preface to this sentence,

These goals can be met on a continuing basis if the industry is supported by an energetic and responsible research program, but the rising unit cost of essential inputs is also a major limiting factor.

In other words, I believe the implication was not that there is a cutback but rather that there would be little or no expansion because of the increased cost of the inputs.

Thank you, Mr. Chairman.

The Chairman: I will recognize Mr. Thomson (Battleford-Kindersley).

Mr. Thomson (Battleford-Kindersley): Mr. Chairman, I have a question in regard to the Veterinary college at Saskatoon. I wondered for example, if they had enough students, or enough raw material, if you will, to make a graduate college. How many might be expected to graduate there? Is it difficult to get enough students? Also, do they give out any bursaries or scholarships of any kind at this college, and do they have any research program involving some of the students in this connection?

The Chairman: Dr. Wells.

Dr. Wells: Yes, Mr. Chairman, there is an adequate demand by students to enter the veterinary college at the University of Saskatchewan. Approximately 30 students will be graduating this spring for the first graduation exercises and it is their intention over the next four or five years to increase this to 60. It would appear at the moment that there is, in fact, greater demand on the part of students to enter the college than can be accommodated in the facilities.

With respect to grants, sir, certainly they do conduct considerable research and will be conducting more, of course, at the Saskatchewan Veterinary College, as this is becoming more and more an integral part of teaching.

With respect to scholarships I cannot really answer you, sir. We do not have any scholarships or grants with respect to students entering veterinary schools but there is, of course, the Canada bursary and in addition to that, the various provinces have assistance programs.

Mr. Thomson (Battleford-Kindersley): Mr. Chairman, could I pursue this part a little further? For example, I know a university student who is studying soils under a bursary system. He is taking his Masters degree. I understand that he is getting paid to go to university. You do not give any similar assistance—at least, it does not come under this Department, if you will?

• 1030

Mr. Williams: Mr. Chairman, we have within the Department a program of post-graduate studies whereby we do send employees, and this applies to research people and professionals in all parts of the Department. It is equally applicable to the veterinary sciences and we do have such people away where the type of work that they are undertaking is directly related to the program of the Department. We have various arrangements depending upon the closeness of this relationship and the need that we have to have a man with these particular talents and we pay everything; at least the arrangements range over a wide spectrum in terms of the assistance that is granted, but this is to full-time continuing employees of the Department who are on the strength of the Department.

Mr. Thomson (Battleford-Kindersley): Thank you.

Mr. Whicher: I have a supplementary. What do you do to keep these people? Supposing you pay them to go to college and get this education and then they get a big offer from Idaho. Can you stop them from going down?

Mr. Williams: At one time there was a requirement that they must remain in the employ of the federal government for, I believe, one year after their return. This requirement was later dropped because apparently it had no legal status. In general, we make the effort in the other direction by trying to make the facilities and the terms and conditions of employment in the federal government as attractive as possible so we do not lose them. But to answer the hard question you have asked, if we send a person

away on educational leave and he gets a very great offer after that, we lose him.

Mr. Whicher: Mr. Chairman, I think that is most unfortunate. You said that there was no legal status to this requirement of some years ago that they had to remain for a year. I understand that in the Armed Forces they have to sign for five years.

Mr. Williams: I believe the terms and conditions of employment, sir, in the Armed Forces are somewhat different from those in the Civil Service.

Mr. Whicher: That is true, but on the other hand, they sign for five years and they are citizens of Canada. My point, Mr. Chairman, is that I do not think that Canada can afford to educate young people, whether it be in your Department or any other, and then have them go automatically to the United States, to sunny California.

I suggest that we develop some manner of legal status so that these people have to sign to stay with your Department and I suggest that one year is not enough. They should stay for three years. This probably is not a nice thing to have to do, but the fact is that we need these trained people in Canada; not only do we need their services after the taxpayer has trained them but we need their tax dollars and I do not think we in Canada can afford to let these people go.

Mr. Williams: I think, sir, that we would have to agree with you fully. This is not a policy that is limited to the Department of Agriculture; this is a government-wide policy and I can assure you that we will raise questions again on it because we do agree.

I think you will appreciate, however, there are great difficulties other than legal difficulties if you are trying to employ people in what might in essence be press service if they get a big offer somewhere else and you say, "No, you cannot go because of your obligations". I must say, however, in defence of the present policy that we lose extremely few people in toto.

Mr. Whicher: This is different from the medical profession where we lose a third of them every year, like last year.

Mr. Williams: I would be pleased to provide the Committee with figures if they are interested in the type of wastage that we get within a year, say, after we have a man come

back from educational leave if it would be of interest to the Committee. I think we could provide that; I do not have it with me.

Mr. Whicher: I have just one more question, Mr. Chairman. Concerning people coming into Canada, for example Czechoslovaks, if there were a well-qualified man according to their standards—that is, who had gone to the University of Prague—would you take him on provided their standards were up to yours? For example, a medical man cannot practise here in the Province of Ontario anyway. Could he with you?

Mr. Williams: It depends, sir, entirely on what area you are talking about. If you are talking about the Health of Animals Branch we have one overriding consideration which is part of the legislation governing the employment in the Civil Service, namely that there is preference for Canadian citizens or people who have come to this country with five years residence in this country. They are required to have five years residence.

However, if there is a shortage of a particular type of person or there is a particular need for that person, those residence qualifications can be waived. Now, in respect of employment as a professional veterinarian, I think I will let Dr. Wells answer that part of the question.

The Chairman: Dr. Wells?

• 1035

Dr. Wells: Mr. Chairman, basically the recognition or registration of professional people in Canada is under provincial jurisdiction and each province in Canada has a veterinary practice act which provides for the registration of veterinarians as fully qualified veterinarians.

This is supplemented by a Committee of the Canadian Veterinary Medical Association and all foreign veterinarians coming into Canada submit their credentials to the Registration Committee of the Canadian Veterinary Medical Association who assess their credentials and if, in fact, the individual is a graduate of a recognized veterinary college, then they are subject either to automatic registration or the writing of an examination in order to register. Now, this varies from country to country around the world and, of course, from college to college within individual countries around the world.

An hon. Member: Could I ask a supplementary question here?

The Chairman: Gentlemen, I think we have pursued this on a supplementary basis about far enough. It is one way of intruding on the time of the Committee and the questioners who are on the list and, if you will agree with me, I would like to recognize the next questioner on my list which is Mr. Lessard, followed by Mr. Korchinski, Mr. Roy and Mr. Pringle.

Mr. Lessard: I have a short question.

[Interpretation]

The subsidies to faculties of agriculture for research, provided by veterinarians of the Province, with regard to Québec, recently, during the last years, has your department granted any subsidies to the province of Québec?

Secondly. In the case of hog diseases, what have we done to prevent and to cure diseases for pigs in Québec?

[English]

Mr. Williams: In reply to the first part of the questions, Mr. Chairman, the assistance direct grants to universities for particular research work is covered in the earlier vote of the Research Branch and is handled by a single committee in which the Health of Animals Branch are handled but for convenience the funds are all grouped in that previous vote and they do apply everywhere to all parts of the Department and to all parts of Canada. Dr. Wells will answer the second part of the question.

Dr. Wells: With respect to swine diseases, we do a considerable amount of research on swine diseases at the Animal Diseases Research Institute and this is headed up by Dr. L'Écuyer who is considered to be one of the top-notch American swine disease research people. He is at our laboratory in Hull and directs our swine disease research.

Research is done with respect to baby pig pneumonia, infectious skin conditions and many other diseases of swine. So far as serious swine diseases are concerned, the country is relatively free from most of them. As an example, hog cholera is perhaps the most devastating disease of hogs and this disease has been successfully kept out and eradicated each time that it was introduced into Canada for the past 60 years.

It is of interest to note, with respect to an earlier remark about the cost of living with the disease or the cost of living without it,

that over the past 60 years hog cholera has been eradicated—and this is perhaps one of the most devastating diseases of swine—by the slaughter method, and the compensation for all hogs slaughtered cost the government approximately four cents for each hog that has gone to market during this same 60-year period.

In the United States where they have, in fact, lived with the disease during this same period, the cost of living with the disease—that is the cost of vaccination, the cost of suffering the mortality and the morbidity from the disease—is estimated at one dollar per hog and it is obvious from this that we can live without the disease 25 times cheaper than we can live with it. In actual fact, so long as we can keep this country free from hog cholera we save the hog producers roughly a dollar for each hog which is marketed each year, which is around \$7 million a year.

• 1040

Now, the same thing applies to African swine fever. Considerable research work is done on these exotic diseases which we do not have, so that if the time comes when they do accidentally get into the country we will be able to handle them.

Mr. Lessard: Thank you.

The Chairman: I recognize Mr. Korchinski.

Mr. Roy (Laval): I have a brief supplementary.

[*Interpretation*]

First of all you worked on the main disease, rhinitis, which still exists. We are faced to an increasing extent, with the problem of sterility in breeding sows, which is taking a heavy toll at present. It is not known whether the disease is contagious or is a problem associated with cross-breeding.

[*English*]

Dr. Wells: Mr. Chairman, the member first mentioned rhinitis. We are doing little work on rhinitis at the moment because it is not really considered to be a serious disease in the country at this time. It has been over the years, but considerable work has been done and it is gradually disappearing.

With respect to infertility in swine, yes, we are doing work on infertility in swine at the Animal Diseases Research Institute. There are no concrete conclusions that one can simply lay on the table, saying that this has been

done, but there is a continuing process of attempting to assess the infertility problem.

Mr. Korchinski: I have two questions. First I want to pursue the line of thought that was started earlier in regard to graduate students.

I do not know whether or not I will get into an argument with the Civil Service Commission, but I make the suggestion that when we give grants, regardless of whether it is in this Department or in other departments, could there not be a system worked out whereby the student is under contract and actually hired, or is contracting, to do a certain work and does not actually go into the Civil Service until completion of one year, or whatever the requirement we set? Has any thought been given to that type of arrangement?

I do not understand the legal niceties of that other arrangement, but this might perhaps be one way of getting around it.

Mr. Williams: Mr. Chairman, there is an arrangement that approximates the type of arrangement that Mr. Korchinsky has just described. Under it we give grants to universities on occasion to have specific pieces of work done to complement, or to supplement, work that we are doing. In that case we might enter into a contract with the university to have Mr. so-and-so conduct such-and-such work, possibly as part of his undergraduate work or postgraduate work, or possibly not; usually the former, however. This man, however, is not a civil servant at that time, and he may or may not become a civil servant later.

The type of arrangement about which I spoke was where people who had been civil servants, and sometimes had been employed for some time in the Civil Service, were given leave to obtain further education. These were under the varying conditions that I spoke of, in terms of pay, allowances and salaries.

In general, it is related to the relevancy of the work that they are doing and the need that we have for it. Sometimes it is simply leave without pay and nothing is paid at all; in other cases it may go as far as full pay.

Mr. Korchinski: But in all cases this is an arrangement with an institution rather than with an individual; is that right?

Mr. Williams: Usually the arrangement is through the institution, but very often a spe-

cific individual may be named to do the work when the contractual work is drawn up.

Mr. Korchinski: My other question relates to an apparent outbreak of a disease by the name of anaplasmosis in Manitoba several months ago. I do not know very much about it—thank goodness—but has the Department checked into it? Has it found out the source of the disease, has it been able to check it, has it found out where it originated and is there a possibility of further outbreaks?

• 1045

Dr. Wells: Yes, Mr. Chairman, in August of 1968 there were several cases of anaplasmosis uncovered on a ranch in southeastern Manitoba in the Marchand area.

As a result of the initial diagnosis all of the cattle on 16 adjoining ranches in the area were submitted to tests—well over 2,000. As a result of the test, infection was uncovered on two ranches, and involved 209 animals.

The two infected farms, and all those surrounding, were quarantined to prevent the spread of the disease, and the 209 reacting animals were ordered slaughtered under the provisions of the Animal Contagious Diseases Act.

The owners were paid compensation of approximately \$47,000 for the 209 animals slaughtered.

The area is still under close scrutiny and observation, and will be kept under observation to ensure that the disease does not become established or is not still in the district, or the area.

Mr. Korchinski: Have you been able to locate the source?

Mr. Wells: Yes; the source was cattle brought in for breeding purposes from the United States.

Mr. Korchinski: At the moment you are just watching and observing. For the benefit of those who are perhaps not too familiar with this disease could you describe its symptoms?

Dr. Wells: Basically, anaplasmosis is simply a debilitating disease. It is a blood infection spread by biting flies. The animals seem to lose flesh, and there is a high mortality rate.

Mr. Korchinski: Thank you.

Mr. Gleave: I have a supplementary. Is there any vaccine, for it, Mr. Chairman?

Dr. Wells: Yes, there is a vaccine available in the United States, although its use is questionable. It is not our intention to vaccinate.

As a matter of fact, over the years there has been some anaplasmosis in the United States, and the importation of cattle from the United States is, of course, subject to health certification.

Mr. Korchinski: I have one other question. Is there a large amount of anaplasmosis in the United States, or in other countries?

Dr. Wells: Yes; there is a considerable amount of it in the southern areas of the United States.

Mr. Korchinski: And in other countries?

Dr. Wells: Yes.

The Chairman: Thank you, Mr. Korchinski. I recognize Mr. Roy (Laval)

[Interpretation]

Mr. Roy (Laval): Mr. Chairman, two questions. Are you continuing your researches on a problem which is called dairy fever in our dairy cattle. And secondly acetony. I also we spoke about hog cholera. Do you know whether swine are still fed on garbage? And when this sickness was raging it was suggested this might be one of the causes, the virus might have been carried by refuse eaten by swine. And unfortunately, there are still people who feed their hogs what's is called "pig-swill" and is the department tracking down these producers so that we can avoid this problem?

[English]

Dr. Wells: On the first part of your question, sir, as was indicated earlier, the Department has done considerable research on milk fever, but this has slackened off because the majority of such research is now carried on at the veterinary colleges and by provincial research organizations.

The same applies to the second disease you mentioned, which I think was acetonymia.

Acetonymia is reasonably well known. Basically, the condition is well-understood and the treatment is reasonably well-understood. It is primarily a lack of blood-sugar. The physiological conditions giving rise to this lack are, of course, being studied.

Relative to the third part of your question, sir, the feeding of garbage to swine, yes, the

Department is well aware of this. In fact, we recognize that this is in all probability the major source of the spread of hog cholera and other diseases in swine in our country.

• 1050

As a result, under the regulations of the Animal Contagious Diseases Act the feeding of garbage to swine is subject to licence and control under the provisions of the Animal Contagious Diseases Act; and all premises in which there is feeding of garbage to swine or to poultry must be licensed and must have equipment on the premises before they get a licence to adequately boil or cook that garbage in order that any infection in it will in fact be killed before it reaches the swine. This has been going on since about 1915, I think, in Canada. There are at the moment a total of 275 licensed garbage feeding premises in Canada of which 70 are in Quebec; in Newfoundland 3; Prince Edward Island 3; Nova Scotia 41; New Brunswick 9; Quebec 70; Ontario 97; Manitoba 8; Saskatchewan 2; Alberta 12; and British Columbia 30.

This garbage feeding, in addition to acting as one of the greatest factors in eliminating the spread of hog cholera in this country, has at the same time been one of the greatest factors in reducing trichinosis in swine, by the same token of cooking all the garbage, so that the trichinae are killed before it is fed to swine.

The Chairman: Thank you, Dr. Wells.

The Chairman: I recognize Mr. Pringle from Fraser Valley East.

Mr. Pringle: Mr. Chairman, I too would like to preface my remarks by saying that my questions are going to be related to processing and international movement, and I feel that the work done by the Health of Animals Division with regard to meat inspection has been nothing less than spectacular over the years in which they have been involved. There seems to be an improvement going on all the time and continuing, so I feel that should be on the record.

There are some questions brought to me from time to time with regard to the international movements relating to the standards and regulations of processing a product in the United States and then shipping it into Canada. It is felt in some areas that there is an advantage possibly to the costs of processing in the U.S.A. by virtue of their standards which may not be considered to be satisfactory

by our standards, and consequently less expensive. I am not suggesting that this is absolutely the case. I am just saying that these questions are brought up. I think it would be of advantage to the Committee if we could get a statement from the Meat Inspection Branch of the Health of Animals Division relating to this.

I am referring, for instance, to how we test the use of esterogens, which is against our laws, and how we check them with regard to some things like moving kidneys and various things that they do not have to do in some areas down there, also particular types of packaging where they can use opaque cryovac and we are not permitted to use different types of opaque and, different types of packaging and removing the feet at the beginning of the processing procedure in poultry instead of at the end as we do here, and so on and so forth. Could we have a statement so that we could have on record how we stand with regard to international processing?

The Chairman: The question will be taken by Dr. Hetherington.

Dr. C. K. Hetherington (Director, Meat Inspection Division, Department of Agriculture): Mr. Chairman, possibly I could answer the first part of the question by saying that the international movement of meats and poultry products is subject to the regulations of the Canada Meat Inspection Act.

In so far as the international movement of meats and canned food products into Canada is concerned, possibly I should preface my remarks by saying that our exports last year were possibly 125 million pounds and we imported 124 million pounds. So they are very close.

• 1055

The Government of Canada recognizes the meat inspection program of some 30 countries. These 30 countries initially are allowed to import sterile canned cooked products. These 30 countries include the United States, Australia, New Zealand and Ireland, which are allowed to send us meat and poultry products which are not necessarily sterile canned cooked. In other words, they could be processed, raw, fresh, frozen, and the like. Most of our poultry products, imports which can vary each year from possibly 12 million to 20 million pounds per annum, come from the United States.

We do not have officers visiting the plants in the United States. The shipments arrive in Canada and they are required to comply with the Canadian regulations, that is, the Canada Meat Inspection Act and regulations, as well as the Food and Drugs Act and regulations. Each shipment must be properly marked. The marking must have the common name of the product, the statement "Product of U.S.A.", the net weight, the name and address of the producer, and the inspection mark. In addition, of course, there must be a certificate with each shipment which states that the goods have been prepared from animals which received anti- and post-mortem inspection, were prepared in a sanitary manner, are wholesome and fit for food, and actually comply with the Canadian regulations.

Despite this fact, there are differences of opinion between our inspection programs. We try to keep the programs as even as we can to permit the movement from one country to another, and I suppose, Mr. Chairman, possibly what Mr. Pringle is referring to is the use of phosphates in the manufacture of poultry products. The use of phosphates is permitted in the United States. As of this date, it is not permitted in Canada. This means that if a firm is preparing processed poultry products for Canada, they cannot use a phosphate in that product.

We go so far as to accept statements from the management and statements from the inspectors that phosphates are not used in the product entering Canada. We also test the finished product as it enters Canada but, here again, I must say that we have a very weak point for the simple reason that poultry raised in different parts of the United States, between points A and B, will have twice the amount of phosphates one from the other. Therefore, a chemical test is not suitable, and we must rely on the inspectors who actually do the inspection as well as the management of the plant that prepared the product.

However, this is something we may possibly overcome because, in short order, likely phosphates will be made available to the manufacturers of poultry products in Canada.

The Chairman: Dr. Hetherington, may I interrupt you. We thank you. I think that is a very complete answer. We have to vacate this room at eleven o'clock. May I thank Mr. Williams and Dr. Wells, Mr. Jarvis and the other gentlemen who have attended our meeting this morning.

Mr. Thomson (Battleford-Kinderley): Mr. Chairman, one question to Dr. Wells. Would he be prepared to give the Committee a statement on an investigation that took place into a flock of chickens in the Selkirk area where there apparently was radiation sickness from the proximity to radar towers? Would he give us some information on that?

Dr. Wells: We will endeavour to get that information and have the answer for you when we come back to Item 1.

The Chairman: Gentlemen, shall Item 40 carry?

Mr. Thomson (Battleford-Kindersley): No, Mr. Chairman, I am going on, on this item.

The Chairman: I assumed the information was not available today. Is that correct?

Dr. Wells: No, we do not have it today.

Mr. Thomson (Battleford-Kindersley): Can we not stand this item while the information is procured?

The Chairman: Well, I am in the hands of the Committee.

• 1100

Mr. Thomson (Battleford-Kindersley): That was a microwave tower rather than a radar tower in that question.

The Chairman: Was that not a microwave tower?

An hon. Member: Under Item 1.

The Chairman: It could be covered under Item 1 if the Committee is agreeable, but I am in your hands.

Dr. Wells: We are prepared to submit a statement. There is no problem about that at all.

An hon. Member: Let us stand the item then.

The Chairman: What is the wish of the Committee?

Mr. Korchinski: I think we should stand it.

An hon. Member: I agreed.

Mr. Southam: Mr. Chairman, there are several more questions to be put under Item 40, and I think Mr. Korchinski's suggestion is well taken. I think we should stand it and possibly clear it up at the next meeting without too much difficulty.

The Chairman: Is it agreeable to stand Votes 40 and 45 and we will continue with them next Thursday, when our next meeting will be called. Then we will also call, assuming that Votes 40 and 45 will not take up the time of the full meeting, the Farm Credit Corporation for that meeting as well. Is that the wish of the meeting?

An hon. Member: What about the Canadian Dairy Commission?

The Chairman: We have either one of three, which would you prefer? I would welcome the advice of the Committee. Would you like to have the Farm Credit Corporation or the Canadian Dairy Commission next week. After we have disposed of these two votes.

Mr. Foster: Which will take the less time of those two.

The Chairman: That is a good question.

Mr. Peters: If I could make a suggestion Mr. Chairman, we have had considerable discussion on the Farm Credit Corporation and I

would suggest that we have the Canadian Dairy Commission.

The Chairman: I would like to have the feeling of the members on this.

Mr. Southam: They are both important subjects, Mr. Chairman. Which would be more convenient for the officials.

The Chairman: I would think that probably in view of the fact that we have had considerable discussion on the Farm Credit Corporation that we might dispose of that estimate in the portion of the next meeting which remains after we conclude our discussion on Votes 40 and 45.

Mr. Peters: It was my thought, Mr. Chairman, that as we have not yet decided on the interest rate we really do not know what we are talking about in terms of the new legislation.

Mr. Foster: Mr. Chairman, I suggest we call Farm Credit Corporation as well as...

The Chairman: Gentlemen, the meeting is adjourned to the call of the Chair.

OFFICIAL REPORT OF MINUTES
OF
PROCEEDINGS AND EVIDENCE

This edition contains the English deliberations and/or a translation into English of the French.

Copies and complete sets are available to the public by subscription to the Queen's Printer. Cost varies according to Committees.

Translations under the direction of the Bureau for Translations, Secretary of State.

The Clerk of the House.

HOUSE OF COMMONS

First Session—Twenty-eighth Parliament
1968

STANDING COMMITTEE

ON

AGRICULTURE

Chairman: Mr. BRUCE S. BEER

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 6

THURSDAY, NOVEMBER 14, 1968

Revised Main Estimates (1968-69) relating to Agriculture

APPEARING:

The Hon. H. A. Olson, Minister of Agriculture.

WITNESSES:

From the Health of Animals Branch of the Department of Agriculture:
Dr. K. F. Wells, Veterinary Director General; Dr. J. Frank, Director,
Animal Pathology Division.

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE

ON

AGRICULTURE

Chairman: Mr. Bruce S. Beer

Vice-Chairman: Mr. Marcel Lessard (*Lac-Saint-Jean*)

and

Mr. Barrett,
Mr. Clermont,
Mr. Cobbe,
Mr. Côté (*Richelieu*),
Mr. Douglas,
Mr. Foster,
Mr. Gauthier,
Mr. Gleave,
Mr. Gundlock,
Mr. Horner,

Mr. Howard (*Okanagan
Boundary*),
Mr. Korchinski,
Mr. Lambert (*Bellechasse*),
Mr. La Salle,
Mr. Lefebvre,
Mr. Lind,
²Mr. Mazankowski,
Mr. McKinley,
Mr. Noble,
Mr. Peters,

Mr. Pringle,
Mr. Roy (*Laval*),
Mr. Smith (*Saint-Jean*),
Mr. Southam,
¹Mr. Stewart (*Marquette*),
Mr. Stewart (*Okanagan-
Kootenay*),
Mr. Thomson (*Battleford-
Kindersley*),
Mr. Whicher,
Mr. Yanakis—(30).

Michael A. Measures,
Clerk of the Committee.

¹ Replaced Mr. Muir (*Lisgar*) on November 12, 1968.

² Replaced Mr. Horner on November 12, 1968.

CORRIGENDUM

Issue No. 2; Tuesday, October 29, 1968;

Evidence, page 1, right hand column, 14th last line:

“\$225.8 million” should read “\$255.8 million”

ORDER OF REFERENCE

TUESDAY, November 12, 1968.

Ordered,—That the names of Messrs. Stewart (*Marquette*) and Mazankowski be substituted for those of Messrs. Muir (*Lisgar*) and Horner on the Standing Committee on Agriculture.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

MINUTES OF PROCEEDINGS

THURSDAY, November 14, 1968.

(6)

The Standing Committee on Agriculture met at 9.40 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Barrett, Beer, Clermont, Cobbe, Côté (*Richelieu*), Douglas, Foster, Gauthier, La Salle, Lefebvre, Lessard (*Lac-Saint-Jean*), Lind, Mazankowski, McKinley, Peters, Pringle, Smith (*Saint-Jean*), Southam, Stewart (*Marquette*), Thomson (*Battleford-Kindersley*), Yanakis—(21).

In attendance: The Honourable H. A. Olson, Minister of Agriculture; *and from the Department of Agriculture:* Mr. S. B. Williams, Deputy Minister; Mr. W. E. Jarvis, Assistant Deputy Minister (Production and Marketing); *and from the Department's Health of Animals Branch:* Dr. K. F. Wells, Veterinary Director General; Drs. R. J. McClenaghan and J. Girard, Director and Assistant Director respectively, Contagious Diseases Division; Dr. W. A. Moynihan, Program Co-ordinator; Dr. C. K. Heatherington, Director, Meat Inspection Division; Dr. J. Frank, Director, Animal Pathology Division; and Mr. R. D. MacMillan, Administrative Officer.

The Chairman reported that arrangements had been made for members of the Committee to visit the Department's Food Research Institute, Ottawa Research Station, and Sir John Carling building, at the Central Experimental Farm, Ottawa, later this day, a visit previously planned for an earlier date.

The Chairman gave the First Report of the Subcommittee on Agenda and Procedure, as follows:

Your Subcommittee met on Thursday, November 7, 1968 and discussed the two matters referred to it by this main Committee on Thursday, October 17, 1968.

On the matter of a tour by the Committee of Eastern Canada, it is recommended that this subject be deferred and brought forward for consideration at a later date.

On the matter of the speed with which the Committee's French Proceedings are produced, it is recommended that this subject be left with the Chairman for appropriate action.

In addition your Subcommittee recommends the following plan for hearing witnesses on items of the referred estimates:

1968

Tuesday, November 19	Board of Grain Commissioners
Thursday, November 21	Canadian Dairy Commission
Tuesday, November 26	Canadian Livestock Feed Board
Thursday, November 28	Farm Credit Corporation

On motion of Mr. Barrett,

Resolved,—That the report of the Subcommittee be adopted.

The Committee resumed consideration of items 40 and 45 of the 1968-69 Revised Estimates relating to Agriculture under the heading of Health of Animals.

Dr. Wells was questioned, assisted by Mr. Williams and Dr. Frank.

With the questioning continuing, items 40 and 45 were allowed to stand.

At 10.34 a.m., the Committee adjourned to the call of the Chair.

Michael A. Measures,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday, November 14, 1968.

• 0939

The Chairman: Good morning, gentlemen; I see a quorum. I want to mention that later this morning at 10.30 the cars will leave the south door of the West Block for a tour of the Experimental Farm and Research Institute. We are going to have a look at some of the plant research work that is in progress and at some of the food research that is under way, and also visit the Sir John Carling building.

Since our last meeting the Subcommittee on Agenda and Procedure met. (For Subcommittee's report, see Minutes of Proceedings).

Is it the wish of the meeting that this report be accepted?

Mr. Barrett: I so move.

Mr. Côté (Richelieu): I second the motion.

Motion agreed to.

The Chairman: Gentlemen, we are pleased to have the Minister with us this morning. Mr. Olson, do you have any statement you wish to make?

Hon. H. A. Olson (Minister of Agriculture): No, Mr. Chairman.

The Chairman: We will direct your attention then to Items 40 and 45 of the Revised Estimates relating to Agriculture under the heading of Health of Animals. We are pleased of course to have our witnesses present. I will recognize members of the Committee in the order in which they indicate they wish to ask questions. Mr. Peters, will you proceed.

Mr. Peters: Mr. Chairman, I am interested in the proposal that we have made a number of times, to go to Anticosti Island to see the quarantine station. Dr. Wells kindly made this offer a couple of times and for various reasons we were not able to go.

There has been much criticism in certain parts of Canada having to do particularly with the importation of cattle from France. I have been told of cases where a farmer has made an application for a Charolais permit and before the government has informed him that he will be given a permit an American visitor has gone to visit him, told him that he is going to get a permit, and offered him a very large sum of money for it. Anticosti Island is becoming a way station for the American importation of Charolais cattle. It is my opinion that this is a pretty loosely handled operation and, for that reason, I think it warrants some considerable discussion. I presume that Canadian breeders fully support the importation of Charolais cattle into Canada, not only from the export market angle but because of the desirability to cross these cattle with other breeds. Therefore, this should be a legitimate operation. Could you tell us more about this operation, as far as the Department is concerned, and why rumours prevail that the permit system is being abused.

• 0945

Dr. K. F. Wells (Veterinary Director General, Health of Animals Branch, Department of Agriculture): Mr. Chairman and gentlemen, I would like to suggest that we agree that we do have problems with respect to the distribution of import permits, but I would like to further suggest that a great many of the rumours are, in fact, rumours. When Mr. Peters indicated that United States citizens come to Canada and offer to buy permits before they are issued, this, Mr. Chairman, is in fact a rumour because when the final decision is made on the issuance of permits telegrams have gone out—at least for the past three years—within two or three hours—just as long as it takes to get them typed—to the individuals who are getting the permits. This is not only the first time that they know that they are getting permits but in fact it is the first time that the Department is aware of the final decision.

We do recognize that United States citizens have a fantastic interest in European cattle, which gives us

some concern. We have investigated these rumours and have found that many United States citizens interested in breeding cattle come to Canada on speculation. They in fact know who in Canada is interested in Charolais cattle. They in fact know who are applying for permits because they are in touch with one another from time to time. Therefore these people do contact many, many more people than ever get permits on the assumption, on the hope, on the expectation, or just on the simple chance that they will get a permit. So the suggestion that they come and contact people who are getting permits in advance of the people being advised is, in fact, a mathematical gamble—if they contact 20 people who are interested in Charolais and who have applied the chances are that they will hit one of them. Unfortunately, we immediately hear about the one, the other 19 are not reported to us.

This is a problem, sir. We do admit that there are difficulties and problems in the issuance of permits. We think that over the years we have improved the permit system. The first year it was rather simple because there were not more people applying than we could give cattle space for. The second year it became more difficult because of the increased number of applications; however, these still did not exceed the total capacity because we doubled the capacity of the Grosse Ile quarantine station. The third year of course it became obvious that we were in difficulty. To overcome this difficulty, we allotted, first, one each to those who had imported previously and then drew lots for the remaining. The drawing of lots was not too impressive in that we felt that it excluded from the operation any possibility of the application of intelligence, even though that may be questioned. Last year it was then decided that we should in fact ask for a project proposal, which we did, and every applicant was sent a form and asked to put on that form his project proposal—what he in fact intended to do with these cattle and how he intended to use them.

I would like to say, Mr. Chairman, that this does not involve only Charolais cattle. The word Charolais is generally used but at the moment it involves cattle from countries in Europe, and to date France and Switzerland have been approved for this operation. In addition to Charolais we have Limousin, Simmental, Pie Rouge and Main Anjou, so that they are not all of the Charolais breed.

• 0950

Then a committee was formed of two senior representatives of the Animal Research Institute of the

Department, a senior professional academician from the University of Manitoba who is involved in genetic research and a representative of the Canadian Charolais Association, because that is the major breed involved. This committee of four assessed all of these project proposals, which were anonymous. All the names of the actual people involved were taken from the project proposals which were submitted to the committee without any evidence of whose project, in fact, was being considered.

The project committee then gave the Department advice on the order in which these permits, in its view, should be issued. Basically we then simply accepted this proposed suggestion, the arrangement of order by the committee, who examined the projects without knowing whose they were examining, and then issued permits on the basis of the project priority given by the committee.

So far as we know, we have stopped if not totally, certainly to a great extent the abuses with respect to permits. The permits, as you are aware, are non-transferable and if we could at any time establish that a permit had, in fact, been transferred it would, sir, immediately be cancelled.

Another point which may be worth mentioning is that there are not quite as many cattle exported as is the general impression. According to our records we have imported 956 cattle through Grosse Ile quarantine station. Of these, 904 are still in Canada, 7 died, for a total of 911, leaving 45 head of cattle out of the 956 that came through Grosse Ile as having been exported.

Now, there are two other features. Incidentally, I should mention that in addition to the 45 that have been exported there is a very small number, I think perhaps six, seven or eight at the most, which have been given temporary licences for export to the United States for show purposes.

First perhaps I should go back and say that when a man gets a permit to import cattle from certain European countries he has to sign an agreement that an export permit for these cattle will not be applied for for three years. Unfortunately this restriction did not apply to the first year's importation but all subsequent importations are subject to this ruling. Then in September, 1967 an export embargo was placed upon the Charolais cattle imported into this country and none imported through Grosse Ile have been exported since that date except, as I was about to say, where people wished to take an imported Charolais animal to the United States for show pur-

poses. This, in fact, is their life's blood if they are going to stay in the breeding business and in these cases we issued a temporary export licence up to the maximum period on the submission to us of a \$50,000 bond in the name of Canada as a beneficiary should that animal not be returned to Canada during the specified period. In all cases of temporary export we have a \$50,000 bond guaranteeing the return of the animal.

Mr. Peters: May I ask several other questions? You mentioned that we did not allow transfer of a permit. After the three-year period does this animal become free to be an export commodity?

Dr. Wells: Not at the present time because of the export embargo under the Export and Import Permits Act.

• 1000

Mr. Peters: Well, a lot of them are finding their way into the United States, obviously. Can the United States get these Charolais in any other way?

Dr. Wells: No, at the moment they cannot. They do not permit the direct importation of cattle from European countries.

Mr. Peters: I believe they allow some free access from Mexico now since that foot and mouth disease is under control. Perhaps Cuba is in the same category or Guyana or some of these other countries. Do any of them maintain a quarantine station?

Dr. Wells: No; we are the only country on the North American Continent maintaining this type of quarantine station. Mexico does not have one and the United States will not accept livestock from Cuba.

Mr. Peters: So really the only country that Charolais can come into is Canada.

Dr. Wells: Yes, in the North American and South American Continents. Now, in addition to this, of course, cattle from France can be imported into England, Northern Ireland and Eire or Southern Ireland, and these or their offspring can in turn be shipped to the United States or Canada. Also cattle can be imported from France into Japan and in turn the offspring of these cattle can be shipped to the United States.

Mr. Peters: How extensive is this? This seems to be a very roundabout way of purchase. The whole

project for getting cattle of this particular breed is pretty roundabout. To your knowledge, how extensive is the importation of second-generation progeny from other countries?

Dr. Wells: It is just commencing at the moment. The Japanese have just reached their agreement, as I understand it, with the United States officials on the importation of first-generation progeny from the original cattle imported into Japan. These cattle are subject to two months quarantine on a farm in Japan, two months quarantine in the official quarantine station in Japan, an ocean voyage from Japan to the New York and two months quarantine in New York.

Mr. Peters: They do have a limited quarantine, then? A large animal quarantine station?

Dr. Wells: Yes, the United States have one at New York but it is not fitted nor accepted for cattle direct from Europe.

Mr. Peters: Concerning the quarantine station at Grosse Ile, are we limited in Canada? Unfortunately I am not from the West so I am not really sure what the advantages of Charolais over many of the other heavier exotic breeds may be, but it would appear that there is considerable interest in this, at least to the extent of a cross. Do we have enough room at Grosse Ile now? Obviously we are getting into two fields. If the United States is finding an alternative method that probably will not be a problem in five years or three or four years, but we seem to be quite short yet—this is a very valuable commodity yet. Do we have enough capacity for the anticipated breeders' desires to import cattle, not only Charolais but other kinds? Is the foreseeable size of Grosse Ile sufficient for this purpose?

Dr. Wells: If one were to take any one point of time such as this year, the answer would be that our capacity at Grosse Ile is not adequate, but then if one were to project the question to a matter of time in the future in comparison with the cost of meeting an immediate and temporary need of today, the answer would be yes, we do have adequate facilities. In fact, we have facilities for 240 head at Grosse Ile and we can make one importation a year. We could, in fact, fill the quarantine station with a thousand head at Grosse Ile, certainly this year and next year and the year after, but from then on—this is only speculation—I think the facilities would be greatly underused.

Mr. Peters: These animals are so valuable that you cannot use a loose-housing arrangement; they have to be individually . . .

Dr. Wells: Well, we do use box stalls. They are not individually tied but they must be inside, of course, for our quarantine purposes. However, we do house them in box stalls.

Mr. Peters: You mention it is for quarantine purposes. Why would that be? Would there be a difference in incubation?

Dr. Wells: No, but there would be the possibility of birds and rodents if in fact they were not inside.

Mr. Peters: In Grosse Ile do we also bring in horses?

Mr. Wells: No, we have no need to bring in horses. The horse diseases with which we are concerned are either sufficiently serious that there are no tests for them, in that they cannot come into the country at all, or they are those with which we are concerned which come from countries where we know the status of these diseases and we can test for them and there is no need for this long-term quarantine of horses. It is simply a matter of drawing blood and having the required tests done and holding up the horses for a matter of a week until the tests are completed in our laboratory. The horses can then come in.

Mr. Peters: So we do not really quarantine for anything except cattle and hogs?

Mr. Wells: Cattle, sheep and swine.

Mr. Peters: Do we have a considerable number of these imported now?

Mr. Wells: Very few swine and sheep. Some sheep are coming in from Finland this fall.

Mr. Peters: What is the present cost factor for the quarantine of cattle for Grosse Ile? Is that the only one we have? We do not have any west coast quarantine stations?

Dr. Wells: No. Grosse Ile is the only maximum security quarantine station we have. Do you mean the cost to the owner, to the importer?

Mr. Peters: No, not necessarily. I want a simple figure, for us to operate it, not the purchaser.

Dr. Wells: It does not cost the Department anything to operate the station, sir. We collect the total cost of feed, care and maintenance of the animals from the individual importers. The owner pays all of this directly to us. This costs him around \$650 per animal in so far as the cost of care, maintenance and feeding of the animal is concerned. In addition to that, he pays us a \$900 quarantine fee, which represents our amortization or capital return on the capital cost of the structure.

Mr. Peters: I presume the reason we conduct this operation is in the general interests of agriculture and not the whims particularly of breeder associations. This is developing into a very rich man's sport. You have indicated that it costs \$1500 per head for only the quarantine aspect of it and then there is the danger of rejection. Have there been rejections?

Dr. Wells: Oh yes, there have been rejections, although we weed out most of these by tests on the farms in France, tests in the Brest quarantine station. We have not had rejections for any of the serious epizootic diseases at Grosse Ile but we have had rejections for brucellosis and tuberculosis. In the majority of cases the importer insures against such rejections.

• 1005

Mr. Peters: I presume most of this breeding stock is the male species?

Dr. Wells: No. On the contrary, sir, most of it is female. If one brings in a male it is rather difficult to reproduce the pure line. In fact, one bull by artificial insemination can inseminate up to five, six, seven, eight, nine, ten thousand females, as high as you want to go. In principle you need enough bulls to make sure that you have a broad enough genetic base to carry on a broad-scale breeding operation without inbreeding, but primarily you need more females and this is the case here.

Mr. Peters: They are bringing in mostly females?

Dr. Wells: Oh yes.

Mr. Peters: What I was getting at is why do we not operate on behalf of the industry an artificial insemination unit for Charolais? This would also eliminate this problem in the United States. As a government unit we could probably sell semen to the United States without getting into a prohibitive price.

Dr. Wells: There are both provincially-operated and privately-operated co-operatively organized artificial insemination units across the country, practically all of which have Charolais semen.

Mr. Peters: Is it, for instance, Maple?

Dr. Wells: Oh yes, Maple has imported Charolais bulls and have semen. I just cannot tell you offhand, but I think the Maple unit have an import permit this year, and, as Mr. Williams has just reminded me, we in fact in issuing permits give priority to artificial insemination units that wish to import for this purpose. Charolais semen is readily available throughout the country.

Mr. Peters: I will pass to someone else although I have some further questions I would like to ask.

The Chairman: Thank you, Mr. Peters. I recognize Mr. Smith.

Mr. Smith (Saint Jean): Mr. Chairman, I will try to be very brief so that other members may get a chance to ask a few questions.

At our last meeting we spoke about tuberculosis in cows and other animals. I have a farmer in my constituency who reported that he lost 24 head of cattle in the last two years which, as we know, is pretty hard to overcome financially. I would like to know at this time, realizing that the federal government pays a subsidy—this was mentioned at the last meeting—of \$140 a head for purebred stock and \$70 a head for grade cattle, depending on age and condition, what a farmer has to do to get this subsidy. I would also like to know if any disease-preventive measures are being taken. I have been advised that on this same farm there are open ponds and spring holes and I wondered if anything was being done to prevent this disease. Could you help me out on that, Mr. Chairman?

Dr. Wells: Bovine tuberculosis is a disease which comes under the regulations of the Animal Contagious Diseases Act, and all of the cattle in the country are under constant testing, retesting and surveillance for the disease.

In answer to your first question as to how a man gets compensation for tuberculosis reactors, we test the cattle on either a routine or surveillance basis and when reactors are uncovered they are ordered to be slaughtered and the cattle are automatically valued and compensation is automatically paid, so there is no request or action whatsoever necessary on

his part. If an animal owner sends beef cattle to slaughter and they are condemned for tuberculosis in the plant and we can trace the animals back to the farm of origin—which in most cases we can do—then we also pay that man compensation for having lost those animals because we are interested in eliminating disease from Canada. Each time evidence of infection is found on any owner's premises the owner is required to clean and disinfect the premises and our veterinarian discusses with him the possibilities of contamination, extension of the disease, where it came from from an epidemiological point of view and we study the situation to ascertain, if we can, where the disease came from in order that we may go back to its source and arrest it. Therefore every effort is made to discuss this with the individual.

• 1010

In 1922, when tuberculosis was first brought under the provisions of the Animal Contagious Diseases Act, there was, on an average, one tuberculosis reactor for every 30 cattle tested. Today we have, on an average, one tuberculosis reactor for every 1,100 cattle tested, but even at that 60 to 75 per cent of the reactors are what we call, NVLs, or have no visible lesions of tuberculosis. Therefore, the disease, to all intents and purposes, has been eradicated.

Perhaps you could give us the name and address of the farmer you mentioned. If he has lost 24 head of cattle through tuberculosis he certainly would be on our records. We would be quite prepared to examine the position to see what has happened and to make sure that they did die from tuberculosis, or that they are recorded, or were slaughtered. We can give you the details of the operation, as we know it.

If we do not know it, then it is in our interest and in the national interest to investigate it.

The Chairman: I recognize Mr. Southam.

Mr. Southam: Thank you very much, Mr. Chairman. My questioning is going to be along the same line as that of Mr. Beer.

I was very glad to hear Dr. Wells' very comprehensive review of some of the problems that have arisen around the importation of Charolais.

I wish to ask a few supplementary questions. I was very interested in the equitable allocation of applications for the importation of Charolais cattle and how this project proposal system is working out.

Dr. Wells, is the allocation or supervision system now working successfully in meeting this problem?

Dr. Wells: No, Chairman, we do not think it is good enough yet. We would like to refine it a little more, and we are hoping to be able to do so for the next year round.

It is a difficult area for us, and this is recognized not only by ourselves but by everyone else. We have gradually been improving it, but we think that it still needs some more refinement, sir, and this we hope to do.

Mr. Southam: I am very glad to hear you say that. Many of those who are interested in this particular phase of our livestock industry have been worrying about it. I am sure they will be happy to hear that you are making this plan work and are giving more attention to it.

I was interested in the \$50,000 bond for the temporary export of Charolais. What is the cost of this bond and have you had any instances of bond forfeiture?

Dr. Wells: No, no instances of bond forfeiture. I cannot give you the actual, specific cost of the \$50,000 bond, but I am told that the cost of obtaining it runs anywhere from \$500 to \$750 for a period of a maximum of seven months.

I presume the cost depends upon the ability of the individual to put up guarantees. I am not really aware of this.

If a man wants to send out a group of three animals we ask for a bond of \$100,000; if he wants to send one, we ask for a bond of \$50,000; if he wants to send two, we ask for \$100,000; if he wants to send three, we ask for \$100,000; if he wants to send four, then we would go to \$250,000. But we have had no cases of forfeiture.

Mr. Southam: When Charolais bulls of top rank or championship stature are imported and then subsequently exported to the United States we have heard of a number of instances in which Canadian farmers have felt that they have been more or less held up by exorbitant prices for the importation of semen from these bulls.

Is there any way of regulating that? Is there any reciprocal agreement with the United States Department of Agriculture supervising this, or have you had many instances of it? I have heard of several cases of it.

Dr. Wells: No, we have not had any such complaints brought to our attention, sir.

Mr. Southam: I have heard of one instance and I want to investigate it further. The report was that in one case a man was asked \$50,000 for one sample of semen from one of these top-ranking bulls. I thought this sounded rather exorbitant. Have you heard. . .

• 1015

Dr. Wells: I certainly have never heard of any such price for semen under any circumstances whatsoever.

Mr. Southam: I doubted it myself, but this man tried to impress me with the fact that this was the case. I was wondering whether you had any record of such cases.

Dr. Wells: I feel reasonably certain, sir, that . . .

Mr. Southam: I have just one other supplementary question, Mr. Chairman, which I think is in order. It is under Vote 45:

Payment of compensation at the rates determined in the manner provided by section 12 of the Animal Contagious Diseases Act, to owners of animals affected with diseases coming under that Act, that have died or have been slaughtered in circumstances not covered by the Act and regulations made thereunder.

The amount under the Revised Estimates 1968-1969, is \$8,000. Have you had instances of this and if so, were these particular, isolated cases where you had to pay compensation, and what was the nature of the disease and who were affected?

Dr. Wells: I am sorry, sir, I did not get the question.

Mr. Southam: It is under Vote 45, about half way down page 33 of the Revised Estimates, 1968-69. There is an item of \$8,000.

Dr. Wells: Well, sir, what happens is that the Animal Contagious Diseases Act specifically states that compensation can be paid where an animal is slaughtered under the provisions of this Act.

On occasions, throughout each fiscal year, animals are ordered slaughtered but, prior to the carrying out of the order, the animals die from some other disease or, as happens in some cases, the barn burns down. I think there was a case of a fire this year and

a number of animals were burned, so that they were, in fact, killed, or died prior to the execution of the slaughter order.

Our concern is to eradicate tuberculosis and where we receive adequate proof that the animal is dead we recommend the payment of the compensation that the owner would have received had he been able to carry out the provisions of the slaughter order. But we cannot pay this without approval, because the Act specifically says that the animal must be slaughtered under inspection.

Mr. Southam: Thank you. I was merely seeking information on that detail.

The Chairman: I recognize Mr. McKinley of Huron.

Would you please present your questions as briefly as possible, gentlemen? And may I ask that that apply to the replies also?

Mr. McKinley: I wish to ask a few questions on poultry diseases, Mr. Chairman, but, further to the Charolais, could we have an explanation of what extra value these Charolais cattle have in the production of beef?

Dr. Wells: Specifically, sir, the argument used in their favour—and I can only suggest that to my knowledge it is a justifiable one—is that they do gain in weight much more quickly.

Mr. Chairman, I do not want to sound as though I am advertising the breed. This is without prejudice.

An hon. Member: To whom—the breed or Dr. Wells!

Dr. Wells: Specifically, sir, the purpose is to produce beef as economically as possible. Not all livestock producers in the country hold the view that Charolais can produce beef more quickly and more economically than can the other beef breeds in this nation, but there are a sufficient number of livestock producers who do, and it is to justify—and this seems reasonable—the view of these people, that this breed can produce beef for them more economically than can other breeds, that this importation takes place.

Mr. McKinley: To follow that with another question, semen is readily available from the artificial units. What is the cost of that semen? Is it the same as that of other bulls?

Dr. Wells: It varies all the way, sir, from \$5 a vial up to, I suppose, \$100, or \$150, or more, depending upon the quality and reputation of the bull.

Mr. McKinley: And a vial is to breed one animal?

Dr. Wells: Yes.

Mr. McKinley: Most of the advantage is through cross-breeding, I understand? What is the advantage to anyone in Canada bringing in animals unless for re-sale?

• 1020

Dr. Wells: Unless for resale? In actual fact, the purpose in bringing them in is, in the initial instance, to reproduce the breed in this country so that it will be fixed here and can be used at any time, as I said earlier, on a sufficiently broad genetic base. We are not sure that we will be able to import regularly. If these countries in Europe were to have a severe outbreak of foot and mouth disease the importations would be cut off. Therefore, we have to be able to reproduce the breed and maintain it here if it is to be of permanent benefit to our livestock industry.

Mr. McKinley: What is the necessity for holding these animals for this length of time at Grosse Ile? What diseases are you looking for?

Dr. Wells: We are looking for all the diseases in the book; tuberculosis, brucellosis, Johne's disease, leptospirosis, foot and mouth disease, rinderpest. Should I rhyme off some more? Bluetongue.

Mr. McKinley: How long are they held at Grosse Ile?

Dr. Wells: About five to six months, depending upon our getting all of our tests completed. This is provided everything goes well and all the tests are negative. If there were problems or difficulties it could run into longer but we have not had serious problems or difficulties yet.

Mr. McKinley: Then it takes another five or six months to clean up to get ready for another . . .

Dr. Wells: Yes; then we have to clean and disinfect the station, get the manure out and get the place in readiness for another importation.

Mr. McKinley: I was just wondering, because you mentioned that you bring in only one group a year.

• 1025

Dr. Wells: We also have the problem, sir, of the weather. We can bring the cattle into Grosse Ile only during the open St. Lawrence season. Therefore, when the cattle come in in October they cannot go out until the end of March or early in April at the very earliest and then we have to get the station disinfected. We could bring another group in in August but it takes us four or five months to get our tests done and then it would be winter time and we could not get them out until the spring in any case.

Mr. McKinley: Yes, I understand. Two years ago when this Committee sat we were told there was a blood-testing program under way with regard to leukosis in poultry and I think anyone connected with poultry knows that leukosis is a disease that is causing the industry the loss of a great many millions of dollars. How much has this program advanced or is there another program?

Dr. Wells: Leukosis is recognized as a very serious disease in poultry and a considerable portion of our financial resources and energy in the research operations are directed towards leukosis.

Mr. Chairman, Dr. Frank is the director of our Animal Pathology Division. Perhaps he could give two minutes on the leukosis research project.

Dr. J. Frank (Director, Animal Pathology Division, Department of Agriculture): Sir, we recognize the fact that leukosis is our most serious poultry disease and we have embarked on a research program that covers a number of different aspects. One of the major projects is a joint project with the genetic people in trying to develop means of finding lines of birds more resistant to it and our effort in this connection is with Marek's disease which is one form of leukosis and one which is causing the industry the greatest trouble at the present time.

This is one aspect of the work. It is quite a major effort and requires considerable facilities and manpower. We are also working on other forms of leukosis. I mentioned Marek's disease as one. There is another form that is known as visceral lymphomatosis or "big liver disease" to the poultryman. It is in this connection that we have been working on blood tests. I think I mentioned two years ago that we were doing preliminary work on this, but as yet there is not a test that we can apply to the field. There is some hope but it is time-consuming work. There are actually two tests that we are working on.

Then we have another form of leukosis which is erythroblastosis and there we are doing basic work on this problem at Lethbridge. I think we are tackling the three important types.

Mr. McKinley: Actually, so far as the blood-testing program is concerned, no progress has been made in the last two years.

Dr. Frank: Not that can be applied to the field, sir. There has been progress in that we are finding it easier to do and the results can be correlated to the disease more easily, but it has not advanced to the stage where we can go out into the field to do a testing program.

Mr. McKinley: You have tested flocks?

Dr. Frank: Just experimental flocks.

Mr. McKinley: Do you ever find flocks that do not have leukosis?

Dr. Frank: No, not with the small number that we have worked on.

Mr. McKinley: Are you doing work at the present time on different breeds to see which breed might be more resistant?

Dr. Frank: With different lines, yes.

Mr. McKinley: You say "different lines".

Dr. Frank: Well, a lot of them are in the white breeds such as Leghorns, but we are not just testing Leghorns and Barred Rocks and so on.

Mr. McKinley: No, but different commercial lines?

Dr. Frank: Yes.

Mr. McKinley: De Kalb High Line and all those?

Dr. Frank: Not those particularly; we are concentrating with our Canadian producers and we are working co-operatively with two of the bigger producers in Canada.

Mr. McKinley: Which producers?

Dr. Frank: They are Shaver's and Peel's.

Mr. McKinley: Peel's, is it?

Dr. Frank: That is right.

The Chairman: I hesitate to interrupt but we do have a commitment at 10.30. I understand there may not be disposition to conclude our consideration of these Estimates this morning.

Mr. Lefebvre: Mr. Chairman, I wonder whether I could ask a few questions here and the answers could be given as an appendix to today's Proceedings because they have to do with the line of questioning already started. I think it would be important to have them in the same booklet.

The Chairman: We will hear your questions. You are next on the list.

Mr. McKinley: I will pass.

Mr. Lefebvre: My questions have to do with Charolais cattle again. Perhaps I missed the answers to some of these questions but I would like to know how many applications were received last year for imports of these cattle. How many were accepted and how many were refused? Into what provinces were they imported?

I believe you said also that they must be in quarantine for six months and remain in Canada for three years, but within this period of three years these cattle are allowed to go into the United States for show purposes. Is that correct, sir?

Dr. Wells: Yes, for temporary periods.

Mr. Lefebvre: How long a period would you call temporary?

Dr. Wells: For bulls, a maximum of seven months based upon the time it takes to run the show circuit in the United States; for females, dependent upon their age and stage of pregnancy. We cannot let a female go into the United States for a long enough period so that she could produce a calf in the United States and we would have no hold on the return of the calf.

Mr. Lefebvre: Now, while these bulls are in the United States can they be used for breeding purposes?

Dr. Wells: Yes, if they so desire because there is no difference between that and selling semen from them

in Canada to the United States during their stay in Canada. Semen is freely interchangeable between the United States and Canada.

Mr. Lefebvre: So semen can be sent immediately into the United States; although the bulls could not be sold to the United States their semen is freely exported.

Dr. Wells: That is right, sir.

Mr. Lefebvre: You also said that the cost of the cattle involves approximately \$500 for a bond fee, \$900 overhead fee I think it is called and approximately \$650 for cost of care for these animals.

Dr. Wells: The \$500, sir, has no relation to the importation. It is the cost of purchasing a bond for any person wanting to export temporarily. It is not connected in any way with the importation of livestock.

Mr. Lefebvre: Could you give us an idea then, Doctor, of the average costs for a bull and a cow imported from France into Canada?

Dr. Wells: I think, sir, that the cost of the animal in France would vary all of the way from \$1,000 to \$2,500 for a female, perhaps averaging between \$2,000 and \$2,500, and bulls would average somewhere between \$3,500 and \$5,000.

Mr. Lefebvre: When these bulls or cows are sold to the United States after the three-year period what is the average price received?

Dr. Wells: I could not give you that average price, sir, because there have not been that many sold. Only 45 out of 956 have been moved. I really have no record of what this price is but I certainly think that it would be considerably above the import cost.

Mr. Lefebvre: What I am getting at, sir, is this. We can export the semen right away, we can let the bulls go over there for show purposes and for use in breeding—writeups in newspapers have indicated that these bulls have gone as high as \$40,000. or \$50,000. in the United States market—but is there anything else we could effectively do to protect the small importer and to make sure that these cattle brought into Canada are actually for Canadian use?

Dr. Wells: I shall be very short, sir.

Mr. Lefebvre: I am willing to receive this answer as an appendix.

Dr. Wells: I would like to tell you now because it is easier than writing an answer.

The simple answer to your question is that we are doing everything possible we can to prohibit the export of animals. The ones which were exported were exported prior to the control measures being put on. But please bear in mind that if, in fact, breeders pay money to bring these cattle into this country, breed them and produce better cattle and are restricted in their market or sale of the product they produce, it is going to be impossible for them to continue in business and produce better and better cattle. To produce better and better cattle they have to have a free market so they can get enough money in return for their work to produce quality cattle. It is all right on the one hand to say that we must not export, which in fact we do—we prohibit the export of the imported animals, but these men that import them, . . .

Mr. Lefebvre: This is what I mean.

Dr. Wells: . . . take the gamble and the risk involved and put their life's blood into breeding, have to get a return for them. Therefore we cannot continue to restrict the sale of the progeny of these animals.

Mr. Lefebvre: I was not talking about the progeny but about the original imports.

Dr. Wells: They are restricted.

Mr. Lefebvre: I have one more question, which will complete my questioning.

The Chairman: I am sorry, Mr. Lefebvre, but we have passed our time. The meeting will be convened again. We will have an opportunity of questioning the same witnesses.

I will recognize Mr. Noble for a very brief supplementary.

Mr. Noble: Is there any provision to prohibit breeders who show bulls in the United States from using them to service cows while there?

Dr. Wells: Not at all, sir. The question has already been answered because he can export the semen, Mr. Noble. If the bull is in Canada the semen is freely exportable, therefore he can use the bull if it is in the United States.

The Chairman: Gentlemen, the meeting is adjourned to the call of the Chair. Would you all please be at the south door of the West Block as soon as you can.

HOUSE OF COMMONS

First Session—Twenty-eighth Parliament
1968

STANDING COMMITTEE

ON

AGRICULTURE

Chairman: Mr. BRUCE S. BEER

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 7

TUESDAY, NOVEMBER 19, 1968

Revised Main Estimates (1968-69) relating to Agriculture
(Board of Grain Commissioners)

WITNESSES:

Mr. S. B. Williams, Deputy Minister of Agriculture; *and from the Board of Grain Commissioners:* Mr. F. F. Hamilton, Chief Commissioner; Mr. M. V. Martens, Secretary.

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE
ON
AGRICULTURE

Chairman: Mr. Bruce S. Beer

Vice-Chairman: Mr. Marcel Lessard (Lac-Saint-Jean)
and Messrs.

Barrett,
Clermont,
Cobbe,
Côté (*Richelieu*),
Douglas,
Foster,
Gauthier,
Gleave,
Gundlock,
Howard (*Okanagan
Boundary*),

Korchinski,

Yanakis—30.

Michael A. Measures,
Clerk of the Committee.

¹ Replaced Mr. McKinley on November 15, 1968.

CORRIGENDUM

Issue No. 6, inside front cover, membership list, bottom of left hand column:

Delete "Mr. Horner".

ORDER OF REFERENCE

FRIDAY, November 15, 1968.

Ordered,—That the name of Mr. McCutcheon be substituted for that of Mr. McKinley on the Standing Committee on Agriculture.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

MINUTES OF PROCEEDINGS

TUESDAY, November 19, 1968.

(7)

The Standing Committee on Agriculture met at 9:42 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Barrett, Beer, Clermont, Cobbe, Côté (*Richelieu*), Foster, Gauthier, Gleave, Gundlock, Howard (*Okanagan Boundary*), Lambert (*Bellechasse*), La Salle, Lefebvre, Lessard (*Lac-Saint-Jean*), Mazankowski, McCutcheon, Roy (*Laval*), Smith (*Saint-Jean*), Southam, Stewart (*Marquette*), Stewart (*Okanagan-Kootenay*), Thomson (*Battleford-Kindersley*)—(22).

Also present: Messrs. Whelan and Ritchie, M.P.'s.

In attendance: Mr. S. B. Williams, Deputy Minister of Agriculture; and from the Board of Grain Commissioners: Mr. F. F. Hamilton, Chief Commissioner; Messrs. C. L. Shuttleworth and A. V. Svoboda, Commissioners; Mr. V. Martens, Secretary.

The Chairman welcomed those in attendance and called items 50 and 51 of the 1968-69 Revised Estimates relating to Agriculture, namely

BOARD OF GRAIN COMMISSIONERS

Item 50 Administration, Operation and Maintenance, etc.	\$8,784,000
Item 51 Construction or Acquisition of Buildings, Works, etc.	\$1,502,000.

Mr. Hamilton gave an opening statement and was questioned, assisted by Messrs. Williams and Martens.

On completion of the questioning, the Chairman thanked those in attendance.

Items 50 and 51 were carried.

Mr. Williams read replies to two questions asked previous to the meeting this day.

At 11:23 a.m., the Committee adjourned to the call of the Chair.

Michael A. Measures,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Tuesday November 19, 1968.

The Chairman: Gentlemen, we will start the meeting.

We are pleased, of course, to have with us the Deputy Minister, Mr. Williams, and to be accompanied by representatives of the Board of Grain Commissioners for Canada.

I will ask Mr. Williams to introduce the witnesses starting with the Chairman.

Mr. S. B. Williams (Deputy Minister Department of Agriculture): Mr. Chairman and gentlemen, we have here the three Commissioners of the Board of Grain Commissioners for Canada. On my immediate right is Mr. Frank Hamilton, the Chief Commissioner; beside him is Mr. Vic Martens, Secretary of the Board of Grain Commissioners; and over to their right are Mr. Shuttleworth and Mr. Svoboda, both of whom are Commissioners of the Board of Grain Commissioners for Canada.

The Chairman: I wish to draw your attention to Items 50 and 51 in our Estimates.

I understand Mr. Hamilton is going to make an opening statement. I will then call for questions.

Mr. Hamilton?

Mr. F. F. Hamilton (Chief Commissioner, Board of Grain Commissioners for Canada): Thank you, Mr. Chairman.

Good morning, gentlemen. It is always a pleasure to appear before the Agricultural Committee. I hope that in our meeting with you this morning we will be able to contribute something to the deliberations of the Committee.

I wish to make an opening statement to indicate, in a general way, the functions and work of the Board of Grain Commissioners for Canada.

The Board of Grain Commissioners is responsible for administering the Canada Grain Act and has general supervision over grain handling in Canada. It has the power to make regulations and orders which are consistent with the Act.

The Board's operations are divided into six main functions. The Executive Offices deal with general administrative matters, provide financial and personnel services, and include the offices of the Assistant Commissioners.

The Inspection Division, which is the largest of the operational divisions, provides official inspection and grading of grain at various points across Canada, particularly grain received at and shipped from terminal elevators and grain loaded to vessels for export at eastern elevators.

The Weighing Division is responsible for official weighing of grain at terminal and mill elevators, annual weighovers of grain stocks in terminal and eastern elevators, and inspection and certification of scales in terminal and eastern elevators.

The Statistics Division collects, compiles and publishes basic statistics relating to handling and storage of grain within the licensed elevator system. Other responsibilities include issuing of licences to elevator operators and grain dealers, supervision of bonding of licensees, and registration of warehouse receipts issued by managers of terminal and eastern elevators. The Division is making increasing use of electronic data processing and telecommunication equipment in its work.

The Research Laboratory carries on a program of research related to the quality of cereal grains and oil seeds, conducts quality surveys of current crops and shipments, and participates in testing of new varieties in collaboration with plant breeders and the Board's Inspection Division.

The Canadian Government Elevators system, which is managed, operated and maintained by the Board, is comprised of six terminal grain elevators located in Western Canada. One of the elevators is situated at the port of Prince Rupert, B.C., and handles grain for loading directly to ocean vessels.

In addition, the Board constitutes Grain Appeal Tribunals and Committees on Western and Eastern Grain Standards. It also has responsibility for collecting the one per cent levy under the Prairie Farm Assistance Act; for setting maximum lake grain freight rates when considered advisable, under the provisions of the Inland Water Freight Rates Act;

and for fixing the maximum charges authorized to be made by licensees under this Act.

● 0945

The fundamental principle of the Act is to ensure that in the movement and sale of Canadian grain the interest of the producer is protected, and that a uniform high quality product moves into both domestic and export markets.

Thank you very much.

The Chairman: Thank you, Mr. Hamilton.

Gentlemen, members who have indicated they wish to question the witnesses are Mr. Clermont, Mr. Gleave, Mr. Southam and Mr. Gundlock.

I will recognize Mr. Clermont.

[Interpretation]

Mr. Clermont: Mr. Hamilton, what was the situation of grain stocks in February and March 1968 in the eastern part of the country, particularly in Montreal and other ports of the province of Quebec?

[English]

The Chairman: Mr. Hamilton?

Mr. Hamilton: Mr. Chairman, so far as I am aware, Mr. Clermont, there was plenty of grain for domestic use in all the eastern terminals last February and March.

[Interpretation]

Mr. Clermont: What are your connections, if any, between the new Canadian Feed Board which was established by parliament in 1966, I believe. Is your Grain Commission dealing with the Canadian Feed Board?

[English]

Mr. Hamilton: Do you mean with the Canadian Livestock Feed Board, Mr. Clermont?

Mr. Clermont: That is right.

Mr. Hamilton: Yes; we meet and consult with them on the...

[Interpretation]

Mr. Clermont: You say that you consult with the members of this new Board. Could you give us a list of these dealings you have with it?

[English]

Mr. Hamilton: Last year we dealt very closely with them because the Canadian Livestock Feed Board allotted space in the Quebec terminal for domestic users. This year they are not doing that. As a result, our dealings with them are not as close as they were a year ago.

Mr. Clermont: Why the change, Mr. Hamilton?

● 0950

Mr. Hamilton: The change, Mr. Clermont, is because the lease between Bunge Corporation Limited and the National Harbours Board required that, for the first year, the Canadian Livestock Feed Board allot the space; but after that it was not required.

[Interpretation]

Mr. Clermont: Mr. Hamilton, your Commission does a lot of research on new varieties, let us say, of grain or corn. When the members of this Committee, in 1966, went to the West, I think I had asked if your Commission intended to carry on investigations on the new varieties of feeding grains. Have such investigations been carried out or is it intended that they shall take place in the future?

[English]

Mr. Hamilton: Mr. Chairman, we do continuing work with the new varieties in our research laboratory and as the result of our work we make recommendations on licensing to the Department of Agriculture.

[Interpretation]

Mr. Clermont: Mr. Hamilton, on page 37 of your estimates, I see that—I am sorry, I mean 36—you have services 1968-1969: \$70,000.00 as against \$55,400 for 1967-68 and on page 37, vote 50: you have \$460,500.00 as against \$280,000.00. Now, what do you mean by "City Service". Secondly, what is explanation for the increase because it is almost the doubled appearing on page 37?

[English]

Mr. Hamilton: Mr. Chairman, "Public Utility Services" refers to the Canadian Government Elevator system.

We are now required to pay full taxes in lieu of a grant. This is almost doubled the amount that we pay in municipal taxes. This is the main reason.

[Interpretation]

Mr. Clermont: My last question, Mr. Chairman, for the time being. On page 36, I see for 1968-1969, "overtime": the figure \$500,000.00 as against \$425,000.00 in 1967-1968.

Mr. Hamilton, when I mention page 36 I refer to the French session. Perhaps it is a different page in the English text.

[English]

Mr. Hamilton: Mr. Clermont, this refers to those engaged in inspection and weighing, who are located in the terminals.

The majority of this is accounted for by the double-shift we have proposed to start on the West Coast, in Vancouver.

[Interpretation]

Mr. Clermont: Thank you Mr. Chairman.

[English]

The Chairman: Thank you, Mr. Clermont. I recognize Mr. Gleave.

Mr. Gleave: Mr. Commissioner, how many professionals and assistants do you have, in the laboratory facilities of the Board? What is the composition of the staff in the grain laboratory?

Mr. Hamilton: Mr. Chairman, I do not know whether I can satisfy Mr. Gleave. The total staff is 62, but I would just be guessing at the make-up between professionals and technicians. There are probably ten Ph.Ds and the remainder will be technicians and clerical.

• 0955

Mr. Gleave: Have the staff and service been increased in recent years, or have they remained more or less static?

Mr. Hamilton: There has not been any substantial build-up. We are trying to recruit new Ph.Ds all the time, but it is very difficult to do so.

Mr. Gleave: I notice in the Estimates that it has remained fairly static. It occurred to me that with the development of technology and the changes of the times this part of the facility would be growing.

Mr. Hamilton: It remains static for two reasons, Mr. Chairman. One is that our space is very limited in Winnipeg. We cannot really expand our facilities in the present building.

The second reason is probably Treasury Board.

Mr. Gleave: Are you improving the equipment in your laboratory, or is it obsolescent? To put it bluntly, is it being kept abreast of the demands of the times?

Mr. Hamilton: We are satisfied, Mr. Gleave, as is the Director of Research, that we have a first-class research laboratory. Our equipment is being improved all the time.

Mr. Gleave: What studies are you making on protein-grading?

I noticed that recently you were reported as saying, if I read the report correctly, that we should be looking at the protein-content in roughly the Palliser triangle.

What studies are you making on protein-grading in the laboratory? How far are you along with it?

Mr. Hamilton: Mr. Chairman, the program we have initiated, and are now actively involved in, is one to try to level out the variations within the grade. Protein seems to be the key factor. Actually what we are doing is trying to level out the protein variation within the grade.

In a rough-and-ready way, this involves an exchange between cars coming from the southern area of Saskatchewan with a very high protein and going into the Saskatchewan Pool terminal and Alberta Wheat Pool cars, not so high in protein going into their terminal. There is an exchange of box cars now, and this tends to level it out.

On the other part of your question, dealing with my remarks to the Saskatchewan Wheat Pool, I was suggesting to them that perhaps 1968 was the time for us to examine the idea of specializing a little more.

What I had in mind, and what I suggested to them, was that a good problem for the National Grains Council to consider would be whether we should select our very high quality grain from the semi-drought areas of the Palliser triangle rather than blend it right across from the Peace River down to Montana.

Mr. Gleave: Would I be right in assuming that if this could be done studies on protein would have to be made in your laboratory?

That is, you would surely have to develop techniques for assessing the protein quality of wheat?

Mr. Hamilton: Yes. We are doing this on a continuing basis. We are checking protein every day.

Mr. Gleave: Are you still having trouble in assuring the West Coast of a satisfactory level of protein for purchasers?

Mr. Hamilton: It varies from year to year, depending on crop conditions and the grades of grain available for export.

There is no problem at present, I can assure you, Mr. Gleave.

Mr. Gleave: Have you sent out information on farm drying machines to elevator agents? How do you reach the farmer who is using a farm dryer?

Mr. Hamilton: We send our advice to every agent. We have advertised our recommendations in farm papers. Our Assistant Commissioners are continually travelling and giving advice. We run schools. There was one in Saskatoon yesterday. We work in conjunction with extension departments to universities.

• 1000

We consider it is quite well in hand. All we really do is advise and recommend; and we offer a free testing service to any producer using a grain-dryer.

Mr. Gleave: I got a dryer on the farm, and to get information I had to phone the Board of Grain Commissioners in Winnipeg. The information of the elevator agent at Biggar was so sketchy that it would not serve the purpose. Have you any comment on this?

Mr. Hamilton: No. All I can say, Mr. Gleave, is that he should have had what we consider to be satisfactory information.

Mr. Gleave: The information he had was as I say, and when I phoned the office in Winnipeg the information I got was different from the information he had. I doubt that the information he had was really from the Board of Grain Commissioners, but I did not check this out.

Mr. Hamilton: Mr. Chairman, I would like to refer this question to Mr. Martens who is our expert on grain handling.

Mr. Gleave: Yes, I would appreciate that, Mr. Martens.

Mr. M. V. Martens (Secretary, Board of Grain Commissioners): Thank you. Mr. Gleave, we have just had a number of meetings with the grain trade in the last week. In conjunction with the trade itself, we produced a pamphlet which the Board of Grain Commissioners agreed to print. The printing has already been completed and the grain trade was going to get this out to the producers through their elevator agents, through the key agent at every station, so that this information should be out right now; it is all available. As Mr. Hamilton mentioned, we emphasize in this that we are offering the free testing service for all grain dryers.

Mr. Gleave: It is rather late in the season. That is; dryers have been going for some time. I do not wish to be over-critical but—

Mr. Martens: Prior to this, we also had our own information that we provided in bulk to the elevator companies for distribution to the elevator agents. This was to go out; this was our own, but we did something more just within the last week.

Mr. Gleave: I see.

Mr. Gundlock: May I ask a supplementary? What information is that on drying? Is it not mostly temperature?

Mr. Martens: It is mostly temperature.

Mr. Gundlock: Has that changed over the years?

Mr. Martens: No, this has not changed over the years; it is the same information.

Mr. Gundlock: So the elevator companies would have that information.

Mr. Martens: That is right.

The Chairman: Mr. Gleave, are you finished?

Mr. Gleave: I do not want to pursue that particular subject any further. I think I have made the point that I wanted to make. If I may be permitted, there is another matter I would like to follow through on the testing of new varieties. How much testing is going forward at the lab in Winnipeg with regard to the milling qualities of new varieties of wheat?

It has been generally suggested in many quarters that we should go for the production of higher-yielding wheats and sacrifice quality to a degree. This, I think, was part and

parcel of the speech of the Chief Commissioner the other day. How much testing are you doing at Winnipeg into the qualities of these new varieties, or has the Research Branch yet presented any to you?

Mr. Hamilton: Yes, we do full-scale milling and baking tests on every variety that is grown on trial at the research stations and also on any varieties we can get our hands on from Mexico or the United States.

Mr. Gleave: Can you give this Committee any general information of what your testing has shown up to this time?

Mr. Hamilton: Before I answer that question, Mr. Chairman, our annual report states that the 1967 series of co-operative tests included 69 new varieties of wheat and barley. This will give you some idea.

So far as the results of looking at these new varieties is concerned, we really have not seen anything too dramatic apart from the varieties coming along in our own Canada Department of Research stations.

Mr. Gleave: Dramatic in what sense?

• 1005

Mr. Hamilton: Dramatic in yield, quality, or disease resistance.

Mr. Gleave: You have had reports, of course, from the research people, and these reports do not show dramatic increases in yields. Do I understand you correctly?

Mr. Hamilton: The big dramatic increase in yield is when some of the new varieties are grown under irrigation.

Mr. Gleave: Yes.

Mr. Hamilton: Of course, this does not apply to too many areas in Western Canada.

Mr. Gleave: But when those varieties are grown under our conditions they do not show this dramatic increase in yield?

Mr. Hamilton: That is correct, Mr. Gleave.

Mr. Gleave: Thank you.

The Chairman: Does that conclude your questioning, Mr. Gleave?

Mr. Gleave: Yes, I think I had better bow out for now.

The Chairman: I will recognize Mr. Southam, Qu'Appelle-Moose Mountain.

Mr. Southam: Thank you, Mr. Chairman. Mr. Hamilton and Mr. Commissioners, a number of the questions I have listed here have already been explored between you and Mr. Gleave, but I think we members from Western Canada in particular are very interested in the research that is going on with respect to the development of new varieties of wheat and the possibilities of increasing yield dramatically and perhaps lowering our price in order to meet competition in world markets.

I understand from a statement you have made, or from something I have read recently, that your Research Branch has been doing some research in connection with Mexican dwarf wheat. Have you anything to report on that yet?

Mr. Hamilton: The plant breeders do most of the work; we do the quality testing. We see nothing so far that would cause us to become very excited. We think that our own Canada Department of Agriculture has varieties that are just as good and perhaps better, certainly for our conditions.

Mr. Southam: How much emphasis would you put on the suggestion you made recently to the Saskatchewan Wheat Pool, I believe, at their meeting with respect to dividing the regional areas of Western Canada into possibly two or three regions according to the Palliser Triangle, and so on, for the production of high quality and then perhaps lower quality, high yielding wheat? Do you think this would be realistic or is it something that could be considered long term? What is your opinion at that?

Mr. Hamilton: Mr. Chairman, my reason for suggesting it was that I thought it would be a very good subject for the National Grains Council to take a look at. We may be too closely involved with it to take an unbiased look, but certainly the improved high quality varieties of our competitors is giving us some real concern. It seems to me that we can produce enough in this semi-drought area to meet a reasonable export demand and this would certainly increase the quality of our top hard red spring and durum wheat exports.

Mr. Southam: As Western wheat growers, I think we are naturally very interested, and I am sure you people are too, with the development of other uses for wheat. I am thinking of a breakthrough that has recently been

made in Japan where one of the major milling companies has been experimenting and has developed a technique where wheat can be used for the production of artificial meat.

The news report indicates that they anticipate starting conservatively with approximately 150 tons of wheat a month and then building it up. Have our research people here in Canada made any breakthrough, or have they any prospects of making a breakthrough in these fields, so far as alternative uses of wheat are concerned?

Mr. Hamilton: Mr. Chairman, I really cannot comment on this. Mr. Williams may wish to comment.

Mr. Williams: Mr. Chairman, my only comment would be that our people are aware of these techniques and are studying them, but we do not have an active program at the present time associated with the development of synthetic meats using wheat or soya proteins or any of the other proteins. The group that this group met at the Food Research Institute the other day are aware and are keeping on top of these various developments.

Mr. Southam: It is naturally a very interesting piece of news to find that something has been developed successfully in Japan. I was hoping that we had some research in this area going on so that we could possibly compete, or at least explore the situation.

• 1010

What is your reaction, Mr. Hamilton, to the demand by the Prairie elevator companies for an increase in handling charges at the present time?

Mr. Hamilton: I had better be pretty careful on this one, Mr. Chairman. I think I will reply that we are studying this one. We have not arrived at a decision yet; we just received the briefs a week ago.

Mr. Southam: What has been your experience in the past two years with respect to shipments of material treated grain? Have you had very many instances of it?

Mr. Hamilton: Mr. Chairman, we have had enough to cause us very serious concern. This year the number has about doubled over last year, and I suspect that the producers are being oversold by chemical and fertilizer companies.

Mr. Southam: Have you laid any charges? If so, have there been any prosecutions?

Mr. Hamilton: Yes, we have. And we have some under investigation by the RCMP now. They should be in court within a month or so. It is a very difficult business.

Mr. Southam: There is no doubt about it. However, it is still a very important thing to keep on top of, is it not?

Mr. Hamilton: Yes.

Mr. Southam: Several years ago we had another problem, we found broken glass in shipments. Has there been any evidence of that recently or has that pretty well cleared up?

Mr. Hamilton: It has pretty well cleared up, Mr. Chairman. This is a continuing problem, Mr. Southam. As you can appreciate, it is mainly window glass from farm bins and country elevators—birds flying through the windows—so it is a continuing problem but it is one that has not given us any concern since the experience of a couple of years ago.

Mr. Southam: There is something else that concerns Westerners to quite a degree which I think you people have under active study; that is, the possibility of mixing grains at terminal elevators in order to try and compete in world markets with the grades that people are interested in. What is your comment on that, Mr. Hamilton?

Mr. Hamilton: It is something which we have been taking a real good look at. Once again I would hope that the National Grains Council would study this problem. I cannot speak for the Board because we have not arrived at a decision. My personal feeling is that I would hesitate to recommend the change at this time. It is not as simple as it may sound, to take number one and number three and mix them together and get number two. It would depend on the degrading factors in the number three wheat.

Mr. Southam: I was out at the Department of Agriculture experimental area, which Mr. Williams mentioned a few moments ago, last week and I was quite interested to see the research that has been done with respect to oil seeds. Are your research laboratories doing quite a bit of work in the development of an improved rapeseed and its ultimate competitive sale in Canada with other oils?

Mr. Hamilton: Mr. Southam, all we really do are the quality tests on this. Most of the rapeseed work is done at the Canada Department of Agriculture in Saskatoon. We are just now getting into a program now of doing quality tests on Ontario soybean crops.

I might add, Mr. Southam, to go back a few questions, you asked if we were doing anything about this along the line of what they are doing in Japan. One of the things that has been kicked around between the director of our research laboratory and Dr. Hannah at the Canadian Department of Agriculture Research Station is the matter of processing our grains here and just exporting gluten. Of course, this is what the Japanese are using, the gluten. It is hard to say if this is a practical or feasible thing to do.

Mr. Southam: I understand they take out a certain amount of starch and then add amino acids to the gluten, which gives them a product which they say is very edible, and so on. It is very interesting. Our actual concern, of course, is that we have large surpluses of grain and other producing countries are competing with us. Without belabouring the point, it is getting to be a very serious situation and we are going to have to bend every effort in Canada to develop markets in any area or through any source that we can. I am glad to see this National Grains Council set up. I hope they can co-operate with yourselves, the Canadian Wheat Board, the major elevator companies and everybody else concerned in the agriculture industry in order to put us on a competitive basis with what is going on in the world to see if we can hold our own. It goes without saying that the cut back in our sales the last year or two has been economically devastating to our agricultural economy.

Thank you, Mr. Chairman.

● 1015

Mr. Hamilton: I can assure you, Mr. Chairman, that we are looking forward to working with the National Grains Council, and the Board of Grain Commissioners have offered their full support and services to this Council.

The Chairman: Thank you, Mr. Southam. I now have on my list Mr. Gundlock, Mr. Smith, Mr. Roy, Mr. Whelan and Mr. McCutcheon. Did I get a nod from you, Mr. McCutcheon?

Mr. McCutcheon: No.

The Chairman: Mr. Gundlock?

Mr. Gundlock: Mr. Chairman, I have three questions. I would first like to ask Mr. Hamilton what liaison he has with the Canadian Wheat Board—and in particular the shipping companies—regarding transportation and the supply of cars?

Mr. Hamilton: Mr. Gundlock, we have an unofficial committee operating in Winnipeg, the Grain Transportation Committee. Mr. W. C. McNamara of the Canadian Wheat Board is the Chairman of that Committee. I am one of the members. We meet on an irregular basis with the railway vice-presidents and the presidents of the grain companies. I am pleased to report that we think this committee has done some very valuable work. We are about to launch a completely new program in grain marshaling the first of the calendar year.

Mr. Gundlock: I have a supplementary to that question.

The Chairman: The acoustics are a little bit difficult this morning, gentlemen. Will you use the microphones, please.

Mr. Gundlock: I have a supplementary to that, Mr. Chairman. How closely do you look at the supply of railway cars?

Mr. Hamilton: So far as the Board of Grain Commissioners are concerned, Mr. Gundlock, we are...

Mr. Gundlock: This committee, rather, that you mention.

Mr. Hamilton: Oh, the committee; very, very closely. They have a technical group in that committee.

Mr. Gundlock: Do you have a field force that actually goes out and investigates?

Mr. Hamilton: Out in the country?

Mr. Gundlock: Yes.

Mr. Hamilton: No, sir, we do not.

Mr. Gundlock: I think it might be a wise thing to do. My second question—and I am leading up to that—concerns inland terminal elevators. As you are quite aware, Mr. Hamilton, there is a good deal of talk about and quite a strong possibility of doing away with branch lines. There has been a suggestion made by at least one railway company that this may be taken care of by trucking facilities. I am referring, of course, to the inland terminal at Lethbridge, and I wish to ask if

any thought has been given to installing facilities for unloading trucks. If branch lines are abandoned and the railway companies say that they can take care of it by truck, where will they unload?

Mr. Hamilton: We have considered this, Mr. Gundlock. We can unload trucks at our inland terminals. Although we do not have proper unloading equipment they can be unloaded there, but at the present time...

Mr. Gundlock: But not in a proper way, though.

Mr. Hamilton: No, you are quite correct. That is true.

Mr. Gundlock: Are you considering this?

Mr. Hamilton: No, I think I must answer that at the present time we are not really considering this. We are considering the operation of the Lethbridge elevator as a country elevator. This is really...

Mr. Gundlock: That would then include truck unloading facilities.

Mr. Hamilton: Yes, it would, at that one big elevator.

Mr. Gundlock: Thank you. This is my last question, Mr. Chairman. In regard to screenings, could you tell us where the bulk of the screenings which you buy are sold?

Mr. Hamilton: They are offered and bid on. Normally it is the local feed lot operators who pick up these screenings. For instance, at Moose Jaw there are about four big feed lot operators and they buy all the screenings from that elevator. They are all put out for public bid.

Mr. Gundlock: That is one point.

Mr. Hamilton: Our elevator at Prince Rupert collects a lot of screenings and they are sold down into the Vancouver market. Edmonton and Calgary use theirs up locally. We just do not really have that many screenings. Sometimes we buy them from the company and sometimes they take them back.

• 1020

Mr. Gleave: A supplementary question, Mr. Chairman. The president of the Manitoba Farmers Union said that two million bushels of wheat were going east as screenings and the president of the United Grain Growers Limited said he was wrong, it probably was nearer ten million bushels. Could you shed some light on this matter?

Mr. Hamilton: This is not grain that goes through the Canadian Government elevators, I can assure you. It is grain that is purchased by the feed mills in the big cities, in Winnipeg particularly.

Mr. Gleave: Is it screenings?

Mr. Hamilton: It is probably purchased as screenings from the producers.

Mr. Gleave: Ten million bushels is a lot of wheat to go out as screenings. Are your regulations or grading procedures as to screenings so wide that this is a loophole? I think it deserves some explanation.

Mr. Hamilton: This is really not our problem, Mr. Chairman. I can assure you that we have looked at this. We have had people at the elevator, we watch as closely as possible that every boxcar that leaves that elevator is reported to us by the railways. There is no infraction so far as the Board of Grain Commissioners are concerned. I think the question involved is transportation from province to province.

Mr. Gleave: But surely with wheat, every car that goes through Winnipeg, or the proper grading points, is inspected and graded.

Mr. Hamilton: These are not cars of wheat, Mr. Gleave, that we are talking about. These are screenings.

Mr. Gleave: And you do not do this on screenings?

The Chairman: Just a minute now. This started as a supplementary, and I think that is infringing on the original questioner. Mr. Gundlock, we will return to you.

Mr. Gleave: I am sorry, Mr. Chairman.

Mr. Gundlock: You purchase them, you are not responsible for them, but when they do exist you simply purchase them and sell them.

Mr. Hamilton: Offer them for sale as screenings. These are in our own elevators.

Mr. Gundlock: How about overage, do you purchase that too?

Mr. Hamilton: Overages stored in our own elevators?

Mr. Gundlock: Overages from the elevator companies.

Mr. Hamilton: Any overage at a terminal elevator is...

Mr. Gundlock: None of your concern?

• 1025

Mr. Hamilton: Not really. It is a deal between the Canadian Wheat Board and the company.

[English]

The Chairman: Mr. Williams will take this question.

Mr. Gundlock: Thank you, Mr. Chairman.

Mr. Hamilton: Yes.

The Chairman: I recognize Mr. Smith, Saint-Jean.

[Interpretation]

Mr. Smith (Saint-Jean): My question has already been answered very intelligently by Mr. Hamilton, for which I thank you.

Mr. Roy (Laval): I have another question. I have a letter here, from the Minister of Transport, dated the second of May 1967 to the Minister of Agriculture, which concludes:

The Chairman: I recognize Mr. Roy.

[English]

[Interpretation]

Mr. Roy (Laval): Mr. Chairman, Mr. Hamilton, Sir, at the beginning, you said producer would be the first to benefit from Grain Board's work. I would like to know the reasons for the decision to rent the Quebec elevators to an exclusive organization, giving them a monopoly of all grain trade in the Quebec area. Where are the advantages to the producer here? This is my first question.

It seems to me that we must be absolutely sure that the provisions of the Act will be strictly enforced at Quebec and I would, therefore, suggest that you give consideration to having the Board of Grain Commissioners have someone at Quebec in order to ensure this enforcement.

[Interpretation]

Mr. Roy (Laval): Does the Grain Commissioner intend to send a coordinator responsible for the elevators in Quebec, especially to avoid the present kind of situation which are very costly for both the producer and the government itself?

[English]

Mr. Hamilton: Mr. Chairman, it is not easy to give a fast answer to that. The Canada Grain Act splits the country into two grade inspection districts: eastern and western. Western is from the lakehead west, and eastern from the lakehead east. The Canada Grain Act requires, and makes mandatory, inspection in the west, but in the east it is only on request. When I talk of producers, I am talking of producers from the lakehead west. The deal you talk about concerning the elevator in Quebec is something that was worked out between the National Harbours Board and the Bunge Corporation. This has nothing to do with us; there is a lease that covers that, but we are not a part of the lease.

[English]

The Chairman: Mr. Williams on the first question.

[Interpretation]

Mr. Roy (Laval): Mr. Chairman, I agree, but is the Grain Commission aware that this situation has raised the price of corn 4¢ to 7¢ a bushel and that the Eastern farmers will have to pay this, due to a situation which amounts to control of the market by one company exclusively? As you have seen, the Federation of Cooperatives, the Catholic Union of Farmers are now protesting because of this attitude of that company which, instead of protecting the producer, and we are wondering if they do not abuse this control. Are you aware of this situation?

Mr. Williams: Mr. Chairman, the situation at Quebec to which Mr. Roy made reference is well known to the Department, to the Board of Grain Commissioners, and to the Canadian Livestock Feed Board. The Canadian Livestock Feed Board within whose jurisdiction lies the responsibility for ensuring that prices of feed to users in Eastern Canada are equitable, have been authorized to take action to alleviate this condition. They are presently working on this and it is anticipated that the situation to which you have referred will be remedied very shortly.

In response to your second question—and Mr. Hamilton may wish to elaborate on this—the question of whether a man should or should not be placed at the location of this harbour to ensure compliance with the Act and with the licence issued under the Act is a matter that has not yet been decided. I think it is fair to say, however, that the Board of Grain Commissioners have given it a great deal of consideration and are continuing to do that.

[Interpretation]

Mr. Roy (Laval): Is it your intention to have a "neutral" person there to supervise the elevators and protect free trade? All trade is done only through one company, and this situation has contributed to raise the price of corn between 4 and 7 cents a bushel and it is a situation which can no longer be tolerated in this area. And, I think that if it were possible for your department to consider this situation as soon as possible, because I have letters going back to May 1967 about the matter. Is it or is it not the intention of the Commission to send a man to supervise this?

[English]

Mr. Hamilton: I can certainly appreciate your concern with the situation at the Quebec elevator. About all I would like to say now is that this matter is receiving very careful study. As you are aware, we issue a licence for that elevator to operate, a one-year licence, and we can attach terms and conditions to that licence. The licence will be up for review at the end of July next year, and the whole operation will be reviewed. Does this satisfy you?

Mr. Roy (Laval): Thank you.

The Chairman: Thank you, Mr. Roy. I recognize Mr. Whelan.

Mr. Whelan: Does the Canadian Livestock Feed Board have any authority to make the Bunge Corporation do what they want them to do?

• 1030

Mr. Williams: I suppose I would have to answer that question by enquiring whether what they wanted Bunge to do is consistent with their act. If it was, they would have the authority to do it. I am generalizing when I say that, but in general I would say, no; the Canadian Livestock Feed Board have certain remedies at their command based on their Act, but these would not in general involve issuing direct orders to the trade to take such action or such other actions.

Mr. Whelan: Mr. Hamilton, do you grade imported grain?

Mr. Hamilton: Just on request, Mr. Whelan.

Mr. Whelan: It is not automatically graded. Corn that comes into Canada from United States would not be graded by your Commission?

Mr. Hamilton: Only a request.

Mr. Whelan: Very little other grain is imported. Soybeans are not graded nor any other grains that are imported, which I realize are very small.

Mr. Hamilton: As I said, in the Eastern Division all our work is on request only.

Mr. Whelan: Do you think it would be a good idea if imported corn, for instance, were graded?

Mr. Hamilton: I would rather not comment on that question.

Mr. Whelan: I think it would be a good idea. When we visited your research facilities a couple of years ago, the Committee made a recommendation that you be given better facilities or the government take action to provide better facilities. Has any action been taken? Do you have any better facilities now?

Mr. Hamilton: Mr. Chairman, we are in the same building with the same facilities. The recommendations of the Committee are being worked on; it is not dead. We had asked for money to purchase land and that has been taken out, but Public Works are working on our behalf. We are hopeful, but it is moving along slowly.

Mr. Whelan: I heard some of the other members asking about the research work that you did there, and I am sure that if the new members of the Committee had viewed the facilities you are working with they would agree with the suggestion we made at that time, that your facilities be improved because they are certainly crowded for the necessary work you are trying to do, and the good work your people are doing.

I have another question; how often do people ship cars classed as damp or tough grain, and actually when you grade them at the terminal they turn out to be number one grain? What do you do to them when you find them shipping grain that is...

Mr. Hamilton: Mr. Chairman, we penalize them \$50 a car. In the last couple of years we collected some \$26,000 a year, although last year there was not very much; I think it was around \$1,600. We hope—I should not say "we hope"; we will probably collect a lot this year. It is \$50 a car if they ship dry-car when it should be tough or damp.

Mr. Whelan: I have just one or two more short questions on the new wheat varieties. I

think Mr. Gleave was asking questions about new varieties, and one or two of the other members. There is a variety that you are doing experimental work with in Arizona and then moving it to Manitoba, and I believe the article I saw on that was written by a John Bird in the *Saturday Evening Post*, or something, and was sent to most members of the Committee at that time. I was going through some old files, and this was a most optimistic report on a high-yielding, fairly good protein class of wheat—I forget the name of it now. Is that proving successful?

Mr. Hamilton: Mr. Chairman and Mr. Whelan, this was probably triticale you are referring to, the cross between rye and durum wheat that is grown down in Mexico in the winter time to give us two crops a year to multiply the seed stocks. So far as I am aware, it is coming along all right; there are lots of snags and bugs in the program, but that particular variety is facing increasing competition from the new strains of barley and wheat that are coming on the market. Its future, I think is in doubt.

• 1035

The Chairman: Would you permit me to recognize Mr. Mazankowski, Vegreville?

Mr. Whelan: May I ask one last question on the number of grades? When we were there you were trying to cut down the number of grades. You had, I think, 400 different grades for wheat. You were trying to break them down into a lesser number to make it better for selling wheat.

Mr. Hamilton: I will ask Mr. Martens to answer this one.

The Chairman: Mr. Martens?

Mr. Martens: Mr. Chairman, it is true that there are 400 grades on the books, but only a very limited number of those are used, possibly four or five of the principal grades and in a year. There would be a very small volume of the others. However, there is a recommendation before the Board now in the survey that was made by Mr. Conacher. Some of these, of course, are statutory grades, and it would cut down the number by approximately 98, I believe, if these recommendations were followed. Their recommendation is on the books.

Mr. Whelan: I think the information we were given at that time is that it would make

it better for selling if the grades were fewer. This is one of the reasons given in the Conacher Report, is it not?

Mr. Martens: Well, actually so far as—

Mr. Whelan: To stop the confusion, I mean.

Mr. Martens: —marketing grain outside of the country is concerned, these grades never enter into it at all.

The Chairman: I recognize Mr. Mazankowski.

Mr. Mazankowski: Thank you, Mr. Chairman, I would like to ask Mr. Hamilton a couple of questions. The first one is, what was the purpose of the recent mission of two senior scientists to Japan?

Mr. Hamilton: The purpose of the mission, Mr. Chairman, was to meet with the Japanese Food Agency, the purchasing agency. They paid particular attention to barley. As you are well aware, we have been facing some very stiff competition in the Japanese market. These were two of our top scientists, Dr. Hlynka and Dr. Meredith, well-qualified men, and we are hopeful that as the result of their visit we will be able to clear up some of the snags that the Japanese laid on their laps.

Mr. Mazankowski: I take it then, Mr. Chairman, that your Board at present is jointly engaged in the study of our loss of markets with the Wheat Board, particularly with respect to rapeseed, barley and wheat, in the country of Japan. Are you active in studying our loss, our inability to procure markets, in other parts of the world as well?

Mr. Hamilton: Mr. Chairman, I think the best answer to this is that we are sending our people abroad just as much as we can. We are limited in numbers and money, but we are bending every effort to meet our overseas customers. I will just read from our last Annual Report. It is under the heading of Overseas Visits:

During 1967 the Chief Commissioner and the Chief Grain Inspector visited several countries in Western Europe to hold discussions with importers and millers of Canadian grain and oil seeds in regard to such matters as the Board's inspection and grading system and the quality of current Canadian grain exports.

The Chairman: Mr. Mazankowski, Mr. Gundlock would like to ask a supplementary. Does he have your permission?

Mr. Mazankowski: Fine.

The Chairman: Mr. Gundlock?

Mr. Gundlock: Mr. Chairman, Mr. Hamilton mentioned snags during negotiations in Japan. I wonder whether it would be possible to name these snags?

Mr. Hamilton: Mr. Chairman, I can certainly name one snag so far as the Japanese are concerned, and it is in our grades of feed barley. It is a big barley market over there. The problem was wild oats—black oats. Most of the grain is rolled and, of course, when it is rolled the black oats show up. It is a matter of appearance more than anything else, but it upset the Japanese.

Mr. Gundlock: They all come from Saskatchewan.

Mr. Hamilton: We are going to take steps to rectify this situation.

Mr. Gundlock: Would you name another problem?

Mr. Hamilton: Another thing that bothers the Japanese, of course, is shipping from the West Coast; the strikes really upset them.

Mr. Gundlock: That is transportation, not grade.

Mr. Hamilton: That is right. Variability in protein that I mentioned before is a bother to them. Their bakeries are advanced and automated now; they want to know beforehand what they are going to receive. They want to receive grain of standard quality.

• 1040

Mr. Gundlock: That comes into your field.

Mr. Hamilton: Yes, it does, sir.

Mr. Gundlock: Thank you.

The Chairman: We will return to Mr. Mazankowski.

Mr. Mazankowski: I have just one more question, Mr. Chairman. I do not know whether Mr. Hamilton would care to comment on this or not, but it was just recently reported that we lost a sale to Poland of 28,000 metric tons of rapeseed to Japan, even though the freight rate on that shipment would be approximately \$8 per ton more than the cost at which we could ship it out of our West Coast ports. Would you care to comment on a situation like that, Mr. Hamilton?

Mr. Hamilton: I do not think I can add much to that, Mr. Chairman. I can tell you that I was in Italy this past spring visiting one of the big oil crushing plants just outside of Rome. One of the Canadian grain companies had a shipment of some 5,500 tons on the way. It was very low grade Canadian rapeseed and these people were concerned about it. The reason they bought it was that the Russians were offering grain at what the Italians called a political price. There was an election going on in Italy at that time, and the price at which the Russians were offering this grain meant that we could not compete in the market at all. I think the term "political price" is a very good one.

Mr. Gleave: Mr. Chairman, in answer to my question some while back, the Chairman of the Board said that the problem of variation in protein in shipments going out of Pacific ports had largely been solved; yet a minute ago he said that the problem still existed and that one of the problems the Japanese complained about was the variability in protein in shipments going out of the ports.

Mr. Hamilton: Maybe I should clear this up, Mr. Chairman. We have only recently got into this program of exchanging cars—a matter of months, Mr. Gleave. So the Japanese were really not aware of this.

The Chairman: I recognize Mr. Stewart.

Mr. Stewart (Marquette): Thank you, Mr. Chairman. I would like to ask Mr. Hamilton a couple of short questions. First, is the price of successful bidders for screenings available to the public in the case of, say, Churchill?

Mr. Hamilton: Mr. Chairman, I think the answer would be that we do not advertise these in the public press. They are sent out to known bidders. I think this is about all I can answer. It is not advertised publicly, no.

Mr. Stewart (Marquette): My second question is: what are the possibilities of increasing storage at Churchill?

Mr. Hamilton: Mr. Chairman, the elevator at Churchill is owned and operated by the National Harbours Board. This is really a problem you would have to lay on their doorstep.

Mr. Stewart (Marquette): Further to that, is the Board investigating the possibilities of overseas storage—in Rotterdam, as an example?

Mr. Hamilton: This is a real hairy one. It is something that Canada has not been involved in up to this point, but it is something that I think we should take a look at.

Mr. Stewart (Marquette): Have there not been cases in the past where we may have lost the odd sale because we did not have stored grain over there at the time?

Mr. Hamilton: Canada, as you know, does not have unsold grain in store outside of Canada.

Mr. Stewart (Marquette): But if we did have it stored, there would be the possibility of more sales, would there not?

Mr. Hamilton: I would think probably.

Mr. Stewart (Marquette): Would the Board be prepared to look into this?

Mr. Hamilton: This is really not within our jurisdiction. The Canadian Wheat Board are very jealous of the job they do, and rightly so. And this is a Canadian Wheat Board problem.

Mr. Stewart (Marquette): Very good. Thank you, Mr. Chairman.

The Chairman: Thank you, Mr. Stewart. I recognize Mr. Roy.

[Interpretation]

Mr. Roy (Laval): One last question, just for information. Are the box-cars, which arrive at Fort William during the clean-up period, subject to demurrage charges or are these costs borne by the Canadian Wheat Board?

[English]

Mr. Hamilton: Mr. Chairman, I am not sure that I understand the import of the question.

Mr. Roy (Laval): Are there any charges?

Mr. Hamilton: No, we do not pay any demurrage.

Mr. Roy (Laval): No demurrage is paid for those cars?

Mr. Hamilton: No. Do you mean if they are neld up because of a strike or something like that?

[Interpretation]

Mr. Roy (Laval): No, I am thinking of the time during the clean-up period when the cars are waiting on the sidings. This certainly costs money. For instance, if cars arrive in

the East, after 48 hours, there is a demurrage of \$5 the first day, but it goes up to \$10 or \$15 according to the number of days. Are there demurrage charges in Fort William?

• 1045

[English]

Mr. Hamilton: Not to any government board or agency, this would be a charge to the grain company that shipped it—Saskatchewan Wheat Pool, Manitoba Pool Elevators, United Grain Growers Ltd. It would have nothing to do with us.

[Interpretation]

Mr. Roy (Laval): It is charged to the company then? Thank you.

[English]

The Chairman: Thank you, Mr. Roy. Mr. Whelan?

Mr. Whelan: I just want to go back to the question of grading of corn that comes into Canada. We grade all of our corn that is sold; does your Commission not grade the Canadian corn that is loaded in cars and shipped? Do employees of the Board of Grain Commissioners check these cars for moisture and grade?

Mr. Hamilton: Yes. Once again, Mr. Whelan, on request only.

Mr. Whelan: On request only.

Mr. Hamilton: Yes.

Mr. Whelan: Since being a Member of Parliament I have learned that in the United States—and I see the Deputy Minister looking at me—in the great free-trading country to the south, grades are often more restrictive than tariffs can be. A lot of U.S.-graded No. 2 corn that we have been getting here, compared with our No. 2 grade, is very low; some is as low as our No. 7 but is sold as No. 2 to the consumers, the producers of livestock and so on, in Canada.

I think, Mr. Chairman, this is one thing that this Committee should give serious consideration to. Corn should be graded to allow us to be as restrictive as is the United States Department of Agriculture when it wants to stop the import of an inferior product into that country—and sometimes not such an inferior product. I could use as an example a recent order by the United States Government on tomatoes.

Mr. Hamilton: I think this is a very good point you raise Mr. Whelan. I cannot comment any further on it.

The Chairman: Mr. McCutcheon.

Mr. McCutcheon: Out of approximately 20 to 30 millions of bushels of corn imported into Canada, how much was inspected? If you do not have that information, could you get it for us?

Mr. Hamilton: I doubt that any was inspected, Mr. McCutcheon, but we will get the information and pass it on to you.

Mr. McCutcheon: Thank you.

The Chairman: Mr. Gleave, on a supplementary.

Mr. Gleave: I want to start on an altogether different subject, if I may, Mr. Chairman.

The Chairman: Then I will recognize Mr. Lessard and come back to you. Mr. Lessard?

[Interpretation]

Mr. Lessard (Lac-St-Jean): Mr. Hamilton, in your early comments you mentioned the research branch or research lab the Board has in Winnipeg, and, I'm wondering then if this is not a duplication of work, of unnecessary expenditures because we already have here in Ottawa a research centre which seems to be quite successful because in one of your comments—if I remember rightly—you said that the research done so far in Winnipeg did not produce any better results than those done here in Ottawa in the research centre? So, why are we going to set up other facilities in Winnipeg for research? Since we have already something here in Ottawa, a research centre or a research department, the estimates of which were studied two weeks ago. They carry out research on new varieties of grain. Why should we have another centre here in Ottawa and one in Winnipeg?

• 1050

[English]

Mr. Hamilton: I will attempt to answer it, Mr. Chairman. We are the only people who do the full-scale milling and baking tests on cereal grains. The point you raise is a very good one; it is one that concerns the Board. You have to give these scientists a lot of freedom, you have to give them a lot of expensive equipment to work with or they probably will not stay with you, so the procedure we have used over the year is to write

to the Chairman of the National Research Council and ask him to set up a committee to take a look at our research work to see that we are not duplicating work that is being done in other Department of Agriculture centres, or other universities.

Dr. Spinks, the President of the University of Saskatchewan, was the Chairman of the last one we had. He had about five members with him. They wrote to our people who prepared a summary of the work they were doing and what they proposed to do. The whole committee came to Winnipeg, did a very thorough study of our laboratory and they reported to the Board. I can sum up their findings in a few words. They almost accused us of being a small-thinking, penny-pinching board and that we should greatly expand this operation. That was, in essence, what they reported to us.

Mr. La Salle: So if it should be expanded, the one we have in Ottawa on that same section should be closed.

Mr. Hamilton: We work in a different area. We do the milling and baking and quality control tasks which they do not do here. Mr. Williams can probably add to this.

Mr. Williams: Mr. Chairman, I do not believe that there is any duplication. The Board of Grain Commissioners' research laboratory has two major functions: One is to do quality control and quality research in conjunction with their regulatory function, which is the enforcement of grades, of course, for grain right across Canada.

At the same time they also act as the testing agency for all cereal breeding work conducted by the Department of Agriculture. We do not have duplicate facilities doing the same job. This is why, of course, Mr. Hamilton was able to speak so freely and with such knowledge in respect of the results of our breeding tests in that the actual testing conducted on any varieties of grain that are being developed in our research branch is conducted in his laboratory. It is not conducted in our laboratory.

Therefore, in essence there is no duplication. They do not do the work on the development of the varieties they do not do the breeding work; the research branch does that, but they do the final testing and evaluation of them from the standpoint of commercial quality.

Mr. La Salle: Thank you.

Mr. Whelan: Is it not true, then, that for the many different countries to which you sell wheat you have to find the wheat that is going to make the kind of flour and bread these people want? This is one of the main things you do in your research laboratories in Winnipeg. They actually do the baking; they have a big bakery where they develop it all. Is this not one of the main things you do?

Mr. Hamilton: Yes, we try to show them how to use our wheats to best advantage in their particular market.

Mr. Whelan: To make a bread that they are used to eating.

The Chairman: I will recognize Mr. Lambert.

[*Interpretation*]

Mr. Lambert (Bellechasse): Thank you, Mr. Chairman. I understood, I believe, that the price of sievings are not known to the public. Are the consumers protected in any way against the use by the mills of such siftings? Isn't it true that, since the cost for reselling is not controlled—I don't know this but I'm wondering—perhaps you may have cases of excessive profits, on re-sales of this for the use of the farmers in the East?

[*English*]

Mr. Hamilton: Mr. Chairman, in answer to this question I can only say that this is why the government set up the Canadian Livestock Feed Board, to ride herd on the prices and this question is really their baby.

• 1055

The Chairman: I recognize Mr. Gleave, Saskatoon-Biggar.

Mr. Gleave: Several years ago—and correct me if I am wrong—there was a proposal that the Canadian Wheat Board and the Board of Grain Commissioners jointly set up what I might call a promotion team of men equipped with the selling techniques of the Canadian Wheat Board and the laboratory training that they could get from your agency. Is this so?

Mr. Hamilton: Mr. Chairman, we do have a technical services arm in our research laboratory and we work in close co-operation with the Canadian Wheat Board. It is often at the request of the Canadian Wheat Board that our technical professional people will travel to markets.

Mr. Gleave: Could this be usefully expanded in a sort of joint effort for promotion and sale?

Mr. Hamilton: I think there is no doubt that it could be; there is almost no limit to how much you can expand this sort of promotional thing. It is just a question of the money.

Mr. Gleave: But in your opinion it would be a useful approach?

Mr. Hamilton: Yes, I think the Americans tend to swamp us with promotion, really.

Mr. Gleave: Thank you; this was the opinion that I rather thought might be useful. This could follow through, I suppose, in areas where the developing countries are putting in flour mills, where they need assistance. As well as being sold, they need information about how to use the grain they are getting effectively. Would this be so?

Mr. Hamilton: That is right, Mr. Gleave. We try to get into these countries just as soon as we can.

Mr. Gleave: At the moment you think more people could be used in this area.

Mr. Hamilton: Yes, I do.

Mr. Gleave: Coming back to the matter of screenings, they are graded, if I recall correctly, as to No. 1, No. 2 and so on, are they not? Are not screenings graded?

Mr. Hamilton: There are grades of screenings, yes.

Mr. Gleave: Then, in this movement to which I referred to earlier, large quantities being shipped out, do they escape the grading? How does this happen?

Mr. Hamilton: I think you are right when you say they escape the grading. These are combination country elevator feedmill operations, sitting around the edge of a city like Winnipeg. Those fellows have a lot of leeway in which to operate.

Mr. Gleave: Are they not licensed by the Board of Grain Commissioners?

Mr. Hamilton: Yes, Mr. Gleave, they are licensed as country elevators.

Mr. Gleave: Then, if they are licensed, why do they not come under your grading regulations?

Mr. Hamilton: Because the feedmill part of their operation is something beyond their country elevator licence.

Mr. Gleave: Should they, then, not be brought under? I noted in a statement that was made, the regular grain companies said, in effect, that due to the irregular practices—shall I use that term—of these concerns that the regular grain companies could not meet the selling thing. Does not this leave our standard grain companies at a severe disadvantage?

Mr. Hamilton: I appreciate your concern in this area, Mr. Gleave, and I am well aware of your views. I will ask Mr. Martens to comment on this.

Mr. Martens: Mr. Chairman, this is grain that is being loaded into boxcars at the country elevator level; that is, these companies that you are possibly referring to are combination feedmills and country elevators and there is no inspection at the country elevator level so far as the Board of Grain Commissioners is concerned. Now, if that grain moves to a terminal elevator, it will get a Board of Grain Commissioners official inspection, all of the grain. If it is No. 1 screenings coming into a terminal elevator it will be so inspected, but if that car goes to some small feedmill in Eastern Canada or if, on its way, it is diverted to the United States, there is no official Board of Grain Commissioners inspection at all.

• 1100

Mr. Gleave: Then in that case the consumer at the other end does not know what he is buying at all. He is buying an ungraded grain or screenings and the company shipping could do what we used to call in the West "plug a load", hoping the elevator agent would take his grade off the top and we would have her loaded with junk in the bottom.

An hon. Member: Who would do that?

An hon. Member: Shame, shame!

An hon. Member: Oh, dreadful, dreadful!

Mr. Gleave: This sort of grain then can move—as I take it from what you said—from a country elevator in the Prairie Region right through to the consumer in the East and not be subject to inspection during the course of that transportation?

Mr. Martens: This is correct, although at present in the area where it is going on, the

Canadian Wheat Board have requested that we undertake a sampling of all these cars from particular country elevators about which they are concerned. We are doing this at present and giving them the information.

Mr. Gleave: Do you not think it should be regularized? Do you not think as a matter of practice that the Board of Grain Commissioners should inspect all grain that moves for domestic or export consumption out of Western Canada? This has always been our principle.

Mr. Hamilton: I can say right now, Mr. Gleave, that we are inspecting every car that leaves those elevators in Winnipeg, and this is where the problem is. We are inspecting every single car.

Mr. Gleave: But then there are some going around, I would take it from what you have said.

Mr. Hamilton: No, we have just started this. It was at the request of the Canadian Wheat Board and our own concern. But right now we are inspecting every car that leaves the city.

Mr. Gleave: We may assume that in the immediate future this loophole will be plugged? May we assume this?

Mr. Hamilton: I am not so sure—you are not talking about No. 2 wheat?

Mr. Gleave: I am talking about screenings...

Mr. Hamilton: This is screenings.

Mr. Gleave: ...that are not screenings.

Mr. Hamilton: As I say, we are not able to detect any screenings that are not screenings. Our experience is that it is a good smart operation that is going on there. Maybe too smart for us, I might add.

Mr. Gleave: Surely not. You know it has to move by rail. It is not as though it was moving by truck. It moves by rail; it cannot avoid your procedures if you apply them.

Mr. Hamilton: They object to paying the fee what we charge for inspection. Whether this grain goes out in bags or sacks—it is almost impossible to sample a car of sacks—you just have to probe a few. It is the best anyone can do.

Mr. Gleave: You cannot control it? .

Mr. Hamilton: I can honestly say we make no attempt to control it, absolutely.

Mr. Gleave: You make no attempt?

Mr. Hamilton: To control it absolutely, I said. We have never received a complaint from a producer. We have never received a complaint from the ultimate buyer.

The Chairman: Mr. McCutcheon.

Mr. McCutcheon: I am concerned about the situation that Mr. Gleave has brought up here, but Mr. Hamilton, is this thing not more apparent than real? The purchasers of these screenings, when they arrive down here, do they not get bit only once? I mean, this thing looks to me, Mr. Gleave, as if it is all out of proportion, and you are not paying any attention to the purchaser. They would not buy a second time, at least I would not, if it was wrong. Is this not the case, Mr. Hamilton?

Mr. Hamilton: I would assume this is the case. Much of this grain that goes out is processed. It is ground up. It is mixed with various oil seed screenings, rapeseed screenings, flax screenings, wild oats, and wheat seeds. It is quite a collection. As you say, if the fellow is bitten once he probably will not be back for a second load.

• 1105

Mr. Gleave: To me, as a Westerner, the domestic market in Eastern Canada is just as important as the export market in Japan. I am just as much concerned that our consumer in Eastern Canada receives a graded product which he knows, as I am concerned that the Japanese receive a graded product which they know. This has been the objective of the Board of Grain Commissioners, as I have understood it, and if there is a loophole I think it should be plugged. I do not want to see some consumer in Eastern Canada receive a shipment for which he has paid a dollar, when it is worth only 50 cents. He may not come back.

The Chairman: Would it not be reasonable to assume that in that case there would be a complaint? As I understand it, it looks to me as though something is being billed through as No. 1 screenings, and when it is received it is No. 2 wheat, and no consumer is going to kick about that kind of treatment, and that is why there has not been a complaint. Is this true or false?

Mr. Hamilton: There certainly has not been a complaint, Mr. Chairman.

Mr. Gleave: Well, Mr. Chairman, in answer to that, I have talked to many eastern farmers and to agencies, and you know unfortunately too often when they do get stung they do not know who to complain to. They know they have been had, and their main reaction is that they will not go back there again. They are like me—if I go into a store and buy a shoddy article, I would say I am not going back to that store again.

Mr. Barrett: It seems to me rather strange that he refers to farmers in the West and indicates that they are nefarious rogues, and do you mean to say that a farmer or a producer would not complain after being ill-treated, as he suggests?

Mr. Hamilton: If anyone requests or wants an inspection, they will get it from the Board of Grain Commissioners. But we just do not receive these requests.

The Chairman: I will recognize Mr. Mazankowski, and then Mr. Lambert.

Mr. Mazankowski: I am told that the licensing of new grain varieties in Canada involves a considerable length of time. As there is a slow progress in the licensing, are we not at a disadvantage in competing with some of the new varieties of American wheat, which I am led to understand are able to be licensed in a much shorter time?

Mr. Hamilton: I do not see any danger in our system. In fact, I am sure it works to our advantage. It is a safeguard.

Mr. Mazankowski: In what regard?

Mr. Hamilton: In that by the time grains have been grown and tested for several years, the characteristics are well known. I think the Americans are in trouble. They have varieties down there that are listed for discount when they arrive on the market, and we have a very tight control of varieties in Canada. It is one thing that works to our advantage.

The Chairman: Mr. Lambert?

[Interpretation]

Mr. Lambert (Bellechasse): Thank you, Mr. Chairman. I entirely concur with what my colleague, Mr. Gleave, has said as regards the protection that must be granted to the eastern consumers who should be treated at least as well as the Japanese customers. You said that you never received any complaint. That may well be, but when a consumer is not sure of the quality of the product he has received, he

does not feel very inclined to go back and buy again. If he thought he was buying top quality and afterwards concludes that it was not top quality and if he doesn't know where to go, since he doesn't know the machinery of the system, then I believe there is damage to both producer and consumer. And the suggestion that we find some way of reassuring the eastern consumers with regard to quality must be borne in mind. If this has not already been done, I believe that provisions should be made to set the situation right now.

• 1110

[English]

The Chairman: There may be an answer.

Mr. Hamilton: No, Mr. Chairman, there really is not any answer.

[Interpretation]

Mr. Lambert (Bellechasse): I understand Mr. Hamilton cannot give us an answer. But could the committee express a wish that the Board take steps to improve the service so as to give some security to the eastern consumer?

[English]

Mr. Hamilton: Yes, Mr. Chairman.

The Chairman: I will recognize Mr. Stewart, and Mr. Roy and then Mr. Côté.

Mr. Stewart (Marquette): Thank you, Mr. Chairman. Mr. Hamilton, I am asking for general information at this point, and this would come under the Wheat Board. You stated earlier that you serve on the transportation committee. Because of the problem we are facing in the West right now, in the opinion of this committee what is the present situation with respect to boxcars for the damp grain in this three bushel quota?

Mr. Hamilton: Mr. Chairman, I am in no position to comment on this. It is not our business.

Mr. Stewart (Marquette): You mentioned earlier that you served on the transportation committee. Does this committee meet fairly regularly?

Mr. Hamilton: The Grain Transportation Committee that I am a member of meets very infrequently. The active group is the technical group. I cannot shed much light on it except to say that there is really just no room in the system to move this grain around. The drying problem is really of great magnitude this year.

Mr. Stewart (Marquette): I understood there was not enough grain at the Lakehead at this point to keep the dryers going 24 hours a day.

Mr. Hamilton: The movement is just now getting properly started. It would be some two weeks ago that the order giving damp grain priority went out and it takes about this length of time to get the thing rolling. They are just coming into full drying now.

Mr. Stewart (Marquette): I see. Thank you, Mr. Chairman.

The Chairman: Mr. Roy.

[Interpretation]

Mr. Roy (Laval): Mr. Chairman, I entirely concur with Mr. Lind and Mr. Lambert with regard to sievings.

Mr. Chairman, Mr. Hamilton, as an employee who worked for twelve years in the grain and feed business and mills, the matter of uneven quality has put an end to those quantities. Big firms do not use "cleanings" because of their uneven quality. Unfortunately, these grains are used locally and the consumers have no guarantee whatsoever on the purchase he is going to make and this feed is sold at the same price as that sold by a company or co-operative not using cleanings. So I believe it would be quite important that we have a guarantee of the quality of purchases, I think this would increase the consumption of this type of grain and make it easier to market.

[Interpretation]

The second question is the following: You know that there are always quantities of grain moving directly from the West without going to the Wheat Board and these grains were milled and sent Eastward. And very often, stock-raisers could buy this substandard grain at lower prices and sell it in competition with the grain which had gone through the Canadian Wheat Board. Do you have any idea of the amounts of grains at present being directly marketed without going through the Wheat Board?

• 1115

[English]

Mr. Hamilton: Mr. Chairman, I do not think I can satisfactorily answer Mr. Roy's question. You are into the area here of processed feeds, and to grind these things up and mix them together, as you say, is a difficult matter. It is hard for the farmer to know

what he is getting when he buys this product. I can only say that this whole matter is under investigation by the Canadian Wheat Board right now, and we will have to wait until they finalize their investigations. I would like to ask my fellow commissioners, Mr. Shuttleworth and Mr. Svoboda, if they have anything to add to this. I can assure you that this whole matter is under very thorough investigation at this very moment.

[Interpretation]

Mr. Roy (Laval): Do you have an idea of the volume of grain which is presently going directly Eastward and by-passing the Canadian Wheat Board?

[English]

Mr. Hamilton: I am sorry, Mr. Chairman, I cannot even guess at it.

The Chairman: I suppose it is reasonable to add here that once it becomes ground feed it is out of the jurisdiction of the Board of Grain Commissioners, and if there is some question concerning it it could be brought up when we come back to Vote 1. Agreed? Mr. Côté.

[Interpretation]

Mr. Côté (Richelieu): Mr. Chairman. I would like to get a few things straight. The impression seems to be that there is no inspection made in the East according to what Mr. Lambert said earlier, that in the East there are no inspections and that the consumer is not protected at all. Speaking as a former co-operative manager I may say that when we buy grain, either grade I feed, II feed or III feed, if the quality is not in keeping with the contract that was signed, we call an inspector, and if the quality is not equal to that on the bill, then the supplier is bound to reimburse the price difference. It may happen that an individual who will buy second grade grain and then complains because he did not get the quality required. Farmers are subject to influence, but if competition is fairly keen he can change his supplier if he feels cheated. When you buy a specific quality there are inspectors who are paid by the government and they can come and inspect, at the customer's request, and the supplier can be penalized.

Mr. Roy (Laval): I do not think cleanings are subject to inspection.

Mr. Côté: No, but generally...

Mr. Roy (Laval): But grain is inspectable.

Mr. Côté: Usually when they buy these cleanings they do not admit it. He claims it is of good quality. In such cases it is not the Department's fault as it is up to the farmer himself to buy good quality feed. It's easy to get an inspection, on request, in Montreal. I agree there may be gaps in the system but I would like to set the record straight on this point: It is not true to say there is no protection. It's there for the asking but you have to go and look for it.

[Interpretation]

Mr. Roy (Laval): There is no problem with grain. I have no argument with you there. But when it comes to cleanings there is no standard of quality and no guarantee. So the consumer has no protection.

[English]

Mr. Hamilton: Mr. Chairman, I would like to say that the Board of Grain Commissioners offer a free inspection service to any producer anywhere in Canada. I would further comment that in our annual report we list the inspection of eastern grain. So far as the United States grain is concerned, it is listed as sampled but not inspected, Mr. Whelan.

The Chairman: Gentlemen, that concludes our...

Mr. Whelan: Before you finish I want to make one thing clear. During the discussion on this sale of so-called screenings I think it was intimated that this graded No. 2. I hope we do not give the impression here that the well-known Canadian Western No. 2 wheat is classed as wheat seeds, screenings, et cetera, and it is being graded as No. 2, because we know this is not the case.

I just have one further comment. Is it not true that the small feed dealers, or the people that blend feeds, would be less likely to use screenings in their mix than the large feed dealers who buy it by the boatload?

• 1120

Mr. Hamilton: I would think this was probably true, Mr. Whelan.

[Interpretation]

Mr. Roy (Laval): Mr. Chairman. Would it be possible to have a chart of the Canadian Wheat Board, your Commission, your Board, and the Canadian Harbours Board. It seems to be quite a difficult and complex matter, and if we had the list of the people in charge, it

would be easier for us, the members of the committee, to put our questions to the right people, and we could get an answer without having to wait for the committee to meet.

[English]

Mr. Lessard: What is your direct authority?

The Chairman: I suppose part of this could be provided by the Board of Grain Commissioners and by the Canadian Department of Agriculture. Some of it would have to come from the National Harbours Board. Possibly we as a committee might endeavour to assemble this information for the members of the Committee and make it available to you.

Gentlemen, may I express our appreciation to Mr. Williams for his presence and to Mr. Hamilton, Mr. Svoboda, Mr. Shuttleworth and Mr. Martens for attending our meeting and answering our questions as completely as it was possible to do. We are grateful to you gentlemen for coming. This concludes our questioning.

Items 50 and 51 agreed to.

The Chairman: This concludes the estimates of the Board of Grain Commissioners. On Thursday we hope to have the Canadian Dairy Commission with us and we will deal with their estimates at that time.

Mr. Williams, the Deputy Minister, has a reply to a question asked at a former meeting. Mr. Williams.

Mr. Williams: Mr. Chairman, I am replying to a question that was asked by Mr. Horner earlier concerning a large, white, hullless grain that was grown by the Hutterites. We asked our people in Lethbridge to look into this question and they report that this grain is hullless barley.

A second question was also asked by Mr. Horner which referred to a molasses salt block that was used for bloat prevention, and he asked if we had done any investigational work on this. We did conduct a test in this current grazing season at Summerland, and the use of this block resulted in a 50 per cent reduction in bloat as compared to controls. The report points out that reports from Texas, where the product is used extensively, indicate it is much more effective than that. Our people also sprinkled the active ingredient in this block on grain twice daily, and they reported when they used it in that manner they got very excellent control of bloat.

The Chairman: Thank you, Mr. Williams. The meeting stands adjourned to the call of the Chair.

⁴ Horner,		

Michael A. Measures,
Clerk of the Committee.

¹ Replaced Mr. Gundlock on November 20, 1968.

² Replaced Mr. Noble on November 20, 1968.

³ Replaced Mr. Stewart (*Marquette*) on November 20, 1968.

⁴ Replaced Mr. Mazankowski on November 21, 1968, subsequent to the meeting that day.

ORDERS OF REFERENCE

WEDNESDAY, November 20, 1968.

Ordered,—That the names of Messrs. Moore, Danforth and Code be substituted for those of Messrs. Gundlock, Noble and Stewart (*Marquette*) on the Standing Committee on Agriculture.

THURSDAY, November 21, 1968.

Ordered,—That the name of Mr. Horner be substituted for that of Mr. Mazankowski on the Standing Committee on Agriculture.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

MINUTES OF PROCEEDINGS

THURSDAY, November 21, 1968.

(8)

The Standing Committee on Agriculture met this day at 9:40 a.m., the Chairman, Mr. Beer, presiding.

Members present: Messrs. Barrett, Beer, Clermont, Cobbe, Code, Côté (Richelieu), Danforth, Douglas, Foster, Gauthier, Gleave, Howard (Okanagan Boundary), Lambert (Bellechasse), La Salle, Lefebvre, Lessard (Lac-Saint-Jean), Lind, Mazankowski, McCutcheon, Moore (Wetaskiwin), Peters, Roy (Laval), Smith (Saint-Jean), Southam, Stewart (Okanagan-Kootenay)—(25).

Also present: Messrs. Downey, Horner and Rynard, M.P.'s.

In attendance: From the Canadian Dairy Commission: Dr. S. C. Barry, Chairman; Mr. J. Thibaudeau, Vice-Chairman; Mr. L. A. Atkinson, member; Mr. H. Mestern, economist; Mr. A. Blouin, secretary-treasurer.

The Chairman called item 55 of the 1968-69 Revised Estimates relating to the

CANADIAN DAIRY COMMISSION

item 55 Administration, Operation and Maintenance . . . \$303,000.

The Chairman introduced Dr. Barry who, in turn, introduced those others in attendance.

Dr. Barry gave an opening statement and was questioned, assisted by Mr. Atkinson.

The Chairman having thanked the witnesses, Dr. Barry gave an answer requested earlier in the meeting and there were some additional questions.

Item 55 was carried.

At 12.22 p.m., the Committee adjourned to the call of the Chair.

Michael A. Measures,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday, November 21, 1968.

● 0937

The Chairman: I see a quorum. We are meeting this morning for the purpose of considering the estimates of the Canadian Dairy Commission, Item 5 in your revised estimates.

We are pleased, of course, to have representatives of the Canadian Dairy Commission with us this morning. I will introduce the Chairman, Dr. Barry, and I will ask him to introduce the officials who accompany him this morning.

Dr. Barry?

Dr. S. C. Barry (Chairman, Canadian Dairy Commission): Thank you, Mr. Chairman. I will introduce my fellow Commissioners first, Mr. Thibaudeau and Mr. Atkinson, and from our staff, Mr. Mestern, our Economist, and Mr. Blouin, the Secretary-Treasurer of the Commission.

The Chairman: Thank you, Dr. Barry. Do you wish to make a statement?

Dr. Barry: If you wish, Mr. Chairman, I could.

The Chairman: I think it would be the wish of the members that you make an opening statement and give us a little report on your activities for the year.

Dr. Barry: Mr. Chairman, as I am sure members of the Committee know, the Canadian Dairy Commission was established closed to two years ago now under the Canadian Dairy Products Act broadly for the purpose of administering the government stabilization program for the dairy industry.

To review broadly, we perform our function with respect to stabilization in two ways. One is by support of the market prices of major dairy products and we support prices of butter and skim milk powder and cheese. The support prices of these products, of course, establish the basis that is paid to producers for industrial milk and cream. Second, the returns from the market to producers are supplemented by direct subsi-

dies from funds provided by the government through the Agricultural Stabilization Board and which we administer in the form of producer subsidy payments.

● 0940

The situation, very briefly, on the market side is that we support the price of butter, at the start of this year at 63 cents a pound and, of course, when I refer to support prices I refer to car lot support prices. Skim milk powder we support at a price of 20 cents a pound and cheese, we supported during the summer months at 46.5 to 47 cents a pound. The prices which flow to producers from those basic support levels for products are, of course, not a matter in which the federal government has jurisdiction. This is determined, to an extent where it is applied, by any provincial action to establish prime producer prices.

On the second side of our operation which involves our subsidy payments from funds provided by the government, we pay a gross subsidy under a quota arrangement this year of \$1.31 per hundred pounds of milk, or 37.42 cents a pound of butter fat. From that gross subsidy we make a deduction of the estimated amount of money required to finance the cost of disposing of surplus dairy products beyond that which the domestic market will take and which, of course, have to be disposed of at a considerable loss in international markets.

In connection with our subsidy program we also apply a quota arrangement under which each shipper has a quota which is the amount of milk for which he can receive subsidy payments for his deliveries up to the amount of his quota. I think, Mr. Chairman, that members of your Committee know that each year we are allotted a fixed amount of money for subsidy purposes through the Agricultural Stabilization Board vote. The amount of money which we are provided each year is based first on the approximate quantity of milk and cream required to produce dairy products for the Canadian market. The rate of subsidy, of course, is decided by the government and the multiplication of those two

figures gives the sum of money under which we have to operate in subsidy payments. It is for this reason, of course, that we administer this by the allocation of quotas to individual shippers.

On the market side we are about in balance on butter. We have a very serious surplus of skim milk powder. We have a surplus of cheese in the sense that we produce more cheese than Canada uses, but the great bulk of that additional amount goes to Great Britain in what is regarded as a fairly traditional market for Canadian cheese, so broadly we feel that our only real surplus in dairy products is in skim milk powder.

We have a rather peculiar circumstance in this connection. Our Canadian production of skim milk powder has been increasing substantially over recent years, not because of an increase in the total amount of milk or cream marketed by producers, but because increasingly producers have changed from delivering farm separated cream to delivering whole milk. As butter and other fat products are made from whole milk rather than from cream, that leaves a residue of the non-fat solids in the milk which is made primarily into skim milk powder. Therefore, broadly the situation is that if we produce enough butter for our Canadian requirements we produce about twice as much non-fat solids primarily in the form of skim milk powder than we require.

This, as I say, is our major surplus problem. It is a problem which is not peculiar to Canada, because there is a very substantial surplus of skim milk powder throughout the world and this has resulted, of course, in a very high degree of price cutting in endeavouring to get what markets are available and we have been caught up in that. To give you an illustration of the situation, we support the price of skim milk powder at 20 cents a pound and while we made some fairly substantial sales this year, the prices have been quite low and, as a matter of fact, now we have set our target for a price which we might procure recently at 7 cents per pound and we are making no sales. Therefore, that is the extent of the problem in skim milk powder.

• 0945

In butter, as I say, we are about in balance. This year we may be a little below our requirements. Now, I would like to make it clear that we do not budget for a shortage of

anything, but we certainly try to arrange our program to avoid surpluses and particularly a surplus of butter, because while we find the skim milk powder situation difficult for us, the butter situation internationally is even worse. The European Common Market at the present time has a surplus of some 800 million pounds of butter, and where as our support price is 63 cents a pound I suppose one could buy butter from western Europe at the moment at 16 cents a pound. This is the state of the seriousness of the butter situation. So on butter our objective certainly is to avoid a surplus if we can. Of course, the only mechanism we have to exercise any control or restraint over total production is through our quotas on subsidies.

On cheese, as I said, we have in addition to our Canadian consumption a normal export market in the United Kingdom of the order of some 30 million pounds each year. This is a highly traditional market, but it is becoming increasingly expensive to hold it because again, in light of world prices, we have to subsidize it and our rate of subsidy this year has had to be quite high as a result of sterling devaluation a year ago. All these costs of disposing of these surpluses are charged, as I said, against producers by hold back on their subsidy payments.

That briefly, Mr. Chairman, is a thumbnail sketch of what we do and what our present situation is. I am sure that Committee members may have many questions to ask us and we would be glad to do our best to clarify any points which may be in anyone's mind.

The Chairman: Thank you, Dr. Barry. We appreciate your statement. I think it was quite comprehensive. We are now prepared to question our witnesses. I have on my list Mr. Danforth, Mr. McCutcheon, Mr. Moore and Mr. Lefebvre who have indicated their desire to ask questions. I will now recognize Mr. Danforth from Kent-Essex.

Mr. Danforth: Dr. Barry, we certainly appreciate the statement that you have given us this morning. We all appreciate that it was very short in dealing with a very complicated subject.

Because the Canadian Dairy Commission is somewhat new and is playing such an important part in the dairy industry. I think what most of the people in the dairy industry are interested in primarily are the mechanics of the Canadian Dairy Commission. For example, you indicated that the government

allocated a certain sum of money and it was, if I understood correctly, the obligation of the Canadian Dairy Commission to translate that in terms of quota and subsidy payments.

Dr. Barry, I wonder whether you could give us in some detail the terms of reference of the Canadian Dairy Commission. The point I am trying to determine is, for example, whether the government institutes a policy to the Canadian Dairy Commission which they implement together with the provincial administration, or whether, just the reverse, the Canadian Dairy Commission determines a policy and recommends it to the government for the new dairy year; whether or not the entire policy is determined by allocation of funds for the government and that the policy changes each year determinate upon the monies allocated or just how the mechanics of these operations are set up.

Dr. Barry: I suppose, Mr. Danforth, it is a dual matter with respect to the inception and origin and policies for a year. The financial side of it, particularly the matter of funds provided by government, obviously had to be a government decision. It could not be a Commission decision. Our Act requires us, though, each year to submit to our Minister a proposed program for the following year. That is the basic starting point. The government will decide each year what, in terms of total returns to producers, is an objective. Then, from the Commission's standpoint, we must decide and recommend to the government what we would propose in the way of product support prices. Bear in mind that two-thirds of the producers income comes from market prices and not from subsidy, so that the total is a combination of both subsidy and market prices. Once a tentative target is set as to the price required by producers then we will make a recommendation as to what might be feasible in the sense of product support prices. That then leads to a calculation of the balance that has to be provided by a subsidy. This then becomes a determination by the government because it involves expenditure of government funds. That is the basic dollar situation.

• 0950

Involved in the total program of course are many matters of detail—details of our subsidies, quotas and this type of thing. These then are Commission recommendations and they form part of our recommendation to the minister each year for our policy for the forthcoming year.

I suppose in brief, Mr. Danforth, the basic decision with respect to producer returns and the amount of government funds to be provided to the Commission obviously is one for government to make. The mechanical operation beyond that then is one in which the Commission on important matters must recommend each year to the minister, and these then become our program for the year.

Mr. Danforth: I have one more supplementary, Mr. Chairman. I know that many members wish to ask questions this morning and perhaps I could return later.

We are all well aware that many of the provinces have their own legislation dealing with the various dairy problems. What part do the provincial governments and the dairy association itself play in respect of the Canadian Dairy Commission. In other words, do they make recommendations to the Canadian Dairy Commission, and are they invited to submit their problems and proposed solutions? I am interested in the tie-in.

Dr. Barry: I should have clarified this earlier to make our position completely clear. As Committee members know, there are actually two sides of the dairy industry: there is what we call the fluid milk side and then the industrial milk and cream side. We do not participate in the fluid milk side of the business; this is all under provincial control and provincial pricings.

There are in every province boards, commissions or some such body drawing their authority from provincial legislation having to do with fluid milk prices and fluid milk operations. There are only three provinces in which there are agencies operated under provincial authority involved in the industrial milk area, namely British Columbia, Ontario and Quebec. In the first place, if there is to be any steadying of producer prices for industrial milk, that responsibility rests with them.

All of these bodies do in fact make a great many representations to us. We have two national organizations on the industry side: one is the Dairy Farmers of Canada which is on the producers side, and the other is the National Dairy Council of Canada which is on the processors side. Then we have these provincial boards which may make representations.

● 0955

Within our Commission we have a consultative committee of nine people with whom we meet periodically during the year to discuss our programs. This committee draws representation geographically and from both sides of the industry. As an indication of the extent of our broad discussions with industry and reception of representations from industry, last year Mr. Greene, the minister at that time, called two broad industry meetings to discuss general policy matters. One meeting was held in October and one in January. This year Mr. Olson has called a similar meeting for next month at which there will be representation from the provinces, from producer organizations and from processor organizations. At this meeting a broad analysis will be given of what we are doing, there will be criticism of it, and there will be suggestions made with respect to it. Obviously, these are not policy-making meetings, the purpose of these meetings is to get the thinking of the people in the industry and of the provinces across the country.

I can assure you that we have the feel of the thinking of the various organizations and groups involved in the industry by their representations at meetings with us.

Mr. Danforth: Thank you, Dr. Barry.

The Chairman: Thank you, Dr. Barry and Mr. Danforth. I will recognize Mr. McCutcheon (Lambton-Kent).

Mr. McCutcheon: Thank you very much, Mr. Chairman. I have only one or two very brief questions.

Dr. Barry, in your previous answer you used the expression "the amount of income required". I am just a little confused. Would you elaborate on that? What is the yardstick used to decide what income is required?

Dr. Barry: Mr. McCutcheon, we have no precise yardstick. It is in part an appraisal of representations from producer organizations, it is in part an appraisal of our own, the department's and government's feeling as to what is required. We have the difficulty that I suppose is common to all agriculture: How do you get the true cost of production as far as the producer is concerned? You cannot do it. I think in previous meetings of this Committee that the Minister and the Deputy Minister indicated something about this program for computerizing and analyzing farm operations,

which may give us a bit more information. It is basically a judgment matter as to what is thought desirable as a gross price to producers of industrial milk and cream, and combined with that of course is the government's decision on what they feel they should do. I suppose this is always the way these things go. Then having decided on what they felt is a desirable price and, coupled with that, what can be met in the terms of the resources to provide it, a gross figure is arrived at. You see, last year when we brought out the policy for the present year the target price was a gross of \$4.85 per 100 pounds for industrial milk, with a calculation of \$3.54 of that coming from the market and \$1.31 from subsidies. The \$3.54 from the market is just a calculation because actual paying prices vary a great deal in different provinces and different areas. The subsidy rate is fixed at \$1.31 gross. I suppose this is broadly the mechanics of the basic decision.

Mr. McCutcheon: In other words, this decision is made through representations by your Commission and the government.

Dr. Barry: Representations from industry organizations to us and to the government and our appraisal of those I suppose would be the proper way to put it.

Mr. McCutcheon: If this is not a fair question you need not answer it. Does your program have as an aim the phasing out of small dairies?

Dr. Barry: As you know, we phased out during this present year shippers who last year shipped less than 420 pounds of butter fat. When I say that we phased them out, we phased them out from subsidy payments, we did not phase them out from the industry. We cannot tell people whether or not they can be involved in dairying. We are involved here in a question on which there are some wide differences of opinion in different parts of the country. The dairy industry in Ontario and Quebec is a different breed of cat than the dairy industry in the prairie provinces. Broadly speaking, the producers of industrial milk are a different breed of cat than cream producers. There are all these considerations to take into account.

I think that there was general agreement with the phasing out of people who shipped less than 420 pounds because it was felt that these people really were not serious dairy men. Whether we will progressively go above

that, I cannot say at the moment. This will have to be a policy decision after discussion with the industry.

• 1000

We feel basically, and certainly with respect to industrial milk producers, that if we are going eventually to accomplish the degree of efficiency in the industry that can make it more self-sufficient then there has to be involved in that a rather larger average production unit than we now have. This, of course, is the goal, but how quickly we will arrive at it, or what steps we may take in the coming year, I cannot say, sir.

Mr. McCutcheon: I have one final question, Mr. Chairman. It is relative to the differential in price of the so-called fodder cheese and patented cheese. My palate is not good enough to detect the difference.

Frankly, I cannot see any reason for there being a differential. The so-called grass cheese, which is basically a summer cheese, is considered by people in the industry and by cheese-buyers to be the cheese which will mature best in storage. This is their assumption. Is this true?

Dr. Barry: Many people increasingly are saying that they can mature winter cheese, as well; but certainly in the British market—and they are, I suppose, traditionally inhibited by prejudices and do not want winter cheese—they just want the summer cheese.

However, I think it would be wrong to assume that our differential in pricing between summer and winter cheese is based on the concept that winter cheese is not necessarily as good as summer cheese. As a matter of fact, a lot of winter cheese is sold in this country; a great deal of the cheese for current sale is winter cheese.

In arranging our operation this year we felt that we had to have a program which would discourage surplus production of winter cheese, because there is no market for it outside Canada. The British market will not take it. They will take summer cheese, prices and everything else being right. Therefore, we fixed our support price for winter cheese at a level which we hoped would discourage production beyond the requirements of the Canadian market. This is the basic reason for it.

There was a concern when we did this that the price would be a losing one to cheese

factories. It would be, if this was the price they took, but we also know that the price at which major cheese-buyers have contracted and are contracting for winter cheese is well above that. The cheese-producer is not going to produce cheese to sell at 42 cents a pound; he cannot afford to.

On the other hand, if he only produces the cheese that the market will take currently he is going to get much more than that. In fact, we have some reason to believe that the price at which the major Canadian buyers will buy cheese that they require during the winter months will be very close to the summer price.

Mr. McCutcheon: Thank you very much.

The Chairman: Thank you, Mr. McCutcheon.

I recognize Mr. Moore (Wetaskiwin).

Mr. Moore (Wetaskiwin): Thank you, Mr. Chairman.

My first question, Dr. Barry, is practically the same as Mr. McCutcheon's, except that I am going to ask for your opinion of what our break-even price would be for a milk shipper. You gave us the figure of \$4.85; but, of course, that is above a break-even price.

Dr. Barry: This depends very much on individual producers. There will be representations to us in the Government from the major farm organization in Quebec that they require a higher price for this coming year. I would not care to say whether it is a negotiating position, or...

Mr. Moore (Wetaskiwin): I know it is a difficult question. I realize that prices for fluid milk are set provincially, but there may be a fluid milk shipper who is receiving under a break-even price—this is the case in some parts of Canada—because of the fact that his surplus milk is not realizing a very high price; there is no subsidy on it. Where does he go? He is a man with a fantastic investment in money and a large herd built up. He cannot obtain a subsidy quota by switching to manufacturing milk.

• 1005

Is this a permanent policy, or is it a yearly policy and likely to be changed?

Dr. Barry: Mr. Moore, last year, which was our first year of operation, when shippers to the fluid milk market were excluded from

subsidies on the portion of the milk used for manufacturing purposes, we made a provision that we would accept fluid shippers who had a fluid quota of less than 45 per cent. If they wanted to change over to become industrial shippers we would accept them.

Mr. Moore (Wetaskiwin): Yes; I recall that.

Dr. Barry: I wish to clarify one point here. We feel—and I think there is a broad feeling of the validity of this across the industry—that the segregation of fluid milk and industrial milk into two separate camps is not in the long run desirable for the dairy industry; that any milk shipper who can meet qualifying standards for fluid milk should be able to participate in the fluid milk market.

If we propose to reach gradually a stage of greater self-sufficiency in this industry all who are able to produce an equivalent quality of milk should be able to benefit from all portions of the market. There are now two provinces, British Columbia and Ontario, where the fluid portion of the market is open to any shipper who can qualify. We have made it a firm and, I hope, a continuing, part of our policy that in any province where there is this pooling of fluid milk—where every qualifying shipper can participate in the fluid milk market—we will recognize all surplus milk, subject to some deductions and quotas, and so on, as being eligible for subsidy.

Mr. Moore (Wetaskiwin): Yes.

Dr. Barry: Of course, the practicality of achieving it depends on circumstances. In a province such as Prince Edward Island, where only five percent of the milk goes into fluid business, the situation is different from that in Ontario, where 30 or 40 per cent goes in, or in British Columbia, where over 50 per cent goes in.

Mr. Moore (Wetaskiwin): Yes; that answers my question fairly well.

I will pass for now.

The Chairman: I have a supplementary question. Will this recognition take place in 1969, 1970, or—?

Dr. Barry: Of the fluid milk—?

The Chairman: Yes; of surplus fluid being eligible for a federal subsidy?

Dr. Barry: This has been in effect in British Columbia for many years. It started in 1962.

Actually, British Columbia had been pooling milk before that. Since 1956 the market has been open to every shipper.

In Ontario, the Ontario Milk Marketing Board formally set up a so-called Group I Pool on March 1 this year, but industrial milk shippers became eligible to enter it on September 1 this year. Therefore, the policy I have just announced, of the opening of the fluid market to industrial shippers, became operative in Ontario on September 1 this year.

Mr. Moore (Wetaskiwin): I have a supplementary. At the present time at this stage of the dairy year no fluid milk shipper could change to manufacturing milk and receive a quota?

Dr. Barry: Of course, there is not much point in doing it in Ontario now.

Mr. Moore (Wetaskiwin): No, of course not; but there are provinces where it may be necessary?

Dr. Barry: Yes, that is right. If I may say so, the background to the thinking here is that the industrial milk shipper, apart from these two provinces, cannot participate in the fluid market.

Mr. Moore (Wetaskiwin): It is a matter of economics, is it not? The operation has to pay, or it is not an operation.

Dr. Barry: They all had a chance to come in last year if their quota was less than 45 per cent.

Mr. Moore (Wetaskiwin): I have an argument against that, too. That is not time enough to make up one's mind.

Dr. Barry: They had the year, sir, to make a change.

The Chairman: Does that conclude your questioning?

Mr. Moore (Wetaskiwin): Yes; for now.

The Chairman: I want to take one minute to alert the Committee to a possibility.

Last week we planned to call the Dairy Commission today, the Feed Board next Tuesday and following that the Farm Credit Corporation, and so on. Because of the multiplicity of committees meeting next week and the urgency for certain committees to complete their work, this Committee will not

be able to meet next week. As you will realize, there comes a time when these Estimates are taken away from us. I merely mention this to alert the Committee to the possibility of spending quite a lot of time on one or two subjects, and then not being able to complete our consideration of some of the others that are left towards the end of our hearings.

• 1010

This is not to alarm you nor to try to railroad something; it is only to say that there is a limit, and if we can use a little extra time today and conclude our consideration of this Department's estimates it might expedite the business of the Committee as a whole.

Mr. Danforth: Mr. Chairman, would you mind elaborating on this—the estimates being taken from us.

The Chairman: There are only so many days allowed for estimates in the House and when that time has expired then, of course, all the estimates that are currently before the committees will be withdrawn. This is because we have only so much time to complete our consideration of the estimates before they will be recalled to the House. This is the catch. And then, of course, we will be provided with the new estimates for 1969-70 early in the new year, and we will want to spend as much time as we can on those new estimates because most of the money involved in our present considerations has been used anyway. Do I answer your question?

Mr. Danforth: Mr. Chairman, could we perhaps deal with this in the steering committee?

The Chairman: Yes.

Mr. Gleave: Why is the Committee not meeting next week?

The Chairman: Because of the multiplicity of other committees that have to meet, and because they are unable to provide rooms and staff to supply us and help us with our meetings next week. In other words, some of the other committees have priority over us next week and we will be meeting the following week.

I recognize Mr. Lefebvre.

[*Interpretation*]

Mr. Lefebvre: Thank you, Mr. Chairman. First of all, I would like to congratulate you Dr. Barry and your staff, for the efficient way

in which you operate the Canadian Milk Board. I received complaints two years ago, but this year, these complaints have almost become nil and this is, I believe, thanks to you and your colleagues.

There are figures I am interested in and that I believe we should have in our present report today. I would like to know the number of producers in Canada, in Quebec and in Ontario? And, the total production in Canada, in Quebec and in Ontario? The average production per producer for Canada, for Quebec and for Ontario? And, the average production per cow for Canada, for Quebec and for Ontario?

[*English*]

Dr. Barry: I have some figures here, Mr. Lefebvre, which may not be in the order in which you asked for them but I can give them to you.

I think it best, in giving figures of average production, to separate milk and cream because they are different.

In Quebec last year the average production of milk per farm—and I am referring now to our own records of the people who are registered with us and who receive subsidy and on whom we have records—was 3,267 pounds of butter fat. We express these figures in pounds of butter fat. It was 4,851 in Ontario, and an average of 3,744 in Canada.

For cream it was—Quebec, 1,375; Ontario, 1,577; and Canada, 1,074.

You asked, sir, the numbers of shippers. The number of shippers who have quotas with us this year in Quebec is 42,949; Ontario, 27,718; Canada, 109,799.

• 1015

The average milk production per cow in Ontario in 1967—and this takes in both milk and cream—was 7,199 pounds; in Quebec, 6,602; and in Canada the figure is 6,600. These are not our figures; they are the Dominion Bureau of Statistics figures.

May I, as a matter of interest to the Committee while I am giving those figures, give the average production per cow in two United States states roughly equivalent to our two major dairy provinces in Canada, Ontario and Quebec. The average production per cow in Wisconsin is 9,600 pounds, and in Minnesota, 9,421 pounds.

Mr. Gleave: I have a supplementary, Mr. Chairman. Would you also have figures for the other provinces, Saskatchewan, for example?

The Chairman: Yes, sir. I think numbers right across the board might be useful.

Dr. Barry: This is the number of producers in each province to whom we have given subsidy quotas for this year. Prince Edward Island, 2,656; Nova Scotia, 1,009; New Brunswick, 1,908. I have given Quebec and Ontario. Manitoba, 8,845; Saskatchewan, 10,034; Alberta, 14,224; and British Columbia, 456. That British Columbia figure is for industrial milk shippers; it does not include the fluid shippers in British Columbia. The total is 109,800.

In addition to that there are about 1,800 people in the fluid pool in British Columbia. These are just industrial milk and cream shippers.

[Interpretation]

Mr. Lefebvre: Could you give the total production for Canada, Quebec and Ontario, the total production?

[English]

Dr. Barry: Again in terms of pounds of butter fat, and these are 1967 figures, Quebec, 149,000,000; Ontario, 118,000,000; and Canada 339,000,000. These are production deliveries by our quota holders for last year.

[Interpretation]

Mr. Lefebvre: Are these quotas held by the Commission, based on the overall production or on the overall consumption?

[English]

Dr. Barry: The total global figure of quotas is based on the approximate amount of milk and cream required to produce dairy products for the Canadian market. The individual producers' quotas were first established last year in 1967-68. Each producer then received a quota for the amount of his 1966-67 deliveries. In the present year, after having excluded the under-420s, those who fell below their quotas last year, we retained their same quotas for this year. Our decision at the moment is that we are not cutting a man's quota because he underdelivers unless he does it two years in succession, but we did not do it for the first year; so that broadly speaking, at least those who are in our ball park have quotas this year for their last

year's production, and in some cases where they did not deliver for more than their last year's production. Now, it so happens that this balances with the total amount we have available to issue.

• 1020

[Interpretation]

Mr. Lefebvre: When you discuss new policies, do you consult with the producers associations from out Canada?

[English]

Dr. Barry: Yes we do, Mr. Lefebvre, as I indicated earlier. We receive representations from them and we have meetings with them. We do not, I suppose, in the final analysis, say this is our policy, do you agree with it, but our policies certainly are made up and devised in relation to representations that are made to us. We do not always meet all the requests that are made to us, of course.

[Interpretation]

Mr. Lefebvre: Another question. Are the quality standards regarding bacterias for milk powder, the same as last year with a maximum of 400 millions bacteria?

[English]

Dr. Barry: I knew there would be some question you would ask me that I could not answer. No, we lowered the standard but I forget the precise figures, I am sorry.

Mr. Lefebvre: Perhaps, you could put it in as an appendix to this?

Dr. Barry: I would be glad to, sir, yes.

An hon. member: It is more like 20,000—

Mr. Moore (Wetaskiwin): Oh, no; it is more than that.

An hon. member: Bacteria count?

Dr. Barry: In the first place, there are two bacteria counts. There are the viable, the living organisms, and the dead, which is a plate count and these are two different standards. May I give this to the Committee separately? I prefer not to guess at it. I am sorry I do not have the information with me.

[Interpretation]

Mr. Lefebvre: Thank you Mr. Chairman.

[English]

Mr. Horner: I wonder if you would just enlarge before you leave this part, Dr. Barry,

on why you think there is so much discrepancy between milk production per cow in Canada and, say, Wisconsin and Minnesota?

Dr. Barry: Well, I would think as a rough appraisal that probably the industries in the two United States states which I mentioned are probably larger units on the average and I think probably in the sense of industry development they have reached probably a higher degree of efficiency than the average in Canada. You have to bear in mind that Wisconsin alone produces as much milk as the whole of Canada and there are virtually no cream shippers involved there. There are virtually no cream shippers left in those areas, you know, so it would be all milk shippers.

The Chairman: May I raise a point here? In reply to Mr. Lefebvre's question, it was suggested that the answer to this question would be as an appendix to our record of proceedings. That would require the agreement of the Committee. It would probably be simpler if this information would be obtained before we conclude our meeting this morning and then just give it as an answer in the record little later. This would save all this. Could that be done? Mr. Lefebvre, have you concluded your questioning?

Mr. Lefebvre: Yes, I have, thank you.

The Chairman: I will recognize Mr. Lessard, Lac-Saint-Jean.

[Interpretation]

• 1025

Mr. Lessard (Lac-Saint-Jean): Dr. Barry, I have five questions, I shall try to make them as precise as possible. As we imported butter last year, because of our inadequate production what control do you have, what control does your organization have on the orientation of butter, cheese or powder milk production? Do you have any control other than existing subsidies or support prices? This is my first question.

Second question now: What is the total milk production for Canada in the last five years?

Third question: What are the total monies given as premiums on milk for quota producers during the past three years?

I have two more questions, but I shall come back to them later.

[English]

Dr. Barry: Mr. Lessard, on your first question which had to do with butter imports, in the early part of 1967 when our position was quite tight we brought in 2.25 million pounds of butter from New Zealand. I expect that we will have to bring in butter during the coming winter to balance our position. As of November, our stock position on butter was 5 million pounds below a year ago, and last year we were quite tight.

Now, this is not much more than 1 per cent of our total butter production.

We exercise no direct control over production of butter, powder or cheese. The only mechanism we have to control or direct is by our levels of price support. May I say, with respect to the importation of butter which I know is a subject of some quite considerable interest, that I think if fortuitously or by management, whichever it may be, we can end up a year not more than 1 per cent over or under our requirements we are very fortunate.

I would hate to think of our being in a situation now where we had a surplus of butter because, as I mentioned earlier, there just is no place to dispose of it at almost any price. Whether the present situation on butter is a result of our management or whether it is fortuitous—and I think to some extent it is fortuitous—butter production on the Prairies has gone down over the past several years as a result of the rather good position with respect to cereal grains.

Incidentally, when we had to import a little butter in the early part of 1967 there could then be no suggestion that this was due to government policy in any respect because there were no restrictions on subsidy payments or anything else. I think we are very fortunate when we can end up a year being within about 1 per cent of our requirements one way or the other.

Your second question was, what is the total milk production for Canada? In 1963 it was 18.5 billion pounds; 1964, the same; 1965, 18.4 billion; 1966, the same; 1967, 18.3 billion. Now, you asked me what was the total amount of money paid in subsidies. The amount of money available to us for subsidies this year is \$125 million. The amount of money available to us for subsidies last year I think was \$120 million. I do not have the exact figure. The year before that it was \$90 million.

• 1030

Mr. Lessard (Lac-Saint-Jean): That would be for 1966.

Dr. Barry: Yes, 1966.

Mr. Lessard (Lac-Saint-Jean): And would you say around \$110 million in 1967?

Dr. Barry: Yes. I am sorry, I do not have the exact figure here. I think it was of the order of \$120 million. Yes, that is right, \$120 million.

Mr. Lefebvre: May I ask a supplementary question?

The Chairman: If Mr. Lessard gives you permission.

Mr. Lessard (Lac-Saint-Jean): I have two more short questions in order to finish. Perhaps you could come back to that point.

Mr. Lefebvre: All right.

[Interpretation]

Mr. Lessard (Lac-Saint-Jean): Two other short questions, Doctor. In 1967-68 and 1968-69, have you accepted new producers without any transfer of quota who have not purchased herds of cows with a quota and when will the new milk policy for next year be officially announced?

[English]

Dr. Barry: Of course, in 1967-68 anyone who had been a shipper the previous year had a quota. This year we provided quotas to all new shippers who registered with us in 1967-68 but did not have a quota for that year. This year we have said that we are not able to provide quotas to any new shipper except by way of what we call reallocations, where a purchase occurred of an existing quota holder. I would like to come back to that in a moment.

In relation to your question as to when the policy will be announded, I cannot give a precise rate. It is our hope—and I know it is the hope of Mr. Olson—that we will be able to announce it rather well in advance of the new dairy year, which starts on April 1. However, may I draw to your attention that there are two elements in the policy; one is the broad policy relating to quota arrangements, subsidy arrangements, this kind of thing, and the other element is our product support prices. We never announce these more than a day in advance because it has a

commercial implication. We would never say on the 1st of March that we are going to reduce or raise the price of butter on the 1st of April because we cannot do that. We give one day's notice on that kind of thing.

Mr. Lessard (Lac-Saint-Jean): Thank you.

The Chairman: Thank you, Mr. Lessard. Mr. Lefebvre has a supplementary question.

Mr. Lefebvre: You gave us a production comparison between the United States and Canada. Could you also give us a comparison between the consumption of butter per person in the United States and Canada.

Dr. Barry: The consumption of butter per capita in the United States is now about five pounds per person. In Canada it is 16.

Mr. Lefebvre: Is that going up or down, sir?

Dr. Barry: In both cases it is going down.

An hon. Member: What about milk?

Dr. Barry: In the United States in 1960 the total consumption of milk, based on a whole milk equivalent—as you know, this includes milk and cream and everything else—was 309 pounds per capita and in 1967 it was 281 pounds per capita. The per capita consumption in Canada—and I do not have the figures going back to 1960 as I did in the case of the United States—of fluid milk products in 1964 was 320 pounds per capita and in 1967 it was 307 pounds.

• 1035

Mr. McCutcheon: Could I ask a supplementary here. Is the reason for this in the United States the impact of substitutes for dairy products?

Dr. Barry: I would not think substantially, because when we compare that seven-year period the so-called substitute—which is basically a filled milk in certain states—I would not think would have an impact that would show in this comparison. You see, this has been a gradual decrease over these years, and I think it has only been within the past year, roughly, that the filled milk has come into the United States. In 1960 in the United States it was 309 pounds per capita and in 1964 it was 294. There has been this regression right along.

Mr. McCutcheon: I am thinking specifically of margarine.

Dr. Barry: I am sorry, I thought you were talking of fluid milk, sir.

Mr. McCutcheon: No, no.

Dr. Barry: Margarine, certainly, oh yes.

Mr. McCutcheon: This would be reflected?

Dr. Barry: Oh yes.

The Chairman: I come back now to my list of questioners and I recognize Mr. Peters.

Mr. Peters: Mr. Chairman, I would like to ask what relationship the Commission has towards the total pooling of milk by provinces?

Dr. Barry: I suppose, Mr. Peters, that in effect the most important relationship we have is our established policy that when this takes place we then take everything into our ball park as one industry.

Mr. Peters: Are you suggesting this is federal rather than provincial?

Dr. Barry: No, not that, sir. It is just that when the fluid market is open to all qualifying shippers we will consider surplus fluid milk in that area as being eligible for our subsidy under our quota system and subject to certain deductions. When you speak of the feasibility of this in the three Prairie provinces, for example—the total use of fluid milk and the numbers of shippers—it hardly makes it practical. In Saskatchewan, for example, we have only one industrial milk shipper—everything is cream, you see—so you cannot think of pooling there. As I mentioned a moment ago, in Prince Edward Island only 5 per cent of the total milk production does into fluid, so pooling really does not achieve a great deal.

Mr. Peters: Can you not work it the other way? Instead of pooling it into the fluid milk market, pool it into the industrial market. Where you have only one large industrial shipper would it not work better the other way? In other words, the province would get out of the field and the federal government would handle the total quota picture?

Dr. Barry: You see, the basic provincial involvement in the fluid milk area is in pricing, and the pricing within a province is not, constitutionally, a matter of federal jurisdiction. This is under provincial jurisdiction. The question of quotas...

Mr. Peters: Yes, but obviously in both cases we are talking about an arrangement. There will have to be agreement by the federal gov-

ernment in order to allow the industrial quota to go into provincial jurisdiction. It seems to me that the reverse would also be true.

Dr. Barry: I think apart from British Columbia and Ontario—and partly in Quebec, where quotas are controlled to some extent by local boards—the quotas are really not provincial government quotas, they are quotas provided by the dairies to whom the people ship.

Mr. Peters: Originally, but this varies from province to province.

Dr. Barry: Yes. Of course, in Ontario it is all administered now by the Ontario Milk Marketing Board.

Mr. Peters: But even previously the producer boards were operating on the basis of the old milk marketing legislation, which gave the producer the right to negotiate on an area basis.

Dr. Barry: Yes, that is right.

Mr. Peters: I am just wondering why that cannot be reversed in the Prairie Provinces and the provinces can give up that jurisdiction. They have the jurisdiction which allows an orderly arrangement between a milk marketing board and the producer. In other words, they were the ones who gave the producer the right to negotiate. I am just wondering why they cannot give it up.

• 1040

Dr. Barry: So far as I am aware Mr. Peters and to use the Prairie Provinces again as an example, I do not think that any provincial agency or any board under provincial authority exercises any jurisdiction over quotas, over fluid milk quotas. I think this is the dairies entirely.

Mr. Moore (Wetaskiwin): It is true in Alberta, dairies entirely.

Mr. Peters: Let us go to British Columbia. Ontario is totally confused, but British Columbia, I understand, is not so confused because all the milk in British Columbia is pooled milk.

Dr. Barry: No, not always.

Mr. Peters: I understod there was total pooling in British Columbia.

Dr. Barry: Mr. Atkinson could probably comment on that.

Mr. L. A. Atkinson (Member, Canadian Dairy Commission): Mr. Chairman and gentlemen, in British Columbia the situation is this. There are five pooling areas which have been set up under the milk industry act and by the milk board. In each of those areas there is a pool of what they call qualifying milk, and this is milk which on the basis of the farm premises and the quality of the milk, and the regularity of shipments, would qualify to enter the fluid market. Now, into that market, into that pool can come any time a man who has been an industrial shipper but who becomes qualified, his farm premises and his milk. He applies to the Board to enter the pool and he ships for one year as an industrial shipper, and then if everything comes up to the standard he is admitted into the pool on a graduated basis. He does not come in as a full-fledged quota holder. But, on the basis of their calculations—it would take a little while to explain it—he is entitled the first year to 20 per cent of the total eligibility for pool shippers in the matter of quota. Each year he has another 20 per cent added, so that after five years in the pool, he becomes eligible for a quota in relationship to the other quota holders in the pool.

Outside the pool there are a few shippers, not very many—some milk shippers and some cream shippers—who are not qualified. We call them non-qualifying shippers. They are straight industrial shippers and they are treated by the Commission in the same manner as industrial shippers in any other province.

Mr. Peters: Why I am asking these questions is that I am wondering what steps we are really taking to pooling all the milk, because we are running into an enormous problem I am sure in many of the provinces—we certainly are in Ontario—in the disparity between fluid milk price and surplus fluid milk price where they are not under subsidy at all, and the \$6.50 or \$6.80 or whatever it may be for a hundred is being reduced to \$3.25 so that the total amount is probably not unrealistically the industrial price.

I think maybe this is the same in Alberta because of the question by Mr. Moore. The surplus milk is obviously having a great effect on the total amount of milk that is available for Canadian production. Obviously the industrial quota is going to have to be set on the total amount of milk produced and the distribution of it, so it seems to me that we should be moving very rapidly or as rapidly

as possible into getting control of all the milk either totally in the provincial field or totally in the federal field.

Dr. Barry: Whether constitutionally we can achieve this, I do not know. Mr. Moore could correct me on this, but my impression is that in the Prairie Provinces shippers who have fluid milk quotas, in the main have fairly substantial fluid milk quotas.

• 1045

Mr. Moore (Wetaskiwin): It varies. In the Edmonton milk shed they have, but in the remainder of the province those who ship to smaller points, even though they may be cities, have not, and this is their big beef, of course. Their fluid milk quota may be as low as a quarter of their total production.

Dr. Barry: I know in Saskatchewan they have difficulty getting enough fluid milk.

Mr. Moore (Wetaskiwin): Yes.

Dr. Barry: So the quotas there I would think would be fairly substantial.

Mr. Peters: Would you explain how far we have gone in this regard in Ontario? I am aware of the fact that some of the areas—it is divided into areas—have gone into pooling but this appears to me, in meetings that I have been at, not really to be pooling as I would anticipate it, but rather a pooling of transportation costs and distribution expenses rather than pooling of the full market in that area.

Dr. Barry: It is not pooling in the sense of arriving at one price for all milk and then dividing that up. It is pooling in the sense of everybody being able to participate in the fluid milk market. In Ontario under the administration of the Ontario Milk Marketing Board, as of September 1 of this year, any industrial milk shipper who applied to enter what they call the Group 1 pool, which is a fluid pool, and whose premises and milk quality qualified, was eligible to enter. He was given a quota on the same basis as the existing people in the pool, but as in the case of British Columbia, that is arrived at over a 5-year period.

My understanding is quite firm that in Ontario any industrial milk shipper who wished to enter what they call the fluid pool and sell part of his milk as fluid milk, and pay for it as fluid milk, and his premises and milk quality qualified, was eligible to come

into the fluid pool. You are quite right, sir, it is not a pooling in the sense of the pooling of total prices. So much milk is paid for at the fluid price and so much is paid for at the industrial milk price.

Mr. Peters: It seems to me, and this is probably policy, that in Canada we have not anywhere near reached a potential in dairy production. What that potential might be I would hesitate to guess, but I would think that in the case of Ontario it could stand probably a 25 per cent increase if we can upgrade our herds to the extent they have in Wisconsin, just by upgrading the herds without increasing anything. But our total production is probably 50 per cent of our capacity right now.

This all seems to me to hinge on markets, and the Board appears to have used as their over-all basic quota only the amount they can sell in a normal market. What steps are being taken by the Canadian Dairy Commission to go into the marketing agency? Let us take, for instance, cheese in Ontario and Quebec. Devaluation in Great Britain had a terrific adverse effect in Ontario. It put the cheese board out of business, overnight almost. It went bankrupt and was taken over by the Milk Marketing Board. Is the federal government anticipating national sales marketing policy?

Dr. Barry: Not at the moment.

Mr. Peters: Why are we not?

Dr. Barry: I think I might correct one point where my understanding is different from yours. There was in Ontario the old Ontario Cheese Producers' Marketing Board, and there were several boards having to do with different outlets for milk. When the Ontario Milk Marketing Board was formed they were all put into the Ontario Milk Marketing Board.

Mr. Peters: But not anywhere near the same type of board. The Milk Marketing Board is not duplicating the work that was done by the cheese board, for instance.

Dr. Barry: The old Cheese Producers' Marketing Board? Pretty well.

Mr. Peters: So far as I know it is not actively in the market of selling cheese.

Dr. Barry: Yes, to the same extent that the old Cheese Producers' Marketing Board was. In Ontario there are cheese auctions, mainly at Belleville and Stratford, and cheese from

factories is technically boarded through those auctions. These auctions were formerly run by the Ontario Cheese Producers' Marketing Board. They are now run by the Ontario Milk Marketing Board.

Mr. Peters: Yes, I agree, but I was referring to the aggressive program that the Cheese Producers' Marketing Board was conducting in England and in several other countries, which does not seem to be duplicated.

Dr. Barry: It was primarily in England, and the Ontario Milk Marketing Board is still exporting cheese to Britain and has taken over the function of the Cheese Producers' Marketing Board in that respect as well.

• 1050

Mr. Peters: Yes, but it is not selling it. It is not going out to sell in the same way.

Dr. Barry: The volume is holding fairly constant, Mr. Peters, year in and year out.

Mr. Peters: I realize this, but we were not interested in constant marketing; we were increasing quite substantially every year.

Dr. Barry: The Committee will be interested to know, I am sure, that this question of dairy product surpluses is a very serious one across the world. The British, now, are very seriously concerned over the volume of cheese imports into that country.

Mr. Peters: We are concerned about the cheese imports into this country.

Dr. Barry: That is right. I think it would be wrong under present circumstances to suggest that there is a limitless market for Canadian cheese in the United Kingdom. In fact, you know, there is some feeling that any market reaches a point where the cost of maintaining it becomes questionable. It is costing us a lot to maintain our cheese market in the United Kingdom at the present time.

To answer your question specifically, Mr. Peters, at the moment we have not visualized our getting into the actual control and marketing of all milk and dairy products, say, in the sense that the Wheat Board is with respect to wheat in western Canada.

Mr. Peters: That is a good example, Mr. Chairman, because that is the kind of marketing I was referring to. Just in my own area we had a cheese factory go into business with assistance from ARDA and from provincial agencies, and because of the price—and

certainly the manufacturing operation margin is minimal, probably not more than a cent to play with on manufacturing cheese taking into consideration the by-products—increased production of skim milk powder has resulted adjacent to casein and butter.

The Board is going to get stuck with the marketing of skim milk powder and I think you said we are subsidizing it to the extent of 20 cents, while on the market we are now getting a price of something like 7 cents. The more production that goes into skim milk the worse off we get. If the Board could direct it into a line of production so that we would have a few million pounds of butter this would...

Dr. Barry: Of course, if you get skim milk powder, you get it because you are making butter from the fat of the milk.

Mr. Peters: Or casein or...

Dr. Barry: Yes, but I mean when we speak in terms of skim milk powder the fat portion of that milk has gone primarily into butter; not entirely, it might go into ice cream, but basically it goes into butter.

On this matter of achieving a proper balance, mind you, in supporting the cheese market this year we have had to buy 7 million pounds of cheese that has been surplus.

The Chairman: Gentlemen, I still have some eight questioners on my list. I do not want to cut anyone short, but I do want to give fair recognition to all members. If you are satisfied Mr. Peters, I would like to recognize Mr. Lind. I ask you to be as concise and precise in your questioning as possible.

Mr. Lind: Thank you, Mr. Chairman. Dr. Barry, going back to the quotas, do the quotas go with the herd or the farm, or how do they handle the quotas now?

Dr. Barry: Mr. Lind, last year we said that we would accept applications for reallocation of quota to a person who bought the farm, or herd, of a quota holder. This year we have changed this and it goes with the herd. Now, I say "go" but it does not go automatically.

Mr. Lind: The whole quota?

Dr. Barry: If the herd is split between two buyers, then we will split the quota between those two buyers in relation to the percentage of the herd each has bought.

Mr. Lind: What about a son who is starting up off his father's farm, with a different set-

up entirely and independent? Would we have to take part of the quota of the father with him?

Dr. Barry: The father can apply to us to reallocate part of his quota to his son.

Mr. Lind: Is that the only way the son can get a quota?

Dr. Barry: The only way any newcomer can get a quota is by getting some quota from a person who now holds it.

Mr. Lind: Are these quotas being sold in industrial quotas now?

• 1055

Dr. Barry: We say that our quotas are not negotiable and this has been quite a contentious thing within the industry. There are some who feel that the simplest way to operate the quota system is to let people buy and sell them, rather than tying them up with the necessity of buying a herd in order to get a quota.

To the moment we have not agreed with this and, of course, it is a different procedure than exists in the fluid field where people can buy and sell quotas. Our position has been that the right to receive government money cannot be bought and sold by an individual.

Mr. Moore (Wetaskiwin): I have a supplementary on that, Dr. Barry. I am sorry, you were not finished.

Dr. Barry: Having said this is our policy, the only way a person can get a reallocation of quota is to buy a herd and apply to us to have the quota reallocated to him. I would not want to guarantee that in every instance there is not, by one device or other, some financial consideration attached to that; I do not know.

Certainly, the whole basis of reallocation is to permit a normal transition within the industry. Dairy farmers leave dairying and leave farming and somebody else buys their property and their operation and basically the concept of reallocation is to permit that. Obviously, a herd or a property that has a quota attached to it would be worth more than one that does not; this sort of thing enters into it, but where we have known that a direct financial consideration has entered into a transaction we have refused to authorize it.

Mr. Lind: I have one more brief question. What is the limit of the quota that you supply to any one herd?

Dr. Barry: There is no limit per se. When we established the quota system in 1967-68, we gave everyone a quota for his 1966-67 production regardless of what that was. In the reallocation of quotas, we would not reallocate quotas to one individual to bring his total quota to over 300,000 pounds of milk, except in the case of partnerships or two operators on the farm. In the reallocation of quotas, we do not reallocate quotas to a newcomer for less than 100,000 pounds of milk—3,500 pounds of butterfat.

The Chairman: Are you satisfied, Mr. Lind?

Mr. Lind: Yes.

The Chairman: I will recognize Mr. Moore for a brief supplementary.

Mr. Moore (Wetaskiwin): On this same question, suppose a dairyman purchased a herd and applied for reallocation of quota, would he not be ridiculous or foolish to do so unless he knew he was going to get the quota? He could not operate otherwise. Can he make application before the deal goes through?

Dr. Barry: Well, in fact we like to see them do this because then they know where they stand.

Mr. Moore (Wetaskiwin): Yes.

Dr. Barry: We get many people saying to us, "We did this on the understanding that we could get a quota now we have done it so you have to give us a quota".

Mr. Moore (Wetaskiwin): That is right; it should be ratified first, then.

Dr. Barry: Ideally, this is what they should do, Mr. Moore.

The Chairman: Thank you. I will recognize Mr. Foster, Algoma.

Mr. Foster: Dr. Barry, you said that anyone can get a fluid quota in Ontario now. It seems to me that in Northern Ontario these are still selling for \$1,000 per can on this basis. Has there been some change recently where a person can actually go into the fluid market in Ontario without getting someone else's quota?

Dr. Barry: The arrangement that the Ontario Milk Marketing Board has, and it started this year, is that any milk shipper who does not now have a fluid milk quota and who qualifies on the basis of farm pro-

mises and this type thing and milk quality, can enter the fluid market and get a fluid quota. This opens up on September 1 every year. Each year on September 1 people who want to come into the fluid pool can do so, subject to their qualifying. Now, in addition, of course, the provision for the purchase and sale of quota still exists; a man can come in by buying a quota if he wishes to, or enlarge his present quota by buying one.

Mr. Foster: Yes. My next question concerns this skim milk powder which is sold for five cents a pound. Who was this sold to? Was it sold to government or to private people, and in what country? What did this skim milk powder cost the government? How many pounds did they buy and what was the market price at the time they sold it at 5 cents a pound?

• 1100

Dr. Barry: Last year—and when I say "year" I refer to the year from April 1 to March 31; these are operating years—we bought under our price support for skim milk powder 101 million pounds. During the year we sold 2 million of that and we went into this year with a carryover of 99 million pounds. Now, bear in mind that any powder exported could come from our stocks or it could come from trade stocks. If it comes from trade stocks we apply a subsidy to it; if it comes from our stocks it is the same thing, in effect, because we sell it in situ.

Last year, while we sold only 2 million pounds of our powder, total exports were 95 million. This year we estimate we will purchase about 180 million pounds of powder. Therefore, our purchases this year plus our carryover from last year will give us total stocks this year to dispose of some 279 million pounds, of which to date we have commitments for the sale of 164 million, leaving 115 million pounds of our estimated total stocks for this year still to be disposed of.

The loss in that, whether a loss on our sales or a loss by our providing export assistance to privately exported stocks, is taken from what we call our export equalization fund, and the assets to that export equalization fund come from our whole bank of subsidy payments to producers.

Mr. Foster: From this 15 cents a hundred holdback?

Dr. Barry: Yes, which is now 21.

Mr. Foster: Oh, it is 21 now?

Dr. Barry: We raised it to 21, yes, plus cheese, plus other things, you know, as well.

Mr. Foster: What does this skim milk powder that we sell at 5 cents a pound overseas, or wherever we sell it cost us?

Dr. Barry: It cost us 20 cents.

Mr. Foster: Oh, I see.

Dr. Barry: That is our support price.

Mr. Foster: And we sell it for five?

Dr. Barry: Well, we sell it for the best we can get for it.

Mr. Foster: Yes. Where is this mostly sold?

Dr. Barry: In Europe and the southern hemisphere.

Mr. Foster: Is it sold to government agencies or is it sold privately?

Dr. Barry: Primarily to private operators. Some is sold for food aid. This year probably we will sell some 5 million pounds in food aid.

Mr. Foster: Is this sold to our External Aid Office?

Dr. Barry: The food aid that is handled by the External Aid Office, whether for bilateral food aid or for multilateral, is through the world food program.

Mr. Foster: The total amount of subsidy, you say, in 1968 was 125 million. In their estimates this morning we see \$303,000.

Dr. Barry: No, that is separate. The \$303,000 estimate item specifically for the Canadian Dairy Commission is our operating expenses, salaries, expenses, office operation and this kind of thing.

Mr. Foster: What does the administration of this \$125 million cost?

Dr. Barry: It costs \$303,000, plus all our buying operations and everything else. That is the cost of our office operations, salaries, expenses and so forth. The \$303,000 is just our administrative vote.

Mr. Foster: Where does this estimate of \$125 million show up?

Dr. Barry: In the Stabilization Board vote.

Mr. Foster: I see.

Dr. Barry: The funds come to us through the Stabilization Board vote.

The Chairman: Thank you, Mr. Foster. I recognize Mr. Lambert.

[Interpretation]

Mr. Lambert (Bellechasse): Mr. Chairman, my first question is directed to you personally. Would it be possible to have the French text of our proceedings a little earlier?

• 1105

[English]

The Chairman: We are doing all within our power to see to it that the French Debates are made available as quickly as possible, but much of it is behind our control and out of our hands. We are doing all within our power to see that they are made available as soon as possible. Does that answer your question?

[Interpretation]

Mr. Lambert (Bellechasse): Yes, thank you. Now I have five brief questions—I would not like to hold up the proceedings but we are trying to find ways to improve the position of agriculture and milk producers. My first question is as follows. Could the Commission tell us what is the present average price paid to producers of industrial milk? What does the producer get per hundred-weight?

[English]

The Chairman: Do you want to ask your questions separately, or do you want to ask them all and then—

[Interpretation]

Mr. Lambert (Bellechasse): Yes, separately.

[English]

Dr. Barry: This varies a great deal, of course, according to provinces. I presume that you are interested in Quebec primarily?

[Interpretation]

Mr. Lambert (Bellechasse): Yes.

[English]

Dr. Barry: In Quebec, up to September 15 this year the generally prevailing price was \$3.50 per hundred for bulk milk—that is milk from bulk tanks—and \$3.40 a hundred for what the trade calls canned milk, because it is delivered in cans. As of September 15 the general price—and again I emphasize “general”, because this is the price generally prevailing in the main milk area—was \$3.65 for bulk milk and \$3.55 for canned milk.

My prices are all in terms of cents per hundred pounds of milk tested at 3.5 per cent butterfat. The Quebec Marketing Board has issued an order as of November 15 that the winter price is to be \$3.85 for bulk milk and \$3.70 for canned milk.

[Interpretation]

Mr. Lambert (Bellechasse): My second question, Mr. Chairman—perhaps you said it before I came but I will still ask my question—can the Commission take into account the production costs when it sets the subsidy amount we pay to the milk producers of industrial milk, for a given dairy year.

[English]

Dr. Barry: This point was discussed briefly earlier and I made the observation that to arrive at an average cost of milk production is almost impossible because of the circumstances of different dairy farms. Basically the decision on the basic support price is a government rather than a Commission responsibility, because the government provides the funds which make the price.

Basically it is an assessment of what is felt is required and what can be afforded, I suppose. For the information of the Committee may I just note this: this year the gross support price in Canada is calculated to be \$4.85, that is \$3.54 for the market with a calculation, plus \$1.31. Now, it does not come to that much net, because quotas and holdbacks, and so forth, come in.

In the United States the only support given to the dairy industry is through the support of product prices. There is no subsidy and the present prevailing price in States like Wisconsin and Minnesota is around \$4.15 to \$4.20 per hundred pounds which may be an indication of the relative degree of efficiency in the industry between the two areas of Canada and the United States.

Mr. Danforth: These are net?

Dr. Barry: These are delivered prices to the factory. When we calculate, Mr. Danforth, we speak in terms of delivered prices at the factory, because of the variance in haulage costs, you know.

The Chairman: Mr. Lambert?

[Interpretation]

Mr. Lambert (Bellechasse): But, Mr. Chairman, the price you just indicated does not tell us whether those producers are satisfied or

not. At any event, does the Commission—it may be a rather blunt question, which you can answer if you wish—does the Commission consider that the price you just mentioned for Canadian producers, as a profitable price which can give the operator an income which is sufficient for him to have a decent standard of living compared to others?

• 1110

[English]

Dr. Barry: Excuse me for a moment, I am just trying to find the Act. I do not think I have a copy. In any event, the Act says that our objective shall be to provide a satisfactory price for efficient producers. As a personal observation, and not as a government observation, I would like to say that I think the existing price is satisfactory to efficient producers.

The Chairman: Do you have another question, Mr. Lambert?

[Interpretation]

Mr. Lambert (Bellechasse): Yes, another question. When the government or the Commission decides to raise the minimum price of butter by two cents how many cents per hundredweight or hundred pounds of milk does this represent?

[English]

Dr. Barry: Eight cents.

[Interpretation]

Mr. Lambert (Bellechasse): Does the producer get these eight cents at the same time as the consumer pays the increase in price?

[English]

Dr. Barry: This depends entirely on the pricing mechanism within the market, over which we have no jurisdiction. A moment ago I gave you the Quebec milk prices, where there was this increase on September 15. Our price of butter was raised by two cents on September 30. In Ontario the minimum price for industrial milk is set by the Ontario Milk Marketing Board at \$3.54. That has been the price all year, it has not changed.

Generally speaking, cream prices in the Maritimes, Western Canada and in Quebec to some extent, have gone up by the equivalent of the increase in butter prices.

[Interpretation]

Mr. Lambert (Bellechasse): I was making this comment, Mr. Chairman, because this is

the second time that there has been an increase in butter prices in the last few years and the last time the producers did not benefit from that increase, although the consumer was paying more. We have had discussions with the Commission, the federal government and the provincial governments and each tried to pass the buck to the other. Neither were responsible for this but still the consumer was paying more and the producer was getting the old price.

This is why I was asking the question. I appreciate that it is difficult for the Board to keep track of the different prices down to the level of the producer if there is no way at the moment it should be the task of the Committee to find a way to ensure that the producer, when there is an increase in price, that the producer gets as much of the benefit as possible.

[English]

Dr. Barry: Sir, if there has been this buck-passing between the federal and provincial governments as to who has jurisdiction here I can only express my view, which is that jurisdiction on a matter of price within a province falls within the area of property and civil rights and it is purely within provincial jurisdiction. We can set up mechanisms, we can establish floor prices which are designed to yield certain prices in terms of milk, but federally we cannot demand that those prices be paid.

[Interpretation]

Mr. Lambert (Bellechasse): Even for industrial milk.

[English]

Dr. Barry: Yes, sir.

[Interpretation]

Mr. Lambert (Bellechasse): Thank you.

[English]

The Chairman: Thank you, Mr. Lambert. I now recognize Mr. Southam (Qu'Appelle-Moose Mountain).

Mr. Southam: Thank you, Mr. Chairman, I will only occupy a brief part of the Committee's time this morning because a number of the questions that were of interest to me have already been discussed and answered.

However, I will go back to the area of general consultation, and this was referred to a moment ago by a former member of the

Committee. Dr. Barry, in the consultations that go on in arriving at the policies to provide equitable prices for both the fluid and industrial milk shippers—or two of them—what machinery or liaison is set up, if any between the federal agricultural authorities and the provincial agricultural authorities with a view to resolving or arriving at the best solution to these numerous problems affecting the dairy industry.

I am thinking of the discussion that went on in the Committee several years ago when this particular facet was elaborated upon to some extent because of the complexity of the wide regional areas of Canada. Is this still going on? Is there still a fairly close liaison? What are the results of this matter that your Commission has been considering?

• 1115

Dr. Barry: With respect to the question of price, Mr. Southam, of course the fluid price is set entirely by provincial agencies. The discussions between ourselves and the provincial authorities are not so much into the matter of price, our discussions are based more with the industry than with the provincial authorities. The provincial authorities may have views with respect to the impact of details of our policy in their provinces, and this kind of thing, but no so much with respect to price negotiations with the provinces.

Mr. Southam: Of course, the reason I bring up the question, Mr. Chairman, is because of what certainly appear to be disparities in the minds of producers in various sectors of Canada. You get letters from various areas. As a Western member I might get a letter from a farmer in Eastern Canada, or something, and I am not in a position, as I say, to answer some of these because of the fact of the wide regional areas, and so on, and the problems of the producers in those areas. But I would think that if possible closer liaison should be developed between the Department officials at the federal level and the provincial level. I believe that continuous consultation should be going on in order that you, as the head of the Canadian Dairy Commission, are kept advised. Is this possible or is it just too cumbersome?

Dr. Barry: I think, Mr. Southam, that we do have fairly close liaison with provincial officials on the implications and operations of details of our program.

Take this quota matter as an example. There are some areas of the country which

feel that our present quota arrangements are discriminatory to them. Certainly provincial officials have raised these matters with us. I was referring more specifically to the matter of price negotiation, which we do not do directly with the provinces.

Mr. Southam: To bring the matter closer to home, and with reference to my earlier remark that several years ago we were discussing this at some length, I was thinking of the particular area of the cheese producers and cheese manufacturers, and the difference in the qualities of cheese that might have existed in certain areas of Quebec and Ontario and the share of the market that they were getting, and so on. This interests me very much because I feel that it is in the interests of the agricultural industry as a whole—not a specific area such as a provincial area—to get uniform standards, uniform markets, and so on, so that...

Dr. Barry: This does apply in this area. Quality standards are uniform. As a matter of fact, they are basically federal and all our support prices are based on first grade quality, which is uniform across the country.

Mr. Southam: Following along this line of thought, in trying to resolve the problems that we have within our dairy industry in Canada, do you as head of the Canadian Dairy Commission, or other authorities in Canada, have liaison with officials in the United States, New Zealand, Denmark and other dairy producing countries, to keep abreast of the development in the industry, and so on?

Dr. Barry: I think pretty reasonably so, sir, yes.

Mr. Southam: There has been very little discussion this morning on the matter of milk and dairy substitutes. Of course, in this country and in other countries as well we are plagued with overproduction in many areas of the dairy industry, and we now find this matter of substitutes entering into the field. What research is being developed or what is going on in the Department with respect to this whole matter and the problems it might create in the dairy industry in Canada?

Dr. Barry: In the area of substitutes, of course, the prime example in dairy products is margarine versus butter. There is also some fairly significant substitution of synthetic creams for cream. The present discussion and concern about substitutes has had to do

primarily with what is called filled milk, which is made from nonfat milk solids, skim milk, with the fat portion consisting of vegetable fats. This is being used to some extent in the United States. In fact, there are countries where it is used quite substantially. In Mexico and the Philippines, where they are deficient in milk, they will use skim milk solids, milk powder, and blend it with a vegetable fat to make milk. This is also being done in some states. It has aroused a great deal of concern. The use seems to be levelling off in those states now at about—is it about 10 per cent or 5 per cent of the total now?

Mr. Atkinson: I think Arizona is the highest with about 10 per cent, but over the federal markets in the United States it is less than 2 per cent.

Dr. Barry: Yes. In all provinces at the moment I think the use of filled milk is illegal. Is this not right?

Mr. Atkinson: Yes.

Dr. Barry: So it is a question of there being some pressures from commercial interests to legalize it. I can only say, Mr. Southam, that it is a matter of present consideration, research, discussion and this kind of thing as to what might eventually materialize.

• 1120

The earlier very considerable discussion on it seems to be tempering a little bit now.

Mr. Southam: In other words, there is research going on in this field?

Dr. Barry: Yes.

Mr. Southam: And you would say that the percentage then, as far as the Canadian market is concerned, is very very small?

Dr. Barry: At the moment there is none on the Canadian market because it is not allowed.

Mr. Southam: What about cream and milk substitutes?

Dr. Barry: These are allowed, yes. Cream substitutes and the margarine, of course.

Mr. Southam: I presume that the Department of National Health and Welfare is looking after the consumers as far as the safety factor and the food value in these things are concerned?

Dr. Barry: Yes sir, but that would come under Food and Drug.

There is also, of course, a suggestion for a purely synthetic milk which would have no dairy product at all, and Food and Drug I think have taken the position that this cannot be sold as a milk substitute unless it has equivalent nutritive value.

Mr. Southam: What is the attitude of the Canadian Dairy Commission and the federal authorities on this whole matter? Are they going into research with the idea of encouraging the dairy industry in Canada to get involved and to compete with, say, the United States or other countries that are involved in this, or are they taking the other attitude that of being against this whole intrusion into the dairy industry here in Canada?

Dr. Barry: It would not be in competition with the United States because these products are all consumed within the country—they are purely domestic products. I think, apart from the feeling of the Commission, that the position generally of the dairy industry is that having fought margarine and having fought a losing battle—and in the course of doing so having given a lot of publicity to it—they probably do not want a repetition. However, I think basically on the producers side there is concern whether it is desirable to have a substitute milk. If this filled milk were to become a very substantial thing of course it would add very considerably to our problem on butterfat surplus, as you know.

I cannot at the moment, Mr. Southam, say what may be the outcome. I only know—and this is a point which is disregarded often—in so far as having a filled milk is concerned, that if the argument for it is to get away from the cholesterol factor in butterfat the vegetable fat which is almost completely used for filled milks has as high a cholesterol factor as butterfat does.

Mr. Southam: In other words, Dr. Barry, this should be a matter of concern and continuing study both by this Committee and the Department concerned.

Dr. Barry: We and the Department are continuing to have discussions with the provinces and the industries because they are involved equally with us in this.

Mr. Southam: Thank you, Dr. Barry.

The Chairman: Thank you, Mr. Southam. I now have on my list Mr. Mazankowski, Mr. Code, Mr. Gleave, Mr. Danforth. I understand that Mr. Mazankowski had to leave and that Mr. Moore will put his question. Do I have

the permission of the Committee to allow Mr. Moore to put Mr. Mazankowski's question at this time?

Some hon. Members: Agreed.

Mr. Moore (Wetaskiwin): Thank you, Mr. Chairman. There seemed to be several occasions in this last dairy year when, for a number of reasons, producers failed to complete their application for quota within the required time and this disqualified them from having a subsidy quota. Will any consideration be given to these producers in the next dairy year?

• 1125

Dr. Barry: You have touched upon a rather touchy subject with us, Mr. Moore. We sent applications to all those who were what we called 1,750 pound quota holders last year—that is, everyone who produced less than 1,750 pounds in 1966-1967 was given a quota for that amount in 1967-1968. There were some 97,000 of them. We sent them applications and advised them that if they wished to be considered for a subsidy quota for this year they were to return these applications. Indeed, at the moment, we are thinking that we will do this universally for the coming year because from the operation of our program we have no way of knowing whether people are or are not continuing in dairying. They may ship for half a year and we have no further record, we do not know whether they are seasonal, have gone out of business or what has happened.

As I said, we sent out some 97,000 of these. There were probably some 8,000 people who, technically, were eligible because they shipped over 420 pounds from whom we did not receive returns. Also, all of these got the phasing out payment. They are not prejudiced as far as the present year is concerned because the phasing out payment was for the full amount for which they would have been entitled to subsidy in this year in any event.

We get two main arguments as to why we should not have excluded them; one is that they did not receive the application and the other is that they did in fact return it and that we missed it. We only know that the applications went to precisely the same names and addresses as all their subsidy cheques and their phasing out payments went. Quite frankly, we are not prepared to accept categorically the assumption that they did not get the application form. In fact, we have had

different people say to us, "Yes we got it but, you know, it was just another piece of government mail so we just threw it away." This was in spite of the fact that we tried our best to make it clear that they had to return them.

With respect to those who said they did return them, we have checked through and in some cases—and even indeed in some cases where people said they did not return them but there appeared to have been a very legitimate human reason for it—we have put them on our list for consideration for quota for next year. This number is not great. This issue with respect to these people is fluid at the moment. You see, our problem is that our heart becomes involved in this as well as our head. I think this coming year we will have to send everybody a form to reapply for subsidy quota.

If the public at large gets the impression that we do not mean what we say when we send them things, then how do you administer a policy?

Mr. Moore (Wetaskiwin): You mean in this case you will give them one more chance?

Dr. Barry: If you give them one more chance then next year they will want one more chance. That is the difficulty.

Mr. Moore (Wetaskiwin): But you do intend them maybe to give them one more chance.

Dr. Barry: No, I would not say this at the moment, Mr. Moore. I am simply remarking that it is a contentious issue at the moment.

Mr. Moore (Wetaskiwin): Yes, but there is a possibility I suppose.

Dr. Barry: I would put it in the sense of a possibility rather than a probability.

Mr. Moore (Wetaskiwin): Yes.

The Chairman: Mr. Lambert?

[Interpretation]

Mr. Lambert (Bellechasse): A supplementary question, Mr. Chairman.

The Chairman: Mr. Lambert?

Mr. Lambert (Bellechasse): The letters you send to the producers, I understand that the Board does its best to ensure they are clear, but many producers cannot completely understand the meaning of the contents of these letters. They are confused. So, they write to their member of Parliament; the member of Parliament approaches the Board

and we do not get an answer each time. Please understand me. This is not a criticism, you may have reasons for not answering but we would be happy to have an answer so that we could forward it to those who write to us and that would help in solving the problem.

[English]

Dr. Barry: Well sir, if you have written to us and if we have not answered I can only apologize. If that is the case, if you would be so good as to call it to our attention we will try and get it attended to. We are relatively small staffed, we have had a very substantial flood of mail on this point, on the phasing out payments and this kind of thing and sometimes there are delays in attending to correspondence. I can only say that we try our best to deal with it.

But just in defence a bit of our position, this is the application form that went out. We struggled over this to try and make sure that it was understandable. It was in English on one side and in French on the reverse. It says at the top:

URGENT: In your own interest, THIS MUST BE RETURNED BY YOU BY April 8, 1968.

Then it says in big type.

IF YOU WISH TO BE CONSIDERED FOR A FEDERAL DAIRY SUBSIDY QUOTA IN THE YEAR BEGINNING APRIL 1, 1968 YOU MUST COMPLETE THIS APPLICATION

...and return it to us. But I realize that people get so much government mail that they may disregard some of it.

• 1130

The Chairman: Thank you, Mr. Lambert. I recognize Mr. Code (Leeds).

Mr. Code: You mentioned cheesemakers being discouraged about manufacturing cheese during the winter months. I know that the cheesemakers in Western Quebec and Eastern Ontario are quite concerned. They have great difficulties carrying on over these four winter months. I just wondered if any consideration has been given to helping them out in any way?

Dr. Barry: Not from our standpoint, no. They are asking that we allow a diversion payment. There has been some request that we allow a diversion payment to divert milk to other outlets. This was done in Ontario by

the Ontario Milk Marketing Board in the previous two years. We cannot do this in one province. If we do this, we must do it nationally.

In the Province of Quebec, the cheese plants, to the best of my knowledge, have all made arrangements privately to put their milk, during the winter months, to other use beyond that required—cheese for which they have sale. If we were to institute a policy, nationally, of paying a divergent program for milk from cheese factories, I am afraid we would be doing something that was quite needless outside of Ontario. Also we know of cases where plants have gone to cheese factories who wanted to get their milk during the winter months and who have offered what I would think would be a reasonable price for the milk. I know of two cases where they have not been able to get any cheese factories to line up with them.

Mr. Code: One cheesemaker I know of tells me he delivers the milk in the winter time; he takes it from his suppliers and delivers it six miles into the nearest town. He pays as much for the milk as he gets when he delivers it to the dairy. That was what he was concerned about. It means he is operating at a loss just to keep the cheese factory going.

You mentioned Quebec. How do they do down there? How do they get around it?

Dr. Barry: With the exception of one area, the great bulk of the cheese made in Quebec is made in plants which can use the milk for other purposes. In the one area where there are specialized cheese factories, they have made arrangements to put the surplus milk for which do they do not have an immediate market, into a plant which can use it for other purposes.

The Chairman: I recognize Mr. Gleave (Saskatoon-Biggar).

Mr. Gleave: What if a cream shipper is under quota, on what percentage of his production is he paid the subsidy?

Dr. Barry: The cream shipper in this regard is treated similarly to the milk shipper. Whether he is a cream shipper or a milk shipper, if last year he delivered more than his last year's quota, he has a quota for this year for the amount of his last year's deliveries. If last year he delivered less than his quota, he has a quota this year for the amount of his last year's quota.

With respect to cream shippers, I must put in one caveat, that last year—and this applies to milk shippers as well, it is a volume matter—last year, as I said earlier, all those who, in 1966-67 had delivered less than 1,750 pounds of butter fat or 50,000 pounds of milk, were given an open quota of 50,000 pounds. This year, those in this category—those who had those quotas—as long as their deliveries last year were more than 420 pounds—have a subsidy quota for this year for the amount of their last year's deliveries. So that if their deliveries this year do not exceed last year's deliveries, they will have a quota for the full amount of their deliveries. If they exceed last year, then the quota will be short by the amount of the excess.

● 1135

Mr. Gleave: Well, this man's yearly quota, at least as he gave it to me, was for 2,280 pounds. On a delivery of 282 pounds of butter fat he received a quota base of only 114 pounds.

Dr. Barry: What he may be confusing here, Mr. Gleave, is this, that we divide our annual quota into monthly quotas. When we went into this business, we had to make a basic decision whether to pay a man for his deliveries up to his quota and then cut him off, or whether it was desirable to continue paying him during the year. We felt the latter was desirable so we give them monthly quotas. If during the year he is not paid for his full annual quota entitlement under his monthly quotas, then we make out adjustment payments at the end of the year. So if this man mentions 114, I would think he is referring to a monthly quota.

Mr. Gleave: That is right. In the third month of 1968.

Dr. Barry: The third month of 1968 would be March, which would be five per cent of the annual quota, and that is about right if it is 2,280, it would have been 114 for the month of March.

Mr. Gleave: Then at the end of the year he will be balanced up?

Dr. Barry: That is right.

Mr. Gleave: And, again, as he is balanced up, on what percentage of his total deliveries...?

Dr. Barry: Up to his quota. Up to his total annual quota. You see, his annual quota was 2,280.

Mr. Gleave: Yes.

Dr. Barry: Then his quota for March would have been five per cent which would have been 114. Now, if during the year, he had delivered 2,280 pounds but had been paid for only 2,000, he would have received a yearly adjustment payment for the remaining 280. If he had delivered 285, he would have received it only for the 280. It is just up to his quota.

Mr. Gleave: I see.

The Chairman: Have you concluded your questions?

Mr. Gleave: Yes, that is what I wanted to know. It occurred to me that in Saskatchewan you said there was quite a drop of production in cream owing to easy selling of wheat. I wondered if it was due to the subsidy and the way it was paid?

Dr. Barry: Well, until this year there has been no restriction as far as the cream shippers are concerned. I mean the smaller cream shippers.

The Chairman: I recognize Mr. Danforth, Kent-Essex.

Mr. Danforth: Mr. Chairman, I have a few questions. They are based more or less on the information we have been given. The first one deals with the allocation of quotas. Dr. Barry has stated that in the exchange of herds and through other measures the Canadian Dairy Commission has the direct allocation of quotas. When there is the changing and disposal of herds, an application for new quotas, does the Commission retain any part of the quotas as a basis for increasing quotas in the next year?

Dr. Barry: No sir. If a man who has a quota sells his herd to another person who takes over his business, then we will re-allocate that full quota to the buyer. If the man who has a quota goes out of dairying and just disposes of his operation, sells his cows at market or something, then that gives us a free quota which we can use for next year. But where there is a specific transaction and an application for a re-allocation of quotas, we re-allocate the full amount.

There are so many considerations here. For instance, if the buyer now has a quota in his own name of 200,000 pounds, and if the seller had a quota of 200,000 pounds, then the maximum we re-allocate is 100,000 pounds, so in this case we save 100,000 pounds.

Mr. Danforth: You indicated that the ideal transaction is an application from a person desiring to buy a herd before the actual transaction takes place. What would be the normal time lag between the application, the consideration and the rendering of a decision in such a procedure?

• 1140

Dr. Barry: The reason that I say it is desirable for a person to enquire from us in advance is that we have, a you know, a minimum amount quota which would be reallocated to a newcomer. We have a maximum which we re-allocate to the existing man and it is best, I think, that the man know precisely when he can get.

Mr. Danforth: I appreciate that.

Dr. Barry: If he writes to us and says that he intends to buy so-and-so's herd and asks if he can get it, we will check that man's quota and see how much he can have and let him know. We cannot deal with the application proper until he makes the formal application. If a man wrote to us and said that he was anticipating buying a herd and it was a quota he could have, I would hope within a week or so, not more than two weeks, to be able to tell him yes or no. I do not know what the normal time for processing applications is. Would you say a couple of weeks?

Mr. J. Thibaudeau (Vice-Chairman, Canadian Dairy Commission): To send the application form back takes about eight to ten days.

Dr. Danforth: Fine. Then to change the subject somewhat, Dr. Barry, in your opening remarks you indicate, according to my understanding, that one of the factors dealing with the quotas and the amount of subsidy was tied in directly to the amount of moneys placed at your disposal by the government. Does this have any effect on the amount of quota or is it confined basically to the amount of moneys paid on the quota?

Dr. Barry: It is related, I would think, to the amount of quota, Mr. Danforth. This year when the basic policy was established we knew how much total quota we could issue. We knew how much we were committed to under last year's quotas. We know how much free quota we had and it was that which we used to take care of newcomers last year and to provide increases for those who exceeded their quotas. This is on a volume rather than on a dollar consideration.

Mr. Danforth: The point I am trying to get at, Dr. Barry, is this. I am concerned about actually where we are going; how the quotas are going to be tailored; what is going to be the limiting factor; whether the limiting factor will be domestic consumption or whether it will be the amount of subsidies provided by the government or a combination of both.

Dr. Barry: Can only answer that in relation to past experience.

Mr. Danforth: I can appreciate that.

Dr. Barry: We have made our calculation of the total global amount of milk and cream required to take care of the domestic market and we have been provided with funds to pay subsidy on that at the rate of subsidy decided on.

Mr. Danforth: The question, Dr. Barry, might have been an unfair one although I was not aware of that. Does this come within the realm of government policy?

Dr. Barry: The rate of subsidy comes within the realm of government policy.

Mr. Danforth: The limiting factors on the entire production of milk are based on subsidy and quotas and remuneration to farmers, and the point I am trying to get an answer on, Doctor, is whether the quotas will be increased or decreased; and whether the amounts paid for quotas are limited on a determination by the National Dairy Commission to tailor production to domestic consumption only, or whether they are arrived at directly by the amount of moneys allocated by the government, or a combination of both.

Dr. Barry: They are tailored basically, Mr. Danforth, to provide subsidy on the approximate amount of milk and cream required for the domestic market. The final dollar calculation then is a multiplication of that by the existing rate of subsidy, by the approved rate of subsidy.

• 1145

Mr. Danforth: Thank you. That is fine on that. There are two other matters I would like to deal with. One deals with the quota—and I am sorry I got off that before I finished it up.

I can appreciate from the statements given here this morning that when a minimum is struck by the National Dairy Commission under which no subsidy will be allocated, this does not necessarily mean that the producer

involved will be going out of business. He may find it possible to continue business under the system he is working under. He would almost be in the category, then, as far as receiving quotas and subsidies is concerned, of a man who wishes to enter the business. If he continues to produce and increases his production to a degree where he then can qualify under the terms, or when a newcomer comes into the business and finds an outlet for his milk and can operate successfully for 12 months or 24 months, is there any provision made whereby they may receive further consideration or is it, in effect, the end of the line under existing regulations as far as the Dairy Commission is concerned?

Dr. Barry: Under existing regulations, as I understand them, this year he can only come in by way of re-allocation.

Mr. Danforth: A re-allocation. Does this mean he must purchase an allocation, then?

Dr. Barry: Yes. Well, he purchases the herd, I guess.

Mr. Danforth: May I return to the question that was raised on filled milk and other dairy substitutes. Dr. Barry, you stated, if I understood you correctly, that cream substitutes and margarine are on our market but that it was illegal in all the provinces with regard to these new substitutes that are being approached, and you dealt with filled milk as one of them. Is this a provincial law and does each of the provinces in turn have this regulation against...

Dr. Barry: Yes.

Mr. Danforth: May I ask then, Dr. Barry, about a research program on behalf of Canadians to ascertain whether or not the dairy products we have in excess can be re-constituted in some other form to either obtain a greater domestic consumption or enter the export trade in a greater amount. Is it under the jurisdiction of the National Dairy Council, or is it under the jurisdiction of any other board or commission or perhaps the Department of Agriculture itself?

Perhaps that is not fair unless I give an illustration, Doctor, and my illustration may be the tremendous increase in consumption by the introduction of the so-called soft ice cream, the use of potatoes in potato chips and onions in onion rings and this sort of thing. I understand there was some research done

where butterfat was incorporated into other products to make an almost half butter-half margarine product and where butterfat could be sold at perhaps a lesser price than fully constituted butter with the same return to the producer. Is there a program in which the government is involved to explore these possibilities?

Dr. Barry: I think both private industry and government research organizations are working in this direction, Mr. Danforth. I can give you one illustration of the type of thing you are speaking of. We are now involved in a proposal which I hope will be successful to find out about what we would call a fortified liquid milk which would have additional non-fat solids to improve its nutritional value and hopefully additional vitamins A and D, again to improve its nutritional value. From the standpoint of the consumer it would be a nutritively better product, better even than milk is at the moment because no one in the dairy business should imply that milk is not a good product and would also hopefully help to take care of part of our problem in disposal of non-fat solids. This type of thing is in our thinking all the time but this is one specific illustration that I can tell you is quite well advanced at the moment.

• 1150

The Chairman: The Chair now recognizes Mr. Peters and then a question from Mr. La Salle. Mr. Peters?

Mr. Peters: I would like to ask whether we still have what was nicknamed the "consumer's butter subsidy" program?

Dr. Barry: No.

Mr. Peters: How long did that operate? It was for a very short term.

Dr. Barry: We operated from 1962 to 1965.

Mr. Peters: What was the result of it?

Dr. Barry: The result was to increase the per capita consumption of butter.

Mr. Peters: Was it an expensive proposition?

Dr. Barry: Oh, yes.

Mr. Peters: I mean, not the cost of it but the cost in relation to the benefit. We had an immense surplus of butter, if I remember correctly, in the early '60's.

Dr. Barry: The great bulk of that surplus, of course, was disposed of through export at quite a considerable loss, of course. I do not have the figures on that—I am sorry, Mr. Peters—but basically the support price as far as producers were concerned was continued at 64 cents at that time. The consumer price—it is not exactly the "consumer price" but it is the price in relation to 64 cents—was reduced to start with to 52 cents and worked up gradually to about 59 cents, did it not? This resulted in quite a significant increase in the per capita consumption of butter.

Mr. Peters: I was wondering whether you have considered—and perhaps it is not within your jurisdiction—the possibility of pursuing the same policy with cheese?

Dr. Barry: No.

Mr. Peters: It seems to me that cheese is one of the chief commodities that we can increase greatly in its potential.

Dr. Barry: Of course, we have had a steady increase of cheese consumption.

Mr. Peters: Yes but there are a number of other factors. One is the grocery stores taking advantage of different sales procedures and for other dairy commodities, and I know that in many of the stores I go to the bulk cheese—in 10 pound blocks which are normally bought—as 90 pound blocks used to be bought in the country store—are cut and put into the meat counter and the mark-up is probably 50 per cent when put out in that way. Therefore, there is no relationship to the selling price of cheese, which is approximately 69 cents for mild Canadian cheddar. We are paying 43 cents to the Board and now it will be 41 cent.

Dr. Barry: Forty-seven cents has been our support price.

Mr. Peters: Well, now it is reduced two cents it will be 45.

Dr. Barry: Forty-two; it is reduced five cents.

Mr. Peters: Five cents?

Dr. Barry: Yes.

Mr. Peters: Well, now it is reduced two, be an unreasonable mark-up. We would not allow this in butter, why have we allowed it in cheese?

Dr. Barry: We had no control over the mark-up on butter.

Mr. Peters: What is the factor? Butter sells for about 4 or 5 cents above the Board price? Why does cheese, in many cases, sell for almost double the Board price?

Dr. Barry: Mr. Peters, I cannot answer that.

Mr. Peters: Why do we not look into it? Why do we not have the machinery to do so? It seems to me to be a commodity that has a potential for much greater consumption than butter. It would probably reach a level with butter although you said when we subsidized it we were able to increase the per capita sales to Canadians. Cheese should be more readily expanded and yet the sales procedure that we use obviously puts cheese into a fairly high priced commodity category; yet, we do not pay the farmers and we do not pay the cheese factories that kind of price.

• 1155

Dr. Barry: I suppose this applies to any commodity, Mr. Peters. To the extent that there is a relation between price and use, if the price could be reduced then the use of that product probably would go up so long as it had relationship between price and use. The so-called consumer subsidy on butter was a direct government expenditure to relieve a very serious situation on butter. I suppose it could be argued that the sales of any commodity, whether it be apples or potatoes or anything else, could be increased by a Government contribution toward reducing the cost.

Mr. Peters: Yes, but Dr. Barry, you would agree that where we subsidize a producer in a particular field, it puts the product in a different category than a commodity that is not subsidized, or at least so I would assume. We appear to be very cautious, both provincially and federally, about an increase. From what I heard on the radio this morning, there is an increase in the price of milk by two cents to the consumer in the Province of Quebec. This had a direct relationship to the price that the producer is now being paid and the increase that is being paid in the Province of Quebec. It has been passed on to the extent of two cents a quart. I therefore wonder why we have not done the same with cheese because the disparity in that case is almost 50 per cent.

Dr. Barry: This, of course, implies the entry of government through some agency, federal or provincial—and I expect that this

is a matter, again, of pricing and the setting of prices is provincial rather than federal—directly by some mechanism into the pricing. No, we have not contemplated this with respect to cheese.

Mr. Peters: We have the machinery to do it for milk. You have said that every province has opposed fortified milk. We did to some extent, I think federally, allow the production of margarine which had a direct effect on butter production. I fail to see why in some way we cannot make a recommendation from this Committee for a method of putting cheese into a closer relationship between its production cost and its selling price for the purpose of disposing of cheese which is in surplus supply.

Dr. Barry: I suppose the point about which I am not clear, Mr. Peters, is whether you are suggesting that the government should put money into reducing the cheese price to the consumer.

Mr. Peters: I suggest that we have some kind of control. I do not know just whether it is voluntary or not in milk, butter, ice cream and other dairy products; yet in the case of cheese we seem not to have any control and there is a fabulous mark-up. This is detrimental to the production of cheese because of the consumer demand.

Dr. Barry: I suppose it gets into the area of price controls, does it not, which is a big area?

Mr. Peters: Perhaps that is what we should suggest.

The Chairman: I recognize Mr. LaSalle, (Joliette.)

[Interpretation]

Mr. La Salle: Mr. Chairman, thank you, I do not understand why there are quota limits for milk producers while we learn to our surprise that we have to import millions of pounds of butter. I am wondering if the commission, for the future, could make better projections to avoid these imports and will increase quotas considerably. I think that many producers would be very happy with this.

[English]

• 1200

Dr. Barry: Mr. Chairman, I touched briefly on this matter previously. Our production of butter is almost in balance with our consumption. As of November 1 the total stocks of

butter in Canada were 5 million pounds below a year ago, which is not much more than 1 per cent of our butter production. I would like to assure Committee members that we are not deliberately formulating policy for a deficiency in butter. We are trying to maintain a balance and, as I said earlier, whether fortuitously or as a result of our program, if we can keep butter production within 1 per cent of requirements one way or the other I think we are very fortunate, because if we had a substantial surplus of butter we would be in a very serious situation. Every time the suggestion is made that we may have to bring in a bit of butter to keep supplies in balance, I know the feeling is that this is a very bad thing. I can understand why people would feel this way, but I can only add again that administratively I would prefer it if we had to bring in two or three million pounds of butter to make sure we had enough than to have 10 or 15 million pounds too much that there was no home for in this world. I do not think it is rational to expect anybody, whether they are fortunate enough to be able to do it by their own policies or whether it just works out that way, to be able to do this. I think about a 1 per cent result is not too bad.

[Interpretation]

Mr. Lessard (Lac-Saint-Jean): So, I understand that at any rate the Board wants to avoid any imports? Right?

[English]

Dr. Barry: I do not want to avoid any import. We would like to be in balance. We do not want a surplus of butter. If we have to err on any side we will err on the side of not having quite enough rather than having a surplus, because if we had a surplus of butter and had to dispose of it the cost to the producer who had to dispose of this would be a hell of a lot more than any benefit that might arise from another million pounds of butter made in Canada. We try to balance. If we miss it by 1 per cent I do not think that is too bad. I would much rather miss it by 1 per cent than be over by 5 per cent.

[Interpretation]

Mr. Lessard (Lac-Saint-Jean): This is why I would like to ask my second and last question, Mr. Chairman. We ask and we urge our farmers to enlarge their operations improve in every way and it happens in many cases that the reproduction, the breeding of cattle does result in higher milk yield. So, if a farmer with a given quota increases his yield by

25,000 pounds of milk he loses his subsidy. I am wondering if this is not penalizing a producer for working towards the improvement of his production? Could I urge the Commission to seek a remedy to this situation?

[English]

Dr. Barry: If you will excuse me for putting it this way, sir, I do not accept the statement that a farmer who increased his production last year was penalized for doing so because this year we were able to give people quotas for the amount of their last year's production up to a maximum of 300,000 pounds. What is happening is that gradually we are getting fewer dairy producers and the ones that are remaining are getting bigger. As free quota becomes available to us by people dropping out, we are then able to use it to take care of precisely the thing you have mentioned: to help the people who are trying to build more economic and more viable units. We are able to do it this year and I hope we will be able to do it again next year, but I cannot guarantee until this year's results are in.

[Interpretation]

Mr. Lamberti (Bellechasse): A supplementary question. Mr. Chairman, can this be done, during the current year or does one have to wait till the following year?

[English]

Dr. Barry: We have to wait for next year.

Mr. Peters: May I ask a question supplementary to the previous question? You mentioned you would be bringing in 1 per cent of our butter production. Do you mean the Board brings it in?

Dr. Barry: If there are to be butter imports these will be brought in by the Commission and distributed by the Commission, and any profit accruing in the transaction will accrue to the Commission to be used for the stabilization of the industry.

Mr. Peters: You buy it at the world market rate and sell it at the Board price, is that it?

• 1205

Dr. Barry: We do not buy it entirely on a price basis because we want to be sure of the quality of the butter we are getting as well, but if we were to buy butter we would buy it rather substantially below our support price but we will sell it at our support price.

The Chairman: I recognize Mr. Danforth. I assume you had finished?

Mr. Lambert (Bellechasse): Yes.

Mr. Peters: May I ask an additional question? You do not control cheese when it is brought in?

Dr. Barry: Oh, no.

Mr. Peters: How do you get the power to control butter and not...

Dr. Barry: Because butter is on the import permit control list. It can only be imported under a permit and we ask for a permit to import butter. The only cheese presently on the import permit control is cheddar cheese, and no cheddar cheese is imported into Canada. The cheese imports are the specialty cheeses such as camembert and gouda, and this kind of thing.

Mr. Peters: I realize this.

Dr. Barry: These are commercial cheeses.

Mr. Peters: Why do you not also control them?

Dr. Barry: What would be the point in our controlling them?

Mr. Peters: To develop a Canadian industry in those fields.

Dr. Barry: The cheese industry...

Mr. Peters: We import more cheese than we export.

Dr. Barry: They are actually fairly closely balanced.

Mr. Peters: In dollar value.

Dr. Barry: Basically the cheese industry does not object to the importation of these specialty cheeses as consumer items because the feeling generally among the cheese people is that the availability of this wide range of specialty cheeses has made the public totally more cheese conscious, and this has contributed to the sale of our own cheeses as well.

Mr. Peters: That is true.

The Chairman: Mr. Danforth, Kent-Essex.

Mr. Danforth: I would like to conclude the line of questioning that I was following, Mr. Chairman. In the figures Dr. Barry gave us this morning he illustrated graphically that

the use of milk and milk products per capita was decreasing. Would it be fair to assume that the increase in population would offset the decrease per capita?

Dr. Barry: It is just about doing so. We had the figures of the total milk production which, as I recall them, varied from 18.5 billion pounds about five years ago and then it held at that, then it was at 18.4, and this past year it was 18.3 billion pounds. But to a very considerable extent the increase in population is taking care of some minor decreases in the per capita consumption.

Mr. Danforth: This leads me to my next question. The drop has been from 18.5 to 18.4 and then to 18.3 billion pounds. This is a drop of 200 million pounds of milk production. Is the Canadian Dairy Commission concerned about the downward trend in production? Do you feel that this will continue, hold steady, or can you foresee an increase in the production?

Dr. Barry: I would not think we would foresee much of a decrease, Mr. Danforth. I would think the production now will stay pretty well at about what the market will take, allowing for these surpluses in some areas. In 1964 the total milk consumption was 17.4 billion pounds and in 1967 it was 17.5 billion pounds. That is total consumption, it is not production.

An hon. Member: So that pretty well bears out your assumption that the increase...

Mr. Danforth: I just have one last question, Mr. Chairman. Am I correct in assuming from the information given us this morning that the Canadian Dairy Commission does not forecast or recommend trends, but more or less bases its entire operation on a complete assessment of what is currently taking place and what has taken place.

• 1210

Dr. Barry: I suppose, as a starting point, our philosophy with respect to production is that we should be self-sufficient. There are some variations in the specialty cheeses, and this kind of thing. I suppose within that basic philosophy that we then adjust the details to what has been taking place, such as trends in individual production levels, and this kind of thing. We are faced with a problem here. The producers are not completely happy over the situation where approximately 30 per cent of their income comes from government funds.

They are not completely happy with that kind of a situation. There is a growing feeling that a larger percentage of their total income should come from the market. Now again, to the extent that there is a relationship between market price and total use this may, if this is to be the objective, result in a lesser total use, which would mean an adjustment within the industry itself.

There are some basic philosophies of this type that are very much in the mill—in the thinking, you know, both on our own part and on the part of the industry that have not been completely resolved as of now.

The Chairman: Thank you, Dr. Barry.

Mr. Gleave: I have a very brief supplementary.

If you are aiming in our present dairy policy to meet the scope of the domestic market would it not then be advisable to have filled products and this sort of thing come under the scope of the Board? It is using part of the market and it is aiming for part of it?

Dr. Barry: Of course, if there were filled milks that would make no change in the use of solids milk fat, it would make a change in the use of butterfat to the extent that filled milks replaced standard milks. I suppose to the extent that we are involved in the support of non fat solids that this would have an impact on it. But again, the filled milks would fall into the category of a fluid milk, which is more a matter of provincial jurisdiction.

I do not know whether that answers the question, Mr. Gleave, or whether I have correctly interpreted what the point was you had in mind.

Mr. Gleave: My question very simply was this. The objective of the Board, as it has been presented to this Committee, is to serve the domestic market and to tailor the total product from the farmers in such a way that it is adequate to this market and no surplus to it. Now if this is the case, and other products comes in—filled milk or other substitutes that aim for this same market and neither add nor take away from the supply, should this not come under the operations of the Board? I am not saying it should be excluded or encouraged, but if this is the objective then surely you must be able to control another product coming in?

Dr. Barry: Of course we cannot control the sale of a product within a province, as you know.

The Chairman: Thank you. I will recognize Mr. Clermont.

[*Interpretation*]

Mr. Clermont: It is not a question. I just arrived late because I was in a Committee that was sitting at the same time. I was not present at the beginning, there surely have been questions directed to the members of the Commission regarding quotas? If so, I shall refer myself to the minutes of the Committee to find the information I need. Thank you.

[*English*]

The Chairman: Yes, this question has been considered well and will be in the record.

Gentlemen, we have concluded our questioning. I am sure you would want me to express your appreciation to our witnesses. The witnesses will remain for a short time after the meeting to answer any personal questions you may have. I know you would wish me to express our appreciation to Dr. Barry, Mr. Thibaudeau, Mr. Atkinson, Mr. Mestern and Mr. Blouin for their presence here and for the comprehensive way in which they answered our questions.

Gentlemen, shall Item 55 carry?

Mr. Cobbe: Mr. Chairman, if I may interrupt, there is one answer that I would like to get on the record.

Dr. Barry: It concerned bacteria. If you wish, I will put it on the record now, Mr. Chairman.

Our standards for quality in spray dried skim milk which we offered to buy under price support require a viable bacterial count of 5,000—that is, living bacteria—and a plate count, which includes all dead bacteria, of 300 million.

Mr. Atkinson: That is direct microscopic count.

• 1215

Dr. Barry: I am sorry, direct microscopic count of 300 million. The plate count, which is the living bacteria, calls for a maximum of 5,000 per gram, and the direct microscopic count is 300 million which includes dead bacteria and everything else.

Mr. Peters: We receive many complaints about this count, the way the testing is done, and also about the butterfat count. What control does the Board itself have over the conducting of tests?

Dr. Barry: Well, if you are referring to tests on fluid milk, we have none.

Mr. Peters: No, of the industrial milk.

Dr. Barry: The only standard we have on industrial milk is the food and drug standard.

Mr. Peters: Do your inspectors—

Dr. Barry: No, we have no inspectors.

The Chairman: Thank you. Mr. Lambert?

[Interpretation]

Mr. Lambert (Bellechasse): I am sorry Mr. Chairman, thank you very much, you are very kind to allow me another question.

Mr. Chairman of the Commission, if I am mistaken, please correct me, I shall be glad if you would do so. I understand from your explanations that the main concern of the Board was to attempt to maintain a balance between production and consumption without being too concerned about ensuring a decent profit for the producer. So, the producer has to suffer the jolts of the regulatory mechanism. In other words, in order to prevent an increase in milk on which would exceed the consumption, the Commission does not raise the price at the producer's level. But the same does not apply in labour, even if there is an excess of manpower. Wages do not go down, I am happy about this for the sake of the workers. Those who work are not penalized. How then, in Agriculture, can we ensure that the producer gets his fair reward?

[English]

Dr. Barry: I am sorry but I cannot agree completely with the suggestion, sir, that nothing has been done about improving producer prices. Now I cannot guarantee that the prices I am going to quote are in all cases the actual prices being paid. I will quote in terms of prices to producers for industrial milk which the programs have been designed to achieve.

In 1962 the price paid was \$2.62 per cwt, in 1963 it was \$2.86 per cwt, in 1964 it was \$3.16

per cwt, in 1965 it was \$3.52 per cwt, in 1966 it was \$4.10 per cwt, in 1967 it was \$4.75 per cwt, and in 1968 it was \$4.85 per cwt.

Now it is for that reason, sir, that I cannot accept the assumption that there has been nothing done to improve the position of producers with respect to the price of milk.

The Chairman: Thank you.

[Interpretation]

Mr. Lambert (Bellechasse): Mr. Chairman, I am sorry, I did not mean to say that nothing had been done. I told you that I understood that the main concern, the main duty of the Commission was to set a balance, to maintain a balance.

[English]

Dr. Barry: If I may, our responsibility under our Act is also to provide an adequate price for efficient producers. I regret it if I have left the impression that we are concerned only with supply. We are concerned equally and must be under the Act, with the price. I just made the point that the final determination of price rests not with the Commission but with the government because of the subsidy involved.

[Interpretation]

Mr. Lambert (Bellechasse): Thank you.

[English]

The Chairman: Thank you, Mr. Lambert. Mr. Moore?

Mr. Moore (Wetaskiwin): Is the Commission in any way concerned with advertising products?

• 1220

Dr. Barry: Up to the present time we have not been concerned.

Mr. Moore (Wetaskiwin): But you may be?

Dr. Barry: We may be.

Item 55 agreed to.

The Chairman: Gentlemen, the meeting is adjourned to the call of the Chair.

STANDING COMMITTEE

ON

AGRICULTURE

Chairman: Mr. BRUCE S. BEER

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 9

THURSDAY, NOVEMBER 28, 1968

Revised Main Estimates (1968-69) relating to
Canadian Livestock Feed Board.
Farm Credit Corporation.

WITNESSES:

From the Canadian Livestock Feed Board: Dr. R. Perrault, Chairman;
Mr. C. Huffman, Vice-Chairman; Mr. J. M. McDonough, Member;
From the Farm Credit Corporation: Mr. G. Owen, Chairman; *From*
the Department of Agriculture: Mr. W. E. Jarvis, Assistant Deputy
Minister (Production and Marketing).

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE

ON

AGRICULTURE

Chairman: Mr. Bruce S. Beer

Vice-Chairman: Mr. Marcel Lessard (*Lac-St-Jean*)

and Messrs.

Barrett,	Howard (<i>Okanagan</i>	⁵ Ritchie,
² Cadieu (<i>Meadow Lake</i>),	<i>Boundary</i>),	Roy (<i>Laval</i>),
Cobbe,	Korchinski,	Smith (<i>Saint-Jean</i>),
Côté (<i>Richelieu</i>),	Lambert (<i>Bellechasse</i>),	Southam,
¹ Cyr,	Lefebvre,	Stewart (<i>Okanagan-</i>
Douglas,	Lind,	<i>Kootenay</i>),
Foster,	Moore (<i>Wetaskiwin</i>),	Thomson (<i>Battleford-</i>
Gauthier,	³ Muir (<i>Lisgar</i>),	<i>Kindersley</i>),
Cleave,	Peters,	Whicher,
Horner,	Pringle,	Yanakis,
		⁴ Yewchuk—30.

Michael A. Measures,
Clerk of the Committee.

¹ Replaced Mr. Clermont on November 27, 1968.

² Replaced Mr. LaSalle on November 27, 1968.

³ Replaced Mr. Danforth on November 27, 1968.

⁴ Replaced Mr. McCutcheon on November 27, 1968.

⁵ Replaced Mr. Code on November 27, 1968.

ORDER OF REFERENCE

WEDNESDAY, November 27, 1968.

Ordered,—That the names of Messrs. Cyr, Cadieu (*Meadow Lake*), Horner, Muir (*Lisgar*), Yewchuck and Ritchie be substituted for those of Messrs. Clermont, La Salle, Moore (*Wetaskiwin*), Danforth, McCutcheon and Code on the Standing Committee on Agriculture.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

MINUTES OF PROCEEDINGS

(Text)

THURSDAY, November 28, 1968.

(9)

The Standing Committee on Agriculture met at 2.10 p.m. this day. The Chairman, Mr. Beer, presided.

Members present: Messrs. Beer, Cadieu (*Meadow Lake*), Cobbe, Côté (*Richelieu*), Cyr, Douglas, Gleave, Horner, Korchinski, Lambert (*Bellechasse*), Lefebvre, Lessard (*Lac-Saint-Jean*), Lind, Muir (*Lisgar*), Peters, Pringle, Ritchie, Roy (*Laval*), Smith (*Saint-Jean*), Southam, Stewart (*Okanagan-Kootenay*), Thomson (*Battleford-Kindersley*), Whicher, Yanakis, Yewchuk—(25).

Also present: Mr. Alkenbrack, Hon. Martial Asselin, Messrs. Danforth, Mazankowski, Whelan, Members of Parliament.

In attendance: Mr. W. E. Jarvis, Assistant Deputy Minister (Production and Marketing), Department of Agriculture. *From the Canadian Livestock Feed Board:* Dr. R. Perrault, Chairman; Mr. C. Huffman, Vice-Chairman; Mr. J. M. McDonough, Member. *From the Farm Credit Corporation:* Messrs. G. Owen, Chairman; W. H. Ozard, Vice-Chairman and General Manager, Operations; R. McIntosh, Comptroller, Financial Services Branch; A. H. Harrison, Director, Farm Services Branch; H. D. Carr, Credit Policy Advisor; E. J. Sivy, Executive Assistant to the Chairman.

The Chairman called the following items listed in the Revised Main Estimates for 1968-69, relating to the CANADIAN LIVESTOCK FEED BOARD:

- 60—Administration, Operation and Maintenance\$ 301,800
- 65—Freight Assistance on Western Feed Grains, etc. ...\$21,600,000

The Chairman introduced Mr. Jarvis who, in turn, introduced the Canadian Livestock Feed Board officials.

Dr. Perrault made a statement pertaining to the Canadian Livestock Feed Board, and answered questions. Messrs. Jarvis, Huffman and McDonough also answered questions.

Dr. Perrault undertook to supply the Committee with certain information and documents requested in the course of the meeting.

The Chairman thanked the witnesses for their appearance before the Committee.

Items 60 and 65 were carried.

At 5.00 p.m., the Committee agreed to take a ten-minute recess.

On re-assembling, the Chairman called the following item, relating to the FARM CREDIT CORPORATION:

- 70—Estimated amount required to provide for the operating loss of the Farm Credit Corporation for the fiscal year ending March 31, 1969\$ 6,000,000

The Chairman introduced Mr. Owen who, in turn, introduced the Farm Credit Corporation officials accompanying him.

Mr. Owen made a statement regarding the Farm Credit Corporation, and answered questions.

Copies of the *Annual Report 1967-1968—Farm Credit Corporation* were distributed to the Members of the Committee.

With the questioning of the witness continuing, at 6.05 p.m. the Committee adjourned until 8.00 p.m. this day.

Fernand Despatie,
Acting Clerk of the Committee.

EVENING SITTING (10)

The Standing Committee on Agriculture met at 8.05 p.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Beer, Cadieu (*Meadow Lake*), Cobbe, Côté (*Richelieu*), Cyr, Douglas, Gleave, Horner, Howard (*Okanagan Boundary*), Korchinski, Lambert (*Bellechasse*), Lessard (*Lac-Saint-Jean*), Peters, Pringle, Ritchie, Roy (*Laval*), Smith (*Saint-Jean*), Southam, Thomson (*Battleford-Kindersley*), Whicher, Yanakis—(21).

Also present: Messrs. Downey, Whelan and Bell, M.P.'s.

In attendance: Mr. W. E. Jarvis, Assistant Deputy Minister (Production and Marketing), Department of Agriculture; *and from the Farm Credit Corporation:* same as at the meeting earlier this day.

The Committee resumed consideration of item 70 of the 1968-69 Revised Main Estimates relating to the FARM CREDIT CORPORATION.

The questioning of Mr. Owen continued and having been completed, item 70 was carried.

The Chairman thanked Mr. Owen and the others in attendance.

At 10.02 p.m., the Committee adjourned to the call of the Chair.

Michael A. Measures,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday, November 28, 1968.

• 1410

The Chairman: Gentlemen, please come to order and we can begin our deliberations. Before us today are Items 60 and 65, \$301,800 for Administration, Operation and Maintenance of the Canadian Livestock Feed Board and Item 65, Freight Assistance on Western feed grains, and so on, \$21.6 million.

Gentlemen, we are pleased to have with us the Assistant Deputy Minister, Mr. Jarvis. I will ask Mr. Jarvis to introduce the witnesses, the representatives of the Canadian Livestock Feed Board.

Mr. W. E. Jarvis (Assistant Deputy Minister, Production and Marketing, Department of Agriculture): Mr. Chairman, it is a pleasure to introduce the Chairman, Vice-Chairman and Commissioner and General Manager of the Canadian Livestock Feed Board; Mr. Perrault, in the first instance, Chairman of the Canadian Livestock Feed Board; Mr. Huffman, the Vice-Chairman and Mr. Jim McDonough, the Commissioner and General Manager of the Board.

The Chairman: Thank you, Mr. Jarvis. I believe that Dr. Perrault has a brief statement to make at this time. Dr. Perrault?

Dr. R. Perrault (Chairman, Canadian Livestock Feed Board): Thank you, Mr. Chairman and Committee members.

Last year when we met with the Standing Committee on June 29, the Board had been in operation for barely a few weeks. The headquarters had been opened at Montreal on June 3 so at that time we did not have too much to report because this was an incipient organization. Of course, we reported about our plans at the time of the organization, especially with relation to personnel, and also we mentioned that we had to administer a new measure because there had been a strike at the Halifax elevators and the farmers in the Annapolis Valley were short of supplies so this Board could pay an additional wheat

freight assistance to the farmers of the Annapolis Valley to have some price stability in that region.

I would like to say a few words first about the present organization. So far as recruiting personnel is concerned, we have put the emphasis on knowledgeable people in the field of agriculture, trade and research. Actually, the basic organization consists of four Board members. Two are on a part-time basis; Mr. Huffman, the Vice-Chairman, is one of them and Mr. Woollerton, who could not attend this meeting today because he has been held up by the annual meeting of the Maritime Co-operative Services in Moncton, is the other. There are two permanent full-time members, Mr. McDonough and me, the Chairman.

We have a department of Finance; the recommendation was made to us to hire a director of finance to improve the accounting procedure and to put it on a more scientific basis. We have a director of subsidy programs which is, namely, the feed grain assistance. We have also a specialist in traffic who will report this week, and research. Our total approved establishment is 18 people and actually we have 14 of which 6 are secretaries and clerks, and so on. This is the basic organization to administer the Act.

This Act in many senses is a wide Act. If you look at the powers you will see that we have to negotiate freight rates and provide some technical assistance. There is the allocation of space. There is, of course, the administration of the feed freight assistance and there is continuous research which the Act calls for, so we feel that to deal with the Act in a broad way we would have to have key personnel, reduced personnel but very knowledgeable.

I would like to go back to the objects. I am not going to spell them out, of course, because these things are known to you—the availability at feed supplies, price stability, price equalization, and available storage space.

I will outline briefly some of the activities to meet the objectives of the Act. Of course, these are not in a compartmentalized way. These objects are intermingled in many aspects. If I may refer to the availability of supplies, there is the case of the subsidy which was extended on Ontario corn to the Maritimes at the rate of \$6 less per ton than the prevailing rates from Fort William, Port Arthur down to the Maritimes. That makes Ontario corn available to the Maritime people.

• 1415

Recently we experienced two strikes in succession but despite these strikes, which lasted a few months, feed grains were made available. I will give you more detail about what we did within our power to meet that situation.

With respect to price stability, last year we made the allocation at Quebec City and Halifax. It was made in Halifax again this year. Of course, in the case of Halifax the allocation was made by the feed administration people prior to the establishment of this Board, and the Board held numerous meetings on agreed charges with respect to the Maritimes. In the case of Quebec the four members met with the railways, and the impact of this meeting was that railway agreed charges would provide a ceiling on prices for feed grains.

Long before there was even a likelihood of a strike at the Lakehead the Board members met with the Board of Grain Commissioners at Winnipeg, as well as The Canadian Wheat Board, so that plans could be made for continuous shipment from the Prairies into eastern Canada and that rail movement would be provided in the case of a strike. It was provided during the second strike at the Lakehead and for 10 days after the termination of that strike. So, that brought price stability to the Eastern markets.

We also had some negotiations regarding space at Montreal. As far as equalization is concerned, this comes under the continuous administration of the feed freight assistance. I might mention two examples of this. By making Ontario corn available to the Maritimes, prices were equalized in the Maritimes in comparison with the Montreal region. There were some changes introduced in feed freight assistance in British Columbia on July 1. We brought in further equalization because there

were inequities in certain peripheral regions. I understand there are things that ought to be corrected there. When we met with the farm organizations and the government we mentioned that these were the plans and recommendations, and if there were some adjustments to be made after some months of implementation we would look at the situation again.

With reference to storage space, at the present time we feel there is sufficient storage space. I am speaking about terminal elevators. It is a question of better utilization. We received a few requests to build more elevators and we turned them down, of course, because the present system is more economical than the erection of any new elevators that might be contemplated would be. We had a request from Rimouski, on the lower St. Lawrence, and from Matane, which is not far away from it, and from Fredericton. At Fredericton it was physically impossible to have boats.

I would now like to refer to the duties.

• 1420

[Interpretation]

The Feeds Act states as follows:

"that the Canadian Feed Board shall carry out a study on a continuing basis of grain and feed requirements in Eastern Canada and in British Columbia and the availability of feed grains and additional storage space needs"

which means . . .

[English]

The Chairman: Excuse me for a moment. Is the English translation coming through?

An hon. Member: Mine is.

The Chairman: That is fine. Thank you.

An hon. Member: Do you have a text? It would be very helpful if you had one. I do not know whether you have one or not.

Mr. Perrault: No, I do not have one.

[Interpretation]

Here is the French text of the Act:

The Board shall carry out a study on a continuing basis of feed requirements for Eastern Canada and British Columbia, along with the availability of various feeds and additional storage space needs for these feeds in these regions.

We soon realized, right from the start of operations, that in order to meet the main requirements of the Act, we would need a considerable amount of statistical data. This is why we keep close track on a weekly basis, of stock reports in the various elevators of Eastern Canada and in British Columbia. We also keep track of weekly shipments to or from elevators in the East. Thus, we are able to determine the various shipments on the basis of grain category, such as oats, barley, wheat, maize, etc. . .

Several months ago, we feared that a shortage of facilities might develop in Eastern Canada.

We then asked grain dealers and also shippers to keep us continually informed regarding sales for future delivery. We also encouraged the various millers to place their orders as soon as possible to avoid a feed grain shortage after the close of shipping on the St. Lawrence.

We also have a weekly internal report in which we keep very close track of prices in the main trade centres of British Columbia and all Eastern provinces.

And naturally, we always keep abreast of trade developments.

We have been asked several times whether we have the price of cattle feed. We have been receiving the various prices of cattle feed for the past 4 or 5 months.

We are now sufficiently certain to be able to rely on our own data; in the initial stages, a certain amount of experimenting has to be done. As clearly as this week, the various cattle feed prices of the previous month were sent to the Treasury Board for programming in order to obtain averages, variations, etc. . .

We wish to carry out this operation by regions.

So far, there is no question at our publishing anything whatsoever in the field of prices. During the past year we have had a few complaints regarding cattle feed prices. In most cases, these complaints came from distant areas. In these cases, we noticed that volume was low. That is the reason why the prices differed from those in other areas.

[English]

As far as prices are concerned, if I could take Montreal as an example, in October last year as compared to October this year it shows on the main types of grain that there

has been a somewhat downward trend of prices. We made a survey in June and we related the wholesale prices just before the strike this year with last year, and there was a decrease of about 5 per cent. As a whole, prices behaved very well. Of course, some action was taken in this respect, but there were some factors which were responsible for this other than the action we took. Cheap U.S. corn was one factor. The introduction of agreed charges in Quebec was another factor. This was as far as the winter months were concerned because there were more than ample supplies of stocks at certain places.

• 1425

Another thing which we look at periodically is the cost breakdown of the movement of grain from Fort William to the different terminal elevators. Of course, we consider Fort William as our basic source of supply.

Finally, we have a research program which concentrates on a particular study of the requirements regarding supplies and storage space and the utilization of transportation and storage facilities. Since this Board has been in operation, and in a sense it is still a new Board because we have only been in operation for a year and a half, we have had several consultations with the trade organizations all across Canada. We have met with the trade organizations in B.C., the Grain Exchange in Winnipeg and also with people in Toronto, Montreal and the Maritimes. We have also made quite a few contacts with farm organizations and several provincial governments. As far as research is concerned, we are collaborating on some research in Newfoundland and in Quebec City.

Mr. Chairman, those are the introductory remarks I wish to make to you gentlemen, and Mr. Huffman, Mr. McDonough and I will try to answer any of your questions to the best of our ability. If some question arises which is outside the realm of our activities, and which deals with agriculture at large, I think Mr. Jarvis will be happy to give you any information you require.

Mr. Yewchuk: Mr. Chairman, are we talking about Eastern or Western agriculture today, or both?

The Chairman: At the moment we are talking about the estimates of the Canadian Live-stock Feed Board.

Mr. Yewchuk: Are we going to be talking about the Wheat Board, and so on, today?

The Chairman: No, we are not going to discuss the Wheat Board. As a matter of fact, the estimates of the Wheat Board have not been referred to the Committee as yet. We will first deal with the Feed Board today, followed by the Farm Credit Corporation and then health of animals.

I wish to thank you, Dr. Perrault, and the gentlemen with you for being present this morning. On my list of members who have indicated they wish to question the witnesses I have Mr. Danforth, Mr. Muir, Mr. Asselin, Mr. Roy, Mr. Horner, Mr. Gleave and Mr. Cobbe. I will recognize other members as I go along. I will first recognize Mr. Danforth, the member for Kent-Essex.

Mr. Danforth: Thank you, Mr. Chairman. Dr. Perrault, we certainly appreciate the detail that you have given us. I have three short questions to ask. They deal with the actual administrative duties of the Livestock Feed Board.

In your report you indicated that the freight assistance on corn was \$6 per ton—I think that was the figure—less than that which was granted to supplies out of Fort William and Port Arthur. Am I to understand that this is the estimated cost of the normal shipment of grain from Fort William to the Ontario border, and this is why it is \$6 less?

Dr. Perrault: First of all, it is a shorter haul.

Mr. Danforth: Yes.

Dr. Perrault: It is the basis of the rate, and it is a shorter haul than coming from Fort William.

Mr. Danforth: This leads me to my question, Dr. Perrault. As I understand your submission, the Livestock Feed Board administers the freight assistance policy. Is this policy as it is set out by the government or can various segments of agriculture, on application to your Livestock Feed Board, obtain a change in the rates or new subsidies, or must this be a Cabinet or a policy decision? You speak of administering and I wonder where the division in power lies?

• 1430

Dr. Perrault: Of course, if it is a question of a change in rates, this is done through the Governor in Council. As far as new areas are concerned, one thing I did not mention is the northwestern part of Ontario; Rainy River, Kenora and Thunder Bay. For many years it

was a no-man's-land, and the Board decided that they should be treated on an equal footing with the rest of Ontario. So, we made a recommendation that as far as freight rate assistance is concerned they should be included. This is the only new area that we have added to our list. Of course, as far as this territory was concerned a special clause was put into the Act. We made the recommendation and it was accepted. I do not remember what rates are paid there, but I know they are being paid. Of course, there was a little bit of trouble at the time because it was new to them, but we sent one of our men to explain the mechanics of the subsidy program to them. I do not know if that answers your question.

Mr. Danforth: Fine. Dr. Perrault, I think it is appreciated that one of the main administrative duties of the Board is, as you put it, to stabilize grain prices in an area.

The Chairman: Would you please use the microphone, Mr. Danforth?

Mr. Danforth: I am sorry.

Dr. Perrault: Yes, within Eastern Canada.

Mr. Danforth: To stabilize the price of grain.

Dr. Perrault: Yes.

Mr. Danforth: Can this Board use the power which I believe it has to direct the purchasing of grain? In other words, can this Board purchase grain outside the country for the purpose of stabilizing the price if they feel the prices are unjustified?

Dr. Perrault: As far as the imports are concerned I think the only power we have is to negotiate the conditions of import permits. We do not have the power to do as you suggest. As far as marketing is concerned, I think some regulations will be published in the *Canada Gazette*, but this is a power we want to use sparingly. This is the power we would use if there should be excessive margins in prices, and short supplies. The two can go together. If it would happen that in certain areas one or two, or let us say, a few merchants would attempt to corner the market this will be the basis of our using this power.

When you refer to price stabilization, this price stabilization has to be done within East-

ern Canada and within British Columbia, not between Eastern Canada and the Prairies, or the Prairies and British Columbia. We take all of Eastern Canada as an area.

Mr. Danforth: We are all well aware that there were bargain purchases available on American corn. It is my understanding that grains—wheat, oats, barley or other feed grains—cannot be imported into Canada without a permit issued under the jurisdiction of the Canadian Wheat Board, but corn does not fall within this jurisdiction. Does this Board have the right to license the importation?

Dr. Perrault: As long as we pay the duty, of course. You are referring to American corn?

Mr. Danforth: I am referring to American corn. In other words, American corn can at the present time come into Canada without permit?

Dr. Perrault: Yes, as long as you pay the duty.

Mr. Danforth: Yes. Was there a volume movement of American corn into the Eastern provinces this fall?

Dr. Perrault: Oh, yes. I think it was quite large. Actually we have estimated about 40 per cent, roughly, of the total requirements, compared to 20 per cent last year in the same period. There was quite a movement.

• 1435

Mr. James M. McDonough (Member, Canadian Livestock Feed Board): The usage of American corn has doubled—this year versus last year—crop year to date.

Mr. Danforth: Mr. Chairman, may I request through you that these figures be given to us in some detail at a later date, when available?

Dr. Perrault: Yes, we have those and we will provide them. They are for shipments out of the elevators on a weekly basis.

Mr. Danforth: I would appreciate that very much. Mr. Chairman, I know there are many members who wish to ask questions. I am prepared to pass at the present time.

The Chairman: Thank you, Mr. Danforth. I recognize Mr. Muir (Lisgar).

Mr. Muir (Lisgar): As I understand it, under the regulations your Board is empowered to

purchase, or licence to purchase, grain whenever it sees fit. Is that right?

Dr. Perrault: Yes, we can buy and sell.

Mr. Muir (Lisgar): You can either licence an agency or a private dealer, or purchase it yourself.

Dr. Perrault: We can go to that extent, yes. We can buy directly from the Canadian Wheat Board or through an agent of the Canadian Wheat Board.

Mr. Muir (Lisgar): Up to the present time, the Board has not purchased any grain?

Dr. Perrault: Not exactly.

Mr. Muir (Lisgar): Under what circumstances would the Board consider it necessary to licence for purchase, say, American corn in preference to Ontario corn or Western feed grains? I think perhaps you did give the answer. Unless you would care to enlarge on it, we can let it pass.

Dr. Perrault: Of course on an equal cost, if we were to market corn we would get preference for the Canadian products. There is no doubt about this. But on the other hand, like many people, we get involved in the trade and we have to face that event.

Mr. Muir (Lisgar): It must be of some use to the purchaser of these feed grains that we have a viable feed grain industry in this country. If it went to the extent where, just because American corn was cheap, we filled our elevators up to feed Eastern cattle with American corn, we would soon run our feed grain business out of Ontario. Is that correct?

Dr. Perrault: As I said, we like to give preference to Canadian products.

Mr. Muir (Lisgar): Does your Board give preference to Canadian products?

Dr. Perrault: We did not buy it yet.

Mr. Muir (Lisgar): No, you have not bought it yet. But you have been licensing other people to buy it. Is that not right?

Dr. Perrault: No.

Mr. Muir (Lisgar): Oh, you have not even issued the licences?

Dr. Perrault: No.

Mr. Muir (Lisgar): Well, I am glad I asked that question, because in purchasing Western feed grain, as I understand it, unless it is

screenings, all the purchases have to be made through the Wheat Board. You are not controlling the purchases that are now being made of Western feed grain. Is that right? Up until now you are not?

Dr. Perrault: No.

Mr. Muir (Lisgar): Do you intend to?

Dr. Perrault: Well, as I said before, depending upon the circumstances, if there are excessive price margins. Last winter the margins were not excessive. On-the-spot offerings—I feel that some companies went into losses—I am not talking about contracts and things like that, I am talking about on-the-spot offerings. One factor was American corn. As for agreed charges in Ontario, well, the crops were better than expected. But if you go back to former years, then as soon as navigation ceased—we can show you this form charts we have—there was a significant price increase during the winter months.

Mr. Muir (Lisgar): During the winter?

Dr. Perrault: Yes, definitely. This is one case of course, if there were short supplies or if somebody attempted to corner the market. You could have a situation whereby you have ample supplies as a whole, but there could be short supplies in one category of grain.

Mr. Muir (Lisgar): In other words, as long as the price is stable, you people do not intend to enter the market?

Dr. Perrault: That is right. As long as you take the price at the source of supply, let us say Fort William Port Arthur, and you add the freight cost—by water or otherwise—and a reasonable mark-up for carrying charges, for the interest and the storage, plus a normal profit, then we would not have to get into marketing.

Mr. Muir (Lisgar): Under those circumstances you would not.

• 1440

Dr. Perrault: We would not.

Mr. Muir (Lisgar): It has been estimated in the West that some 10 million bushels of grain—this is not screenings—has been transported illegally out of that area and, of course, the bulk of it, I think, is coming East.

The Wheat Board regulations, of course, do not permit the transport of such grain across provincial boundaries, so that I think it is

safe to assume that the bulk of this grain is coming through illegally as screenings. Do you have any regulations, or are there regulations under the Board of Grain Commissioners to grade the screenings?

Dr. Perrault: What we have done on this is to discuss the matter several times with the Canadian Wheat Board and the Board of Grain Commissioners. The Canadian Wheat Board have tightened their regulations—I believe this started August 1. We have changed some of our own regulations. There was a time when we required an affidavit to prove the nature of the shipment, but since a few weeks ago now we request an inspection certificate from the Board of Grain Commissioners.

We know that this situation exists. We know also that there are shipments, illegal shipments as you call them, and that the subsidy assistance is being paid on this. We are aware of this. We have a few cases in mind, and we are investigating with our legal adviser what sort of action could be taken soon. As far as we are concerned, we are trying to stop this, because this is very unethical for the trade, and as you said, it is not a normal practice.

Mr. Muir (Lisgar): In other words, you think that it could be policed.

Dr. Perrault: Whatever we can do we are going to do, provided we have the evidence. We have one case in hand at the present time, and the legal adviser is looking at it. As I said, we modified our regulations in order to try to stop it to the greatest possible extent. It is as far as we can go.

Mr. Muir (Lisgar): You said that the Board of Grain Commissioners are also looking into this. Is that right? Do they grade these screenings? Are they usually graded, so that, let us say, there is a No. 1 screening, a No. 2, and so on?

Mr. McDonough: Yes, these would normally be graded on the movement out of the elevator in Western Canada, at the original elevator in Western Canada. We have one particular case in mind right now that the Department of Justice are reviewing for us, where we feel that we may have some action on this. As Dr. Perrault mentioned, there has been, we suspect, some falsification of documents in regard to our own Act and regulations. I think that we can control the import

of this type of grain into Eastern Canada only to the extend that we stop paying subsidy on it. I think if it flowed in without our paying subsidy, we would have no control over it. Although not paying a subsidy certainly should be a deterrent.

Mr. Muir (Lisgar): I would think so, yes. The last question then is: Are you also empowered to divert grain or designate where grain should go or what elevator it should be placed in?

Dr. Perrault: The movement itself?

Mr. Muir (Lisgar): The movement of the grain?

Dr. Perrault: No.

Mr. Muir (Lisgar): Are you not really set up to make sure that there are supplies at strategic points?

Dr. Perrault: Of course if we were in marketing then we could market for a certain area and go to specific elevators.

Mr. Muir (Lisgar): As long as the grain moves into these strategic points that we are talking about for the feeders, then you would not enter the picture?

● 1445

Dr. Perrault: No.

Mr. Muir (Lisgar): But suppose for some reason or other, probably resistance to the price that was being paid, the private dealers did not fill a certain elevator, what would you do in a case of that kind?

Dr. Perrault: Get into marketing.

Mr. Muir (Lisgar): I beg your pardon?

Dr. Perrault: Get into marketing.

Mr. Muir (Lisgar): You would get into marketing? I will pass, and thank you very much.

Mr. Huffman: We would have to get into marketing, but not divert somebody else's grain. This was your question. We have no authority to divert; we would have to get into the market.

Dr. Perrault: This is not a power we want to use for the sake of the power. We want to use the power if there are strong reasons for using it.

Mr. Muir (Lisgar): I see; thank you, very much.

The Chairman: Thank you, Mr. Muir. I recognize Mr. Asselin, Charlevoix.

[Interpretation]

Mr. Asselin: Thank you, Mr. Chairman. I would like to put a question to Dr. Perrault. Transportation companies are carrying grain in the East, are they accredited by other organizations on your Board.

Mr. Perrault: You mean truckers.

Mr. Asselin: Yes.

Dr. Perrault: Yes.

Mr. Asselin: By your Board.

Dr. Perrault: Yes, truckers must be cleared. They must be registered with the Canadian Feed Board.

Mr. Asselin: How many firms are accredited at the present moment.

Dr. Perrault: With regard to the East, I cannot say.

[English]

How many truckers' associations do we have in Eastern Canada, Mr. McDonough?

Mr. McDonough: I am only guessing, mind you, but I estimate somewhere in the neighbourhood of one hundred.

The Chairman: Thank you, Mr. McDonough. Mr. Asselin?

[Interpretation]

Mr. Asselin: Could we have the list of accredited companies? Could the Board send us the list of these firms which are registered with the Board?

Dr. Perrault: Yes, we are going to.

Mr. Asselin: In your presentation you said that your Board has plans for grain transportation in strike time. Or have I understood you rightly?

Dr. Perrault: Yes, I mean...

Mr. Asselin: Could you be more specific.

Dr. Perrault: We always thought there could be a strike at the Lakehead and if my memory serves me right, about a year ago, we met with the grain shippers of Canada, the Canadian Wheat Board and our Board to discuss the possibility of having the "C Plan". This plan was used in the war years to transfer grain from the Prairies to eastern ports.

During the second strike, because we had two strikes in a row—first of all there was a strike on the St. Lawrence, then at the Lakehead, the “C Plan” was put into operation during the second strike and it was thus possible to ship grain from the Prairies to eastern Canada.

Now, we were in a fairly favourable situation in Quebec and the Maritimes because we had agreed charges with which grain could be transferred from the Lakehead to various destinations in the East, in Quebec particularly, and in the Maritimes. During the strike, producers did not lack grain.

We also recommended to the Wheat Board that use of certain grains be allowed in Nova Scotia and in Ontario and that some wheat be made available for human use. That grain is now being used as animal feed. All these steps have enabled us to weather two strikes with no feed shortage to the stock-raisers. The situation in Ontario was different. Here there was no agreed rate. Normal rail freight charges prevailed—“open rate”.

Ontario then used local feed grain to face the shortage.

Mr. Asselin: So far as price stability is concerned, will you have more warehouse facilities, in eastern Quebec, for example? Farm associations in the East have repeatedly asked the Federal government to build grain elevators in the East to allow them to get better supplies, and more easily, and also to get better prices. Did you inquire lately to know whether this storage space is sufficient for farmers' needs?

Dr. Perrault: So far as we are concerned, there is enough space in Eastern Canada but as I stated, it is a question of good use so that we supply eastern farmers.

In eastern Canada storage space is adequate. But as I said a while ago, it is largely a matter of making better use of existing facilities so as to give eastern elevators a better supply service.

• 1450

In winter, we could also store on ships. This would mean slightly higher rates of course. But there is no overall storage problem, as far as available space is concerned. We had some requests earlier, from Rimouski and Matane. We met the Rimouski UCC directors with figures in hand to show that it would be much more expensive to build—that the present programme was cheaper. It would always be possible for them to get supplies

from Quebec city or have them shipped by rail.

We feel there is no problem of space shortage in Eastern Canada.

Mr. Asselin: Transportation by water and by rail do not cost the same.

Dr. Perrault: No, they do not.

Mr. Asselin: But in the lower reaches of the river in Rimouski, Matane and Charlevoix areas, where there are no winter shipping problems, could you not build elevators for these people to receive feed grain all year round and stock them in these elevators instead of using railways in times of shortage?

Dr. Perrault: The needs are limited because there are not as many animals as in the other counties in Quebec, particularly east of Rimouski. Now, in the case of grain elevators, for an elevator to be profitable, it should handle exports.

There is sufficient storage space to export from Quebec city to the east; to Baie Comeau, Cartier and so on. We have figures—I can show them to you afterwards—to prove that it would not pay to build another elevator. It is more profitable to use the services of the Quebec elevators or ship by rail at the agreed rates.

Mr. Asselin: Mr. Chairman, could Dr. Perrault send us, through you, the results of his study of the storing space question.

Dr. Perrault: I can let you have the data on Rimouski. In Matane the problem is the same.

Mr. Asselin: Does the same apply to Charlevoix area and the North Shore?

Dr. Perrault: We received no representations from those areas. That is something else again.

Mr. Asselin: I made several representations since I have been in the House.

Dr. Perrault: I must emphasize that it is the same problem. It would not be profitable.

Mr. Asselin: Maybe it would not be profitable for the Board or for other organizations but the farmers living in remote areas still have needs to be met, regardless of ultimate profit. Could the Board not consider that there are exceptional cases and could you not in a given area build some grain elevators to help farmers who have problems at some periods of the year. They are away from

larger centres and that is no reason to penalize them.

Dr. Perrault: In the case of mills you mentioned there is usually enough storage space. Even though this is limited it will always be possible to supply them by rail or truck unless there are unforeseen events.

Mr. Asselin: Mr. Perrault, you talked about the imports of American corn into Eastern Canada. I wonder whether these imports have been on the increase in the last five years?

Dr. Perrault: Yes, they have. We could give you figures on this. A member asked for specific data on this. We can give you data on the last five years. I will take note of this request. You will receive your information shortly.

Mr. Asselin: When these importation licenses are granted, are they granted to meet an immediate need or scarcity of the Prairie supply?

Dr. Perrault: Do you mean maize?

Mr. Asselin: Yes.

Dr. Perrault: There is no import permit or license in those cases. It is just a question of paying customs duties and various charges. Unless the Department wishes to add something.

Mr. Asselin: Am I to understand then that we are now in the following situation: U.S. feed grain or corn are competing with products which could come from the West?

Dr. Perrault: Their prices were more competitive in recent months so far as oats are concerned. In the case of corn and barley more so. Barley is now the tougher competitor. The low American prices for Indian corn certainly gave our Canadian products some tough competition. This is the reason why during the winter months some farmers bought heavy supplies of U.S. corn.

Mr. Asselin: Thank you very much.

The Chairman: Mr. Roy of Laval.

Mr. Roy (Laval): Thank you, Mr. Chairman. Dr. Perrault, first of all I would like to congratulate you and your staff for the remarkable job you are performing at the Canadian Feed Board. I notice that when you made your presentation, in addition to your efforts to stabilize grain prices you recently conducted an inquiry concerning feed prices. What is

the point of such an inquiry in view of the many factors influencing the price of feed. There is for example very strong competition which could play the role you play in this specific field.

Dr. Perrault: There certainly is very strong competition. Besides, the Act mentions feed grain and not processed feed. But these prices are asked for every month. We also see from the report of the feed enquiry committee which investigated the matter in 1964-65, that the proposed agency compile feed prices. We had many queries on this and we want to be accurate in our answers about price trends. If you want to know the price trends so far as concerns feeds, there are many things outside our control. There is no control for soya beans or vitamins, nor do we really control anything except grain. But it does give a better idea of the trade, of actual prices. People often tell us prices are on the increase. We can prove to them, at least since last year that there has been nothing like the increases they claim.

• 1455

Actually, in Eastern Canada, in 1968, feeds went down by about 5% from the previous year. The Act states that we should keep a close eye on market trends. This is why we decided to list the feed prices. We are asked for them every month.

Mr. Roy (Laval): I was in this business and I wondered what was the point of all this in view of the factors that can influence prices: shipment in bulk or bag sales; quality of the jute bags used—the latter case: terms of payment. There are many factors which can influence this trade. I wondered how important or how useful was this work of your Department. My second question is this. You also stated that you are doing research. We had the Canadian Grain Board. They are doing research, you are doing research. I wonder in what fields you are doing research?

Dr. Perrault: We are trying at all costs to avoid duplication. We do not want to duplicate the same work. Dr. Walker who is in charge of the economic research met with university people, government officials and so on to know what research was being done. We worked mainly on method of paying subsidies. As I stated earlier, we are working in close co-operation with the representatives of the Quebec Department of Agriculture to see what are the possible developments of local crop resources.

Then we are starting the work on the efficient use of storage space. The Act incidentally requires us to carry on continuing study of all aspects of the grain trade.

Mr. Roy (Laval): Now, one last question if you will allow me, concerning corn on the cob. I wondered whether it wouldn't be possible, whether we couldn't set up a system of prices as we have on other products, according to the use of the finished product, just like for milk, for example. Corn if used as corn flakes is worth \$23.00 a bushel if it is used as popcorn, it is \$44.00 while, sold as crushed corn retail market, it sells for \$9.30. Couldn't a price system related to the use of the product, farm prices are so competitive that if corn were not used—it could be replaced by something else—wheat for example. So the price is the deciding factor. Isn't my suggestion one practical?

Dr. Perrault: I wonder whether we wouldn't really be going beyond the scope of the Act? The Act says that we should have the greatest possible price stability. So, we want the research to be done within the framework of the Act. What you suggest really would go beyond the scope of the Act.

Mr. Roy (Laval): Couldn't we extend the Act? I believe our corn producers would be very happy if we could set up a price structure. This would certainly help producers to obtain the best prices and I think this would be a very useful job for the producers.

• 1500

Dr. Perrault: Some provincial governments have made studies in the field. I have seen the one for Quebec.

Mr. Roy (Laval): Thank you very much.

[English]

The Chairman: Mr. Horner?

Mr. Horner: Dr. Perrault, you suggested that you made no purchases and in order to direct or allocate shipments of feed grain you would nearly have to make purchases. I think I am right in assuming this?

Dr. Perrault: Allocate the space, yes.

Mr. Horner: You suggested earlier that your main function was in stabilizing prices and supplies to Eastern farmers. How do you suggest in your own way that you have stabilized the prices?

Dr. Perrault: Well, an area of price stabilization is, of course, marketing. There is no doubt about this, but in the absence of marketing we use whatever tools are left to us to deal with the stability.

Of course, at times for equalization you bring more stability, but the real tool is really marketing in order to achieve permanent stability of prices whenever needed.

Mr. Horner: You have attempted through the operation of your Board to re-divide or re-allocate the subsidy program. Am I right in saying that, in a sense? Now, you took in the Northern Ontario area?

Dr. Perrault: Yes, we added that.

Mr. Horner: You re-appraised the subsidies in the Maritimes as to how much they should receive on various shipments of grain. Has there been any change in the operation?

Dr. Perrault: Well, this is one thing that we want to look at. Of course, we will have to make a basic study of where the grain is going. The last one on record goes back to 1960-61, and this was a long study; I think it took six months for a few people to do it. What we intend to do in the future is to mechanize the operations of the subsidy in order that we know where the grain is going.

We have some idea at this, but we do not have any definite idea, and of course, we are paying the major part of the freight costs and once we have all this data there could be a re-appraisal. In B.C. there is going to be a re-appraisal in a matter of a few months. We are waiting for a settlement of the rate reductions before we make any recommendations.

Mr. Horner: I have been just trying to ascertain in my own mind what useful purpose you have been serving to the feed grain industry. Can you give the Committee some idea of how many individual farmers or feeders receive Western grain? I just want an approximate number—would it be 1,000?

• 1505

Dr. Perrault: In B.C.?

Mr. Horner: No, in Eastern Canada. I am not concerned particularly with B.C.

Dr. Perrault: At least 120,000.

Mr. Horner: At least 120,000?

Dr. Perrault: In B.C. there would be between 10,000 and 20,000.

Mr. Horner: Could you give the Committee some idea? I have always had it in my own mind that the large feeder was the one best suited to take advantage of the subsidy. Would this be a correct assumption?

Dr. Perrault: Well, there are large accounts, yes.

Mr. Horner: Could you give the Committee some idea at what the approximate average subsidy a feeder or farmer would receive under the feed freight assistance?

Dr. Perrault: Well, that could be done through some computations. I would have to take the total shipments.

Mr. Horner: Yes.

Dr. Perrault: Let us take the case of Quebec. We pay about \$70 or \$80 per ton. Yes, with a little bit of time we could do that.

Mr. Horner: You could leave it with the Committee.

Dr. Perrault: Yes, we could do that.

Mr. Horner: While you are doing that would you take a look at the feasibility of breaking it down? I am just going to throw out a few figures and you can say I am wrong or way out if you like, but in my appraisal of the whole program I would like to know, for example, how many farmers or feeders receive a subsidy of over \$1,000 on the feed grain they feed in a year?

Dr. Perrault: There is no way to know this.

Mr. Horner: There would be no way to know it?

Dr. Perrault: No, no. You are referring to quotas or things like that.

Mr. Horner: No, I am referring to the feed freight assistance. Supposing, for example, I am running a big feed lot in Eastern Canada and I am feeding mainly Western grain. I would stand to gain a huge amount; there is no limit per person to the amount of subsidy he can claim under feed freight assistance. As long as he uses the feed he is entitled to get a huge amount of assistance. Am I right in that assumption?

Mr. McDonough: That is right.

Mr. Horner: I would like to know how many huge feeders are making full use of and getting huge subsidies. In other words, sup-

posing we are paying out \$20 million or \$27 million, whatever the figure is now.

Mr. Huffman: It is about \$20 million.

Mr. Horner: About \$20 million—this is what it is now. In other words, if we are paying this out—you said to 125,000 people?

Dr. Perrault: Maybe, yes.

Mr. Horner: But supposing 50 per cent or...

The Chairman: Ten per cent.

Mr. Horner: ... say 10 per cent of that amount... Supposing 50 per cent of the \$20 million goes to 10 per cent of the farmers.

This is what I would like to know. I think it would be very useful in appraising whether or not the \$20 million is actually diversifying the feeding industry in Eastern Canada or whether it is...

Dr. Perrault: Well, if you look at the state averages, of course the average would be low on account of the high number, that is for sure. Surely we do not have any way of knowing it unless we go back to the census data and see what the cattle numbers are, for instance, and...

Mr. Horner: But there is no way your research staff has looked at this problem, as I have suggested?

Dr. Perrault: As I have said, we look at ways of modifying the method of the payment, and we look at the impact, too, of changes; but with the present system, no.

Mr. Horner: You cannot ascertain where the money is put?

Dr. Perrault: Well, we would have to come out with generalities about the breakdown of the herds for operators, and so on, which is given by the...

Mr. Horner: Supposing I order and buy a carload of feed barley from Western Canada; I buy it through a broker, it is shipped to me. How do I get the subsidy? It is not paid to the farmer, it is paid to the broker.

Dr. Perrault: Yes, competition.

Mr. Horner: Competition, but there is no way of knowing how many individual farmers purchase grain from a given broker?

Dr. Perrault: Well, we want to bring the subsidy closer to the farmers; this is our plan.

Mr. Horner: Well, tell me, how many different brokers are receiving payments under the feed grain assistance? Could you give us an idea?

• 1510

Mr. McDonough: We pay brokers, merchants and feed mills doing business over a large area, and in total these would run somewhere in the neighbourhood of 100 claimants.

Mr. Horner: One hundred claims?

Mr. McDonough: One hundred claimants.

Mr. Horner: And they would vary in size, some big and some small?

Mr. McDonough: Yes.

Mr. Horner: The Canadian Livestock Feed Board itself does not act as an agency?

Mr. McDonough: No.

Mr. Horner: The subsidy is paid out in a competitive relationship. In other words, a farmer in northern New Brunswick, for example, would receive a greater subsidy than one in Northern Ontario. Is that correct?

Dr. Perrault: Yes.

Mr. Horner: How does the relationship vary, from the nearness of the market or from the nearness of shipping facilities?

Dr. Perrault: Well we try to equalize freight costs within this area.

Mr. Horner: The freight costs?

Dr. Perrault: Yes. Of course we will have to reassess again when we have more data.

Mr. Horner: How do you feel, Dr. Perrault, that the National Grains Council will facilitate the management and working of your board once it becomes operational?

Dr. Perrault: Well, I do not know. There was a conference on this, they gave the terms of reference and so on but I do not think it has been finalized yet. We said in Winnipeg at the time that we were ready to collaborate.

Mr. Horner: Could you give the Committee some idea how you felt at Winnipeg that the National Grains Council would assist your people?

Dr. Perrault: Well we said that the Council, to be effective, should take into account all regions of Canada and all grains, that there

was a probable need to look into research and market potential for domestic and exportable grains, and that more effort should be directed towards plant research. These are some of the things that we mentioned at the time.

Mr. McDonough: I do not think that we looked at the National Grains Council in the light of how it would assist this Board, we gave our views as to how it would best serve Canada in total.

Mr. Horner: Looking at it with regard to plant research and feed grain—and I want to know whether the same thought is true of eastern Canada—there has been quite a bit of thought in western Canada that as the condition now stands it is nearly prohibitive for private enterprise to do any research in the development of better feed grains. There is much thought in western Canada that this restriction should be removed, that feed grain companies and anyone else interested should be allowed to do research to develop better feed grain varieties. Is there any thought in eastern Canada that perhaps we have lagged behind because we have, in a sense, left it to the state—I am using that word loosely—to develop feed grains?

Mr. Jarvis: This is an interesting question. I think it relates to the suggestion that there is no place for the private plant researcher or that no one in the private area has found reason to be interested in plant breeding and the several elements attached to it. The reason of course that he is not in it is that there has been nothing there to attract him, I presume, and he has preferred to depend on the government and universities to carry out this work.

In cereals, very much in contrast to corn, for example, the private industry has made a great contribution to the breeding. In the case of corn we are dealing in hybrids and the seed has to be reproduced every year. The farmer has to start with new seed every year. So that there is a very significant role here for a multiplier and breeder of seed from year to year. In the case of the cereal grains of course, where we were dealing with specific varieties, once the variety is established then as long as the original quality of the seed is maintained through registered seed growers the seed is in the farmers' hands and the seed trade's hands and there is not this fundamental work to be done year after year in the maintenance of the hybrids. There is a great difference here and I think it

is necessary to recognize this. On the other hand, certainly in the terms of the attitude of the Department of Agriculture and the government, I am sure, we would like to encourage the people who can make a contribution here—an important contribution in the advancing the quality and calibre of our grains from whence they may come. We will certainly hope they can make the contribution. But there are some differences here which I think are quite distinct.

• 1515

Mr. Horner: Thank you, Mr. Jarvis. I have no further questions, Mr. Chairman.

I would just like to say to Dr. Perrault that I hope they do make a study on where the feed grain subsidy is really going and give the Committee some figures at a later date.

Mr. Pringle: Mr. Chairman, might I ask a supplementary question? During the discussion Dr. Perrault mentioned that he felt that improved marketing procedures was a step that could be taken to stabilize prices. Is this stabilizing the price for the consumer or the feeder, or stabilizing it for the grower and the feeder?

Dr. Perrault: For the feeders, by taking the sources of supply.

Mr. Thomson (Battleford-Kindersley): I take it the purpose of your Board is to look after the feeder of livestock, not the grower of feed grains?

Dr. Perrault: Of course if we have a policy change, it would affect the growers. Like, in the case of B.C., we know of certain instances and in the coming months, as soon as the situation is settled, we are going to attempt to correct the situation.

The Chairman: I will now recognize Mr. Gleave from Saskatoon-Biggar.

Mr. Gleave: I would like to ask a question or two on American corn. The Board has not the power to control the importation?

Dr. Perrault: No.

Mr. Gleave: Once American corn is imported and in position does it qualify for freight assistance?

Dr. Perrault: No, it does not.

Mr. Gleave: We do not control the importation of American corn. I know at one time there were quotas on our sales of feed grain

into the United States; is it still so—that Canadian feed grain—that is oats, barley and feed wheat, cannot move freely into United States markets?

Mr. McDonough: I believe it is restricted on a quota basis. I am not positive of this. This is a question that only the Canadian Wheat Board could answer.

Mr. Gleave: Do you know the size of quotas that are imposed?

Mr. McDonough: No, I do not, but this information could be obtained.

Mr. Gleave: But there is no quota on the amount of American corn that can come in?

Mr. McDonough: No, none whatsoever.

Mr. Gleave: And neither is there licence on the imports?

Mr. McDonough: No.

Mr. Gleave: But if the Board does not choose to use its marketing power then we are in the position where we can freely import American feeds but Canadian feed grains cannot move freely into the United States market?

Dr. Perrault: In the case of corn it moves freely into Canada, provided the duty is paid, yes.

Mr. McDonough: Regardless whether or not Canadian Livestock people were importing or marketing corn could still freely move into Canada. This would not restrict it in any way.

Mr. Gleave: So that we have one-way free trade, so to speak. There is a certain duty on American corn coming in?

Mr. McDonough: Yes.

Mr. Gleave: And if American corn comes in then it will serve our markets from roughly central Canada to the Atlantic seaboard—the Maritime markets, Quebec and so forth?

Dr. Perrault: Well very little of it goes into the market. Are you talking about American corn?

Mr. Gleave: Yes.

Dr. Perrault: I recall that last month there was only one small shipment of American corn made into the Maritimes.

Mr. Gleave: Then it is mostly to Ontario and Quebec?

Dr. Perrault: Ontario, Quebec, yes but I would say mostly into Quebec.

• 1520

Mr. Huffman: Mr. Chairman, quite a lot of corn goes into B.C., and some goes into the Prairie provinces. When it was at a cheaper rate last fall it flowed into the Prairie provinces.

Mr. Gleave: Also, substantial amounts of American corn come into the Prairie provinces and British Columbia and as it comes into these markets it of course displaces American feed. Does it also have the effect of lowering the general price level of feed grains in the area?

Dr. Perrault: Do you mean with respect to source of supplies from Fort William?

Mr. Gleave: Yes.

Dr. Perrault: It has an effect, yes.

Mr. Gleave: It has that effect?

Dr. Perrault: Oh yes. Actually American corn is not as competitive as barley. It went up recently to \$1.16 or \$1.17 at Chicago.

Mr. Gleave: Then the Wheat Board is in a real sense the price setter for Canadian barley moving into the eastern market?

Mr. Huffman: Right.

Mr. Gleave: Are the Wheat Board prices usually competitive with the American corn coming in?

Dr. Perrault: Oats was not competitive in the past few months for sure.

Mr. Gleave: Oats was not competitive?

Dr. Perrault: No.

Mr. Gleave: Do they usually keep barley competitive?

Dr. Perrault: Barley is getting closer. I think there is a good competing basis actually, but barley was more competitive in relation to American oats than Canadian oats were.

Mr. Huffman: It was not a year ago.

Mr. Gleave: I would assume since the amounts of American corn coming in have doubled that Western feed grain was losing its competitive position?

Dr. Perrault: They were losing a share of the eastern market, yes.

Mr. Gleave: Well, that means that we are losing our competitive position *vis-à-vis* American corn in our central Canadian market?

Dr. Perrault: This is correct.

Mr. Gleave: So that we work very hard to get export markets while the ones at home go south of the line.

Mr. McDonough: We must take one thing into account here. We were mentioning barley. Although American corn will first replace that wheat which is used in feeding rations in the United States and Canada, wheat has not for some time been competitive with corn. Barley at the present time is quite competitive with corn. In fact, on a Montreal basis at the present time there is about a \$6 per ton advantage using barley versus corn. However, when it is compared with wheat, there is about an \$8 disadvantage for wheat.

Mr. Gleave: What grades of wheat would that be?

Mr. McDonough: This would be a five wheat or an equivalent grade.

Mr. Gleave: Five or an equivalent grade.

Mr. McDonough: A mixture which is equivalent in feeding value and price to a five.

Mr. Gleave: And you said it was \$8 a ton disadvantage.

Mr. McDonough: Yes, to corn at the present time at Montreal.

Mr. Gleave: Then on screening, the Board of Grain Commissioners told us when they were here that they would inspect, on request, car lots or larger amounts of grain shipments. Do you frequently request such inspections?

Mr. McDonough: We ask for inspection on all our cars of bulk grain moving in from the West.

Mr. Gleave: Does this identity as to inspection follow through to the user?

Mr. McDonough: Well, it follows through to the claimant; he waits until the documents or the inspection certificates which do identify it get over to us to substantiate his claim.

Mr. Gleave: This would probably be what you might loosely call an importer. He might be bringing it in from Western Canada.

Mr. McDonough: Right.

Mr. Gleave: And from him on the deal is between him and the farmer.

Mr. McDonough: Or the feed mill.

Mr. Gleave: Yes. And at this point of course there would not be inspection unless that individual called for it?

Mr. McDonough: No.

Mr. Gleave: Could he call for it again if he wanted to?

Mr. McDonough: I would suspect that he would be able to get an inspection on a sample, yes. We do though in our procedure of making claims ensure that that which is invoiced is the same grade as that shown on the grade certificate. So, as far as it getting to the mill or to the feeder is concerned, that same grain would move to him.

Mr. Gleave: Thank you very much.

The Chairman: Mr. Thomson?

• 1525

Mr. Thomson (Battleford-Kindersley): Are you aware of what subsidy the American Government pay to their farmers that grow corn? I wonder how we might relate this to the matter of tariffs, and so forth.

Dr. Perrault: The price support loan as an average is \$1.05. It varies according to location. I think Illinois has an average of \$1.08 and people who comply with the system get 30 cents per bushel. They also have a payment which I was told at one time could amount to \$60 per acre—I am not sure about that—for diverting acres to conservation practices. This is the kind of deal that the compliers get from the U.S. Treasury.

Mr. Thomson (Battleford-Kindersley): It would really be pretty hard to determine what it was per bushel of corn. This is the point I am getting at; how much subsidy, in effect, was given per bushel?

Dr. Perrault: I do not have that information.

Mr. Huffman: Mr. Chairman, perhaps I can answer it a little bit more specifically.

The Chairman: Mr. Huffman?

Mr. Huffman: Under this program, as Dr. Perrault said, it starts out between \$1.05 and \$1.08. That is basic. In order to do this you must reduce your allotment 20 per cent and if you reduce it 20 per cent you automatically will get another 30 cents which is \$1.35. If you reduce it to 50 per cent which is the minimum then you could go up to \$1.60, something. It varies from 80 per cent reduction to 50 per cent and in turn that goes from \$1.35 on up.

That is that one program, so if you did reduce your quota allotment to 50 per cent you may get \$1.60 and you may get anything between these two, but basically you have to go to \$1.35 because you must go to the 80 per cent in order to join the program.

Mr. Thomson (Battleford-Kindersley): In effect, you could afford to put fertilizer on the rest, then.

Mr. Huffman: There are other programs, such as the land bank, and so on, and then there is what we call the free corn, which has no subsidies or anything. It is grown free; you can grow all you want and put it on the market.

Mr. Thomson (Battleford-Kindersley): I am thinking here of the competition . . .

The Chairman: I think we cannot permit unlimited supplementaries or else we are offending those who have their names on the list. I recognize Mr. Cobbe (Portage).

Mr. Cobbe: Thank you, Mr. Chairman. Dr. Perrault, in your opening remarks you did refer to corn quite frequently. What part does your committee play in the handling of corn and looking after the demand, and so forth? Why do you continually refer to corn in your statements?

Dr. Perrault: Because it has had quite an impact on the needs of the livestock feeders of the East this year and it had some last year over the total requirements before the close of navigation. Gradually it has been replacing Western grains so far as the usage is concerned.

Mr. Cobbe: Then in Vote 65 where the Western Feed Grains is mentioned this, then, does include your handling of the corn.

Dr. Perrault: Yes; Ontario corn to the Maritimes.

Mr. Cobbe: I would say that this is a very misleading title because this would indicate in

the vote that there were some \$21.6 million spent on Western Feed Grains.

Dr. Perrault: That is right.

Mr. Cobbe: Really it is not all that, is it?

Dr. Perrault: Well, no; the Ontario corn is a small part of the total amount.

Mr. Cobbe: Right.

Mr. Horner: How small?

Dr. Perrault: Oh, it is a matter of what; about a few million?

Mr. Horner: About 1.5 million bushels.

Dr. Perrault: Yes, 1.5 million bushels last year.

Mr. Pringle: Mr. Chairman, was any consideration given to paying a subsidy on Ontario corn going West?

Dr. Perrault: There is a subsidy already on Manitoba corn going to British Columbia. That has been there for many, many years, but from Ontario down to the West no consideration was given to this.

Mr. Pringle: Only from Ontario.

The Chairman: We will return to Mr. Cobbe.

• 1530

Mr. Cobbe: I assume the Western farmer is paying the greatest percentage of this, so this is why I asked that question. The other point is, does your committee make any recommendation to the Canadian Wheat Board or give them reports on the amount and type of feed that is being handled?

Dr. Perrault: Yes, what happens is that in the East we have a monthly periodical on the grain facts and this information is sent to them, and occasionally we meet with them and bring to their attention the development in Eastern Canada.

Mr. Cobbe: I realize that the Canadian Wheat Board is controlling the price of the feed coming from Western Canada, but I think in what we know about the so-called screenings entering Eastern Canada that it would indicate possibly some of the farming industry in the West is interested in getting the feed into Eastern Canada and perhaps not always at the price the Canadian Wheat Board indicates. I think your discussions with

these people should include some discussion at the price of the feed grain to the Eastern market so that it can be kept competitive, so that we can get more feed into it.

The Chairman: Mr. Huffman?

Mr. Huffman: Mr. Chairman, we have met with them and we have discussed it. We discussed it fully when we met with them. I think we have made them very well aware of the situation concerning corn and where it is going and the competitive other products. I think we met very amicably and laid all our cards on the table so that we worked closely together, and we try to help out the situation for them as well as for the feeder in the East. They know the facts. We did this several times.

Mr. Cobbe: All right. Then it would be up to the Canadian Wheat Board to make a decision.

Mr. Huffman: That is right.

Mr. Cobbe: To follow up what Mr. Horner said regarding the number of feeders in eastern Canada, I refer to the time the corn growers paid a visit to the Hill. When I was speaking to them quite a few of the smaller feeders indicated they were not obtaining any advantage from the subsidy of freight on Western grain and I think perhaps this review you will come up with might show us that everybody is not getting the advantage or, in fact, perhaps the large feeders are getting all the advantage and a lot of the smaller feeders are not getting it. I shall be very interested in seeing this report. Thank you, Mr. Chairman.

The Chairman: Thank you, Mr. Cobbe. I recognize Mr. Southam (Qu'Appelle-Moose Mountain).

Mr. Southam: Thank you, Mr. Chairman. My questioning will be brief because a number of the questions that I had in mind have now been covered, specifically this matter of feed corn and the series of questions that Mr. Horner started concerning where the subsidies are going.

Dr. Perrault, the tenure of office of you and the members of your Board has been relatively short. As a matter of general information for this Committee, are you satisfied in your own mind that you are accomplishing the role you were set up to do, or could you recommend any amendments to the Act that would make your work more effective in this whole field?

Dr. Perrault: No, I think that is all. The Act is very broad. I do not think we would have any definite suggestions to make about amendments for the time being.

Mr. Southam: In other words, you think your role is being quite effective?

Dr. Perrault: Except at times as I mentioned, when you talk about allocation of space. To do a genuine job, a real job, it is pretty hard to do anything without the exercise of marketing powers. This is the real authority.

Mr. Southam: So far, according to your testimony, you have not been exercising in this field too much, have you?

Dr. Perrault: Nothing whatsoever so far.

Mr. Southam: Have you been approached by, or have you made a brief to or been involved with the Federal Task Force on Agriculture?

Dr. Perrault: Yes; this very week an economist of the Task Force was going to visit us and discuss the feed grain question with us.

Mr. Southam: You see, I am interested in...

Dr. Perrault: It is not complete, but we will get a contact somewhere, you know.

Mr. Southam: Some of my questions are prompted by what went on at the Kennedy Round at Geneva a year and a half ago. It has become apparent to me that our great friends to the south, the Americans, were interested in promoting the sale of feed grains as much as wheat, for instance, or perhaps more so under this International Grains Arrangement. I think we are just now feeling some of the repercussions of this forward push on their part by the import of this corn, and these are things that could be discussed at great length by our Task Force and by our National Grains Council. Will your Board be represented on the National Grains Council?

Dr. Perrault: Who will be represented is not set yet, Mr. Southam.

• 1535

Mr. Southam: Are you making representations to be represented on it, or do you think you could serve a useful role there?

Dr. Perrault: So far as we are concerned we have suggested that we be there in some advisory capacity.

Mr. Southam: How about this agricultural congress that is to be held here in Ottawa early in March? Are you people going to be represented on that, or will you be involved in it? Are you involved in the steering committee now?

Dr. Perrault: I expect so.

Mr. Southam: Are you involved in the steering committee?

Dr. Perrault: No, no; not on the steering committee, no.

Mr. Southam: I will leave it at that for the moment, Mr. Chairman.

The Chairman: Thank you, Mr. Southam. I recognize Mr. Lambert (Bellechasse).

[Interpretation]

Mr. Lambert (Bellechasse): Mr. Perrault, at a previous meeting, in the presence, I believe, of a representative of the Wheat Board the elevators in Quebec was raised. Does the Canadian Feed Board have jurisdiction over elevators in Quebec City?

Dr. Perrault: Does your question refer to allocation of storage space?

Mr. Lambert (Bellechasse): Yes.

Dr. Perrault: No, not this year. Last year, we recommended that storage space should be allocated between ten users, although this should not amount to the total space, but to a storage space with a capacity for 5 million bushels. We based ourselves on the use made the three previous years. We then made recommendations with respect to the allocation of space.

In so far as Quebec harbour is concerned, every year, we shall recommend to the National Harbours Board to assign storage space to handle 6 million bushels for the domestic market.

This is what we have recommended this year, whereupon the National Harbours Board transmits our recommendation to the elevator operators in Quebec City.

Mr. Lambert (Bellechasse): Was the Board consulted when the Harbour Commission rented elevators to an American company?

Dr. Perrault: Yes, we were consulted, and we were very reluctant to approve this. I think it took one year before the contract was signed but we made two recommendations opposed to this. We saw in this letting of the

elevators in Quebec City a situation which might entail some difficulty in the future. a fait accompli.

Mr. Lambert (Bellechasse): In the interest of farmers of Eastern Canada, has the Board considered that this renting could be more advantageous, more economical? Can the price be reduced?

Dr. Perrault: We were told that because of the efficiency of the company because it was able to move grain in great quantities, there would be some price reductions. Over the past few months through, we have noted exactly the contrary. For instance this week, according to figures we received, American corn is sold in Quebec City at a price which is 5 cents over that at which it is sold in Montreal.

• 1540

Mr. Lambert (Bellechasse): Now with reference to Rimouski and the surrounding area, for instance. Suppose that during the winter supplies are not sufficient and the farmers of the area have to get their supplies by railways, or by trucks: do these particular means of transport affect the prices they have to pay there?

Dr. Perrault: What product are you talking about?

Mr. Lambert (Bellechasse): I am talking about cereals.

Dr. Perrault: I am sorry, I did not fully understand your question.

Mr. Lambert (Bellechasse): The member for Charlevoix was asking if an inquiry had been made to build elevators in the area of Rimouski. You yourself had explained why it had not been done.

Supposing that at a given time you have a shortage which was not foreseen by the mills in the area. Cereals most then be transported from Quebec City by truck...

Dr. Perrault: We consider the stock stored in Quebec City and that which is going to be stored for the winter, we should have enough stock in Quebec, to serve the needs of the area. And also you note that the area of Quebec is no longer quite so extensive because of the opening of the Three Rivers bridge. There is a part of Quebec area which is served by Three Rivers, there should be enough stock at Quebec City to meet the needs of the producers.

Now, prices. As far as we are concerned, as far as the Board is concerned, we hope the prices will be as competitive as in the Montreal area.

Mr. Lambert (Bellechasse): Just one question, one last question. A little while ago, you told the member for Charlevoix that you are going to send him the results of the study that was made.

Dr. Perrault: Yes.

Mr. Lambert (Bellechasse): Are we given to understand that all the members of Committee can get these copies?

Dr. Perrault: Yes, you will get all these figures; we have no objection.

Mr. Lambert (Bellechasse): Thank you very much, Mr. Chairman.

The Chairman: A supplementary question, Mr. Roy?

Mr. Roy (Laval): Thank you Mr. Chairman. To follow up on this matter of elevators in Quebec city and considering that right now no one has been appointed to check how much space is available at the elevator. Does the Feed Board feel that it should recommend appointment of a co-ordinator to be responsible for investigating this matter of the space available because nobody is there to find out whether there is space or not nobody could guarantee that available space is being used.

Dr. Perrault: This recommendation has been made already; it has been made by the Canadian Feed Board.

Mr. Roy (Laval): Do you agree with it?

Dr. Perrault: No, we have already made this accommodation.

Mr. Roy (Laval): Thank you.

[English]

The Chairman: I recognize Mr. Korchinski, Mackenzie.

Mr. Korchinski: Is there available table of representative prices which are requested from the feeders at various points? For example, let us take the case of barley at various points. Do you have a table indicating the average price per month, say for every month? This might give us an indication as to whether there is any stability in the prices or not.

Dr. Perrault: Grains lose their identity when they are incorporated in mixed feeds. As I mentioned before, we are building up data for the various economic regions, eastern Canada and B.C. We are working on that. The data have gone to programming this month. This is one thing we want to do from month to month, to see what variations are from month to month and from a given month this year to a given month last year. This is how they are processed.

If you are talking about grains, this is a different thing. We keep prices of grain for the major trading centres, from week to week. We have the premiums over Fort William, Port Arthur; that is being done. We are also compiling data on other ingredients.

Mr. Korchinski: Would you have this information on grain available immediately?

Dr. Perrault: We could give you some historical data; we could give you some trends; but we have just started that a few months, and we are not ready to give it right away.

Mr. Korchinski: So that in effect you have no idea, really, whether you are stabilizing, if you do not have this information.

Dr. Perrault: We feel that if we can stabilize in a reasonable way the wholesale prices of grain, then we are fulfilling some of the requirements of the Act, but that does not go up to the retail level. We could give you some prices on the wholesale level. I do not know how many months you would require.

Mr. Korchinski: I am not so much interested in the wholesale levels. What I am interested in more is the price that the feeders have to pay. This is the price that really counts.

Dr. Perrault: I was mentioning that the feeders buy mostly mixed feeds.

Mr. Korchinski: Even if it is a mixed feed, it is mixed in certain proportions and so on, and you would have a comparative price for a certain type of grain, would you not, from certain points? For example, if it is Quebec or another point.

Dr. Perrault: Up to the wholesale level, yes.

Mr. Korchinski: But from there on you do not have it?

Dr. Perrault: From there on they use it more for mixed feed. Of course we could

gather also some retail prices of grains, but what we have done mostly is mixed feeds.

Mr. McDonough (Member, Canadian Live-stock Feed Board): Very little of the market in Eastern Canada or British Columbia is in the sale of raw grain. Most of it will be in the finished rations which are sold to feeders. As Dr. Perrault mentioned, grain loses its identity as soon as it is mixed, but we have started over the past few months accumulating data on the complete feed prices to the feeders, and it will be some time before this data can be put together with some reliability and accuracy in order to have tables which we are positive we could rely on.

• 1545

Mr. Korchinski: Are there various brokers that operate only in a certain point, or do the same brokers operate in every one of these points?

Dr. Perrault: There are both types. Some of them will operate right across the country. Others will operate only at one port.

Mr. Korchinski: In your study, would you be making comparison between the various brokers and so on, and the prices that are asked?

Dr. Perrault: Various trading centres, terminal elevator centres, yes.

Mr. Korchinski: Is there much use made of rapeseeds in the final feed that is being sold?

Dr. Perrault: In the mixed feed mill, in the incorporation of mixed feed?

Mr. Korchinski: Yes.

Dr. Perrault: I do not think there is too much of this.

Mr. McDonough: I have some figures.

The Chairman: Gentlemen, just while these figures are being presented, I wonder if I might get some guidance of the Committee. As you know Farm Credit is standing by in the event that our Committee would wish to question its members. We also have the Health of Animals Branch coming later in the day in the hope that we might want to discuss health of animals and conclude that consideration.

I have now before me some four questioners.

Mr. Korchinski: I could pursue the questioning while this thing is being looked up. I have a few other questions that I want to ask.

Up until now the only vehicle that you have used to stabilize prices, I gather, is the freight subsidy. You stabilize through subsidy on the freight.

Dr. Perrault: I mentioned that we have used the subsidy in part on Ontario shipments, Ontario corn, and also during the strike we had Plan C established again. Of course there were cases where they were under strike, where we made a recommendation of having an additional subsidy. These were some of the tools, and also the allocation at Quebec City last year.

Of course, one thing I did not mention, the technical advice given as far as agreed charges, because agreed charges really have the effect of putting a ceiling on prices, so we have agreed charges now for the province of Quebec. The present system goes up to November 27-28, and it will be replaced by a de-escalator clause. That was another way to get more stability, and prices during winter cannot go higher than the replacement cost by rail. This is a way of giving more stability to the market.

Mr. Korchinski: Could you say how much freight per ton on grain is paid from the Lakehead to Toronto?

Mr. McDonough: \$4.80.

Mr. Korchinski: Could you tell us how much subsidy is paid to a feeder in the Toronto area.

Mr. McDonough: Excuse me; I had figured that was your first question. The actual freight to Toronto *per se* would be...

Dr. Perrault: That was the subsidy, you want the freight.

Mr. Korchinski: That was the answer to the second question.

Mr. McDonough: If we use barley as an example, the cost of movement of barley to Toronto was around \$6.49 a ton on a weighted average basis, and the subsidy was \$4.80 a ton.

Mr. Korchinski: Would you have comparable figures for oats?

• 1550

Mr. McDonough: For oats it is \$8.08 a ton.

Mr. Horner: Is that by boat?

Mr. McDonough: Yes, water.

Mr. Korchinski: Freight is \$8.08?

Mr. McDonough: No. This is all costs: loading at the Lakehead, water freight, insurance, unloading, and then loading out to a truck or a car.

Mr. Korchinski: I see.

Dr. Perrault: We do not pay all expenses; we pay the greater portion of the freight costs.

Mr. McDonough: And wheat would be \$4.69.

Mr. Horner: The cost of wheat would be \$4.69, and you get the same subsidy of \$4.80. That is a pretty good deal.

Mr. McDonough: There is very little wheat used.

Mr. Horner: This year there might be quite a bit because of...

Mr. McDonough: This of course depends on price, and as I mentioned earlier it is not competitive in price with either U.S. corn delivered in Ontario or Ontario corn.

Dr. Perrault: That would be at the opening of the navigation season, that those contracts are being made.

Mr. Huffman: For the simple reason, Mr. Chairman, that Ontario is self-sufficient, and it would have to be very competitive in order to have any of this wheat used in that area.

Mr. Korchinski: It seems that storage facilities will be one of your problems. I think you answered this question, and I may have missed part of it. Have you had some requests for building more storage?

Dr. Perrault: Yes, from Matane, Rimouski and Fredericton.

Mr. Korchinski: Have you had many complaints from people in various areas that prices have not been stabilized since the Board has been in effect.

Dr. Perrault: Some complaint about what?

Mr. Korchinski: About the stability of the price.

Dr. Perrault: No, except if you talk about maybe some differences, let us say between the prices that the growers used to get in a certain area and the prices that they get now after some changes. Yes, we got some from British Columbia, which we will attempt to correct in the coming months.

Mr. Korchinski: Have you gone as far as the planning of any storage in the future. I imagine you will be giving it some thought. Have you given consideration to the possibility of shipping feed grains through the Port of Churchill, using the facilities there and stockpiling them in the eastern part of Canada to save on rail shipments during the winter months, rather than having to transport them.

Dr. Perrault: No, we did not.

Mr. Korchinski: Will you some time in the future give that some thought? I think there have been several plans that have been outlined in the past. It might be an area where you could save on your subsidy.

Dr. Perrault: Then you would need ocean vessels; are you referring to serving Halifax?

Mr. Korchinski: Yes, I think there were several plans outlined. Halifax, and I suppose for that matter ocean freight being cheaper than rail freight, you can come right down the St. Lawrence. Those are all the questions I have at the moment.

The Chairman: Thank you, Mr. Korchinski. Gentlemen, at this moment I am wondering if the Committee would consider completing our consideration of these Estimates by about 4.15, so that we could have a 15-minute break; then we might come back with Farm Credit at about 4.30. That is only a suggestion to the Committee, if it meets with your approval.

I recognize Mr. Ritchie.

Mr. Gleave: I would agree with it if at that time it was obvious that those who wanted information had it. But I do not think that we should arbitrarily cut off.

The Chairman: Oh, no.

Mr. Ritchie: The feed grain market in Eastern Canada consists of local grains, western grain, mainly barley, and American imports, corn I presume, probably soya beans, is that right?

Mr. Huffman: Yes.

Mr. Ritchie: What has been the trend in the past three or four years. Is American corn displacing western grain or local home-grown grain?

• 1555

Dr. Perrault: Yes, it is displacing western grains and this is some of the data that we are going to give to the Committee members at a later date. But we have some figures. Mr. McDonough can give you some figures for the past three or four years.

Mr. McDonough: I have only the crop year to date this year, and this would be from August 1 of this year up to November 13. Of the grain which was consumed for livestock feed, 39.7 per cent was U.S. corn. Last year in the same period of August 1 to November 15, it was 19.4 per cent of the total basket; so it has approximately doubled.

Mr. Ritchie: What about local grains in that time?

Mr. McDonough: Local grains consumption has been heavier, especially in the Ontario area where crops are larger this year, and it was used as a supplement to stock shortages during the strike.

Mr. Ritchie: I was informed that even at the present barley price, American corn still commands about a 10 per cent premium or advantage over western barley, when you put it in the computer and come out with the mixture that they do. Does this vary? I believe you made the statement that in Montreal barley was slightly over corn.

Mr. McDonough: Yes, this would depend on where you made this comparison. I believe it was about \$6 at Montreal, and it is about \$4 advantage to barley in Ontario. Of course, it depends on the type of feed that is being made, too.

Mr. Ritchie: If this is carried forward all year at the percentages you quoted—39 per cent versus about 19—what would that mean in barley or oats, or can you give us an approximate estimate quickly?

Mr. McDonough: I do not really suspect it will carry forward for the total year, because during the past week or so we find that the U.S. corn impact is declining somewhat because of the increase in U.S. corn prices.

Mr. Huffman: Mr. Chairman, Ontario corn is very competitive. The producer of the corn

may not be happy, but we are more than meeting competition. It has an advantage over American corn so the latter is slackening at the present time.

Mr. Ritchie: Therefore western grain, and barley especially, depends on the price to The Canadian Wheat Board plus the subsidy offered to put it in the position of being competitive.

Mr. Huffman: That is right.

Mr. Ritchie: World shipments of feed grains in 1961 to 1967 are quoted as increasing from 20 million metric tons to approximately 40 million metric tons. The Americans went from 10 million metric tons to 20, whereas we remained the same at approximately 1 million metric tons. Seeing that your Board is here and, although you are not directly concerned I believe in research, is this one place where we as a nation, agriculturally, should make considerable effort in doing something about this?

Mr. McDonough: We made this very point at the National Grains Council in our submission to them. We felt that the grain market which existed in the world was one for feed grains as well as bread wheats, and we felt that more emphasis should be placed on market research and plant research and better utilization of storage and transportation facilities for feed grain crops.

Mr. Ritchie: Has the Wheat Board pricing policy on barley been flexible enough? Has it created any problems for you to stay within the eastern market?

Mr. McDonough: Barley consumption is lower than it was a year ago. Of course, you can only measure the demand against the price that is being asked in competition with other commodities, such as corn.

Mr. Ritchie: Is the B.C. market approximately the same as the eastern except on a smaller scale?

• 1600

Dr. Perrault: With the breakdown of the usage for the various categories?

Mr. Ritchie: Yes. There is no great variation in corn.

Mr. McDonough: There would be a lesser amount of corn used because of the cost of corn into B.C. being higher. The only way of getting corn in there, of course, is by rail

movement, and the cost is somewhat higher. I believe at the present time that corn into B.C. runs somewhere around the \$60 a ton level, whereas in Eastern Canada corn is around \$50 a ton.

The Chairman: A supplementary question by Mr. Thomson.

Mr. Thomson (Battleford-Kindersley): Mr. Chairman, in relation to this question that has been raised here, some of the implications are that we need to sell western grain for less. My understanding of the corn situation and the corn sale from the Americans is that they are not actually, basically, selling it for less; they are being bonused by the American Treasury to this extent. Would you gentlemen care to comment on this particular angle?

Mr. McDonough: I did not want to imply that the western feed grains should sell for less. I think, as Dr. Perrault pointed out earlier, that we have made the Wheat Board well aware of the price situation in eastern Canada. The pricing from that point on is up to them, if western grain is going to compete with U.S. corn. We are looking at making sure that there is sufficient space for feed grains and that prices are stable.

Dr. Perrault: The eastern market and B.C. is a good market for the western producers if you take all categories of grain. It is about 100 million bushels a year, which is a good market.

Mr. Huffman: Mr. Chairman, I would suggest that we would like to see the American corn price higher, and not the western grains lower. This is not the government corn that we are talking about; this is free corn that is on the market. I do not think you are getting government corn in there. I do not think you are going to sell \$1.45 corn for \$1.20.

Mr. Thomson (Battleford-Kindersley): The point I want to make is that if it were not for the American subsidies to their farmers, one way or another, they would not be able to grow corn for that any more than we could. Am I correct?

Mr. Huffman: I do not think the free corn grower feels that he could either, and he is now turning to the government program by six million acres.

Mr. Gleave: A supplementary, Mr. Chairman. I would then take it that our situation here is that the American corn now is really the price setter in the market.

Dr. Perrault: Not right now. It was in the past few months.

Mr. Gleave: It was in the past few months?

Dr. Perrault: Yes.

Mr. Gleave: Not right now, but it could be so again.

Dr. Perrault: It could happen this coming year; that I do not know.

The Chairman: I recognize Mr. Côté, Richelieu.

[Interpretation]

Mr. Côté: Mr. Chairman, my question is addressed to Dr. Perrault.

In the last few days, some members complained that drying of grains in the West was not done quite quickly enough and a member said that this could slow down supplies to the East. Did you have any problem in supplying the East, because of this alleged problem? Is this a problem you have encountered?

Dr. Perrault: No. I do not think so.

Mr. Côté: This was not a problem?

Dr. Perrault: No.

Mr. Côté: It is my only question, Mr. Chairman.

[English]

The Chairman: I recognize Mr. Peters, Timiskaming.

Mr. Peters: Mr. Chairman, I think originally there were two people in favour of this Board for totally different reasons. This was back in 1964, or early 1964. One of them was myself and the other was the Member for Acadia, who is now the Member for Crowfoot. We were interested, specifically, in establishing a supply of grain in Eastern Canada that was sufficient to meet the requirements of eastern farmers. This in itself, if it was established where there was a sufficient supply and not an organized deficit of supply, would equalize the payments over a period of the year. The situation was that in March in the Ottawa Valley and in some parts of Quebec the price went up \$12 or \$13 a ton.

• 1605

Now, it seems to me in listening to the Board; we are again engaging in empire-building and the Committee here is certainly not curtailing this desire on the part of the

Board because they are asking for a number of things. They are asking for research; they are asking for the Board to be able to administer the importation of corn and control the price of corn. In my opinion this is not what this Board was set up for, and I would strongly urge the Committee members not to support the extension of this Board into that field. The purpose of it was to maintain a reasonable price for feed grain in Eastern Canada and this does not mean this Board builds elevators, as I have heard mentioned, and conduct studies into the type of feed available and this sort of thing, but to control that price. In my opinion, the Board has really only got into the extent, yet, of controlling the distribution of feed grain subsidies which was put into this Board's responsibilities simply because it fit in with the program. If grain was not in the area from water transportation, then subsidy would be paid to bring it in by rail, and this would carry that subsidy.

Mr. Chairman, I just raise with the Committee its responsibility to see that this Board is not sent into a number of directions that are almost the responsibility of the Department of Agriculture in the whole field.

Our main consideration at that time was the problem of Baie Comeau and Prescott, and the inability of the Department of Agriculture to ascertain why supplies were ensured demand in a particular area and how this situation was created. I would like to ask what they have done in terms of solving this problem of having forward amounts, not forward prices, of grain in position to meet the total requirements of Eastern Canada in the last three years?

Dr. Perrault: You referred to research. What we try to do, of course, to the best of our ability is to administer the Act. When you talk about research, it is well spelled out here that:

(1) It shall be the duty of the Board

(a) to make a continuing study of feed grain requirements in Eastern Canada and British Columbia, of the availability of feed grain and of the requirements for additional feed grain storage facilities in those areas;

Later on it says:

(c) generally, to advise the government on all matters pertaining to the stabilization and fair equalization of feed grain prices to livestock feeders;

So, I do not see how we would be able to accomplish that without having continuous research.

Mr. Peters: Well, I suggest the questions that have been asked have been giving you some leeway to get into fields that are not within the requirements of the section that you have just read. That is not really research, that is statistical requirements.

Dr. Perrault: Well, we certainly have to be aware of what goes on. As far as the duplication of the work with the Department of Agriculture, this is one thing we try to avoid, and I think we have been successful in avoiding duplication there.

I did not quite understand your point that we want to get into the imports of corn and control of prices. You mentioned this.

Mr. Peters: Yes, but this was not really why we set the Board up. The reason originally—and I think the members of the Committee should know it because it hinges on what they want to do with this Board—the original problem was that grain was being imported from United States companies into Canada in transit for export markets. Because that grain filled our elevators at Prescott, there was no room to store feed grains for the eastern Canadian requirement. The purpose of setting up the Board was to ensure that there would be 100 million bushels or 10 million bushels or whatever it amounted to, in the Prescott area for the eastern part of Canada.

I do not know what the reaction of the Board has been to Baie Comeau, but I understand the elevator that the National Harbours Board owned has been sold. I do not know whether we have any control over that—I would like to know. But I think that was the extent. The corn that was coming in then was for export purposes, but it eventually found its way into the Canadian market because the trade in Canada did not have any access to putting storage in that facility for the eastern feed grain producer.

Dr. Perrault: Getting back to prices, we do not have any way to control prices. The Act says, "to achieve a reasonable price stability."

Mr. Peters: Well, supply controls price.

Dr. Perrault: That could be true, of course. That has an effect on prices, but we do not have any way to control prices. This is not a thing we want, either.

• 1610

Mr. Peters: Mr. Chairman, I do not say to control prices but certainly to stabilize prices. There was a \$13 difference that has not occurred since; had it neither occurred much previous to that particular year.

Dr. Perrault: We did not have to get into marketing because prices had been reasonably stable.

Mr. Peters: Has supply had an effect?

Dr. Perrault: Yes; because at places like Montreal and so on, in Quebec, wherever there were supplies during the winter months this definitely had an effect on prices. Therefore, we did have to intervene with our marketing powers and make a recommendation to this extent.

Getting the grains into position is, of course, tied up with space availability. We had several discussions last fall with the Montreal harbour—and we did the same thing this year—and made the allocation last year at Quebec City. As I mentioned previously, we were concerned that there could be a shortage of supplies for the coming months, so we counselled the trade that the feed mills should book their requirements early. One association of Ontario thought that it was a good move on our part with the Ontario Feed Dealers Association and recommended to their feed mill members to book early.

Also, of course, the agreed charges have an impact on availability because they make for a continuous supply over the winter months and all through the year.

These are some of the ways in which we use the Act; and in rail negotiations particularly, in assisting a continuous movement of grain.

As I mentioned earlier, these agreed charges have the effect of putting a ceiling on prices throughout the year. We do not consider trucking wheat to be on a competitive basis in relation to rail, but it becomes competitive as your storage and interest charges mount up during the winter months. Oats are definitely, and barley becomes competitive later on in the season.

These are some tools that the wheat Board has been using.

Mr. Peters: Is it not true that we are still paying on that winter storage of eastern grain requirements for feed purposes?

Dr. Perrault: This year we will not pay any storage assistance. There was a little bit of it last year in Montreal...

Mr. Peters: Why?

Dr. Perrault: There were many pressures at the time on the Montreal harbour. On the other hand, corn came into the picture and people could put more corn in because they felt that they would have a way out by exporting the surplus, if necessary, and the agreed charges were here.

Mr. Peters: Yes; but your Board's responsibility was to see that this did not happen. There was an agreement with the Harbours Board and the other agencies concerned that you would have a prior right to an average yearly requirement so that freight rate assistance would not be necessary, or would be limited. Is this not true?

Dr. Perrault: You mean the freight movement?

Mr. Peters: That you would not have to move by freight; that you would have a prior right to the...

Dr. Perrault: We did not have any such authority, no. The only authority we have on allocation is on grain for our own usage.

Mr. Peters: But the Board does not have any usage.

Dr. Perrault: No, we do not have any; therefore we do not have the authority to make the allocation except in the case of Quebec City where it was a part of the agreement between the company and the National Harbours Board at the time. But without that authority it is rather difficult to make any allocation.

Mr. Peters: I wish I could remember the figures, but say the requirements for feed grain in the Eastern Ontario Region is 100 million bushels of the average yield. Through your relationship with the brokers are you not being allotted 100 million bushels in the elevator at Prescott before American corn is allowed to fill that space?

Dr. Perrault: No; we do not have that authority.

Mr. Peters: You have the authority. That is what the Board was set up for.

Dr. Perrault: No, we do not have that.

Mr. Peters: That is really the purpose of the Board.

Dr. Perrault: Take the case of Montreal, for example. There you have the milling trade, the domestic feed trade and exports, and so on. Every year we have discussions with the authorities there so that they store enough grain for the winter position.

Mr. Peters: But there are no storage facilities in Eastern Ontario except at Prescott.

The Chairman: Mr. McDonough has a supplementary answer.

Mr. McDonough: I might just mention, as Dr. Perrault mentioned earlier, that neither this year nor last year was there any real problem with storage space at any of the Eastern Canadian elevators. Whether it gets into the elevator or stays afloat on vessels, which is a supplementary way of expanding the storage facility, there are sufficient feed grains.

● 1615

There are other users who also float stocks for export and/or for milling. But there has been no real shortage of space in these elevators. It may be that shortages of feed grains develop during the wintertime in one particular type of feed grain and there will be an overage in another type.

Mr. Peters: You can only anticipate that within limits, because of the changing requirements of the feeders themselves. They change the mix.

Mr. McDonough: One thing I think we should emphasize here is that the Board has been very active in developing and encouraging the implementation of rail rates which are competitive with water movement.

Two or three years ago the rate, for instance, into a point in Nova Scotia might have been \$1.07 a hundredweight in Fort William, which meant that more of the space at Halifax had to be used to carry grain for the winter time.

Mr. Peters: Let me read to Dr. Perrault a statement made in December 1966, by Maurice Sauvé, Minister of Forestry and Rural Development, when he was outlining the policy of the government:

The objective of the Canadian Live-stock Feed Board will be to ensure that feed grains are available at reasonable

prices to meet the needs of livestock feeders. It will also have the responsibility of ensuring that adequate storage space is available and to bring about fair equalization of feed grain prices.

You have stated that we have been fairly lucky because you really do not have any control over this second and, what I consider to be, major reason for...

Dr. Perrault: These are the objects, but we must work within the powers available.

Mr. Peters: In what respect have we not given you the power? Tell us and we will make the recommendation, and you will have that power. This is why the Board was set up.

I am concerned, Mr. Chairman, about this discussion on because the questions seem to relate to a number of fields other than those within the Board's responsibility.

I may be mistaken about research, and this sort of thing, but I have heard members from Quebec ask for elevator facilities. Perhaps we should be building these—I do not know—but I think the Board is being asked about things which are not their prerogative.

Dr. Perrault: The Act says that we have the power to conduct negotiations. This is Section 6(b)

...with any agency or person involved in feed grain storage of handling for the purpose of reducing or stabilizing the cost of storage and handling and for the purpose of obtaining adequate storage space for feed grain in Eastern Canada;

The Act says "conduct negotiations", which we did. And on allocation it says:

(c) allocate space reserved for its use in any storage facility among persons requiring feed grain storage facilities in Eastern Canada;

That is what the Act says.

Mr. Peters: This is the point. I forgot the fact that we have boats in the wintertime and that they are a big source of storage, but all that was included in the problem we had.

It was felt that the feed grain agency would be able to bring in the last boat shipment that would not be leaving the St. Lawrence and would be staying in the position at Goderich and at Toronto and at Prescott, as well.

Mr. Huffman: Mr. Chairman, I recognize the problem both at Prescott and at Goderich.

We have the power of negotiation, which we used in Goderich, and we had ample supply through negotiations. If they had not seen fit to negotiate favourably we would probably have been powerless, but we did negotiate and there was ample supply.

We negotiated in Prescott, and during the strike at the Lakehead the situation became quite serious. We did not have agreed railroad rates into Ontario—they are into Quebec and the Maritimes—so that it was a very touch-and-go situation at Prescott. However, we negotiated with the dealers and we were prepared—and I think did on a small scale—to move some from Goderich area into the Prescott area, and we picked up the extra costs of rail transportation. Therefore, in the Prescott area during that period they used up a lot of their local grains plus a little pinch-hit grains that were moved in from Goderich, because certain companies were short. In this way we took care of the situation at Prescott. It is the power of negotiation.

• 1620

Mr. Peters: Members may not realize it, but we are paying as much as \$23.40 a ton for this freight subsidy. That is a situation which I am sure all members would like to get rid of. We are not interested in paying that much tonnage.

As I see it, the solution is to have proper storage facilities in place by the late fall so that we do not have to use winter rail storage. You obviously have the full power to handle this freight subsidy program, but you appear not to have the...

Dr. Perrault: Our feeling is that the storage facilities are ample to serve the domestic market as a whole.

Mr. Peters: But you will also agree that this Board was established simply because that was not the case in 1964, and had not been the case for the five or six previous years, because the price varies by \$15 to \$20 a ton between September and March; and in some cases there was an additional jump in rail freight between March and June. This is really why the Board was formed.

Mr. Huffman: Mr. Chairman, the agreed rates take care of it in Quebec and the Maritimes to a great degree but we do not have agreed rates in Ontario and the dealers have not agreed to negotiate agreed rates; they particularly have backed away from them for Ontario.

If the situation should arise that a shortage occurs it would be difficult—I want to be perfectly honest about it—because Quebec and the Maritimes are protected by agreed rates which are almost equal to water rates.

Mr. Peters: Would you not agree with our original suggestion, that particularly the Prescott elevators be not loaded with American export grain—what they called export grain—which eventually in the winter, when the price went up so high, they could transfer into an export market in Canada, whereby we were competing with ourselves simply because we did not control that storage facility?

You are saying that the Board still has not got the power to control that storage facility—and this includes boats and a number of other things—then it seems to me we really have not accomplished much and that we have been lucky that the same situation has not recurred.

Mr. McDonough: Within our Act we only have the power to negotiate for storage space. There is nothing compulsory on the elevator operators. We have had excellent co-operation from most of them.

Mr. Peters: This is a government operator.

Mr. McDonough: This is the situation I mentioned. The development of contract rates, or agreed charge rates, into the Maritimes not only took the pressure off the need for building additional storage facilities at Halifax to feed this market, but it also took the pressure off Prescott. Prescott was the second base. In other words, what could not, in the past, be stored at Halifax was stored at Prescott; and the government was picking up the additional freight tab on this. I believe it amounted to nearly \$1 million a year because of this lack of storage.

Two alternatives were available. One was to extend the use of the elevator at Halifax for storage for perhaps a two-month, or three-month period, or try to work out some cheaper alternative. When this matter was discussed with the railways and the mills water competitive rates were established, which meant that the government did not have to go into expanding the facilities at Halifax in the amount of perhaps of about 3 million bushels or \$6 million of expenditure. Besides that it saved the cost of a million dollars a year in subsidies.

• 1625

The Chairman: Thank you, Mr. Peters.
I recognize Mr. Lefebvre (Pontiac).

[Interpretation]

Mr. Lefebvre: Dr. Perrault, I have a question which is related to the transportation of feed grain. I saw on the list that you gave us that the Témiscamingue County, they have a subsidy of \$13.60, Gatineau and Labelle \$10.60 and Pontiac \$7.40.

Now, I would like to know who made the decisions on these figures. According to the geography of the province of Quebec, I think that a fair rate of subsidy for Pontiac would be something between the rate paid to the people from Gatineau and Labelle those of Témiscamingue.

Dr. Perrault: Yes, as I was saying a while ago these figures should be re-assessed. In order to do so effectively we have to know exactly the volume shipped every year in each of these countries. This matter is being studied. Of course, there are certain inequalities, but we want work out a system which eliminates as far as possible all disparity between the various countries but there is some disparity right now.

Mr. Lefebvre: Have you had many complaints in this regard?

Dr. Perrault: No.

Mr. Lefebvre: I have had a few.

Dr. Perrault: Well, if you would pass them on to us—

Mr. Lefebvre: Yes, that is why I am asking the question today. Did you say that you are investigating right now.

Dr. Perrault: Yes.

Mr. Lefebvre: And when do you think we can expect to get the results of your investigation?

Dr. Perrault: Well, it will take some time, but I would like to know of any complaints you get from these areas. What are the areas first of all? What are the complaints? Maybe we can make the necessary adjustments right away. You are saying you have reports from Pontiac?

Mr. Lefebvre: Yes, I am the member from Pontiac myself. That is why I ask the question today.

Dr. Perrault: Yes, we will take note of it.

Mr. Lefebvre: You will answer me?

Dr. Perrault: Yes.

Mr. Lefebvre: Thank you.

[English]

The Chairman: Thank you, Mr. Lefebvre. Mr. Gleave, did you have a supplementary?

Mr. Gleave: It is not supplementary. I wanted to make a comment and then ask another question or two.

In Western Canada we have supported the idea of a feed board and the idea of freight subsidy partly because of the need of the eastern growers and partly because we felt that it afforded us a market for our grain. I myself have argued this case in the agricultural forum at Winnipeg with those that took a different view. Now if we are in a position where American corn is going to dictate the price and occupy the market then I suggest our position in the West for arguing for this is considerably weakened.

Dr. Perrault: Our basic philosophy is as you have expressed it—to give some assistance to livestock feeders in Eastern Canada and B.C. and to provide a market for Canadian Western grains. Now it is true, with the inroads that American corn is making into this country, that this in part weakens the equalization process, and we recognize that as a fact.

Mr. Gleave: It was said that feed freight subsidies did not apply to American corn moving once it came into this country. How do you keep it separate? How do you know? Do you follow this through in bond, or how do you achieve this?

Dr. Perrault: Are you talking about Ontario corn to the Maritimes?

Mr. Gleave: I am talking about American corn. I assume that an importer purchases American corn and puts it in stores some place in eastern Canada. How do you know that feed freight subsidies do apply to Canadian corn moving forward?

Mr. Huffman: Canadian corn only is subsidized into the Maritimes. It has gone exclusively by rail with the exception of one boatload of American corn that went into Halifax when they could not get Ontario corn, and we paid no subsidy on that.

Mr. Gleave: I see.

Mr. Huffman: We pay a subsidy on the freight into the Maritimes but not into the Province of Quebec. Now Ontario wheat goes into both Quebec and the Maritimes so that it is pretty clearly set out, you know—we can trace it.

• 1630

Mr. Gleave: At one time the Canadian Wheat Board had the right to issue permits for the importation of American corn. Does it still have that right?

Dr. Perrault: No.

Mr. Gleave: It no longer has it?

Mr. Huffman: Nobody has it. It is free.

Mr. Gleave: You say that no one has the right now to issue permits. When did this change take place?

Mr. Huffman: I do not know but it was before this Board's time.

Mr. McDonough: I do not recall it.

Mr. Gleave: The Deputy Minister told me he had answers to certain questions I posed earlier. Could we have them now?

Mr. Jarvis: Mr. Gleave was interested in details on the United States tariff and quotas on feed grains moving to that country.

In the case of Canadian wheat moving to the United States, there is a quota of 795,000 bushels per year, and the tariff is 21 cents per bushel. Related to this is the quota on wheat flour; the quota is 3,815,000 pounds and the tariff is 52 cents a hundred pound.

The area to which I think you had particular reference was feed grains. In the case of barley there is no quota and the tariff is 7½ cents per bushel, in the case of oats there is no quota and the tariff is 4 cents per bushel, and in the case of rye there is no quota and the tariff is 6 cents per bushel.

Mr. Gleave: Does that compare with the tariff on American grain coming in?

Mr. Jarvis: Relatively speaking. You will recall the corn you have been discussing; our tariff on corn is 8 cents per bushel and of course at the present time there is an extra tariff if it is below the support level in the United States.

The Chairman: Mr. Danforth, did you have a question?

Mr. Danforth: Yes. In answer to question posed by two members Mr. Huffman indicated that they had not been able by negotiation to secure agreed rates in Ontario. Would he care to amplify on this, stating the reason for the difficulty?

Mr. Huffman: First, Mr. Chairman, the trade negotiates the rates, with our assistance—we sit in but we are not in the marketing. If we were in the marketing then we would have to negotiate. But the trade itself has negotiated because they use water rates from Owen Sound right into Prescott and all along. They have not seen any great advantage in the negotiations, and I do not think the railroads have seen much advantage of negotiating with them. Simply put, is the railroads and the trade itself have not seen too much advantage to sitting down and wanting to negotiate. Of course when they get into a tight spot then they do want to negotiate. We tried to negotiate space in Goderich and the Lakehead because a lot of that grain flows back up into Northern Ontario. We were successful in doing this. This kept your prices north of North Bay stable with the grain other than came through from the Lakehead. The Prescott area is perhaps going to be a difficult one. It looked as if the grain that was being ordered was not going to be sufficient. We drew the trade's attention to this and, at the present time, the orders have been picking up quite rapidly. I do not predict much trouble there. We are watching the situation closely and advising them.

Mr. Danforth: What would prevent a subsidy payment on corn unloaded at either Goderich or Prescott and subsequently shipped through to Truro, Nova Scotia?

Mr. Huffman: In the first place, there is not available space in the Maritimes to unload boats. One of the problems is that they have to depend on rail rates. They are taking another bin but they want to utilize it mostly for export and Western grains.

• 1635

Mr. Danforth: But if in the course of the winter months a transshipment of corn loaded in Goderich and Prescott from American ships—that is, American corn owned by local dealers—does find a market in the Maritimes is it not subject to the rail subsidy once it leaves the Province of Ontario.

Mr. McDonough: Actually the cheapest mode of transport presently on Ontario corn to the Maritimes is via agreed charge rates from the Chatam area directly through to the Maritimes. This would preclude any advantage to transshipping any United States corn.

The other point is that because of our accounting procedures no corn could be shipped out of Prescott and called Canadian corn unless, of course, it had a legitimate inspection certificate from the area designating it as Canadian corn, or had previously gone into Prescott for storage and transshipment as Canadian corn.

Mr. Danforth: My final question, Mr. Chairman, is on freight subsidy on Ontario corn. Is it correct that the actual subsidy paid on the shipping of Ontario corn into the Maritimes does not apply in any way to any area in the Province of Quebec?

Dr. Perrault: This is right.

Mr. Danforth: Can you give me some reason for this? I am sure that we all are aware that Montreal is one of Ontario's chief markets?

Dr. Perrault: One argument, of course, is that we look at it as a consumer subsidy, not as a producer subsidy. Mr. McDonough can enlarge on that. If there were a subsidy on Ontario corn to Quebec areas it would tend to be a producer subsidy rather than a consumer subsidy. We discussed the question with the Seed Corn Growers Marketing Board—at the time there were some bookings made—and it was argued that that would have an effect on the prices of inventories at the time. Also, the price of United States corn was so low at the time that in order to equalize a greater subsidy than that applying to Western grains into the Province of Quebec would be required. These were some of the reasons that we did not make the recommendation at the time.

Mr. McDonough, do you want to expand on this?

Mr. McDonough: What we attempted to do was to place Ontario corn into the Maritime market at about the same cost as United States or Ontario corn moving into the Montreal market. We had a situation whereby the Maritimes were not able to take advantage of the United States corn as a cheap feed ingredient, were having to use higher cost ingredients and, of course, were having difficulty in competing in their final products.

So this enabled them to get corn at much the same cost as in the Montreal or Quebec area. Also, had we paid it of course into the Quebec market we would be going into a market which itself is building up rather rapidly in production of corn. I believe corn production in Quebec this year is around $2\frac{1}{2}$ million bushels. I think we would have been working against the incentive to expand this production in Quebec.

• 1640

Dr. Perrault: In the years to come in the Montreal region, provided there is proper tile drainage, drying facilities, technical skills and so on, you could very well see a situation where you have 100,000 acres of corn. Actually, it is about 30,000 acres or roughly in that area, so it is going to expand very rapidly because this crop is more profitable than many others in the Montreal region, certainly with respect to oats, barley and all the other feed grains.

Mr. Danforth: Is it not true though, Dr. Perrault, that you are administering a freight subsidy to Western feed grains coming into Ontario—they are produced in Manitoba and shipped into Ontario—and yet where we have corn in Ontario we are not able to get a freight subsidy into Quebec which is one of our chief markets? Does this not seem to be a contrary policy where the two grains are concerned?

Dr. Perrault: We look at it, let us say, with interest and we have to develop ways and means to have equalization. We would have looked at it, let us say, favourably but these arguments tend to deter us from making the recommendation to go into other areas. At one time I felt there might be a possibility of getting a subsidy on Ontario corn outside of the Montreal region, but at the time the price of U.S. corn was so low that you needed a very high subsidy in relation to the subsidy paid on Western grain in order to make that possible.

Mr. Danforth: Elaborating this a little further, I fail to see where the argument regarding seed corn would be a motivating factor; you are speaking of thousands of bushels of seed corn and you are speaking of millions of bushels of commercial corn.

Dr. Perrault: No, but when I said seed corn, I said we met with the organization but when we give these arguments they refer to

commercial corn, definitely. When we met with the seed corn people, we discussed mostly commercial corn, definitely.

Mr. Danforth: So far as subsidy on Ontario corn going to Quebec is concerned, is there perhaps a chance that this whole thing will be gone into again, or has a definite policy now been formulated as far as the Livestock Feed Board is concerned?

Dr. Perrault: No, I do not think this is a permanent policy; we can look at it again to see what is possible.

Mr. Danforth: What will necessitate reconsideration of this problem? An application on behalf of Ontario growers or...

Dr. Perrault: Well, we already have that. Oh, yes; we did receive all these requests from the various associations.

Mr. Danforth: Have you received one this week?

Dr. Perrault: No, not this week.

The Chairman: Thank you, Mr. Danforth. Mr. Whelan has a supplementary or a question.

Mr. Whelan: Yes, it is just on corn. Do you demand that all the corn you pay freight subsidy on in the Maritimes be graded?

Dr. Perrault: Yes.

Mr. Whelan: Do you realize that you are competing with American corn that is not graded?

Mr. McDonough: American corn coming into Canada must come in under a grade certificate, so far as I know.

Mr. Whelan: I mean by Canadian grade standards; no corn that comes into Canada is graded except by request. Do you not think it should be compulsory?

Mr. Huffman: Mr. Chairman, I was under the understanding that it had to carry a grade, but if it is—

Mr. McDonough: No, no; a U.S. grade.

Mr. Whelan: We had the Board of Grain Commissioners before the Committee from which we learned you do not have to grade corn at all, only by request. The grain that comes in from the United States is not graded by our officials. It may be graded by American officials, but not by ours.

Mr. Danforth: And inspected.

Mr. McDonough: Pardon me. My answer concerned the U.S. grade. As you say, it is not graded by Canadian inspectors except by request.

Mr. Whelan: Do you not think that all grain used in Canada should be graded? Corn is the only one, if I understand rightly, that is not graded by the Board of Grain Commissioners, by someone of their staff. It is the most free-wheeling, dealing, grain commodity that comes into Canada and I think our Department of Agriculture has been as negligent as hell in not making sure that corn is automatically graded.

The Chairman: Thank you, Mr. Whelan.

Mr. Huffman: Mr. Chairman, I wonder if Mr. Whelan is aware that there is a grade on corn, if by request, and if corn is better than Grade 1 by request, it can have that on the certificate which is even better than Grade 1. That has only come into force just now.

Mr. Whelan: What I am saying, Mr. Huffman, is that a great deal of corn is used by unsuspecting small feed dealers and other people who buy corn directly and pay perhaps No. 2 Canadian grade price for it. It may be grade No. 7 American corn and they do not know it.

• 1645

Mr. Huffman: I never heard tell of No. 7. I agree with you, other than...

Mr. McDonough: There was some No. 4 in.

Mr. Huffman: I would agree with you.

The Chairman: Gentlemen, unless there are further questions this concludes our questioning of the witnesses and I, on your behalf, would like to express our appreciation to Mr. Jarvis for attending our meeting, to Dr. Perrault, to Mr. Huffman, and to Mr. McDonough for their lucid and comprehensive answers.

Gentlemen, shall Item 60 carry?

Item 60 agreed to.

The Chairman: Shall Item 65 carry?

Mr. Horner: What is Item 65?

The Chairman: Item 65 is the subsidy, \$21.6 million.

Mr. Peters: Before this Item carries, has this been going down because of the operation of the Board?

Mr. McDonough: This subsidy is geared to freight costs and freight costs for rail and truck transportation actually have been on the rise, while remaining stable for water transportation, and feed consumption has been increasing. This figure naturally has been going up year by year. Actually, the only thing the Board could do to improve the rates of subsidy is by negotiation of better types of rates.

Mr. Peters: No, my suggestion, Mr. Chairman, is that the Board's main purpose is to get out of freight rate subsidies altogether by having a stable price facility put into place other than by the rail subsidy program.

Dr. Perrault: Mr. Peters, price stability is one of the objects of the Act. There is also in the Act the object at price equalization. These are the two main objects of the Act really, to achieve price equalization through feed freight assistance.

Mr. Peters: Freight equalization can be obtained, I am quite sure, in the marketplace by having a very high subsidization of transportation. That can be attained, but certainly in the over-all cost of agriculture it is probably not the way we want to provide the assistance. I am sure this was a consideration, that we could at any time bring a winter supply of feed grain seeds into Canada by rail if we are going to pay the subsidy and the dealers do not have to pick up that in their costs. That is one way of equalizing the price, all right.

Dr. Perrault: It would equalize it between Ontario and Quebec, but Quebec and the Maritimes would not have equalization under that system.

Mr. Peters: Yes, but it still produces a stabilization to the consumer; it becomes a cost factor to the operation of agriculture. It was my opinion that this could be accomplished probably by having summer or early fall supplies where the portion of the freight subsidy would not have to apply to bringing in off-season grain.

Mr. McDonough: Mr. Peters, if I might just explain, the subsidy is paid on the movement year round based on the least-cost route whether that be water and rail, water and truck or direct rail. We do not pay special subsidies in the wintertime when stocks are short and this is where we have developed the alternate route of transportation arrangements.

Mr. Peters: But we do pay transportation from Fort William to Rimouski...

Mr. McDonough: All year round, yes. We are attempting to equalize...

Mr. Peters: I would think the Board's position if they had a supply in Baie Comeau would be that the rail costs would be reduced considerably and the subsidy would go down, would it not? I am sure it is cheaper to bring it by rail and boat to Rimouski or to Baie Comeau than it would be to bring it by rail from Fort William to Rimouski.

• 1650

Mr. McDonough: If we can continue, of course, to develop the competitive rail and utilize rail as an alternate mode of transport, it will mean that you would need less stocks in points such as Quebec City or Montreal or Three Rivers, but we do attempt generally to equalize the cost of feed grain throughout Eastern Canada. Therefore, we are paying a portion of the transportation costs on a year-round basis.

Mr. Peters: Mr. Chairman, it just seems to me that one of the responsibilities of the Board is to reduce this freight cost wherever possible. Granted in the over-all structure we may need to keep the CNR in operation but we may have to keep some boat companies in operation that we do not even know the names of. I find it is more economic to keep them in operation than it is...

Mr. McDonough: I think we are attempting to do this by the development of alternate routes of transportation or modes of transportation to be more competitive.

Mr. Peters: Good, good.

The Chairman: Thank you, Mr. Peters.

Mr. Danforth: Mr. Chairman, following the line of thought of Mr. Peters, I just wonder whether Dr. Perrault can give me an indication of where we are going in this freight subsidy. Is it the intention of the Board to work to the end that it will be necessary to pay less and less freight subsidy? Is there any indication by the Board to encourage the development of the new type of grain carriers which would make it possible for loading and unloading to be greatly facilitated and larger amounts carried, with the end in view of reducing the per bushel carriage? Just where are we going in this regard?

Dr. Perrault: What we are looking—and we will have more data as soon as we get a traffic man—to get, possibly after discussion with the interested people in the West, train units from the Prairies to the East and see what savings would be involved in a case like this. This is one of the plans we have under study. Of course, one thing mentioned is that as far as subsidies are concerned we look at the most economical route. It is based on this.

Is what you have in mind the level of the subsidy itself?

Mr. Danforth: Yes. One point that comes to my mind as one of the major problems we are faced with in Ontario in many years is the fact that when the bulk of our corn crop is ready to move by water there are no facilities to put it in because of a first come, first served basis. Is there any attempt being made to assess this problem and to make available storage so that we in Ontario can take advantage of the water rates and not be subjected to the high rail rates and truck rates in our off season?

Mr. McDonough: This depends, of course, on which market you are going into with your corn. There are rail rates which exist today between the producing area of Ontario in and around Chatham and the Montreal market, which would be the bigger market, that are cheaper than you could get by attempting to move this by water.

Mr. Danforth: My point is this: we are handicapped in Ontario. We do not have the subsidy going into Quebec and the Montreal markets. Montreal is our biggest market and we have not the freight assistance available. If we cannot get the water rates, what is the answer? My understanding of the Board's function is to make the maximum use of domestic grains, as well as stabilization of prices.

Dr. Perrault: That is right.

Mr. Danforth: This is, as you stated, the basic philosophy. Where are we going in this regard? What is the answer for us in Ontario, as far as corn is concerned which is our biggest commercial crop?

An hon. Member: Mr. Chairman, may I...

The Chairman: Wait until we get the answers to this one first.

Mr. Peters: Well, Mr. Chairman...

The Chairman: Order.

Dr. Perrault: When we discussed the matter with the associations—of course, this will not cure everything—the recommendation we made at the time was that there was a need to have orderly marketing in Ontario, and that they should build up the necessary organization among the farmers as a first step to having orderly marketing.

Mr. Danforth: Well, as a grain grower I am well aware of some of the problems and I am satisfied that this can *not* be the answer. This *will not* be the answer. We have to be in a competitive position and we are not at the present time.

• 1655

Mr. Huffman: Mr. Chairman, from the Ontario viewpoint again we will not be competitive with the U.S. until we have water loading facilities that will carry corn competitive with U.S. corn and I think what you are driving at, Mr. Danforth, is that the Ontario producer is certainly handicapped by not having water facilities to compete with the U.S. water facilities, and we have to take it by rail. Now, until such time as somebody creates these water facilities we are going to have the same handicap.

Mr. Whelan: Have you recommended it to anybody?

Mr. Huffman: Yes, we have; I have, at least.

Mr. Danforth: Are there any indications of savings on freight subsidy that such facilities would bring about by the utilization of greater quantities of Ontario corn?

Mr. Huffman: Well, let me give you the rates. I think the rate from Chatham to Montreal is about 20¼ cents per bushel. Right across the border, and most of this corn comes from Toledo, it is anywhere between seven and ten cents. If it is going to come in to certain places it might even be negotiated at five or six cents. Now, there is the difference. If they had a water port where this corn could be loaded this side of Toledo and get the same rate there would be 10 cents a bushel difference. It is easy and plain, but somebody has to build the facilities and somebody has to organize the growers to put this corn in position. These two things will have to come about.

Mr. Gleave: I have a supplementary, Mr. Chairman. Is it within the Act or the declared policy of the Board to maximize the use of Canadian domestic grain? Is this a declared objective of the Board?

Dr. Perrault: No, I do not think this is in the Act as such. The Act calls for availability of supplies, price stability and fair equalization of prices, together with enough storage space. If we ever get into marketing when there is a need for it of course, as I said, the people would want to give preference to Canadian products.

Mr. Gleave: But there is no declared objective now?

Dr. Perrault: As such, no. It is a philosophy we can build up, of course.

Mr. Gleave: Thank you.

The Chairman: Gentlemen, shall Item 65 carry?

Item 65 agreed to.

The Chairman: Gentlemen, shall Item 65 consideration of the estimates of the Canadian Livestock Feed Board. What is the pleasure of the Committee? Do you want to carry on until 6 o'clock, or do you want to adjourn for 10 minutes and come back?

Mr. Horner: Who are we going to hear when we come back?

The Chairman: We will then have the Farm Credit Corporation.

Mr. Gleave: If we are going to adjourn I suggest 15 minutes, at least to have time for a cup of coffee.

Mr. Horner: I suggest we carry on right now for half an hour and then quit until this evening.

Mr. Southam: I think we should hear them right away and then, as Mr. Horner suggests, adjourn.

The Chairman: I think in fairness to those who have been tied to their chairs for three hours we should have a five minute recess and come back quickly.

Mr. Peters: Ten minutes.

The Chairman: All right; a ten minute recess.

• 1710

The Chairman: Gentlemen, if we could come to order. Someone close the door,

please. We would like to consider the Estimates of the Farm Credit Corporation, Item 70.

Department of Agriculture
D—FARM CREDIT CORPORATION

- 70 Estimated amount required to provide for the operating loss of the Farm Credit Corporation for the fiscal year ending March 31, 1969 6,000,000

The Chairman: I am pleased at this time to have the opportunity of welcoming the Chairman, Mr. Owen, and I am also pleased, as you are, that he is accompanied by a number of his officials, and I would be happy to introduce Mr. Owen and to ask him to introduce the members of his party. Mr. Owen.

Mr. M. G. Owen (Chairman, Farm Credit Corporation): Mr. Chairman, on my immediate right is Mr. Carr, Credit Policy Advisor for the Corporation. Seated next at the table here is Mr. Ozard, Vice-Chairman of the Corporation, and to his right, Mr. McIntosh, Comptroller of the Corporation. In the rear here is Mr. Jarvis, Assistant Deputy Minister of Agriculture, who is also a member of the Board of Directors of the Corporation. On his right is Mr. Harrison, Supervisor of Farm Services for the Corporation, and immediately on his right, Mr. Sivyver, Executive Assistant to the Chairman of the Corporation.

The Chairman: Thank you, Mr. Owen. I am sure the Committee would welcome an opening statement if it is your pleasure to make one at this time.

Mr. Owen: Thank you, Mr. Chairman. I have a few brief remarks. This is the first appearance of the Corporation before the Standing Committee on Agriculture since the Corporation was formed on October 5, 1959. Since that time we have made about 75,000 loans for a total of \$1.2 billion, and for that reason I welcome the opportunity to appear before the Committee to discuss our operations.

Our legislation provides a framework within which we operate, but of necessity for a program of this nature it provides a considerable amount of flexibility and room for the application of judgment. It is in this application of judgment that we would welcome the comments, suggestions and criticisms that members of the Committee may wish to make.

• 1715

I would like to mention some of the ways in which we go about maintaining the closest possible contact with the farmers whom we serve. First, of course, we have regular contact with other agricultural agencies, federal, provincial and university, and with farmers' organizations. We then have a fairly massive contact between farmers and the members of our staff. We interview in one way or another anywhere from 12 to 15 thousand farmers a year, and go into detail with them with respect to their financial progress, farm operations, their financial circumstances, and the kinds of problem they are encountering. This information sifts through the organization and is used as a basis for ideas and suggestions with respect to our policies.

We have also an advisory committee composed of 10 persons who are either farmers or representatives of farmers' organizations from various provinces across the country. They meet about once a year to discuss policy matters. In addition to this, in each province where the member of the committee is living, he attends a meeting of our own staff for that province. Each year during the winter months we take three or four days when we bring our staff from a province together to discuss the problems we have encountered during the past year, the policies that we are using, and the changes they think ought to be made. We invite members of the advisory committee to sit in on these discussions in order to become more familiar with our problems and our program, to be in a better position to offer us advice at a later date.

We have another method of contact which is, we think, unique for a lending agency. We have established appeal boards across the country with a chairman in each province and members located in various farming areas throughout the province, so that if a farmer is not satisfied with our decision with respect to his application for a loan, he may then appeal to that appeal board composed of active, progressive and successful farmers, and that appeal board may then recommend to the Corporation whether or not we should change our decision with respect to that application. We have found this a very useful contact with the farming public.

The objective of our program, as I am sure you are all aware, is to provide the long-term capital that farmers need in order that Canadian agriculture can be organized into viable units in the hands of competent farmers, and so that they can expect to receive

reasonable returns for their investment and a reasonable standard of living in return for their work and their management skills.

Our role in the total farm credit picture is very significant. If we speak in terms of all kinds of credit which farmers use, during 1967 they used a little more than \$2 billion. That is the amount they borrowed during the year. This includes operating capital, short-term capital, intermediate and long-term. This we provide at about 12 per cent. However, when you come to the long-term credit field, that is, the mortgage type of credit, our estimates would indicate that we probably provided about 60 per cent of the kind of capital that farmers need to organize their farm business, their farm plant. That is distinct from the capital they use for actual operations. So that our role becomes fairly significant in the field.

• 1720

Now to come down specifically to the item in the budget, it is an amount of \$6 million to cover our operating loss. I would like to make it clear that this is not a loss on loans. This is purely a loss on operating. The reason for this is that when the Act was passed in 1959, it established a lending rate of 5 per cent. It established ceilings of \$20,000 for standard mortgage loans and \$27,500 for a supervised loan. In 1964 the amounts of loans were doubled. Any amount in excess of the original amount was to be at a rate which would be an economic rate to the Corporation. It would enable us to pay our cost on borrowed funds and the proportionate cost of operations that related to that additional money.

Over the years the cost of borrowing money to the Corporation has increased while the rate at which we lend has been relatively stable. Our operating costs have increased as we have enlarged our organization very substantially over the years to cope with the very great expansion in our lending activities. I would like to point out that the operating costs as a percentage of the capital which we have loaned, have been declining. They have been going up in terms of total dollars, but as a percentage of the money we are dealing with, they have been declining.

However, there have been losses. The first loss in the first full year of operation, 1960-61, was a little over \$200,000, and for the first three years of operation we had losses which we recovered from the reserve which had

built up and which we had taken over from the Canadian Farm Loan Board.

Since the year 1963-64, our losses have been covered first by a supplementary estimate of the Department of Agriculture towards the end of the fiscal year, and in the past two years and the third year coming up via an item in the main estimates. The actual loss for 1966-67 was \$2.6 million; in 1967-68 about \$3.8 million; and this year \$6 million. Our reserves stand at only \$1.5 million and this is the item from which we recover our losses on capital, our actual losses on loans. These have run from about \$10,000 in 1960-61, up to the last fiscal year just a trifle over \$40,000. This is where we have actually taken a loss on a loan that we have made.

That is a summary of the nature and the reason for this particular item in the Estimates.

The Chairman: Thank you, Mr. Owen. Gentlemen, I have on my list Mr. Lind, Mr. Danforth, Mr. Southam and Mr. Korchinski. If there are others, I will be happy to place your names on the list. I now recognize Mr. Lind.

Mr. Lind: Mr. Owen, you dealt with the item of your net losses in loans. I am looking at page 12 of your annual report. I notice you have an inventory there on hand of 56 agreements for sale. Is that 56 farms? Did you take the whole farm back?

Mr. Owen: That is 56 farms where over the past number of years—some of them dating back a great number of years—we have recovered the farm and have resold it. But rather than giving the purchaser a title with a mortgage, we have sold it to him on an agreement for sale.

Mr. Lind: Thank you, sir.

Mr. Owen: This is an accumulation of sales over a number of years.

Mr. Lind: That does not seem to be a very big loss for the amount of money that you loaned. Do you not think that you are actually screening these applicants fairly hard? Are you getting down to help the common farmer out? Or are you just helping the top level farmer?

Mr. Owen: I could get down to the sizes. I think in the first instance, however, I would like to mention that we are lending on the strength of first mortgages against farm land.

During the ten years that we have been operating, farm land generally has been increasing in value, and therefore when a farmer does find himself in difficulty he is likely to sell the farm himself for more than the amount he owes us. Therefore we do not incur a loss since the maximum loan we can make is 75 per cent of the agricultural value of the property. You can appreciate that in a period of rising land prices, losses are very unlikely to occur. If land prices were going down, our picture on losses would be quite different.

• 1725

Mr. Lind: My chief concern here is with constituents that come to us and claim that they cannot get a loan from the Farm Credit Corporation and that is why I am interested in this very low figure of re-claims and losses. I am wondering whether we are a little too hard on the credit angle of it, a little too stiff?

Mr. Owen: I think there are probably about three answers to that. First, I am sure that you would hear from those who do not receive loans and you can appreciate that in any lending activity there will be some applicants who cannot be accommodated. I suggest that you probably seldom ever hear from those many that we do lend to and I think if you look at page 6 of the annual report, the indication of the growth of our lending operations, you will see the tremendous increase.

The second point I think I should make in this respect is that we must realize that when we lend on a first mortgage and lose money, before we lose anything the farmer has lost his farm and everything he has, because if we foreclose then he has lost everything he has. Now, very often there are situations where we might be able to lend and be relatively sure that by pushing him off the farm we could recover our funds, but if the indications are that he just would not be able to pay us back and if the end result to him would be the loss of his property, I do not think we would really be doing him a favour.

Now, if there are instances as I have said where our decision—and, mind you, these are all value judgments, judgment decisions—seems unreasonable, then that man has the opportunity now to appeal before three farmers and to get their recommendations.

Mr. Lind: Well, that leads to my next question. I see your appeal board fees and expenses on page 20 are up considerably for the year 1968 over the year 1967. Is it a protection for your agents in these areas that rather than take a chance, they throw it over to the appeal Board?

Mr. Owen: No, it is quite the contrary. We make our decision with respect to whether or not we believe we can make a loan based on the man's circumstances. It is then up to him, if he wishes to appear, to ask for an appearance before that appeal board. He can make that appearance without cost to him, other than the cost of his time and any travel involved in going to the meetings, and present his case.

These appeal boards were started only in the fiscal year 1965-66. There were some increased costs of operations last year, although I do not believe there were significantly more appeals during the year. There is not any intent by us to push the responsibility to the appeal board. It is purely to give the farmer an opportunity to sit down and talk with three other farmers and explain his case so that we can determine whether or not we should, in fact, be making a loan.

Mr. Lind: There is not any instruction by the executive, then, to tighten up the amount of leeway the agents can give to provide loans for these people, because in a period of dear money as we have had in the last year or two it is apparent that these border-line cases are those that need help.

If they can get this money at the old farm credit rate which was in effect until a month ago, it is still a lot better than what a lot of them have to pay. They have a much better chance of success than if they are forced out into the open market where they are going to be paying 3 or 4 per cent more, and often 5 per cent more.

• 1730

Mr. Owen: I appreciate this. I would only say that we do our best in the light of the specific limitation set upon us within the Act and in the exercise of judgment to accommodate those farmers where we have reason to believe that they can succeed and repay the loan.

I must mention that in the period of dear money, as you refer to it, or in the period of short supply or higher rates from other len-

ders, we have had to issue instructions during the past year to insure ourselves against such things as borrowing purely to repay other lenders, which is not really adding anything to the productivity of the farm unit but purely replacing one lender by another; some instructions with respect to the maximum size of farm that we might support to ensure that the funds we have will go to assist those who really would suffer if they could not expand, rather than to those who might not suffer so much.

This kind of instruction has been issued during a period when we must ensure that we conserve our funds for those who need them most. These kinds of instructions would be issued, but those are all. As a matter of fact, speaking of our executive officers or our senior people responsible for lending, I think you would find that they would be as often involved in encouraging local representatives to take another look at a situation before they said no, rather than the other way about. Mind you, this is just a matter of balance.

Mr. Lind: Do you have criteria for these agents such as whether they have always issued good loans or whether they have ever had trouble with loans? Is this one criterion used similar to what is used in some other types of industry?

Mr. Owen: No, we do not. We do have a measure of the time used to process loans and various measures of this nature, and we move our men from time to time. We do not go back to a man because a particular loan that he made was, in his view and in the view of his supervisor, satisfactory at that time and later turned out to be wrong.

You must realize, however, that in dealing with our local people the thing we are most concerned about, the thing we would most go back about, is to ensure that we would get a true picture. This is the thing we are most anxious about.

Mr. Lind: I have one parting shot. I do not want to name any specific instance, but I have heard of cases where people have obtained farm credit loans on their farms and invested them in bonds at 7 per cent and had the difference.

Mr. Owen: I suggest that before you accept that as valid you make a very thorough investigation. To begin with, he would be liable to serious difficulty if he did so. Second,

we do not disburse the money directly into the hands of the farmer. It goes for various specific purposes; to buy land, to improve land, to repay other lenders in some instances, and we control the funds to see that they go for those purposes.

Now, I concede that there could be a situation where a father decides to sell the farm to his son and the son borrows money from us to purchase that farm, and the father then invests the money but, after all, that is a legitimate transaction, father to son, and the father's disposition of the funds is his own responsibility.

Mr. Lind: Do they have to reveal their total net assets to you when they do this? They could have another farm.

Mr. Owen: They have to give the total assets and liabilities. If you are aware of any such circumstance I would be most happy to learn about it to investigate it.

● 1735

Mr. Lind: Thank you, very much.

The Chairman: I will recognize Mr. Danforth, Kent-Essex.

Mr. Danforth: Thank you, Mr. Chairman. Before I pose my questions to Mr. Owen, I would like to go on record as saying that I think he and his Department are to be complimented on the fact that they have had jurisdiction over this legislation for nine years and it is only now that they are coming before the Standing Committee, and this on a routine basis.

Certainly the administration of this particular Act has proven a real godsend to the farmers of this country. I should also like to add in passing that the members very much appreciate the fact that when some applications are sent down and a reason is requested by members of Parliament, I personally have found that the answers have come back and, although not revealing any confidence, have given very logical reasons why these loans could not be entertained. I wish to say that this action and courtesy by the Department are very much appreciated.

Mr. Owen: Thank you, Mr. Danforth.

Mr. Danforth: My question, Mr. Owen, is that very often we run into difficulties when a transaction is almost completed but a final acquiescence by the Department is withheld

due to the fact that an assessor is unable, because of frozen land or some other problem, to make what is considered an adequate assessment of the land itself.

Is any consideration given or can a method be devised so that these transactions can continue in an orderly manner, because in some areas of Canada it is often quite necessary for the success of a crop for an owner to have early possession in the spring. I have found that because of a backlog of work it is almost impossible for the Department to process all of these once the weather breaks. Have any steps been taken to eliminate this bottleneck?

Mr. Owen: This has been a recurring problem for us for many years. We have taken many steps to try to overcome it. The problem really relates to the fact that if we are going to administer credit in a productive way to ensure that it is doing the best for agriculture, we have to consider the managerial ability of the farmer as a fairly major factor in our decision.

When the land is covered with snow to the extent that you cannot see it you have very little opportunity to know how well he manages his farm. Now, we do have aerial photographs of all of the country in the hands of our local man. He has an aerial photograph of each farm; he has soil maps; in some areas he has yield information, and this sort of thing, but none of these can answer the question of how the farmer is using that piece of land which is basic to his enterprise.

Now, we do make appraisals in some areas of the country pretty well all year long. We do make appraisals for some kinds of enterprises where the land is not important, such as a greenhouse or hogs or poultry or this sort of thing where approval is not based on land itself. In other cases we conscientiously feel that we cannot make a proper assessment, so we must wait until the snow goes.

However, as our supervision workload has built up we have increased our staff and we have done a lot of work in arranging so that as soon as the season opens in the spring we have considerably more staff now to get to work on initial applications and we are now able to catch up very much earlier with the backlog of applications that have built up during the winter. In our early days we were lucky if we were caught up before we were snowed in again. We actually were into late August before we would be caught up with the spring rush. This year we caught up to all

the current applications early in June, so we have made a great deal of improvement in this direction. I admit that it is still a problem for those farmers who do not decide to buy land before the snow comes. If they come in before the snow comes and our man realizes that the appraisal season will end shortly, he will go out and examine the land right away so we can go along with it.

• 1740

Mr. Danforth: Thank you, Mr. Owen. I have a companion question to my last one. Although I have never been too frequent a visitor to the local offices I realize that the appraising of land and the handling this type of loan is in itself a very specialized business. Is it possible if the secretarial staff was increased that it would make the personnel available for more of this specialized type of work, that it would free them for more field work as contrasted to office work?

Mr. Owen: This is again a possibility. We have about 127 offices across the country and we do not have secretarial or stenographic help in all of these offices. The addition of this number of staff would be quite a cost item, and this item would be \$7 million rather than \$6 million. However, we have used other methods. At first we felt that this was a particular man's job, he had particular specialized training in it, and therefore, through every means possible, we reduced to the lowest possible extent the amount of clerical work he would have to do. For example, he would not be involved, with respect to our current borrowers, in following up on their taxes, insurance, collections, or anything else. We are shortening our reporting forms so that as much as possible the time required to make them out will be shortened up as well. We are trying to keep this part of his work down. If we put a secretary in each office we find there is a tendency for paper work to increase, and we find these men are spending more and more time telling their secretaries what to do than if they just gave them a little bit to do and let them get it done by themselves.

I appreciate that this is not the complete answer, but it is a question of choosing between whether we should put an additional secretary into each of these 127 offices or try to keep the paper work away from them. I do not like to see these people doing paper work when they would be so much more valuable if they were doing the other work.

Mr. Danforth: This is my concern. One further short question, Mr. Chairman, and then I will be prepared to pass.

Mr. Peters: Members of Parliament as well.

Mr. Danforth: Mr. Owen, a very few years ago there was a great deal of concern by Members of Parliament, over the fact that in certain central points a tremendous backlog seemed to be building up. I found that the wait in the Toronto Office was indeed of long duration. However, lately I have found that this is not so much a factor, the clearance is much more rapid and much more satisfactory. Can you give us any indication of what steps were taken to bring about this change, which was a very agreeable one as far as the applicants were concerned.

Mr. Owen: I think I could refer to two steps. In our initial year we were in a very difficult situation and we appointed a new manager. We then appointed some additional people to assist him. We also gradually got more staff because in the early years we were overloaded.

One of the other big difficulties was the time it took to do the legal work. We had a legal agent in each county of Ontario and solicitors in our office in Toronto. One of the things we did was to remove all of the solicitors from our office in Toronto and depend entirely on the local agent. This has had a very significant effect in reducing the time factor.

Mr. Danforth: Thank you, sir. I pass.

Mr. Peters: They changed the political appointments from the Conservatives to the Liberals.

Mr. Danforth: You do not have to tell the truth all the time!

Mr. Owen: I might mention that the lawyers to whom I referred who were in our office were actually employees of the corporation. They were not appointments in any other way.

Mr. Danforth: We are aware of that!

• 1745

The Chairman: Mr. Southam?

Mr. Southam: Thank you, Mr. Chairman. I want to associate myself with Mr. Danforth in complimenting Mr. Owen and the members of his corporation on the administration of this

important board.—As Mr. Owen said, it is a matter of interest to note that it has been nine years since they have appeared before a committee and this, of course, speaks for itself.

Of course, I think this revolves around the fact that we have an administrative body within the association.

For instance, I am looking at the report of your district and field officers, your appeal board, and so on, which makes it possible that you can solve a lot of your problems within the day-to-day routine of administering the Act.

I was interested in the appeal board section of this legislation, and I have a question or two on statistics. I would like to ask how many appeals by loan applicants have been made to your board since its conception, and how many appeals have been granted. This would indicate something to me about the efficiency of the inner workings of the Board.

Mr. Owen: The appeal board first went into operation in October of 1965. Since that time they have heard 225 appeals. In 173 of those cases they confirmed to the corporation that our decision was correct and we should not make the loans. In 45 of the cases—and I do not have this figure broken down—there were some instances where they recommended that we should make a loan, which we then did, and in other instances they recommended an alternative amount or an alternative arrangement of using the loan. In many of these instances we made specific suggestions to the farmer, which he did not feel he would accept from us as public servants. However, when he appeared before a board of three farmers and discussed the situation with them they were able to convince him that this was in his best interests and he accepted it. So, there were 45 who were successful in getting either the loan they applied for or an alternative one. The balance of them are pending.

Mr. Southam: Coming back to a question raised by Mr. Danforth with regard to the appraisal of land, in arriving at your yardstick as far as land values are concerned how do you arrive at this criteria? Is it based on provincial land value; is it over-all, dominion-wide, or is it more or less left to the discretion of the field officers? What yardstick is used in this connection? Sometimes you find a difference of opinion in this respect.

Mr. Owen: Of course, value of land is always an opinion. There are even differences between vendors and purchasers. I would say that the only person who can estimate the value of a farm is the man who goes out and looks at it, nobody else. However, in order to ensure that there is relativity in treatment of farmers and relativity in the application of judgment, we do certain things, and this may take me a few minutes to explain. Agricultural value is the value which we believe a farmer should pay for his property and on which he can expect to get a reasonable return on his investment. In other words, we do not base our values on what it might change hands for at a particular time but on what kind of income he might expect to receive from the farm. I appreciate that if we did this in the case of every farm it would burden us with a complete analysis of income and expenses and details of each farm, and this is a very, very long job.

What we do is establish what we call benchmark farms. We take the kind of farm that is most common in that area and make a thorough study of it. We may spend a week or ten days or more in doing this. We even keep records of income and expenses for future years on that farm and on this basis we establish a sort of a benchmark or a point from which the local appraiser can make comparisons when he is looking at other farms. The value is established by the man who visits the farm but he has this well established benchmark as a basis against which to measure this.

Mr. Southam: Would this be one of the areas where you would find that possibly most of your appeals would revolve around a difference of opinion on land values, or what would be the areas in which you would find the most difficulties? I am thinking that perhaps we could help you with some suggestions to help you.

• 1750

Mr. Owen: I am afraid I have not analyzed this in any great detail, but I am fairly certain that the largest number of appeals are from those people whose existing debts are more than we believe that farm can carry, or where we believe the managerial ability of the farmer is such that he cannot make a living from the farm and pay back the loan he wishes to get from us and, in many cases, even the loans he has already received from someone else. I think these were the two key areas where appeals were made.

Mr. Southam: I was interested in Mr. Lind's line of questioning that commenced our deliberations, which was with respect to possibly a number of people in the small farm category that perhaps have applied, but after getting advice from your people, the field officers, and so on, they felt they could not qualify, and yet with the trend that we have in this agrarian revolution that is taking place towards a larger family farm and more economic unit I would like to tie the two together. We hear so much about family farms and economic units, but I think they are still one and the same thing, and we are only trying to develop them into a situation where they are viable, and I was interested in this particular area. As I said earlier, though, I think you people are doing your very best. I know that in my particular riding I am happy to say that I have very few complaints about the administration of the Act.

I was wondering if, due to the backlog of applications that must have piled up because of the shortage of funds over the last year, you are getting along pretty well in processing these applications, or is there a very big backlog?

Mr. Owen: As a matter of fact, I think the backlog is less than it has been at any time since the corporation started. You can appreciate the fact that legislation was before the House to amend the interest rates, and as all of our staff were born or brought up on a farm and with very close associations with it I can assure you they made sure that as many of these applications as possible were processed and the loans approved before the legislation was amended. So, our backlog is almost negligible.

Mr. Southam: Could the number of applications not be related to the increase in interest rates now, or would this not be so?

Mr. Owen: I think the fact is that our men made sure they processed them just as quickly as they could. In the middle of November I think our figures indicated that on the average for each member of our staff there was less than one application pending across the country.

Mr. Southam: That is all I have. Thank you, Mr. Chairman.

The Chairman: Thank you, Mr. Southam. I recognize Mr. Korchinski (Mackenzie).

Mr. Korchinski: Mr. Chairman, I will start off with this question. In regard to a benchmark farm, is this one of the farms that probably has a loan on it and you will have the information, or do you go to some farmer in a particular area and say, "Would you allow us to look into your books?" and so on?

Mr. Owen: It might be either one. We might use a particular borrower who is already keeping accounts for us on our electronic farm accounting system. If in that area we do not feel we have a farm that is really typical of the kind we are dealing with most of the time and where we have this record, we may go to another farm. I would suspect that most of the benchmarks are farms where the farmer already has a loan from us.

Mr. Korchinski: How wide apart are these benchmarks in the West?

Mr. Owen: I would suspect from Saskatchewan, to give you an example, we would have about 50 or 60 of what we call key benchmarks, and then about 130 or more of what we call satellites. It is the key ones that we make the biggest study of and then we look at the satellites, which vary either in size or kind of enterprise or location.

Mr. Korchinski: I want to go into another area. Is there any particular area where the backlog is greater? That is to say, in Western Canada, Eastern Canada or the Maritimes?

Mr. Owen: Are you referring to a backlog of applications?

Mr. Korchinski: A backlog of applications.

Mr. Owen: Waiting to be handled? No. As a matter of fact, there are very few of them right across the country. As of November 15 we had 29 in British Columbia, 27 in Alberta, 59 in Saskatchewan, 11 in Manitoba, 55 in Ontario, 66 in Quebec and 6 in the Atlantic provinces.

Mr. Korchinski: And that is the amount—

Mr. Owen: By the way, that is the day on which the interest rate changed.

• 1755

Mr. Korchinski: Yes. That is the backlog which will carry through until the next year, or do you have some further applications which you—

Mr. Owen: Oh, we will receive further applications, and wherever we can we will continue to make appraisals.

Mr. Peters: I have a supplementary question. Has there been any drop because of the increase in the interest rate?

Mr. Owen: The rate changed so recently that—we really do not have any information. I heard of a couple who came in and said, "Why did we not get our loan a week ago? I am sorry I did not apply earlier." However, I have no real indication of any as yet in order to indicate any change.

Mr. Korchinski: Would you be prepared to make any kind of a prediction as to what is going to happen? Do you think the demand will taper off as a result of that?

Mr. Owen: I think fewer people will borrow at 7½ per cent than at 5 per cent. I suggest to you that in some of these cases it will be because they can get their financing adequately elsewhere. For example, a father selling to his son may decide to take back a mortgage and finance it himself when he would not have done so if the son could borrow at 5 per cent, this sort of thing. There will be some.

If you could project for me what crops, markets and prices are going to be I can give you better projections of demand. I think these are far, far more significant, the feelings of optimism or pessimism in the minds of the farmers at any particular time. Our indications are that generally speaking—now, this is not for all farmers actually—they are concerned about being able to get the money to expand their unit more than they are about the specific interest rate that they have to pay to get it.

Mr. Korchinski: If somebody comes in with a straight application for a loan of \$15,000, can he get it on the Farm Improvement Loans Act under present conditions?

Mr. Owen: Of course, we did not lend very much on farm machinery anyway. The whole thing will depend on the extent to which lenders will come into to lend the land on 10 to 15 years at 7.75 per cent. This will make a difference in our future demand.

Mr. Korchinski: I wonder whether you could give me a rough idea of the function of the advisory board that meets every year and to what extent they make recommendations to you.

Mr. Owen: The functions in accordance with the Act are to advise the Corporation on

such questions as may arise under the Act as may be referred to it by the Minister, or by the Corporation. In actual practice, we give them a fairly free-wheeling opportunity. We will present problems to them. We would present problems to them with respect to changes that may be advisable in the legislation or the regulations or the policy. For example, one key area where they were helpful to us was in our problem of whether we should or should not lend to integrated poultry operations; at what stage is a man integrated and at what stage is he not integrated, and they were very helpful in arriving at a reasonable basis by which we could distinguish between where we were lending really to help the processor who was having broilers raised, for example, and where we were lending to help a farmer, this is one thing and there are many major policy items. We do not get them involved in individual loan decisions, but matters of general policy.

Mr. Korchinski: In other words, this is more or less a policy decision which is handled then by the Minister himself?

Mr. Owen: Some policy recommendations are within the scope of the Corporation's operation. I might mention that another valuable contribution is when the individual members attend our staff meetings to participate with us in our discussion of the problems. This is where they have been very valuable.

Mr. Peters: It is six o'clock, Mr. Chairman.

Mr. Korchinski: I have a few more questions here but...

The Chairman: I think we should complete...

Mr. Korchinski: Have you any prediction of the probable trends in land values in the future?

Mr. Owen: Are you referring to the Prairies now, or Canada as a whole?

• 1800

Mr. Korchinski: Well, all right, take the Prairies.

Mr. Owen: If you take the long view, I suggest that in the long term land values are not likely to come down. There is likely to be an increase in land prices equivalent to the decrease in the value of the dollar and possibly more, but here I am crystal gazing so far as the future of agriculture is concerned.

In the short view, I think we have seen during the past few months a decrease in the value of land on the Prairies and I think the extent of the continuation of this will really depend on what happens with respect to crops and markets.

Mr. Korchinski: Is it absolutely necessary to take in all the titles when that person makes application for loan? If he has, say a loan of \$15,000, is it absolutely necessary to tie up all his property for a loan of that size?

Mr. Owens: No, it is not. As a matter of fact, we do not.

Mr. Korchinski: You do allow him a certain amount of leeway?

Mr. Owens: Yes; I would like to clear this one point. We base the value, as I indicated earlier, on the agricultural productive value which, right at the moment in the Prairies, happens to be considerably less than the actual market value, because the market value is determined by farmers who wish to buy a quarter or a half to add to their farms, which is quite a different thing.

Our lending value is somewhat less. We must have security to the extent that our loan does not exceed 75 per cent of the value of the security which we mortgage and this is not its market value but its productive value.

Mr. Korchinski: Have you refused applications because the holdings of the operator are so large that you felt that he could perhaps finance his operation somewhere else; that is, not go through your Board?

Mr. Owen: Yes, a considerable number. We have refused them on the basis that either they can finance it elsewhere or because we do not feel we should be using public funds to assist them in expanding further.

Mr. Korchinski: Do you think this policy will change as a result of the recent amendments?

Mr. Owen: I would be speculating here. I would say, probably not. I think we have to look at this aside from the question of whether there was a subsidy. There is a question of the total amount of public funds we may be using and the thought that public funds really should be used to help those who need it most.

Second, there is only so much land and if we assist very large operators to go out on the market and outbid the smaller operators

because they can offer all kinds of security, we would make it much more difficult for us to assist those fellows who really need to get land to get their farms bigger, so this is another reason why I would suggest this policy probably will not change.

Mr. Korchinski: I have two more short questions put I am prepared to wait until later if you wish.

Mr. Owen: I will try to shorten my answers if you wish.

Mr. Korchinski: Concerning refinancing, do you turn down all applications for refinancing? It may be just a matter of life and death for that farmer; he may be under pressure from where he got the loan before and this may be just his only way out.

Mr. Owen: No, we do not turn them all down but if he is asking for refinancing and, as a matter of fact, the reason he needs to refinance is because he is not able to produce enough income to meet his obligations, we then seriously question whether we should. In other instances where the only purpose of borrowing this money is to pay off another lender because he may save 1 or 2 per cent interest, we would hesitate to do this when we are in short supply of funds.

Mr. Korchinski: I have just one more question concerning assessment. Having assessed a parcel of land, do you reassess it and, concerning aerial photographs, are these up-dated occasionally?

Mr. Owen: Aerial photographs are taken in a mass survey and we get the latest series as it comes out.

Mr. Korchinski: Do you reassess property? If you had assessed some land five years ago would you reassess it now if an application were made on it?

Mr. Owen: Absolutely.

Mr. Korchinski: In all cases you do it all over again?

Mr. Owen: That is right, if it is more than two years since the last time we appraised it.

• 1805

Mr. Korchinski: That is all. Thank you.

The Chairman: Thank you, Mr. Korchinsky. The meeting will adjourn until eight o'clock sharp.

EVENING SITTING

• 2006

The Chairman: I think we could begin our meeting. I recognize Mr. Douglas (Assiniboia).

Mr. Douglas: Mr. Chairman, I want to add a few words of commendation for the Farm Credit Corporation. They have done a wonderful job of work in the last number of years that they have been operating and I want to particularly thank Mr. Owen. I have had occasion to talk to him on the telephone once or twice and he was always very cooperative and willing to answer questions. In fact, I am going to repeat one of the questions that I asked him on the telephone. I hope he will forgive me.

I think the answers deserve of being put on the record. As to questions, I have a few here and they are somewhat unrelated. I have put them down as they occurred to me during some of his remarks at the beginning and some of the later questions.

First of all Mr. Owen mentioned the objective was to create viable farm units through the agency of the Farm Credit Corporation. Mr. Owen, is there not a secondary objective which maybe much the same, but which I think is very important and that is the passing on of farm property from one generation to the next. This might not involve increasing the size of the unit at all, but just passing it on.

Mr. Owen: Yes. This, of course, is another objective or use of long term credit. You will recall I said that the idea of financial assistance is to create viable units and place them in the hands of competent operators. It is a natural process in that it is passed from generation to generation to maintain this management and certainly there is a transfer. I must say, however, that, by and large, young farmers, particularly on the Prairies are getting into agriculture by parts rather than buying complete farm units initially.

Mr. Douglas: I was interested in these appeal boards and part of the question I had in mind has already been answered in answer to Mr. Southam. I think the figures you gave were that there had been about 225 appeals over the years and that approximately 45 of them had been allowed, at least partially. However, just to go a little bit farther on that, how many loans or applications have been turned down?

Mr. Owen: We do have figures on that. I must preface this remark by explaining precisely what an application is. Years ago a man made an application by mail and that was an application in the literal sense of it. Since the operations of the Corporation a man wishes to make an application gets in touch with our man in the office. Very often people who come for an interview are people whose principal occupation is something else; they are not farmers and you have to explain to them then that they are not eligible. So we do not just take an application. We explain that they are not eligible.

• 2010

There are others who think that the Farm Credit Corporation since it does not have the name "Federal" or "Canadian" in it is another type of finance agency such as Household Finance Corporation or some other corporation, and others who think that our motive or operation is to provide short or intermediate term credit. Of course, there is a number of these people and we explain what we can do and what we cannot do and try to guide them to those people who can meet their needs. There are others who for various obvious reasons would not be able to get a loan and these are discussed and we say, "Well, we do not think you can get a loan." If it is obvious that they cannot get loans we tell them so and suggest that they should not apply. Some of them say, "Well, we would like to apply anyway." Then they have that perfect right to apply if they wish. If there is doubt, of course, we do take an application and make an impression.

This is a preface to the question and I am talking about applications where they have specifically completed an application and paid the initial \$10 application fee. In the 1967-68 fiscal year we received 13,699 applications and approved 11,954 loans. Out of those who did not get loans there were 909 who either withdrew their applications or were rejected before we actually appraised the farms. 1,443 either withdrew their applications or were rejected afterwards. I am sorry I cannot tell you how many withdrew and how many we rejected. On occasion they find that, for example, the conditions of the loan are such that they cannot go ahead with it, or the vendor who was going to sell them land has changed his mind, and other things. So, there are a number of withdrawals in those rejections.

Mr. Douglas: Are the people who are rejected made aware of the fact that there is an appeal?

Mr. Owen: Those who oppose our rejection. We do not say to every man we reject "This is really only tentative, and you can appeal". However if they feel strongly about it, we tell them, when they question our decision "You have a perfect right to appeal". Also, as a result of the amendments to our legislation, we are reprinting the brochure we give to each farmer outlining the provisions of our legislation and in that we are including a paragraph indicating that they have a right to appeal our decision.

Mr. Douglas: You made a comment in answer to another question that you felt that land prices were going down possibly on the Prairies, had receded a little bit from the peak they reached maybe a year ago. Has the number of applicants for Farm Credit Corporation loans decreased in the last year in Saskatchewan? Could you tell us the number of applications you had in this past year and the previous year—just for Saskatchewan?

Mr. Owen: Yes, I can give you the figures. Actually last year up until November 15, to make these comparable, we had received 3,718 applications, and this year, as of the same date, 2,865 applications. Now, this is not only Saskatchewan; there has been a decrease in British Columbia, Alberta, Saskatchewan, Manitoba and Ontario.

Mr. Douglas: Are the figures readily available? Could we have them for all provinces? You could add them later.

Mr. Owen: I have them right here. They are not in the annual report—

Mr. Douglas: No.

• 2015

Mr. Owen: I have them here. I can give them for each province if you wish. This is the total applications for appraisal up until November 15 and includes those we received during last winter that were building up for the spring. I will give this year's first and last year's second: British Columbia, 376 versus 541 last year; Alberta, 2,105 versus 2,850 last year; Saskatchewan, 2,865 versus 3,718 last year; Manitoba, 984 versus 1,261 last year; Ontario, 1,644 versus 2,103 last year; Quebec, 1,479 versus 1,685 last year; the four Atlantic Provinces grouped together, 296 versus 328 last year.

Mr. Douglas: There is a fairly consistent reduction all across Canada, then.

Mr. Owen: Yes, and certainly with respect to the amount of money asked for. In fact, in the Atlantic Provinces there were thirty fewer applications and the amount lent is up 8 per cent. In Quebec it is down 1 per cent. The rest of them range from 17 to 29 per cent decrease.

Mr. Douglas: Have you the total for all provinces there?

Mr. Owen: This year 9,744 applications as against 12,486 last year, and if you wish this in dollars, excluding those that are still on hand as some of those applications have still not been processed, at November 15 we had approved \$188,657,000 this year against \$232,438,000 last year.

Mr. Douglas: Do you find that the present maximum level of loan is large enough to take care of the demand?

Mr. Owen: The maximum prior to the amendment of the act, generally speaking, was about maximum for the individual farmer excepting those, of course, who are on a larger size to whom we do not lend. It was not, however, large enough where two farmers were working in partnership. We saw situations where two farmers working in partnership, only being eligible for \$40,000, would, in effect, in order to get the capital they needed, dissolve their partnership so that they could each get a loan because our limit was tied so much to the farm rather than so much to the farmer.

Mr. Douglas: The new amendments to the act will allow each one of those to get the maximum?

Mr. Owen: It will allow the two of them together as a joint farming enterprise to get up to \$80,000.

Mr. Douglas: And if there were three of them, they could get \$100,000?

Mr. Owen: One hundred thousand dollars.

Mr. Douglas: You mentioned something from time to time about loans being restricted to various categories of farmers, depending upon their net worth and so on and so forth. Has there been any changes in those regulations recently?

Mr. Owen: No, excepting, as I indicated this afternoon, because of the pressures on our capital which is billed at a much lower rate than elsewhere, and because of the short-

age of capital generally, we have been somewhat more reluctant to lend to the larger farmers this year. In other words, we have imposed a somewhat lower ceiling than we would have imposed last year for example.

Mr. Douglas: My feeling in this matter, for what it is worth, is that the restrictions should be fairly severe on the kinds of farmers who should be able to get this money. It should be restricted to those mostly in need. By giving it the wider distribution it has forced the price of land up and this makes it that much tougher for the smaller fellow and the younger fellow to get going.

Mr. Owen: I tend to agree with you, sir, but I would mention that the size of farms that we are lending to on the average are not significantly different than the average size of farms in the provinces.

• 2020

Mr. Douglas: Well, that is fine. I hope the trend is not making it easier for the big fellows to get it.

Mr. Owen: We are a little tougher this year.

Mr. Douglas: Good enough. There is a bit of a problem, I understand, with farmers who may have a loan already under the old rates of the Farm Credit Corporation, the old rate of five per cent, and who may still owe some on that and want to make a new loan. What happens then, if they are approved for another loan?

Mr. Owen: I would not want to go into the mathematical calculations involved in this, but if a man has, say, \$15,000 payable at so much per year for 15 years at five per cent and he wishes to borrow another \$25,000 for 29 years at 7½ per cent, we would make one new loan for the total amount. It would pay off his old loan: it would include the new funds; it would be put over the 29 years but the 7½ per cent rate would be reduced to give him the full value of the lower interest rate that he has on that \$15,000.

Mr. Douglas: Thank you very much, Mr. Owen. Mr. Chairman, those are my questions.

The Chairman: Thank you Mr. Douglas. We recognize Mr. Peters, Timiskaming.

Mr. Peters: I pass.

The Chairman: Thank you. We recognize Mr. Ritchie, Dauphin.

Mr. Ritchie: My questions Mr. Chairman are a little more general as I am more interested in general matters. I presume the Farm Credit Corporation provides the largest capital input, as we call it, into the farm loaning business by far, does it?

Mr. Owen: Only if you are referring to longterm capital, sir. Banks put in a lot more capital than we do, but for mortgage credit we actually provide, we think, about 60 per cent of the long term capital in Canada.

Mr. Ritchie: Where does the other percentage come from?

Mr. Owen: A significant amount of it comes from some provincial agencies. There is some from the Veterans' Land Act, some from the Industrial Development Bank, although a relatively small amount, and a fair amount from private individuals. It is very difficult to get any accurate figures on the amount from private individuals, of course.

Mr. Ritchie: Well, really what I am getting at is that for the provinces, yourselves and the Industrial Development Bank, the terms are approximately the same are they not? The terms and the principles which govern the provinces and the Industrial Development Bank are largely like your own. Is that right?

Mr. Owen: The Industrial Development Bank loans have no ceiling, they lend to larger enterprises, their rate is very much higher and their terms of repayment are very much shorter.

Mr. Ritchie: Surely.

Mr. Owen: Provinces vary quite a bit from one to the other, but generally speaking they are somewhat the same as ours.

Mr. Ritchie: Do you think that there is enough capital input into farming to retain it as a viable industry and in good shape? How do we compare with, say, other western countries, Americans and so on?

Mr. Owen: The total debt of farmers in relation to their assets in Canada is very similar to that of the United States: it is about 18 per cent. Their debts amount to 18 per cent of their assets. That is for farming as a whole. In some areas, in some instances, there has been too much capital put in. In other instances, there may be a shortage. I really think that one of the problems is that we have been lending, as you know, at five per cent and we are a mortgage lending agen-

cy, and therefore, the tendency is to, when someone is looking for a low-rate loan to come to us and we are essentially for long-term credit and for building up and expanding the enterprise. I suggest that in many farm businesses greater marginal profits, or greater returns could be obtained by the input of more production capital, of shorter-term capital and that this may be the kind of capital that in many farm businesses is most required.

However, we must remember that the input of this kind of capital must be tied fairly closely to a real good knowledge of the farming business by the farmers and it is a dangerous practice for someone who is not familiar with this particular kind of enterprise, where he is changing enterprises, to go too far. I do feel that there is room for more production capital in agriculture generally.

• 2025

Mr. Ritchie: I have heard it suggested that perhaps in contrast to the Americans, we may be doing too much, what we call, extensive-farm farming rather than intensive farming, as you have just mentioned when you said that perhaps we are buying too much land without putting enough into the machines to work on it. Would this tend to bear this out or would you suggest this is possible?

Mr. Owen: I was not wishing to suggest that we were putting too much into land and not enough into machinery. I was really suggesting that we may be inclined to think more in terms of putting money into land than into the other production inputs. I am thinking of fertilizer, seeds, pesticides and production input as distinct from actual machinery.

Mr. Ritchie: In other words, you are suggesting it may be a little bit out of balance.

Mr. Owen: I am supporting your theory or your belief that we may be tending towards extensification rather than intensification although in saying this I have to qualify it by saying that the same situation does not exist in all parts of the country. In some areas land ownership, and the expansion of acreage is not nearly as significant to the farmers as it is in other areas.

Mr. Ritchie: I was merely seeking information. I have no real opinions on this.

I notice the insurance companies, I believe the Royal Bank and one or two others are

getting into the mortgage field. Is that not correct? I know of one insurance company that is in it in a fairly big way.

Mr. Owen: I doubt very much that the Royal Bank is getting into the farm mortgage field.

Mr. Ritchie: They have hired farm experts.

Mr. Owen: Maybe some insurance companies are but I do not think the banks so far are getting very far into the mortgage field.

Mr. Ritchie: I may be wrong, but it is my impression they are making plans and they have hired some agricultural people.

Mr. Owen: I have been talking to their agricultural people about the new men they have hired over the last year or so and they indicated they were really primarily concerned with the production and short or intermediate-term credit and not particularly anxious to go to loans much beyond five years.

Mr. Ritchie: Do you think if they are moving into this field that there is a place for what you might describe as a sphere of influence for each of you in the long term, helping out the young fellow getting started? Can you foresee defining spheres of influence or will they fall naturally into this?

Mr. Owen: I think the farms to whom we would not lend because they are too large might be a natural field for those agencies. I am not sure of the extent to which the agencies are going to be willing to engage the kind of staff that is necessary to serve farm mortgages unless they could be assured of a fairly substantial amount of business. I think the whole problem in lending to farmers, if you wish to refer to it as a problem—we think it is a pleasure—is that you must have staff who know farming and many of these agencies would find it difficult or expensive to acquire the kind of staff they need unless they were going to have a large enough volume of business. I would say that the fact that we will not lend to the larger ones leaves a natural field for them and possibly in time, when there is less difference between the rates, we might see the opportunity for breaking this sphere into different fields of responsibility.

I would like to say one other thing in respect of this. As I indicated, we probably provide about 50 per cent of the mortgage credit

to farmers. I really feel that it may be, in fact, desirable to farmers to have alternative places to go to shop for credit. Credit from one agency or one institution leaves the farmer as well as the lending agency with the feeling that this is the only road, that you either make it or you do not make it. I think alternative sources may be a good thing providing that we can be assured that the alternative sources are going to be people who know how to, and can, service farm lending.

Mr. Ritchie: There has been some discussion in the western papers and I presume in them all about the new estate taxes and so on whereby farmers are going to have more difficulty—I think it is a problem anyway—in passing from one generation to another. While I know very little about the proposed estate changes, I understand that in the so-called middle—\$100,000 to \$200,000—farms, the estates are more substantial. Do you suppose this will increase pressure on you people for loans? Do you run into this now in any way?

• 2030

Mr. Owen: To tell you the truth, we have been working so assiduously in getting ready to put our new legislation into effect that we have not yet thoroughly studied the implications of the proposed estate and gift tax amendments. There is one thing within our recent legislation, I think, which will help to a certain extent. A number of farmers, in endeavouring to transfer farms from one generation to another, have found that it is quite difficult to transfer the farm itself, and a great number of farmers are incorporating so that a farm can be bought by a son share by share rather than piece of land by piece of land. We now have the facilities to handle this sort of thing so this may ease, somewhat, this transition from one generation to another.

Mr. Ritchie: I have one final question. As farm capitalization is so high now, are we arriving at the stage where the young farmer particularly, faced with capital repayment and income tax, does not have enough money to live on or carry on? The alternative is at least to go to the city and get a job where his capital is already supplied for him by somebody else. Do you think this is a factor and that we will have to take something like this into consideration in the future?

Mr. Owen: I can foresee it as being a real difficulty. I suggest that there is difficulty in selling farms to new purchasers; it may have an effect on land prices with moderate rates

in order to make it easier. I am not saying that this is any real answer, though.

I will agree with you that a really large part of the increase in capitalization, while part of it has been from larger farms, has been from the increased value or the increased market price of existing farms. This is brought about as a result of the decision of a number of people to buy these farms.

The Chairman: Thank you, Mr. Ritchie. I recognize Mr. Cadieu, Meadow Lake.

Mr. Cadieu (Meadow Lake): Thank you, Mr. Chairman. Mr. Owen, many of my questions have been covered and I will skip over a bit.

One question that stands out in my mind is that we are all aware that the Board has to have some sort of yardstick to go on in lending to anyone and naturally they support people with farming experience. No doubt every member of Parliament has had many applicants come to him complaining that they had been turned down for various reasons, and certainly in many cases he could see the reason why they were turned down. I often wonder if more consideration should not be given.

For instance, I know of some young couples who have both come from a farming background and who were determined to get back to farming on their own. They were turned down for the simple fact that they were not living on a farm at the time they applied. They did not have an opportunity of living on one but they had saved money; yet they were turned down for the simple fact that they were not residing on a farm, although both had farm backgrounds. I had them appeal their application, but still they were turned down. I knew them personally and they did have a farm background and were very capable young couples. I was just wondering if cases such as these should not be given a better look.

Mr. Owen: I would have to say that unless something has gone grossly wrong, I feel there must have been some other reason because, in fact, we lend money to many people who do not specifically reside on their farms. It seems to me there must inevitably have been something else. If it so happens that the man was employed full time elsewhere, had a full-time job and intended to retain it—

Mr. Cadieu (Meadow Lake): No, no, they were giving up their jobs to go on the farm.

• 2035

Mr. Owen: You might possibly drop me a note and let me look into it because I am quite sure that actual residence on the farm would not be a problem unless, for example, they were raising a type of farming operation that required day-to-day attention and they were living in a town 20 miles away or something like this. But actual residence right on the farm is not a requirement.

Mr. Cadieu (Meadow Lake): This was not so in this particular case. Of course, as I say, I did have many cases where I could understand why the Board turned them down. But in this one particular case I had them re-apply, knowing this aggressive young couple, what they had done and how much their minds were set on farming.

There is another difficult situation in my area where there are a lot of small farmers. Another young couple had to take other employment, subsidize the farm, but were doing a good job of farming and they were turned down for a loan because he had taken on the job of driving a school bus and she was working part time in a store. I wondered about this because small farmers are finding it quite difficult now. Where they used to be able to milk a few cows, that is out now. They tell me they were turned down on these grounds. And they were good farmers.

I have often wondered if you were sticking to just one hard and fast rule on anyone who could obtain a farm loan to buy a farm or whatever the case. Where you have had a case looked into separately, were any adjustments ever made?

Mr. Owen: I think I can answer that we have often looked back, re-examined and changed our decisions.

First, the fact that a farmer's wife is working would not make him ineligible. If he has a job such as driving a school bus to supplement his income, we have been able since 1962 to not only still make loans to him but to take into consideration this supplementary income, as long as his principal occupation is farming.

You can appreciate that it is difficult to draw a line between those people who are making a living elsewhere and want to moonlight as farmers and those who, in fact, are farmers and who are moonlighting outside. What we are trying to do is to make sure that

our capital goes to those people who are depending upon their farms for making a living.

I recall that some years ago in your area in particular we were not making very many loans. We really felt that with the amount of land and the number of farmers there we should have been able to make more loans, so in conjunction with the provincial people we went in and made a survey of a great number of farmers. We organized, again in conjunction with the provincial people, some meetings at which we could explain what we could do and on what basis we could do it and our business increased three or fourfold.

Sometimes we find that in some particular area, for one reason or another, the knowledge of what we can do to help them has not really been fully understood, so we have to concentrate our efforts there.

I can assure you, though, that in any of these things that you find, you can feel perfectly free to come to us and we will do whatever we can. But as far as principal occupation is concerned, this is a most difficult thing because if we start to accept people whose regular full-time employment is somewhere else, then we are going to be faced with quite a large volume right across the country. This would be taking land right out of the hands of those who actually need it to make a living. So, on this we are fairly rigid.

Mr. Cadieu (Meadow Lake): I had one other complaint from a young couple who had applied. Although for the amount of land he had he did not need two tractors, he had a second old tractor that was in good shape because he was a good mechanic and he kept this second tractor for some rough odds and ends of work he wanted to do. He told me he was turned down on a loan because they figured he had too much equipment for the amount of land he had. I wonder why this should have been?

• 2040

Mr. Owen: Did you ever get the other side of the story? One old tractor sitting on the farm will not stop the man from getting a loan. If he bought a whole host of new machinery he did not need when he was already in a difficult financial position, it would be a different matter.

Mr. Cadieu (Meadow Lake): I could personally see that it was an asset to him to save his good tractor as he had some pretty rugged

land with stones and so on. I certainly could not see why he should be refused a loan for this reason.

I have one further question, Mr. Owen. I do not know whether you care to answer it, but at present-day farm prices, after the farmer pays his living and clothes his family, do you really think he can pay $7\frac{1}{2}$ per cent interest on a farm loan?

An hon. Member: It is $7\frac{3}{4}$ per cent.

Mr. Cadieu (Meadow Lake): Is it $7\frac{3}{4}$?

Mr. Owens: Yes, it is $7\frac{3}{4}$ per cent on a long-term loan. In referring to farm prices are you talking about the price of farm products?

Mr. Cadieu (Meadow Lake): Yes, the present farm prices.

Mr. Owen: The criterion for lending is an assessment of what income we expect this farmer to be able to obtain from the farm, what his operating expenses will be and how much is left over to cover his living costs and his payments to us and to any other creditors. These are the kinds of things that he has to be able to meet.

As I was saying earlier this afternoon, when sometimes it appears that we may be a little harsh in some instances, it is really because we know that if we make the loan it will be beyond his ability to repay. I know that many farmers will pay their mortgages and do without food and clothing for themselves, but if we put them in the position where they have to deprive themselves severely in order to be able to keep their farms, then we are not doing them any favour. I honestly do believe that they can pay $7\frac{3}{4}$ and $7\frac{1}{2}$ per cent. It all depends on the relationship between the amount of debt and the productivity of that farm. In other words, they may pay $7\frac{3}{4}$ per cent on less money.

Mr. Cadieu (Meadow Lake): Thank you very much.

Mr. Korchinski: I have a supplementary question, Mr. Chairman. I wonder why your administration charges are higher than those of the bank, which apparently is quite prepared to grant loans under new provisions of $7\frac{1}{2}$ per cent and you, apparently, have to charge $7\frac{3}{4}$ per cent.

Mr. Owen: First, I might say that I would not accept the premise that our administra-

tive costs are higher than those of banks. I do not know what the banks' administrative costs are, but I do not think they handle money as cheaply as we do. Secondly, the rate at which the banks would be lending under farm improvement loans for the purchase of land is $7\frac{3}{4}$ per cent, the same as ours. The rate of $7\frac{1}{2}$ per cent is for loans for machinery and other types of things.

I would like to point out that the base rate which is used in our Farm Credit Act loans is the average yield on bonds maturing in five to ten years—that is an average of $7\frac{1}{2}$ years to maturity—over the six months preceding. This represents our cost of money, and to that is added 1 per cent.

The banks have precisely the same provision for land purchase loans, where they are lending for up to 10 or 15 years. For their other loans, where they are lending on farm machinery—and farm machinery loans are not in excess of five years—the base rate used is the average yield on Government of Canada bonds maturing in one to ten years, an average maturity of five years. That rate happens to be lower and therefore they are at $7\frac{1}{2}$ per cent. That average in the last six months happens to be $6\frac{1}{2}$ per cent, to which is added 1 per cent making it $7\frac{1}{2}$ per cent, which is the same rate as we are charging under the syndicate act. The difference here of $\frac{1}{4}$ per cent is purely related to the length of time of the loan.

• 2045

Mr. Korchinski: If you had to work on a $\frac{3}{4}$ per cent margin and the work was extended according to the amount of money available in this particular case, would you try to pare down your expenditures to meet that amount of available money?

Mr. Owen: We would certainly reduce our services; we would have to. In fact, ten years ago, at the time the Corporation was set up, our cost of handling money was about 1.5 per cent; it gradually reduced to .76 per cent last year.

Mr. Douglas: Mr. Chairman, I have a supplementary.

An hon. Member: I have a supplementary too.

The Chairman: Then we will have to confine the supplementaries. I will recognize Mr. Smith of Saint-Jean.

Mr. Smith (Saint-Jean): Mr. Chairman, the three questions that I had on the Board have already been answered. Thank you very much, Mr. Owen.

The Chairman: I will now recognize Mr. Horner, Crowfoot.

Mr. Horner: Mr. Chairman, I was quite interested in Mr. Owen's remarks. For a number of years I have been an avid appreciator of the work the Farm Credit Corporation has done, and I want Mr. Owen particularly to know that. I have been interpreted at times as a vivid critic of the Farm Credit Corporation but at the same time I have appreciated their work very much, particularly in the area in which I live.

I am particularly interested in the new concept of the Farm Credit Corporation's work under the new bill. Am I correct that loans are still being made on the ability of the farm to repay the loan?

Mr. Owen: This is one of the criteria, yes.

Mr. Horner: If that is one of the criteria, the Farm Credit Corporation, with the government's advice—I would add that as a rider—then assumes that the farm has the ability to repay the $2\frac{3}{4}$ per cent higher interest rate.

Mr. Owen: On the amount of money which we would lend when we approve a loan, yes, we feel satisfied. We look at the annual payments in relation to his income, and we will satisfy ourselves that he can pay this back before making a loan.

Mr. Horner: Is the cost of money to the Farm Credit Corporation within the last year in any way responsible for the diminishing amount of money or loans approved by the Corporation?

Mr. Owen: Partly. As I indicated this afternoon, during the past year, not because of the cost of money to the Corporation but because of the general need of the government to conserve capital, we have in some ways reduced the amount of lending. I would like to add that this was particularly the case where we were using our money to repay other lenders when they really did not need to be repaid, or the larger farmers where we felt that they were not going to suffer any hardship by not getting that extra half section or whatever it happened to be at that time. This accounted for part of it but it is by no means all of the reason for the decline. It is

difficult to measure which has caused the decline the most, but I think the greatest reason for it has been the economic situation of farmers. Evidence of this, for example, is that other lending agencies lending to farmers also have experienced a decline in their applications.

• 2050

Mr. Horner: You leave me in a little bit of doubt. You have suggested there has been a decline partly because of the government, partly because of your situation, and partly because of the economic situation of farmers. Are you suggesting that the economic situation of farmers has been such that they have not been in a position to borrow money or repay money they could borrow?

Mr. Owen: No. As you will notice, our decrease in lending has been particularly evident in the Prairies, and I am suggesting that during the past summer farmers have been less optimistic and less anxious to go out and buy additional land. The price of land had gone very high, they began to resist these prices and, as a result, there has been a reduction in demand. They are not as optimistic as they were, say, two years ago.

Mr. Horner: I am glad that you cleared that up.

Mr. Ritchie: It was because of the capital cost though.

Mr. Owen: Partly the capital cost and partly, I suppose, their concern about sales prospects...

Mr. Horner: Their ability to repay.

Mr. Owen:...the crops and various factors that come into it.

Mr. Ritchie: And the cost of the land.

Mr. Owen: Oh yes. My people working on the Prairies told me that a year ago when a piece of land came up for sale it was not very long until it was taken up but that this year it sat for quite a while until the vendor finally decided that maybe he could take what was going for it.

Mr. Horner: I am not going to debate the fact that the cost of land has gone up but I also suggest that the ability to repay on the Prairies has diminished to some extent too in the past year or a year and a half. Would you agree with that?

Mr. Owen: I would say that with the present marketing and crop situation with respect to wheat that they are less optimistic about their ability to repay.

Mr. Horner: That is right.

Mr. Ritchie: It depends on the weather, for one thing.

Mr. Owen: Yes.

Mr. Horner: I am not disagreeing in any way with my friend, Mr. Chairman. I would be the first to admit that the weather plays a predominant part, particularly in western agriculture, but I do not think it is the dominant part.

Mr. Owen: Evidence of this is that during 1961, the period of drought, we had a significant number of applications withdrawn by farmers who changed their minds.

Mr. Horner: I agree that the weather plays a predominant part but not the dominant part. I think a western farmer considers the average. Crop insurance is based on the ten-year average, farmers basically consider their crop on the average, if they get a bumper crop it is in a sense a bonus and they build a new house, as my friend suggests, or a new machine shed, but I think the ability to repay has long been Farm Credit Corporation's criterion for a loan. Is that not right?

Mr. Owen: Yes.

Mr. Horner: Not on the value of the land.

Mr. Owen: To a measure but, primarily, any lender's first security for a loan is the repayment capacity. The land is the natural final resource.

Mr. Horner: I agree, but if the ability to repay is the major criteria on which you base your loan I fail to see—and I am not holding you fully responsible for it—how you can justify an increase of 2½ per cent on your interest rates—over 50 per cent increase—for farm loans. Has the farmers' ability to repay increased as much as that?

Mr. Owen: The interest rates are set by the Governor in Council and I would not wish to endeavour either to justify or to non-justify it. This is a matter of government policy.

• 2055

Mr. Horner: As I said in prefacing my remarks, Mr. Owen, I am not holding you responsible in any way. All I am saying is

that the Farm Credit Corporation's basis for making a loan is not on what we commonly call the market value of the land but on the ability of that land to repay. Now we have had an increase, and I calculate it at roughly 57½ per cent, in the interest rates. Again, I am not holding you responsible for this increase, but in light of the reduction in loans that you have made in the last year can you in any way say that the ability of a farmer to repay a loan at that interest rate has increased and do you think the higher rate is justified?

Mr. Owen: I would say that the ability of farmers to manage their business and to make money with it is increasing all the time. I think this is a natural progression. Farm managers are much better today than they were 10 or 15 years ago and they are continuously improving. I am not going to get involved in the other question. Economists will argue one way or the other, so will lots of other people, as to whether interest rates for one input should be below that for other inputs because of the tendency to distort the relationship of inputs. These are arguments and, after all, the rate is set and that is it. However, I want to point out to you that although the rate has gone up 2¾ per cent the annual payment on an amortized basis only goes up from 6.6 per cent to 8.7 per cent, or approximately 2.1 per cent.

Mr. Horner: I now want to go on to another part of my questioning. Let us go into the details of the economic unit. It has long been the criterion of the Farm Credit Corporation to loan money only to those farmers who are borrowing money to establish themselves on an economic unit or have already established themselves on what might be declared a minimum economic unit. Is this still the criterion on which you base your loans? In other words, can a farmer presently on, let us say, a well above average economic unit still apply for a loan from the Farm Credit Corporation and get it?

Mr. Owen: This measure is, of course, a difficult one. We do decline to make many loans to the larger farmers. As I indicated a while ago, during the past year we have been more rigid in this respect than we were before. Our principal job is to help those who need to get economic units. In this connection though I think we have to recognize possibly more now than we did seven or eight years ago—experience teaches a little bit—that what was an economic unit then may not be

an economic unit today. We must not accept sort of a minimum standard for economic units today, we must go above this minimum in order to project viability and this sort of thing.

Mr. Horner: I would be the first to agree with your suggestion of a flexible economic unit, but the reason for my asking that question was to ascertain whether or not you still held out an economic unit as the major criterion. Now look at that fact in the light of the new bill. Look at that fact in the light of a corporate entity applying for a loan under the new bill. Let us suppose that the Corporation is made up of a major number of farmers but it has not been engaged in the farming industry to date but it wants to become engaged. It is very anxious, avidly anxious—use any adjectives you like. It wants to become engaged in the farming industry. For all intents and purposes it is new as far as farming, the basic operation of a farm, is concerned. How would you measure that same criterion of an economic unit in gauging a corporate entity applying for a loan under the new Bill?

• 2100

Mr. Owen: We have two separate kinds of corporations under the definition of farm incorporations. The first is the family farming corporation, as we used to have it, where 95 per cent of the shares were held by persons related by marriage or adoption. 51 per cent were held by the actual operators. We have the other type of corporation where they need not all be related but at least 75 per cent of all kinds of the shares of this corporation must be held by the actual operator or operators.

When we come to make a loan to this corporation, if the actual person whose principal occupation is farming that farm, or will be when the land is purchased, and if there is only one of them, whose principal occupation will be on that farm, the maximum loan under Part II of the Act will be \$40,000 and we would judge that farm as to whether or not it was an economic unit for that man and his family. They are the principal shareholders. They hold 75 per cent of the shares and the principal occupation of that man is farming.

If there happen to be two men whose principal occupation is farming in that farming corporation, then the maximum amount which they could borrow would be \$80,000

and in looking at the economic size of that farm, it must be adequate to support the needs of two families.

The Chairman: Gentlemen, I wonder if it would be reasonable here to observe that we are really not debating the Bill which was debated in the House of Commons and passed, but tonight our real business before the Committee is to consider the estimates of the Farm Credit Corporation, most of which have been used and I am wondering whether or not Mr. Horner would consider coming back to the estimates as they apply.

Mr. Horner: Mr. Chairman, I do not want to abuse any rules or privileges of the Committee. I was led to believe, though, that in the debates on this particular new Bill in the House—in fact, if my memory serves me correctly, and you can correct me if I am wrong, the Minister led us to believe in the House that the Farm Credit Corporation would be before the Committee and that any questions pertaining to attitude and intentions under the new Bill could well be put at that time. As I say, if I am wrong, I will abide by your wishes. I only have a few more questions.

Mr. Southam: Mr. Chairman, I would like to support Mr. Horner. This was the interpretation I got from the Minister's remarks and I believe it is government policy, when referring estimates to Committees, such as we are discussing here today, to expedite the work of the House itself. Unfortunately, the Minister is away in Europe and cannot be here. I have complimented Mr. Owen already on doing a real job here on behalf of the Minister and the policy of the government. I would like to support Mr. Horner in his contention that we should have these answers, if they are available.

The Chairman: I do not want to be arbitrary about it. I thought that probably there was some wisdom in coming back close to the estimates.

Mr. Howard (Okanagan Boundary): I have listened for about three weeks to arguments about 5 per cent interest rates in the House. The Bill is passed now. Let us get on with the business that we are here for. I am sick and tired of hearing this over and over again. I have heard of filibusters before legislation is passed. Now we have a filibuster after the legislation is passed. Let us get on with the business.

The Chairman: May I say I think we have had excellent co-operation in the Committee and would you proceed with your questioning, Mr. Horner.

Mr. Horner: I am sorry, Mr. Horner, if I have offended some people in the Committee. If anybody thinks that I am attempting to filibuster this Committee, they should see me in full stride.

• 2105

Mr. Whelan: On a point of order, you apologized to Mr. Horner. I do not know if you really meant to do that.

Mr. Horner: No, I did not apologize to Mr. Horner. I apologized to the Committee.

Mr. Whelan: You said: "I am sorry, Mr. Horner".

The Chairman: Mr. Horner, will you proceed with your questioning, please.

Mr. Horner: Thank you, Mr. Chairman. He has me completely off my topic but I will quickly pick it up. My question had to do with the basic principle of the Farm Credit Corporation. In the past it has been the judgment of the Corporation to attempt to make loans to farmers so that they might become established on economic units. My question related to the fact of a corporation becoming established, not a single corporation, but I was thinking of three or more farmers or three or more persons, including somebody other than a farmer. How would you gauge whether or not—let us suppose for the sake of the argument that here are four farmers who form a corporation and those four farmers or the fathers of those four farmers are well established on what even you might claim, or even the government might claim—not meaning you in any derogatory sense, Mr. Owen—is an economic unit. In other words, let us break it down this way: let us suppose that I am a farmer on an economic unit and I cannot get a loan from the Farm Credit Corporation if I wanted to, but it would be to my advantage to get together with three other farmers in a similar position and apply for a loan. So, we form a company, duly incorporated, and we want to buy out X number of neighbours or one neighbour: how would you ascertain whether or not this new corporation, just formed by a group of farmers, is really in need of additional land or a farm, even to become an economic unit? Do you follow my question?

Mr. Owen: Not entirely. I could take two different interpretations. To begin with if you were a farmer and you were putting your land into that corporation, it becomes part of the assets of the corporation.

Mr. Horner: No, no, no. Let us suppose it does not.

Mr. Owen: If you are trying to form a separate corporation—

Mr. Horner: Yes.

Mr. Owen: —then is your principal occupation in that farming corporation or is it back on your home farm? If it is back on your home farm, you are not eligible here.

Mr. Horner: Do I understand it clearly? If my principal occupation is back on the home farm—

Mr. Owen: Then you are not eligible as a shareholder in that corporation within the 75 per cent shares.

Mr. Horner: But supposing my principal occupation was not farming, what then?

Mr. Owen: Seventy-five per cent of the shares of that corporation must be held by persons whose principal occupation is farming the farm owned by that corporation.

Mr. Horner: And if those persons holding 75 per cent of the corporation are already established on economic units, they are not eligible?

Mr. Owen: Now what do you mean? That they have economic units of their own?

Mr. Horner: Yes, let us suppose they have economic units of their own.

Mr. Owen: Where are they farming? Their own farm or the other one?

Mr. Horner: Yes, let us suppose they have their own farm or let us suppose the corporation—are they not held at arm's length, are they not held separate from one another?

Mr. Owen: No. No, we look into the individual shareholder who is actually an operator and consider what is his principal occupation. We ask ourselves is his principal occupation farming in the farming operations of that corporation? We get right into the individual shareholder.

Mr. Horner: And you do not consider the two of them, as I say, at arm's length?

Mr. Owen: No. Otherwise, we could have a fellow forming two or three corporations and getting different loans.

Mr. Horner: Yes.

Mr. Owen: We have to look at the individual shareholder in that corporation who is the qualifying shareholder and ascertain his situation.

Mr. Horner: And this is the way you ascertain it—whether he is already on an economic unit—

Mr. Owen: That is right.

Mr. Horner: I have one further question, Mr. Chairman, and I will go back to the old rule or the old Act, if you like; you can apply it as well to the old Act as to the future Act. It has long been my contention, Mr. Owen, that the Farm Credit Corporation has not utilized its time to the fullest advantage with regard to winter loans. Is it still in the regulations that no loans on any land will be made during the winter months while the snow is on the ground?

• 2110

Mr. Owen: It is still within the regulations that no land will be appraised when it is covered with snow to the extent that it cannot be properly examined. We may have examined it before the snow came and make a loan.

Mr. Horner: Oh, I see.

Mr. Owen: During the winter when there is snow there and we cannot see that land we would not make an appraisal.

Mr. Horner: You will not make an appraisal. There has been no evidence to suggest that through the use of soil maps and local knowledge of the land that some loans—and I am thinking of the farmer, for example, who has perhaps rented the given land for the last five or six years; he knows it well and all of a sudden the land owner dies and he wants to buy it. It is in the middle of the winter. The Corporation may have vivid knowledge of the land, but yet cannot make a loan until spring. Then somebody else buys it by the spring. I am thinking of that sort of a situation which may well arise.

Mr. Owen: We did discuss this this afternoon. As you indicated earlier, it is one of our basic criteria to estimate repayment capacity.

Mr. Horner: Yes.

Mr. Owen: And one of the basic things you have to do to estimate repayment capacity, is to find out not only the quality of the land but the way in which the man has been using it. This is one of the reasons why we like to see that land when there is no snow on it. If we had made an appraisal of that piece of land within the two previous years, then this is satisfactory. But usually there is some other land with which we are not thoroughly acquainted and we want to know more about how that man is using it. I do not really think that this is a very serious problem today. . .

Mr. Horner: Oh, no.

Mr. Owen: . . . because most of our farmers who are going to buy for the next spring either come in before the snow comes and we run out and look at the land, or else we now are able to get on to it much earlier in the spring than we used to. We have more staff and we can get this backlog cleared out much quicker.

Mr. Horner: O.K. I will forego any further questions now.

The Chairman: Thank you, Mr. Horner. I recognize Mr. Roy, member for Laval.

Mr. Roy (Laval): Mr. Chairman, I would like to thank the member for Crowfoot because I thought I would not have time for my questions.

Mr. Horner: Thank you.

[Interpretation]

Mr. Roy (Laval): Mr. Owen, first of all, I would like to congratulate you and congratulate the department for having modified the farm credit to meet our needs in the Eastern part of the country. I think that the previous loan structure did not fit the needs of the farmer in this era of increased specialization. Especially when you consider the number of farms with sales of less than \$5,000 has decreased by 30 per cent between 1961 and 1966 and there has been a 90 per cent increase in the number of farms which have increased their volume of sales to over \$10,000. I think that you are really showing awareness of the development needs in the East through the new loan structure, and I think can use them effectively.

I am thinking of specific cases of people who are going to merge their farms, the father and two sons who are going to merge

their holdings. And then, we will have loans of twice \$40,000 and then a further loan of \$100,000 covering up to 90 per cent of the assets.

The member for Saint John riding will probably be very happy; yesterday, I was in a market-gardening area and found out that the vegetables producers' problem really was insufficient storage space. They were forced to sell off their vegetables because they could not store them.

And here, I have a question. I want to know for instance this: In the Montreal area, when you have a potential of land, of arable land which is very hard to value because it has never been cultivated, but which have a definite future as vegetable farms.

I want to know how we are going to assess these farms and lands as compared to other places where you have capital investments of up to \$4,000 an acre?

Mr. Owen: We value property on the basis of its potential productivity as soon as it is ready for cultivation and deduct the cost of whatever improvements are necessary to make it cultivable. As far as storage is concerned, we can make loans to build storage facilities, to either an individual farmer or a group.

Mr. Roy (Laval): Now if the farming is to be specialized do you insist these market gardeners take out crop insurance to guarantee the loan?

Mr. Owen: Insurance?

Mr. Roy (Laval): Crop insurance, yes.

Mr. Owen: This is not at all an essential condition. But now, we certainly would like to deal with people who have crop insurance. But this is not the essential condition of our loan.

Mr. Roy (Laval): Thank you very much Mr. Owen.

● 2115

[English]

The Chairman: Thank you, Mr. Owen. Mr. Gleave, please, Saskatoon-Biggar.

Mr. Gleave: I think the new changes in the Act represent a new departure from the older concept. You are now going into a position where money will be loaned to the farmer at market cost, that is, market money. This is

really what it is tied to. Previously we had the \$20,000 which was envisaged, I believe, as a sort of a subsidy, but now we have departed from that. Presently a farmer buys and he is locked into a $7\frac{3}{4}$ per cent interest rate. He is locked into that interest rate for the term of that loan which may be 25 or 30 years. Would it not be a logical thing now to put the loans also on a market basis? You could not review them every year but, say, you reviewed them over a four or five-year period, and if market money had dropped from $7\frac{3}{4}$ to 6 per cent, then you reduce the interest rate on the loans retroactively so that he then pays 6 per cent; that is, you do the same for the farmer by reflecting the money market situation directly into the amount the farmer is paying. Should not this be possible?

Mr. Owen: Actually it is a matter which is of some concern to us. We have about \$1 billion out now at low rates. These are on contracts. Many of these farmers are coming back to get new loans and we have felt that they ought to benefit by the lower rate which they have had in the past and to continue this on throughout their loan.

Mr. Gleave: This I would agree with.

Mr. Owen: If we wished to carry that same principle forward, if in five years from now, somebody has some money at $7\frac{3}{4}$ per cent and the rate is down, then by the same adjustments he should pay slightly higher because he has this higher money to pay off, to be completely equitable. I realize that this is a problem.

You are probably aware that we do not charge any premium for prepayment or repayment so that if a farmer wished to pay us off, and he could get money elsewhere at a lower rate, he could do so. I think this is a problem though. We hope that before too long we will see some decrease in interest rates. It would then become a problem. It is certainly a thing that we are aware of and we will do what is possible.

You will appreciate from the Corporation's point of view, if we borrow money for 20 years at $6\frac{3}{4}$ per cent, we would like to have the same right to repay, to reduce or renegotiate, otherwise we would go broke. It is a problem and all I can say is that I am aware of it; many others are aware of it, and we will certainly keep this in mind. I cannot say just what might be done. I do not think it is an insoluble problem.

Mr. Gleave: Do you think that such a thing could possibly be worked out?

• 2120

Mr. Owen: I think such a thing would be possible but, if so, it would have to include the provision also that if rates went down and later on went up that he would agree also to the higher rate when it went up.

Mr. Gleave: Yes, of course.

Mr. Owen: You have to take it from both ends.

Mr. Gleave: Of course, but it seems to me, if we were to go on to a money market rate, that a farmer or anyone borrowing at this level could be at a quite serious disadvantage if it went up.

Mr. Owen: Yes. I suggest that if the market rate went down very substantially, other funds would be available for him to pay us off, but if we do not see other lenders in the field then we have to take another complete look at it.

Mr. Gleave: The other thing is the matter of co-ordination. With the increase under farm improvement loans running up, if I remember correctly, to \$25,000 maximum and \$10,000 in land, is there not a necessity for co-ordination between you as the major lending agency—well, I should not say the major lending agency because you just said a while ago you are not—but as the central lending agency; I think that would be fair. Is there not a necessity for co-ordination between your agency and other agencies that are going to be in the field?

You might very carefully appraise a farm operation and the operator and decide that this is good for a \$40,000 loan, and you make it, so then the chap trots out and picks up another \$25,000 and adds it on, and when you come back a few years from now he is in pretty serious trouble. Do you not think there is a need to consider this situation?

Mr. Owen: Yes, I think there is a need for consultation with the banks and other lenders. I suggest that generally speaking we would lend \$40,000 to would be smart enough not to go out and put himself into that trouble. We are faced with these possibilities right now and we do have some that get themselves into trouble.

Mr. Whicher: Where would he get the additional \$25,000?

Mr. Owen: This is from the bank under the Farm Improvement Loans Act. It can lend up

to \$15,000 on machinery and farm improvements, and \$15,000 on land, but a total of not more than \$25,000. This would be a guaranteed loan. Certainly I do believe that there is much room for consultation between us and the banks and we do have a lot of this consultation already at the local level between our men and bank managers. In any credit agency there must be exchange of information and I agree with you that there is room for improvement.

Mr. Gleave: You are probably right; it would not be the \$40,000 man that would do this, it would be lower down the ladder. I agree with you. Do you have enough supervisory staff? That is, is the Corporation moving far enough or fast enough in the area where you have people specifically trained in the supervisory field, especially for loans that are pretty well marginal? I am sure you must do this; you cannot avoid it. Have you enough people you can use in this instance? For a group of farmers that are scattered all over Saskatchewan can you say to an individual "You keep an eye on those loans"?

Mr. Owen: No one is ever satisfied that he has the ultimate. We think we are fairly well equipped. We would have within each branch office one or two persons who specialize. In a situation like Saskatchewan for example, where the supervised zones are widespread, of course that one person could not get around to see them.

We think that our local credit adviser who spends all of his time dealing with individual farmers, getting into their financial situations, finding out how they are making out or not making out, seeing good farmers and what they are doing and why they are successful and seeing other farmers who are less successful and seeing why and who are trained in farm management, is able to do this job.

I realize that many people think we should separate those people who are lending from those people who are doing supervision afterwards. We are not particularly inclined to that view at this moment. We have discussed it many times. One of the factors is that the greatest amount of judgment and the greatest amount of knowledge and ability of our people are required at the time we make the loan because if we have made that loan and it is not right, if we have not thoroughly discussed with the farmer his future operations and his investment of capital, we are into trouble. We

need this real capacity there. It is precisely the same kind of knowledge and training that is required for future supervision.

• 2125

We have specialists at our branch offices to reinforce this training. We do think we can do a really good job. There is a limit here in that we do not wish to duplicate, overlap or trace over the work of the provincial people. We have also thought that if we endeavoured to separate these two functions, some specializing in supervision and some specializing in lending, we would cover a province with two networks of people all covering the same roads and we feel that at present our arrangements are satisfactory.

I would say, however, that in some areas where the load of supervision is heavy, where there is a large number of farmers under the supervised loan program, we then do concentrate some people in this particular work.

Mr. Gleave: I see. I have one final question. In circumstances such as we have in the West this year, I suppose you can and probably do extend a loan for a year where you find it is essential and not necessarily through bad management by the individual?

Mr. Owen: We would defer repayment of loans by farmers unable to pay and, as a matter of fact, I can tell you that in the province of Saskatchewan there has not been an instance where we have foreclosed on a farm since 1959.

Mr. Gleave: Thank you very much, Mr. Owen, and Mr. Chairman.

Mr. Whelan: Do you create a moratorium and no interest for that one year?

Mr. Owen: No, we cannot forgive interest. We can defer its payment, but we cannot forgive it. We are not allowed to and as far as a moratorium is concerned which is very often felt to be something that applies to the whole region, we really do not do this. Different farmers in an area are hit in different ways; different farmers with different kinds of enterprises. Bad weather in one area might not hurt the poultry man, for example, and there are all sorts of different circumstances.

On the other hand, there may be one farmer in an area that is hit with some difficulty and none of his neighbours are bothered, so we like to deal with the individual farmer. If he is really genuine and sincere in his efforts

with us and he gets into difficulty, we will defer his payments and we will carry them.

The Chairman: Mr. Thompson (Battleford-Kindersley).

Mr. Thompson (Battleford-Kindersley): Mr. Chairman, they say that our society is built on credit and judging by the amount of credit that is out, at least it should be built, but we are not satisfied with building on the society that we have had, we are going to start building the Indian society in the same way. It is not right that he should get away with not owing money; he has got to owe money like the rest of us. I would like to deal with this particular item of the Farm Credit Corporation and in particular one or two items.

As I see it, this would be a new venture for many of these people and I would like to stress, if you will, not only farm skill but the farm management end. You could use provincial people, but I wonder whether this is not one area where, there should not be a fair amount of work. I hate to see anyone borrow money, particularly on this level, if he has not got some training or management skill.

Mr. Owen: That is a sentiment with which I heartily agree. Our facilities have not been available to Indian farming on reserves before; they are now going to be available and we feel very strongly that if we are going to make these services available we are going to make them available in such quality that our reputation, which we think is a good one now in farming generally, will not be hampered by it.

We will do everything within our power to ensure that we deal with these individual farmers and give them every bit of help we can. We will have to co-operate; we will be in co-operation with the Department of Indian Affairs and we will, in some instances, be in co-operation with the extension people from the provinces. I can assure you that we are not going to be lending under this particular section for a little while until an agreement is made, but we are going to give it a very real effort to ensure that what we are doing is helpful and not in the long run harmful.

• 2130

The Chairman: Thank you, Mr. Thomson. I recognize Mr. Whelan.

Mr. Whelan: I just wanted to ask a couple of questions, Mr. Chairman. You said that you were not the largest lender of money for

farms in the farm mortgage business. What percentage of all farm loans in Canada do you make? Do you know?

Mr. Owen: Total credit, including short term, intermediate, long-term, all kinds of money which farmers borrow, in 1967 was a little over \$2 billion; we lend about 12 per cent; that is, of the amount extended during the year of the long term or mortgage credit, we lend about 60 per cent.

Mr. Whelan: You are talking, then, about all the money they borrow from banks, credit unions and so forth.

Mr. Owen: That is right, in fact the banks are the largest suppliers of capital to farmers but the loans are, of course, of shorter duration.

Mr. Whelan: You also mentioned the farm supervisors and being a strong believer that we do not delve into this sphere of the whole operation deep enough. I have always said that we should have a program to provide more advisers to farmers that bought the number three type of loan.

Mr. Owen: Yes, the supervised loan.

Mr. Whelan: How many supervisors do you have in each province? Do you know this offhand?

Mr. Owen: Our credit advisers do the supervisory work. We have a total of about 250. In British Columbia there are 12, in Alberta 58, Saskatchewan 58, Manitoba 21, Ontario 52, Quebec 59, and the Atlantic Provinces 12.

The Chairman: Thank you, Mr. Whelan.

Mr. Whelan: I have just one other question on the appeal.

The Chairman: I am sorry.

Mr. Whelan: Mr. Pringle told me that perhaps this question on appeals was answered before. How many appeals a year are made by farmers that are refused loans and how many of these appeals are successful?

Mr. Owen: In the three years approximately during which the appeal boards have been operating—I can give you the total rather than the yearly breakdown.

Mr. Whelan: Yes.

Mr. Owen: There have been 225 appeals, of which the Appeal Board indicated they

agreed with us, and 45 in which they either recommended that we make the loans or recommended alternative loans.

Mr. Whelan: But the Appeal Board does not have the power to say you shall grant them a loan?

Mr. Owen: That is right.

Mr. Whelan: They just have power to recommend.

Mr. Owen: Yes. Now, of those 45 we made loans to 43 of them. There were two instances where we did not agree with the Appeal Board recommendation and did not make the loan.

Mr. Whelan: Thank you.

The Chairman: Thank you, Mr. Whelan. I recognize Mr. Lambert (Bellechasse).

[Interpretation]

Mr. Lambert (Bellechasse): Mr. Chairman, as everything goes together in agriculture. I wonder whether in the future the Farm Credit Corporation, when loaning to dairy farmers, will be bound by increasingly strict quota regulations set up by the Dairy Commission?

Mr. Owen: Yes.

Mr. Lambert (Bellechasse): Will this influence the decisions of the Commissioners in estimating the income and the possibility for repayment etc.?

Mr. Owen: Yes. If the quotas are taken into consideration, it is one criteria used to evaluate a farmer's income.

Mr. Lambert (Bellechasse): Thank you.

Mr. Owen: We also work in close co-operation with the Dairy Product branch.

Mr. Lambert (Bellechasse): Then, the conclusion is definitely, in this matter of dairy farm loans there will be less of them in the future?

• 2135

Mr. Owen: For processing milk?

Mr. Lambert (Bellechasse): Yes.

Mr. Owen: Yes.

Mr. Lambert (Bellechasse): We call that the poor man's milk.

Mr. Owen: This is true. This is not the same as milk for the market.

Mr. Lambert (Bellechasse): Well, of course, there is fluid milk and powdered milk.

Mr. Owen: I have an idea that, in the future, there will be fewer loans for powdered milk and some farmers who will produce it will certainly extend their activities, to have an adequate income. In these cases, the loans will be very useful to extend farm buildings.

Mr. Lambert (Bellechasse): When there is a question of processing, when a dairy farm is unable to expand, these people still have to live somehow. They might want to switch to growing or hogs raising. What kind of collateral will you demand in these cases? On farms of inadequate size, will the buildings be valued as collateral, or what? What will the position be in other words?

Mr. Owen: We go by the value of the property, including buildings. You will understand that the farmer's income will depend to a large extent on the buildings he has for hogs, or fowl. It is the potential income from his production which will be the basis for assessing our loans. The productive value, the possibility for repayment are just about the same really, are they not?

Mr. Lambert (Bellechasse): Thank you.

[English]

The Chairman: Thank you very much, Mr. Lambert. I now recognize Mr. Korchinski (Mackenzie).

Mr. Korchinski: Mr. Owen, I presume that all your applications are treated as confidential and that that is how it is intended to be?

Mr. Owen: Yes.

Mr. Korchinski: Do you wish to continue in that fashion? That is, to have applications and loans continued to be granted in a confidential manner?

Mr. Owen: Yes. I would say, however, that if a farmer applicant wrote somebody to make representations on his behalf we would assume that he was expecting us to take that man into our confidence.

Mr. Korchinski: Yes. Then, perhaps you may wish to reconsider your reply to the Member for Saskatoon-Biggar? When I deal with a bank I consider my dealings with it to be confidential, and if I went to the Farm Credit Corporation I would also wish it to be treated as a confidential matter.

Do you still consider that there should be consultations between the bank and the Farm Credit Corporation?

Mr. Owen: As a matter of fact, we ask each applicant about his obligations to a bank and obtain his permission to go and talk to the bank.

Mr. Korchinski: That is fair enough; but having been granted the loan if he goes into the bank he also has to give them a statement. There is, however, no way that the bank can check with you, and I doubt that you would really be interested in checking back with the bank.

Mr. Owen: If the bank asked us we would say: "Get your farmer's permission for us to give you the information."

Mr. Ritchie: They would know automatically.

Mr. Owen: They would not know whether he was up to date.

Mr. Ritchie: The mortgage is there.

Mr. Owen: Oh, yes, the mortgage is there; but they might not know whether he was up to date. If they wished to know the status of man's account we would expect them to get that man's agreement to our releasing the information.

• 2140

Mr. Korchinski: Oh, yes; but in the case that the member for Saskatchewan-Biggar was citing the suggestion was that, after getting a loan of \$40,000, one then got another loan from the bank for \$25,000. I would not want this kind of an exchange between the Farm Credit Corporation and banks, or any other lending institution, for that matter. This would not be advisable, would it?

Mr. Owen: It depends on the kind of consultation to which you are referring. We certainly would not go into the bank and say "You should not make a loan to that man."

Mr. Pringle: Mr. Chairman, is this not usual in the case of all loans? When you go to a mortgage company they want to know what money you owe and your financial position.

Mr. Korchinski: I agree; but I do not think the Corporation should get itself into a position where it has consultations back and forth, or that the banks give out this informa-

tion to other people. This is the inference that was left with the member from Saskatchewan-Biggar.

I would strongly advise against any policy such as that.

Mr. Gleave: Mr. Chairman, on a point of information. I was suggesting to Mr. Owen that it would be advisable to develop an approach by which, to avoid difficulty, there was some co-ordination between these two types of loans. It might be done by a regular procedure whereby the farmer would be fully aware that this was the course that was to be followed and would fully accede to it. I was not suggesting any kind of prying procedure.

Mr. Korchinski: I would certainly wish to leave the decision to the farmer. I would give him credit for at least having some common sense.

I will leave this topic.

Mr. Owen: May I make a few comments on that? First of all, a man who obtains a supervised loan from the Corporation is not eligible for a farm improvement loan unless the Corporation has given him permission.

Mr. Korchinski: That is a different situation.

Mr. Owen: The second comment is that although lenders deal in confidence with the status of individual accounts, I think you would appreciate that in any credit operation it is incumbent upon the lender, whether it be a bank or anybody else, to get the credit ratings of, and credit information about, the applicants.

Mr. Korchinski: I will not pursue that any further. I have another question about Indian bands.

What guarantee have you that you will be able to get this money; and if they are in default what do you do?

The Chairman: Order, please.

Mr. Korchinski: Is the loss that you suffer in this case then carried on by the bulk of the lenders from thereon in? You obviously cannot sue the Crown, and you cannot repossess. What is your method of procedure here?

Mr. Owen: Ordinarily, in lending to a farmer, we take, as our first security, his ability to save...

Mr. Korchinski: I am speaking about Indian bands.

Mr. Owen: Yes; but I want to lay the foundation before I say anything about that. In lending to any farmer our first security is his repayment ability. In the event that he does not repay we have a second security to fall back on, which is a mortgage. This we have not been able to obtain from Indian farmers on reserves. To replace this we get a guarantee from the Minister of Indian Affairs and Northern Development that if we do not get the money back from the Indian we will get it back from the Minister of Indian Affairs and Northern Development. It is only to make such an agreement that the amendment to the act really permits us.

Mr. Ritchie: Has he given you one?

Mr. Owen: I beg your pardon?

Mr. Ritchie: Has he given you one agreement?

Mr. Owen: The Act has just been amended. We will be working out an over-all agreement about guarantees.

Mr. Whelan: What you are really doing is loaning the Indian money to buy back his own land, and it was really his in the first place.

Mr. Owen: We did not say that this money would necessarily be to buy land. Farmers do a great deal more than that.

Mr. Korchinski: I have one other question on repayments.

I believe you have a policy whereby payments can be made on the basis of a share of any crop that is received. I think it is one-sixth of the crop, or something like that. I may not be accurate in the detail here. Do you have a policy of that sort?

Mr. Owen: A crop share agreement?

Mr. Korchinski: Yes?

Mr. Owen: Yes.

Mr. Korchinski: To what extent are payments made on that basis?

Mr. Owen: A very limited number. I will take wheat as an example. If the crop is only six bushels they do not pay anything; between six and 18 bushels per acre, they pay half. Therefore, for the first 18 bushels they pay one third. Above that they do not pay anything.

There are very few farmers who use it—somewhat less than 400 in the country.

• 2145

We offered this in 1961, during the period of drought, to some 20,000 farmers and there were only about 500 who wished to take it up. Many of these have dropped it since.

This is rather a two-edged thing. It makes for lower payments during poor crop years, with very much higher payments during the years of good crops.

The farmer has to report his crop with his grade, and so on. Our experience has been that he would prefer to know that he has so much money to pay on such and such a date, regardless of his crops; because he knows that if he does not have a crop we are going to deal with him in a reasonable and sensible way and are not going to foreclose on him.

Mr. Korchinski: Is this policy based on production of the crop in that given year or on the delivery of it?

Mr. Owen: Crops during that year; but we can wait for receipt of the money until it is delivered.

Mr. Korchinski: In other words, you could accept the . . .

Mr. Owen: The amount he owes us for that year is based on the amount of his crops. Naturally, we cannot get it until the crop is sold.

The Chairman: Thank you, Mr. Korchinski.

Mr. Horner: I have a supplementary on that point. You talked about his ability to deliver it. Let us suppose he has borrowed more than a six-bushel quote will allow him to deliver—other than his living allowance, and so on. How long are you prepared to wait? Suppose he has the grain in storage. How long are you prepared to wait until his delivery and the payment for that year?

Mr. Owen: We have so few of them that I really cannot say. The question of how long we will wait has never yet arisen so I am afraid I could not answer.

Mr. Ritchie: He can get \$6,000 from the Government to pay you, can he not?

Mr. Owen: I can only say that it has never created a problem either for us or for a farmer.

The Chairman: Thank you, Mr. Horner.

Mr. Peters (Temiskaming)?

Mr. Peters: At the beginning of the discussion you mentioned the role being played by the advisory committee. In terms of credit, have you ever thought, or has there been any advice from the advisory committee for the establishment, of a revolving fund whereby moneys being paid back to the treasury are retained by the Corporation so that over a long period of time we probably would be able to equalize the interest rates that were available?

I notice that your original borrowings were at three per cent in 1951-52, and they have gone up in 1967-68 to a maximum high of 6.8. You operate with a very small revolving fund, I understand, but has the advisory committee ever suggested that all the moneys go into a revolving fund for re-use within the Corporation?

Mr. Owen: I would like first to clear up the question on revolving fund. It is not truly a revolving fund, although it is somewhat in the nature of one. The Act authorizes us to borrow so much money, and we borrow it from the Government at a particular time, amortized over a period of years. We have to make payments on it each year.

On money that we lend to farmers they have to make payments to us, and these are made to the Corporation and not to the Receiver General. We then, from proceeds, repay the Minister of Finance the amount due on our loans. That reduces the amount we owe the Minister of Finance, and we can come back and borrow from him again so long as we do not get up to the ceiling. What has happened is that the tremendous rate at which we have been lending has pushed us up to the ceiling on several occasions.

You will appreciate that on an amortized loan to a farmer he pays very, very little principal in the first years and most of our business has been over the last five or six years so that the principal repayments are not nearly high enough to meet our new lending requirements, and this is why the ceiling was gradually raised. I suppose if a revolving fund was set up it would probably have to carry a current rate each year. However, I will say, in answer to your specific question, that this question of a revolving fund has never been considered by the Advisory Committee.

Mr. Peters: So in the true sense there was not within the Corporation a revolving fund from which you could borrow or loan out money.

• 2150

Mr. Owen: Not truly, no.

Mr. Peters: In fact it was just an annual holding fund that you had. The only difference would be that in the years you took in more money than you put out there would be a limited revolving fund for that year.

Mr. Owen: Then we would have a surplus with which we would have to make prepayments on some of our borrowings. We borrow from the government and we repay it depending upon our repayment capacity as a result of loans from farmers.

Mr. Peters: I presume there was not a revolving fund, but I wonder if the Advisory Committee had ever made the suggestion. It seems to me that all your borrowings are going to have to be on current market values, no matter whether we change the Act or not. It is a fact that you borrowed in the market sometimes advantageously and sometimes not too advantageously, but you had to borrow it currently.

Mr. Owen: Yes.

Mr. Peters: I would have thought that the Advisory personnel would have indicated the advantages of establishing a revolving fund. It would not be anywhere near a billion dollars but a very much lesser amount, would it not?

Mr. Owen: There may be some advantages which are not apparent to me, but certainly it is a matter that could be referred to the Advisory Committee. I might mention that in addition to the money we borrow we also get our capital interest free.

Mr. Horner: A supplementary, if I might, Mr. Chairman. Would there not be some advantage gained in having the Corporation in fact set up on a revolving fund principle. In this way the money you loaned 10 or 15 years ago at three per cent interest could now be reloaned, in other words the same money would be used and there would not be the added cost of, let us say, inflation on that money to the Corporation.

Mr. Owen: Actually the money we borrowed at three per cent years ago was lent out to farmers, some at four and a half and some at five per cent, and it is still out.

Mr. Horner: Yes.

Mr. Owen: There may be some specifical advantage to a revolving fund but I cannot see any. It would take a very long time to discuss the merits or demerits of a revolving fund.

Mr. Peters: What did you mean when you said that you borrow your money capital interest free?

Mr. Owen: Our borrowings are current to government lending rates. But in addition to this, the capital subscribed for the Corporation, which was \$40 million and is now up to \$56 million, is provided by the government interest free.

Mr. Peters: What do you do with that? Except as a bookkeeping factor, what is the significance of that original capital?

Mr. Owen: It is really the government's equity in the Corporation, the rest is a liability. We cannot have assets and liabilities in excess of 25 times our capital stock, if you will. That also sets a limit on the amount of reserve we can establish for losses, but we do not have any revenue to establish such a reserve. Initially it was really shares in the Corporation.

The Chairman: Mr. Douglas, Assiniboia?

Mr. Douglas: These are really supplementary questions. One has to do with deferment of payment, which Mr. Owen mentioned briefly, in case of crop failure or other things that might happen to an individual farmer. You said there was no forgiveness of interest, but in case of a deferment of a payment for a year do you just extend the whole term—add another year on the end,—or do you charge interest for that year and increase the next year's payment?

• 2155

Mr. Owen: We carry that payment in arrears, and when he gets a good crop then he pays us back. If, as happens in many instances, the farmer has had difficulty for two or three years in a row and we see that he has now overcome these difficulties we could reamortize that payment over the balance of the term or, if necessary, over a longer term. But ordinarily we do not make these arrangements. Normally we just defer it if he is a year or two behind and he catches up, and actually they prefer it that way.

Mr. Douglas: You spoke about inspection fees for checking out a farm before making a loan. Has there been a change in the inspection rate?

Mr. Owen: Yes. Since we increased the interest rate to cover our operating costs we reduced the charges for making appraisals from 40 cents per hundred under Part II to 20 cents per hundred, and under Part III from 50 cents per hundred to 25 cents per hundred.

Mr. Douglas: Thank you.

The Chairman: I recognize Mr. Howard, Okanagan Boundary.

Mr. Howard (Okanagan Boundary): I want to say, first of all, that since a revolving fund system operates quite successfully in the United States it would seem to me that the intelligent thing to do would be to take a look at their system which is operated on a more decentralized basis than we have here.

Mr. Owen: Which organization are you referring to, sir, the Farm Credit Administration or the Farmers Home Administration?

Mr. Howard (Okanagan Boundary): They call it the Land Bank System.

Mr. Owen: The Land Bank which is part of a Co-operative system is a form of credit union.

Mr. Howard (Okanagan Boundary): Now their revolving fund system has been operated by decentralized units over the years, many of these units have repaid their original capital to the government and now are operating on their own without any burden on the government itself because they now have their own capital.

Mr. Owen: It is a co-operative credit system. As a matter of fact, the Farm Loan Board initially was set up on that basis. Each borrower has to buy stock up to a certain percentage of the amount of his loan, and eventually the farmers came to own it themselves. They started about 1916 and now they pretty well own it all. The Farm Loan Board was originally set up on that basis, and in 1935 it was changed to our present system.

Mr. Howard (Okanagan Boundary): I just suggest that it is operating successfully.

Mr. Owen: I do not believe that it is operating on a revolving fund. They borrow their money through a financial agent on the Unit-

ed States money market. We have been down to visit them several times to discuss the ways in which they raise their money.

Mr. Howard (Okanagan Boundary): My understanding is that they borrowed it originally from the government and most of them now have paid it back.

Mr. Horner: The original money that was in the revolving fund.

Mr. Owen: Individual farmers also bought shares and now they have been able to buy out the government shares. But the actual money they get for lending is raised on the money market. In fact, outside of the United States Government itself they are the next largest borrower on the money market in the United States.

Mr. Howard (Okanagan Boundary): I think there is another advantage to the system: it is operated by the farmers themselves so that they are on the spot to give proper advice to a farmer who might require it in connection with his loan.

Mr. Owen: It is a co-operative credit system. As a matter of fact, I have on many occasions suggested to many farm leaders in Canada that they might be interested in this sort of a system. Generally speaking, however, the consensus has been that as long as they could borrow money from the government at less than they could afford to borrow and lend it themselves they themselves did not particularly wish to go into the business.

Mr. Pringle: Would it be a fair question to ask if they borrowed money as cheaply as our farmers have been able to borrow it during the last three or four years.

Mr. Owen: No, the Land Bank's rate has been somewhat higher than ours. They had a ceiling of six per cent but this had to be removed recently in order to meet the market situation. Now this is the Land Bank, not the Farmers Home Administration which is a different thing. But interest rates in the States generally are lower.

Mr. Pringle: That is what I mean.

Mr. Howard (Okanagan Boundary): I have another point I wanted to make in connection with appeals. I know of a case where a farmer requested leave to appeal in connection with an application for a loan because, in his opinion, the appraisal on the property was not high enough. The Farm Credit people said

that they could not do anything about the appraisal because they had only one appraiser for that area.

Mr. Owen: If an exception has been made in this case I would like to learn more about it, but ordinarily if a question arises in the minds of the Appeal Board concerning our value they can ask that we send somebody else out to make that appraisal, even if we have to bring them from some distance.

Mr. Howard (Okanagan Boundary): This was not what your officers told the applicant in this case.

The Chairman: Thank you, Mr. Howard. I now recognize Mr. Korchinski and then Mr. Pringle.

Mr. Korchinski: What rate of interest did you charge on any default under the old system?

• 2200

Mr. Owen: One half of one per cent in excess of the rate in the mortgage.

Mr. Korchinski: And what is the rate of interest that you charge on any default under the new system?

Mr. Owen: One half of one per cent above the rate in the mortgage.

Mr. Korchinski: Good. It is nice to see some consistency.

The Chairman: Thank you, Mr. Korchinski, Mr. Pringle, Fraser Valley East?

Mr. Pringle: Mention was made of economic units and criteria. There is developing all across Canada so-called marketing units which are effective procurement commissions. These units are made up of small farmers who, from a marketing standpoint only, are actually economic units. These farmers' ability to earn has been enhanced by their participation in economic units. We have some very successful operations like this in British Columbia. However, if you appraised each individual farmer on the basis of his fixed assets you might find that he would not comply with the necessary criteria. Do you take this into consideration when considering the applications of these people?

Mr. Owen: Our criteria is based on his income. Regardless of what particular source his income might come, this is what we use

as a basis for establishing value and also for establishing whether or not it is an economic unit. I am sure that any economic advantage he has from this arrangement would reflect itself in our evaluation of the property.

Mr. Pringle: Thank you very much.

The Chairman: Gentlemen that concludes our questioning of Farm Credit Corporation witnesses. I am sure you would wish me to express your appreciation to Mr. Owen and

his officials for the very competent manner in which they have answered your questions. They have done a wonderful job and we are grateful to you, Mr. Owen, and to your officials.

Item 70 agreed to.

The Chairman: Gentlemen, we will adjourn until Tuesday at which time we will consider and conclude, I hope, health of animals, and Item 1.

OFFICIAL REPORT OF MINUTES
OF
PROCEEDINGS AND EVIDENCE

This edition contains the English deliberations and/or a translation into English of the French.

Copies and complete sets are available to the public by subscription to the Queen's Printer. Cost varies according to Committees.

STANDING COMMITTEE
ON

AGRICULTURE

Chairman: Mr. BRUCE S. BEER

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 10

TUESDAY, DECEMBER 3, 1968

Revised Main Estimates (1968-69) relating to Agriculture

WITNESSES:

Mr. S. B. Williams, Deputy Minister of Agriculture; *and from the Health of Animals Branch:* Dr. K. F. Wells, Veterinary Director General; Dr. W. A. Moynihan, Program Co-ordinator; Dr. C. K. Heatherington, Director, Meat Inspection Division.

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE
ON
AGRICULTURE

Chairman: Mr. Bruce S. Beer

Vice-Chairman: Mr. Marcel Lessard (*Lac-St-Jean*)

and Messrs.

Barrett,	Howard (<i>Okanagan</i>	Ritchie,
Cadieu (<i>Meadow Lake</i>),	<i>Boundary</i>),	Roy, (<i>Laval</i>),
¹ Clermont,	Korchinski,	Smith (<i>Saint-Jean</i>),
Cobbe,	Lambert (<i>Bellechasse</i>),	Southam,
Côté (<i>Richelieu</i>),	Lefebvre,	Stewart (<i>Okanagan-</i>
Douglas,	Lind,	<i>Kootenay</i>),
Foster,	Moore (<i>Wetaskiwin</i>),	Thomson (<i>Battleford-</i>
Gauthier,	Muir (<i>Lisgar</i>),	<i>Kindersley</i>),
Gleave,	Peters,	Whicher,
Horner,	Pringle,	Yanakakis,
		Yewchuk—30

Michael A. Measures,
Clerk of the Committee.

¹ Replaced Mr. Cyr on November 29, 1968.

ORDERS OF REFERENCE

FRIDAY, November 29, 1968.

Ordered,—That the name of Mr. Clermont be substituted for that of Mr. Cyr on the Standing Committee on Agriculture.

TUESDAY, December 3, 1968.

Ordered,—That the names of Messrs. Horner and Moore be deleted from the Order of Reference dated November 27, 1968 relating to the Standing Committee on Agriculture.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

MINUTES OF PROCEEDINGS

TUESDAY, December 3, 1968.

(11)

The Standing Committee on Agriculture met at 9:44 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Barrett, Beer, Clermont, Côté (*Richelieu*), Foster, Gauthier, Gleave, Horner, Howard (*Okanagan Boundary*), Korchinski, Lambert (*Bellechasse*), Lefebvre, Lessard (*Lac Saint-Jean*), Lind, Moore (*Wetaskiwin*), Muir (*Lisgar*), Peters, Ritchie, Roy (*Laval*), Southam, Stewart (*Okanagan-Kootenay*), Whicher, Yanakis—(23).

Also present: Mr. Downey, M.P.

In attendance: Mr. S. B. Williams, Deputy Minister of Agriculture; and from that Department's Health of Animals Branch: Dr. K. F. Wells, Veterinary Director General; Dr. W. A. Moynihan, Program Co-ordinator; Dr. C. K. Heatherington, Director, Meat Inspection Division; Dr. J. Frank, Director, Animal Pathology Division; Dr. A. E. Lewis, Associate Director, Contagious Diseases Division; Mr. R. D. MacMillan, Administrative Officer.

The Committee resumed consideration of items 40 and 45 of the 1968-69 Revised Main Estimates relating to Agriculture under the heading

HEALTH OF ANIMALS.

The Chairman introduced Mr. Williams and Dr. Wells, the latter of which introduced the others in attendance.

Mr. Williams and Dr. Wells were questioned, assisted by Dr. Moynihan and Dr. Heatherington.

On completion of the questioning, the Chairman thanked the witnesses.

Items 40 and 45 were carried.

At 11:00 a.m., the Committee adjourned to the call of the Chair.

Michael A. Measures,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Tuesday 3 December 1968.

The Chairman: Gentlemen, we will begin the meeting.

• 0944

We have with us this morning the Health of Animals Branch. We are considering items 40 and 45. The majority of you will know that we have had the Health of Animals Branch with us for two meetings, and I presume that members who may not have been on the Committee for the previous meetings will have read reports Nos. 5 and 6. It would be an unwise use of the time of the Committee to repeat the questioning that already appears in these reports.

I am pleased to have the Deputy Minister with us this morning, and Dr. Wells.

Mr. Deputy Minister, would you like to say a word?

Dr. Wells, perhaps you would introduce the gentlemen with you this morning, in case there are some additions.

Dr. K. F. Wells (Veterinary Director General, Health of Animals Branch, Department of Agriculture): Mr. Chairman, starting on the far end are Dr. J. F. Frank, Director, Animal Pathology Division, Health of Animals Branch; Dr. C. K. Heatherington, Director, Meat Inspection Division, Health of Animals Branch; Dr. A. E. Lewis, Associate Director of Contagious Diseases, Health of Animals Branch; Dr. W. A. Moynihan, Program Co-ordinator for the Branch; and Mr. R. D. Mac-Millan, Administrative Officer for the Branch.

• 0945

The Chairman: Thank you. I am ready to receive questioners. I recognize Mr. Horner (Crowfoot), followed by Mr. Foster.

Mr. Horner: Dr. Wells, I regret not being here earlier, but I was away serving on another Committee at the time you were before the Committee previously.

In reading over Issue No. 6 of November 14, I noticed on page 76 you said that this

year applicants were sent a questionnaire asking them to signify their intent and what they purported or hoped to do with the Charolais cattle.

Dr. Wells: Yes, that is correct. It was a project proposal, Mr. Chairman.

Mr. Horner: Was there a question asking whether the applicant was a Canadian citizen?

Dr. Wells: No, there was not.

Mr. Horner: The reason I ask this question, Dr. Wells, is that there is a great influx into Alberta of American people buying ranches for the purpose of obtaining Charolais permits and for the purpose of becoming ranchers in Alberta to take advantage of our co-operative laws in setting up the Grosse Isle quarantine station.

I think that would have been a good question to ask. If they are not Canadian citizens, do they intend to take out Canadian citizenship when they have served their five years in Canada, or something like that. Did the Department, at any time, think about asking that question?

Dr. Wells: Well, we did visit every applicant to ascertain that they did have facilities and were in fact, farming or ranching, in other words had livestock facilities in order to maintain the cattle they imported.

Mr. Horner: I do not suppose it would do much harm to name the party I am thinking of. Mr. Murray, I think, was the name, one of the biggest ranchers in Hawaii, one of the big ranchers in the United States. He came to Canada and bought out one of the beginners in the Charolais industry in Canada. I think it is near Lacombe.

He bought his ranch and his cattle. It is difficult to convince me that he, with his enterprise as big as it is in the United States, in buying that ranch, in buying that pioneer in the Charolais industry in Canada, is doing it for the Canadian livestock industry.

Dr. Wells: What was the gentleman's name?

Mr. Horner: I think it was Murray. I could be wrong. He bought out James in Lacombe.

Dr. Wells: Rodney James.

Mr. Horner: He bought his Charolais cattle, his ranch, the whole business. He is well known. He is a major breeder in the United States, in Hawaii, and so on. Do you remember anything about that particular case?

Dr. Wells: I do not think the name is Murray. That name is not familiar to me. I know the man of whom you speak, but I cannot think of his name.

Mr. Horner: Well, then it is better we do not name him. As long as you know the case I am talking about.

Dr. Wells: As I recall, he did not apply for an import permit.

Mr. Horner: But he did not have to after having bought the original stock of Mr. James. He has the foundation breed in Canada, really.

The Chairman: Of course, you could not prevent that.

Mr. Horner: No, you could not prevent that. You could not prevent him buying it.

I used him only as an example of why I believe the Department should give serious consideration to placing on the questionnaire: "Are you a Canadian citizen? If not, do you intend to become one?"

It is of the utmost importance that we run the risk of the foot and mouth disease being spread in our livestock industry. We Canadian ranchers, run that risk. We, in the Canadian Government, run that risk.

• 0950

We should define first that we are running the risk. I think, Dr. Wells, that we are running the risk for the Canadian livestock industry, and the sole purpose of bringing these cattle in is—I would like to hear the Department say this anyway—to improve the Canadian livestock industry, and the Canadian rancher's competitive position with other nations. If we accept that philosophy, then we should ascertain who these breeders are working for. Are they working for the Canadian industry or some other industry? And that is why I would have that question on top of the sheet of paper.

Mr. S. B. Williams (Deputy Minister, Department of Agriculture): Mr. Chairman, if I might say a word. First of all I must say

this, that the situation that Mr. Horner has described is one that has caused this Department some concern. This very definitely is our objective, and I have stated this objective in bringing these cattle into this country, namely to provide a source of seed stock that will be of assistance to Canadian producers.

The difficulty that we have seen in this matter—I do not think that we have forsaken this position at all—the difficulty is exactly the one that he has described. There is nothing to stop a Canadian who has brought these cattle in, quite validly, from then selling his lot, stock and barrel, or the cattle or anything else.

We have taken the position that the best way to really reserve these cattle for Canadian use basically, is to place an embargo on their exportation, which has been done, on the grounds that this might deter the type of thing that you have described, which does concern us, as I say. And it does at least take some steps towards ensuring that the cattle are used for Canadian purposes.

Now, having said that, I must say that we are concerned about these matters and we are trying to devise ways and means of meeting that objective that we have set for ourselves.

Mr. Horner: Just to carry that embargo idea one step further. Am I correct in assuming that the embargo now is absolute, that it is not just for three years?

Mr. Williams: At the present moment there is an embargo on the movement of all purebred Charolais cattle, irrespective of their origin, under the Export and Import Permits Act of the Department of Trade and Commerce.

However, permits are issued under that embargo. At present no full French animals that originated in France are being given permits, nor are any full French female offspring of these animals. However, the other ones for which a normal trade exists, that is to say crossbreds or halfbloods and straight Canadian or straight American ones, are traded freely, other than that they still require a permit.

Mr. Horner: I am pleased to see the Department take that step. A few years ago I urged the Department to do that. I would not want to accept any of the credit for it having been done, but I am pleased that we are in agreement.

Now, to go another step further. On page 79 of Issue No. 6, Dr. Wells, you suggested

that in issuing the permits—I will just use the figures roughly and you can correct me if I am wrong—I think there were something like 1,700 applicants this last year, and you issued something like 235 permits. Could you give us those figures, so that the Committee would know full well what we are discussing here?

Dr. Wells: Three hundred and thirteen applicants, and we issued one hundred and forty-one permits.

Mr. Horner: I was thinking of the previous year, I guess, when you had the huge number.

Mr. Williams: Or maybe the applications, the number of animals?

Mr. Horner: When I said applicants I meant the number of applications for permits.

Mr. Williams: Individuals applying, or the number of animals being requested?

Mr. Horner: Well, both, in a way.

Mr. Williams: The first figure is the number of people.

Mr. Horner: The 313?

• 0955

Mr. Williams: Yes, the number of people who applied, and the number of people to whom applications were issued.

The other figure, I may say, is much more difficult to arrive at in that many people ask for as many as we will give them. They would like to have a permit for 60 or 80, or figures of this nature. But do you recall, Dr. Moynihan, roughly the total number of animals that were...

Dr. Moynihan (Program Co-ordinator, Health of Animals Branch, Department of Agriculture): Close to 3,000 were specified.

Dr. Wells: Close to 3,000, but many of them were sort of open-end applications.

Mr. Horner: Yes, I can understand that.

Dr. Wells: But in relation to that, Mr. Chairman, we get letters applying. Then we send out the project proposal or the questionnaire, and it is not returned, so that we never know whether the original letter is in fact an applicant, or whether the project proposal is an applicant, and it would depend entirely upon how you counted them.

Mr. Horner: Yes, I can well understand it would be difficult to assess in that light, and

analyze them as full applicants unless they return it.

At the top of page 79, you suggest that in issuing the permits you give priority to artificial insemination units. This is the one criteria—and I looked through the questions—this was the one criteria I could find that you used as a preference. How many artificial insemination units would there be that would fully qualify? I could be a rancher whose dream is to get into the business of selling semen through the use of artificial insemination, but how many actually do it? There is one in Ontario here, a major one; there may be two in Western Canada. Am I right?

Dr. Wells: I am speaking from memory and I will correct this and put the proper figure in the record, but I think that this past year there were three artificial insemination units.

Artificial insemination units must be registered in accordance with other provisions of the Animal Contagious Diseases Act, and so we are aware who is and who is not an artificial insemination unit. A person simply cannot write in and say that he operates an artificial insemination unit. If my memory serves me correctly there were three involved this past year.

Mr. Horner: Are these units importing only bulls, or do they import heifers and attempt to develop a strain?

Dr. Wells: No, it is bulls only.

Mr. Horner: Bulls only. So they are really not the big importers or not the difficult ones?

Dr. Wells: No. They in fact are servicing the commercial industry.

Mr. Horner: To carry the issuing of permits a little further. This past year there was a great deal of complaint with the lateness of the Canadian Department of Agriculture issuing or signifying who, in fact, got the permits. There was a great deal of complaint about the lateness of the year. As I understand it, and you can correct me if I am wrong, the calves nearly have to be weaned and in the quarantine station in France by about August 1, am I right?

Dr. Wells: This is correct. Early August. We shoot for the first to the ninth and the fifteenth of August.

• 1000

Mr. Horner: And yet this past year—I am just guessing; you can correct me if I am

wrong—I think it was well into July before ranchers and farmers were told they were to be given “X” number of permits.

Dr. Wells: I do not have the exact date. Was it July 17 that they were issued?

Mr. Horner: I am not condemning anybody; I do not get my work done as fast as I would like; but do you not agree that the Department, or the Government, or whoever gives the final authority, should aim at an earlier date than that?

Dr. Wells: Yes; and in fact we usually do, sir.

Mr. Chairman, this was not a matter of not having the work done. We were having difficulty in being able to assure ourselves that our testing material, blood samples, tonsil scrapings and other specimens could be obtained from the Charolais area of France and up to Paris for testing.

Tonsil materials has to be out of the animal and into the laboratory for testing in definitely not more than 24 hours.

In addition to that we had problems in obtaining reasonable assurance that the animals could and would be transported from the Charolais area to the Brest quarantine station, in accordance with our requirements. This is a non-stop operation under our supervision.

A delay in the permits was created simply because the situation in France this summer was so difficult that we could not be assured of adequate transportation of our specimens to the Paris laboratory from the Charolais area, nor could we be assured of adequate through transportation for the livestock.

Mr. Horner: Why was it more difficult this year? You said that in other years this was not a problem.

Dr. Wells: Our information was, of course, that in France this spring and summer, there were some difficulties with transportation and other things.

Mr. Horner: In an optimum situation when do you consider would be the best time to get these permits out? In my opinion it would be something like two or three months earlier than last year.

Dr. Wells: A month is adequate time in advance; although we try to get them out six weeks to two months in advance.

Mr. Horner: Dr. Wells, am I correct in suggesting that a committee, the name of which, I cannot remember, assisted you this year in appraising the various applicants?

Dr. Wells: Yes; in fact, we had a project proposal committee which surveyed, and made recommendations to us on, all project proposals.

Mr. Horner: Having talked with this committee I have reason to believe that their recommendations were in no way followed. Am I right or wrong?

Dr. Wells: You are wrong, sir.

Mr. Horner: I am not in a position to argue with you. I am merely saying that they told me they were not. At least one of the members of the committee said that he could in no way see any similarity between the number of applicants approved and those that they recommended.

Dr. Wells: I would question that the committee member knew exactly whereof he spoke, sir. The project proposals that went to the committee did not have any names at all on them. This was done so that no finger could be pointed at the committee suggesting that they had had any influence other than on the actual project proposals that were before them.

Mr. Horner: Yes; this is true; he told me that. But he said that for anyone who knew the business and was engaged in it, it was not too difficult to appraise who the applicants really were. He said there were certainly no names mentioned that after the permits were issued in July he was phoned continually by annoyed breeders. He flatly denied, I think, publicly—at least he was quite public about it when I was within earshot—that he could see any similarity at all.

Dr. Wells: Mr. Chairman, I think there is some error. The recommendations of the committee were followed in considerable detail, although we did deviate in one recommendation. We accepted the committee's recommendations in total relative to the multiple import permit operations, but it was then decided that those who had imported previously and had maintained their imported animals at home should be entitled to some consideration. These people were given one animal, regardless of the project proposal level which had been assigned to them by the committee.

But the committee's recommendations on the multiple operations were quite closely adhered to.

Mr. Horner: What was the prime reason for granting some breeders six permits and for other breeders who also applied for six, being ruled out? They possessed the qualifications that you had suggested, too.

Mr. Williams: Mr. Chairman, if I may, I will answer that because it covers the broad matter of policy. First of all, let me go back a little bit. We asked a group of animal breeding experts within the Department how would they go about it if they had the responsibility for allocating these permits.

They generally agree that probably there would be more value to the Canadian livestock producer if, instead of spreading the animals out by one to as many people as possible, we tried to develop herds of some size and some excellence to give the breeder a wider genetic base on which to work.

This being the case, we moved to this project application form, let us call it. In it the prospective applicant was asked certain questions. It was all retyped so that there was no chance of identification by letterhead; we did not just blank it out. We retyped the applicable portions, and this committee, which consisted of officials from the department and one representative, each from a university and the Charolais breed association, was asked to assign a rating to each of these project applications.

This they did. They started with 1 as their top rating and 15 as their bottom rating, and the allocations were made depending upon the rating. In other words, all those who received a rating of 1 received six animals, and so on in descending order until we reached a rating of 8 at which point it was broken off; then the rating was done on the basis of one each to those people who had, in previous years, imported Charolais, had shown their interest in the business and had shown that they were planning to stay in the business by the fact that they had maintained on their own property all the animals they had imported previously.

In other words, Mr. Horner, we tried to compromise between the building up of herds of some size and excellence and the need to provide an animal to as many as possible of those who had asked for one.

Mr. Horner: The one fallacy in your system of allowing the committee to judge solely on

the basis of the applications is that if I had been a committee member I would have been at a disadvantage compared to you in that you knew who the people were, in a sense.

• 1010

As an applicant, I might have been able to hire a good writer who had an insight into what the Department, or the committee was looking for, and he could have written a beautiful application. Is there not the danger that the person with the ability not to raise Charolais cattle but to write a beautiful application could very well get the permit?

Mr. Williams: I think we would have to admit that that certainly is a defect in the system.

Mr. Horner: I have had complaints, for example, that one applicant got six and his hired man, or his herd boss, got six because they compared notes in writing their applications. They probably wrote very similar applications. I have not seen them. I am merely assuming that this could very easily happen. In another instance three or four brothers in Saskatchewan were each given six. The committee would be at a disadvantage there.

Dr. Wells: I do not think either of those two examples that have been reported to you are correct, Mr. Horner.

Mr. Horner: I am not going to argue whether or not they are correct. I have pretty good reason to believe they are. I may be out a little in the details, but the examples are there, in my belief anyway, until proven otherwise.

In the past I have tried to obtain a copy of the list of permits, but apparently the policy has been not to disclose it. Therefore, I feel reluctant to mention any names.

Mr. Williams: Relative to the disclosure of the list of names, the Department's policy has been that they are not disclosed while importation is under way. Once the importation is completed we have made these lists public.

Mr. Horner: You could settle my argument in a hurry by just listing the applicants who were approved on July 17.

Mr. Williams: But these importations are still underway at the present time. They are still in the quarantine station. Our reason for this is that it is a commercial operation. We feel that this is an agreement between the

department and the importer. However, once the cattle are released from quarantine we feel that our obligation is over and that it is then common knowledge.

Mr. Horner: In fairness, I will forego any further questions for the time being. Thank you.

The Chairman: We have this room until 11 o'clock, and I wish to recognize as many questioners as possible.

I will recognize Mr. Foster (Algoma).

Mr. Foster: Dr. Wells, my questions relate to the veterinarians who went to England last year on the outbreak of foot-and-mouth disease.

How many were sent, what was the cost to the government and what was the philosophy behind sending them? Was it merely a matter of assisting in an emergency in a friendly country, or was it to familiarize the veterinarians with this disease? Or is it a reciprocal thing, in that England would be prepared to assist Canada in a similar emergency?

Dr. Wells: Mr. Chairman, 12 veterinarians were sent to England. The cost to the Government of Canada was their air transportation to London, England, and return, together, of course, with their normal salaries.

All expenses, maintenance, and travel expenses in Britain during the course of their work with the foot-and-mouth outbreak were assumed by the Government of Great Britain.

The purpose of sending them was twofold. First of all, we do not have—and hope we never do—outbreaks of foot-and-mouth disease in this country. Therefore the first purpose was to give our veterinarians an opportunity to see and work with foot and mouth disease, become familiar with the routine for controlling it so that if the occasion should arise here, we would have a nucleus of people trained, and secondly, of course, to give assistance to the British veterinary service who were under very great stress and strain because of the magnitude of the outbreak at that time. Certainly, Doctor, there is no question in my mind that if we did get into a similar situation where our veterinary services were strained in any disease control that the British ministry would be the first to offer us veterinarians on a similar basis. In addition to Canadian veterinarians there were, of course, veterinarians sent to Britain from the United States, Australia, New Zea-

land and Ireland. I believe there were some from other countries too.

• 1015

Mr. Foster: The arrangement was completely satisfactory from our point of view, then?

Dr. Wells: It was, Dr. Foster; it was a very, very satisfactory arrangement, and, of course, our men received training and were of assistance to the British ministry at the time of a very difficult disease situation. Anything we can do to eliminate foot and mouth disease in any country anywhere in the world, bearing in mind the present trade situations and rapidity of transport, gives us just that much more assurance that we will not have an outbreak in Canada. If it were possible to assist the entire world to eliminate foot and mouth disease it would be advantageous from our point of view to participate.

Mr. Foster: My second question relates to the Animal Disease Research Institute which is proposed for the Greenbelt area. What facilities will this new Institute be providing to your Department, or your Branch, that are not already available in the old building?

Dr. Wells: There are two sets of buildings being planned. The first is a general laboratory which will encompass all of the normal animal disease and research work which is carried on today, except that it will provide the facilities we need, which unfortunately are not available today in our present quarters in Hull which were built in 1923. The other set will be a maximum security research operation and diagnostic laboratory where we can, in fact, deal and work with these serious epizootics such as foot and mouth disease, Rinderpest, African and swine fever, African horse sickness, Blue tongue—the full gamut of exotic diseases.

Mr. Foster: What is the status of this new Institute now? Is it going to be built this year or next year?

Mr. Williams: Mr. Chairman, I cannot give a direct answer to that. The latest information we have from the Department of Public Works, which is responsible for constructing it, and contained in a recent letter, is that priority decisions have yet to be made. I would anticipate, however, that the construction may be delayed somewhat. You appreciate some work is being done, but it is site preparation rather than actual construction.

Mr. Foster: In the meantime are you planning to farm out some of your research which cannot be carried on because the building is not there?

Dr. Wells: We are not farming out research, Dr. Foster, but we do, of course, have to farm out our testing. As an example, samples of the necessary foot and mouth testing done on the cattle imported through Grosse Isle must be sent from here to Perbriquet for the testing procedures. We are not equipped here to handle it, nor are we particularly anxious at this moment to have foot and mouth virus in the country in order to handle it. Until we have an adequate maximum security laboratory for such purposes, we dare not handle it.

Mr. Foster: That is all.

The Chairman: Thank you, Mr. Foster, I recognize Mr. Roy.

[Interpretation]

Mr. Roy (Laval): Thank you, Mr. Chairman. My question has to do with agriculture and it is mainly for information. I would like to know, for example, whether there will be any chance of finding out the main reasons for condemnation in a province or abattoir as well as the percentage killed. This would help detect the cause of disease. We have a lot of condemnations because of leukemia for example, I believe that this sort of detailed information would be useful to all members. Could we see or have the report at another meeting?

[English]

Mr. Williams: We might ask Dr. Heatherington to answer this. Dr. Heatherington, do we have a breakdown by province or by facilities, that is to say, by registered plant of the reasons for condemnation?

• 1020

Dr. C. K. Heatherington (Director, Meat Inspection Division, Health of Animals Branch, Department of Agriculture): Mr. Chairman, our present figures of primers deal with across the board from Canada wide rather than by provincial. We do have the provincial figures in our possession. As a general rule they are not published, although I do not see why they could not be made public if anyone wished to have them.

Mr. Williams: Mr. Roy, we would be glad to provide them by province. We may have

some difficulty in providing them by plants for obvious commercial reasons. This information is provided to us on a confidential basis. We might have to lump some plants; for example, if there were only one or two plants in a province, we might have to include them with some other province in order to provide averages that would not allow one plant to know exactly the business of its competitor. Subject to those reservations we would be glad to provide the Committee with a breakdown of that nature.

[Interpretation]

Mr. Roy (Laval): Does this apply only to agriculture?

[English]

Mr. Williams: For poultry only.

[Interpretation]

Mr. Roy (Laval): I believe that in the light of these figures we might determine the main cause of condemnation.

My second question is this. Are you having any research work being done on leukaemia, the blood cancer?

[English]

Dr. Wells: Yes. In response to your first question, we do list the primary causes of condemnations in packing plants today, but not, as Mr. Williams has indicated, by provinces. We follow very closely the primary causes of condemnation so as to have an indication of whether diseases are going up, or down, or whether there are any new diseases—this kind of pattern.

Secondly, we are doing considerable work on the disease leukosis in poultry. We have a very large project going in conjunction with the poultry research people of the Research Branch. If you wish details of that program, Dr. Frank, who is the Director of our Animal Pathology Division, would be quite prepared to give them to you. However, there is a large project.

The Chairman: Mr. Williams?

Mr. Williams: If I might supplement that information, in the last complete year, that is to say, the last fiscal year 1967-68 approximately one-third of all condemnations of chickens and fowl at registered plants resulted from leukosis conditions. Others resulted from, in descending order, CRD, emaciation, anemia and septicemia. There is quite a lot of others, but the numbers become relatively insignificant in terms of the total.

[Interpretation]

Mr. Roy (Laval): I thought that leukaemia was the main disease. Is there an improvement right now, as far as this disease is concerned?

[English]

Has there been any improvement during, let us say, the last two or three years?

Dr. Wells: No, on the contrary, sir, it is holding quite steady as a condemnation rate.

[Interpretation]

Mr. Roy (Laval): Are the condemnations about identical per area or per province? Is there more condemnations in one specific or given area as compared to another?

• 1025

[English]

All across the province.

Dr. Heatherington: Yes, the condemnation rates primarily in leukosis vary from province to province. At the moment I think the condemnation rate for leukosis would be almost equal in Ontario and Quebec. The next province would be either British Columbia or Alberta. There is very little in the Maritimes, and very little in Saskatchewan.

[Interpretation]

Mr. Roy (Laval): One last question. I notice here, in the estimates, on item No. 40, there is an increase in revenues. The increase is \$163,000. Could we have any information? What are the special services which are called for by the salting processes? In 1967-1968, there was an amount of \$840,000 for special services. And now, the amount is for \$1,003,300! What are the special services required by the salting processes?

[English]

Mr. Williams: I can answer that, Mr. Roy. This special services is overtime for which the packers pay, and we recover it from the packers. So there is a recoverable item which offsets that. Under our working system with the packers, there is a fixed hour of work for any employee. Under the meat inspection it is 40 hours a week, or has been 40 hours a week; it was changed quite recently under the new contract. If the plant requires a man to work longer hours, but not enough for an additional total shift, the plant is then required to pay him. We put an item in here and we have an offsetting return.

[Interpretation]

Mr. Roy (Laval): Thank you very much, Mr. Chairman.

Mr. Lambert (Bellechasse): Supplementary question, Mr. Chairman.

Do we have your permission for a supplementary, Mr. Roy?

Mr. Roy (Laval): Yes.

Mr. Lambert (Bellechasse): Would it be possible that a breeder, for example, send a certain part of his production to a slaughterhouse and, of this let us say 2 per cent is condemned and then in another packing plant the other part of the same cycle of production has a difference of 6 per cent condemnation rate. Is this possible?

[English]

Dr. Wells: Yes, Mr. Chairman, this is possible. It is known that when broiler chickens are raised in large numbers, in large broiler houses, that a considerable number of those chickens during their nine or ten weeks life will not move more than 25 or 30 feet from the watering and feeding bowl at which they water and feed. The disease therefore, even though it may be a very, very large broiler raising barn or room with up to 10,000 chickens in it, can be localized to very small areas and therefore in such a large broiler operation one can pick out any number of birds in one part of the operation where there would be a high condemnation rate for leukosis and a hundred feet away, in the same building and in the same room, there would be very, very little evidence of infection. If one wanted to be statistically sound, early in the morning you would have to divide the chicken house off into 10 or 15 foot compartments and take bird for bird to the different packing houses. Under such circumstances you would probably get an equivalent rate of condemnation.

• 1030

[Interpretation]

Mr. Roy (Laval): What we see quite often is that certain breeders choose the best poultry to send to one packing plant and those which are not so good to another packing plant and this accounts for the difference in the rate of condemnation. Sometimes, the best poultry goes to one packing plant and those which are not so good to another packing plant and then the difference in the condemnation rate is harped upon. This is not quite fair to our in-

spectors. If I understood correctly, I will get the break-down of condemnation statistics? Thank you.

Mr. Lambert (Bellechasse): Mr. Chairman, a very brief supplementary question. What happens to this poultry that is condemned? What happens at the packing plant?

[English]

Dr. Wells: The poultry is destroyed or rendered in rendering tanks, under the supervision of the departmental inspectors.

The Chairman: Thank you, Dr. Wells. May I return to my list of questioners. I recognize Mr. Moore, member for Wetaskiwin.

Mr. Moore: Dr. Wells, in the area of warble control, is this a provincial or federal problem?

Dr. Wells: This is a provincial matter, Mr. Moore.

Mr. Moore: I see. I just have one question on the bill relating to compensation for animals. Has there been any change in the policy of paying a greater amount for the condemnation of a very high priced animal, for example, a Charolais bull which is imported from France and which might have to be destroyed at any time?

Dr. Wells: There has been no basic change in that connection although, as Mr. Williams indicated in one of the earlier Committee meetings, a resolution is presently before the House with respect to the compensation sections of the Animal Contagious Diseases Act.

Mr. Moore: The regulations are in line with this particular problem, are they?

Dr. Wells: Of course, this would depend entirely, sir, upon the consideration of the House.

Mr. Moore: Yes, naturally. Thank you. That is all.

The Chairman: Thank you, Mr. Moore. I now recognize Mr. Muir, member for Lisgar.

Mr. Muir (Lisgar): Dr. Wells, I would like to take you back to the importation of cattle for a moment.

The Chairman: Will you use the microphone, Mr. Muir, please.

Mr. Muir (Lisgar): You listed four other breeds that were imported from France and

Switzerland, and I take it that France and Switzerland are the only two European countries aside from the British Isles that are approved for importation. Is that correct?

Dr. Wells: Yes, at the moment this is correct, sir.

Mr. Muir (Lisgar): Are these the breeds that are being imported?

Dr. Wells: Yes, they are, sir; Charolais, Simmental, Limousin and Main-Anjou.

Mr. Muir (Lisgar): When was the importation of these other breeds approved?

• 1035

Dr. Wells: We do not specifically concern ourselves with breeds, sir. We are concerned with cattle from the country which gives us the necessary disease control. The importers select the breeds and, in fact, they may select any breed they wish from these countries.

In addition to those four breeds, Pie-Rouge and Brown Swiss cattle have been imported.

Mr. Muir (Lisgar): You cannot break it down as to how many of the different breeds have been imported?

Dr. Wells: Yes, we can, sir. Dr. Moynihan could do that calculation and we could give it to you in about two minutes.

Mr. Muir (Lisgar): That is fine. While he is looking that up, I would like to know if these animals that are being imported are all top quality of their breed, or do you care whether they are or not?

Dr. Wells: Yes, we care, sir, but basically we do not enter into a judging of the quality of the animals which are imported. However, in principle, people who have to spend the kind of money necessary to import these cattle are seeking to buy good cattle.

Mr. Muir (Lisgar): Good cattle, yes. Then you would not care to briefly go into the main characteristics that sets the difference between the various types that are being imported.

Dr. Wells: No sir, except to say that as our breeders are looking for breeds which in their particular view—and, of course, there are as many views among livestock men as there are breeds of cattle—will give them quick growth; more beef at a lower cost.

Mr. Muir (Lisgar): Does the Department import any cattle?

Dr. Wells: Yes, sir. On two occasions the Research Branch of the Department of Agriculture have imported cattle. Last year they imported 10 Pie-Rouge. If I may, sir, in violation of our normal suggestions, indicate that this year the Research Branch of the Department also have a permit to import cattle. They are now in quarantine. This year they are Limousin.

Mr. Muir (Lisgar): Limousin, yes. What about this other breed, Simmental?

Dr. Wells: They are a beef breed from Switzerland.

Mr. Williams: I might say in further explanation of this that the Pie-Rouge cattle which are imported by the Research Branch are the French strain of the Simmental breed. As you know, it goes by a different name, as some dairy breeds do, in different parts of the world.

Mr. Muir (Lisgar): Have you done any research to find out if one particular breed is superior to others with respect to adjustment to our climate, weight gain, thriftiness, and everything else that goes into a good breed.

Dr. Wells: This comes under the Animal Research Branch operations of the Department, not the disease research. The reason for these importations by the Research Branch is to develop and assess these various breeds. This is why they brought in Pie-Rouge a year ago. This year they are bringing in Limousin.

Mr. Muir (Lisgar): You have no Charolais in the Department?

Dr. Wells: No. While I cannot—and perhaps should not—speak for the Research Branch, many Charolais have already been brought into the country and I think they feel that perhaps they can obtain their objective research information from people who have brought them in and who have kept records.

Mr. Muir (Lisgar): There are enough of them here now.

Dr. Wells: Yes. I have those figures, sir, if you wish. Since the commencement of the program we have imported—and this includes the group that are in quarantine at this moment—752 Charolais, 17 Simmental, 12 Pie-Rouge, 7 Limousin, 2 Brown Swiss and 3 Main-Anjou.

Mr. Muir (Lisgar): That is also a French breed, is it, sir?

Dr. Wells: Yes, sir.

Mr. Muir (Lisgar): You have imported two of those, sir?

Dr. Wells: Three of the Main-Anjou.

Mr. Muir (Lisgar): Do you have any of these other breeds in quarantine at the present time?

Dr. Wells: Yes. At the moment there are 212 Charolais in quarantine and 8 Simmental. The 10 Limousin that were brought in this year were not included in that earlier figure. The earlier figure I gave you should read 17 Limousin instead of 7. This includes the 10 for the Research Branch.

Mr. Muir (Lisgar): Yes, I see.

Dr. Wells: At the moment there are 6 Limousin in quarantine, plus the 10 for the departmental Research Branch, making a total of 16. There are also 3 Main-Anjou in quarantine at the present time.

Mr. Muir (Lisgar): Aside from cattle, do you take into quarantine any other animals such as sheep and swine before you bring them into the country? Perhaps you answered that question the other day when I was not here.

• 1040

Dr. Wells: Yes, we import sheep and swine. Of course, we import zoological animals through the maximum quarantine stations from other countries as well, but not from France or Switzerland. The maximum quarantine station at Grosse Isle is designed to receive animals from those countries which are not free of foot and mouth disease but which have an adequate control program upon which we can base sound importation procedures.

Mr. Muir (Lisgar): I asked that question because I understood a new breed of sheep was presently being imported from Finland, and a flock of them is supposed to be imported to the Edmonton area. Is the government doing any work on this or is this a private arrangement?

Dr. Wells: The particular importation of which you speak is private. However, again the Research Branch of the Department is interested and they have asked questions of us with respect to importations. However, as far as I know at the moment there are no specific plans for them to import, although they are—

Mr. Muir (Lisgar): Do you remember the size of the flock that was imported?

Dr. Wells: Two hundred and two. They were from Finland.

Mr. Muir (Lisgar): Two hundred and two. Are they principally imported for their wool or is it—

Dr. Wells: No. They are imported for both wool and lambs. They are reported to produce multiple births more than once a year.

Mr. Muir (Lisgar): Thank you.

The Chairman: Thank you, Mr. Muir. I now recognize Mr. Horner, member for Crowfoot.

Mr. Horner: I would like to follow up Mr. Muir's questions for a minute. Dr. Wells, the reason you import from France and Switzerland is because they have an adequate control program. Is that correct?

Dr. Wells: That is correct.

Mr. Horner: This is why Italy does not qualify. You do not believe they have an adequate control program.

Dr. Wells: This is correct, sir.

Mr. Horner: Yet there might well be areas in Italy that are free from foot and mouth disease, as there are such areas in France?

Dr. Wells: Yes. There may well be small areas in Italy which have a similar status to France and Switzerland. However, I should add that this is a new program. It is one of the first of its kind in the world, and we are developing it. In fact, we are looking at the Italian situation, but at the moment they simply do not have an adequate national control program on which we could depend in order to build into it the safety which we require.

Mr. Muir (Lisgar): May I ask a supplementary?

The Chairman: Yes.

Dr. Wells: I might add that the Italian authorities are just commencing a new foot and mouth program, so they are moving into this area.

The Chairman: Mr. Muir, member for Lisgar, on a supplementary.

Mr. Muir (Lisgar): I was amazed to find on a recent trip to Europe that in one city alone

they were eating 700 horses a week. When they have breeds of cattle that obviously put on weight and reach maturity much faster than a horse—and I am only asking for an opinion—why would they consider raising horses for human consumption when a horse must be at least two years old before it is ready...

Dr. Wells: I think there are two considerations here. These horses are not raised specifically for human consumption, they are raised for other purposes and at the end of the road they are simply slaughtered for human consumption. Also, there is a considerable dietary preference in Europe which people ask for and, of course, can obtain horse meat. But they are not, in fact, raised specifically for this purpose.

Mr. Horner: It is a fat-free meat.

Mr. Muir (Lisgar): Would you not consider, though, for the supply of one city alone at 700 a week—they must have a lot of horses lying around idle I would say.

Dr. Wells: It is a lot of horse meat.

The Chairman: Mr. Horner?

Mr. Horner: What is the position with regard to the importation of land raised hogs from Denmark? Do they strictly prohibit the export of their hogs?

Dr. Wells: They have, up until this moment, prohibited the export of land raised hogs from Denmark although we do get land raised hogs, of course, from Britain and Norway.

• 1045

Mr. Horner: Has there been any success with artificial insemination in the hog breeding program?

Dr. Wells: It is gradually developing. There is some difficulty, gradually being overcome, in freezing swine semen which, as you know, is well established in the bovine or cattle industry, Mr. Horner.

Mr. Horner: Have the Danes attempted in any way to promote the export of the semen of their breed?

Dr. Wells: Not to my knowledge.

Mr. Williams: I would say quite the opposite.

Mr. Horner: Quite the opposite. That is the point I want to establish; what they are doing with their seed stock.

Now, to get back to the Charolais question, Dr. Wells, you stated that the committee report was followed fairly closely with one exception, if I am right.

Dr. Wells: Yes.

Mr. Horner: You admitted, Mr. Williams, that there was a weakness in following that report with regard to the applicant's ability to file a good application; this you admitted was a weakness. Was any actual inspection of the farms carried out by the Department, and I think you suggested earlier that there was.

Dr. Wells: Yes, our veterinary officers visited each applicant to confirm that he was a legitimate livestock operator.

Mr. Horner: Did you go any further into that idea? Legitimate operator, yes, but what kind of legitimate operator?

An hon. Member: Very legitimate.

Mr. Horner: Well, I think there are more adjectives than that; I would like to say good, bad, or indifferent.

Mr. Whicher: If you are legitimate you cannot be bad.

Dr. Wells: It would be rather presumptuous we felt, on our part, to decide whether a man was a good breeder or a bad breeder or whether the lack of good buildings indicated a similar lack of knowledge. We were primarily concerned that these applications were coming from people who were indeed in the livestock industry.

Mr. Williams: I think there were only two questions involved in this visit. I think one was whether or not, in fact, he did have facilities that would be commensurate with the type of operation he described under his project proposal. Second, we determined, if he had been a previous importer, whether or not he still owned and had the animals that he had imported previously. That was the basis, as I pointed out earlier, for the second level of issuance of permits.

Mr. Horner: You had the committee that worked on the project proposal applications categorize them from numbers 1 down to 15, but in no way did you attempt in your inspection to categorize them in A, B and C in efficiency or their appearance of efficiency in promoting the breed, or anything else?

Dr. Wells: No. This was, in fact, the first year that a project proposal to this extent had been requested. Now, next year—not this coming spring but certainly the following year—when the cattle are out we will be able to visit and we intend to visit to ascertain that the project proposal is in fact being fulfilled, but on the first occasion there was nothing on which to build.

Mr. Horner: Then, in fact, you intend to categorize them, maybe not the first year but in mind, at least, you will.

Dr. Wells: Being human beings, we cannot help it. We will ascertain whether, in fact, they are fulfilling what we consider to be their obligation under their project proposals.

Mr. Horner: And then are you going to carry on with the same committee's appraisal, or what is your intention in that regard?

• 1050

Mr. Williams: I think I will have to say here, Mr. Horner, that no decision has yet been made about the procedure. We would hope to try to improve the procedure somehow this year. We are having a group of people work on seeing what refinements could be brought in and we would appreciate any suggestions along the lines that you have made in order to improve this method. We do not consider it perfect by any means. We consider it as a developmental thing and we have tried to work with it as we go along and as difficulties have arisen.

Mr. Horner: You are tempting me to make a speech rather than ask questions. I think, and you can correct me if I am wrong, there should be three major criteria, the first one being working for the Canadian industry. The second one should be having the adequate facilities—the adequate ranch—and, in essence, the material capable to allow him to work for the industry. The third one should be his intent. In other words, I may have the greatest ranch in Alberta and I may think in the back of my mind that I am going to work for the industry, but not have any intent of really doing it, so I think you have to appraise all three.

The Chairman: What is your question, Mr. Horner?

Mr. Horner: My question is this: do you agree, Dr. Wells, that the use of any one of the three criteria I mentioned is a weakness, but by correlating the three or perhaps four

or five, one could come out with a pretty good breeder who would promote the foundation of seed stock in Canada?

Dr. Wells: Yes, Mr. Horner, I do. But I must, as a personal view, make one reservation and that is that I do not think it is sound to equate farm facilities with success in breeding.

Mr. Horner: Yes, that would tend to be true with regard to plant breeding, perhaps, more than livestock. With a rancher of the old stock the main system of weeding out the poorer cattle was the survival of the fittest. Unless you believe in that theory, which still has to be borne in mind in the bringing in of any new breed, I think you also have to look at the buildings and the ranch itself or the farm, whether it has the necessary material and facilities actually to fulfil the intent of the breeder's application.

The Chairman: Gentlemen, as I mentioned earlier, we have to vacate this room at 11 o'clock. I have Mr. Ritchie on my list...

Mr. Horner: I have one more question on another subject.

The Chairman: Is it a brief one?

Mr. Horner: My other subject—and I realize that I have been really brief this morning considering the short time we have been sitting—concerns TB testing and vaccination, Dr. Wells. I can honestly say in the constituency of Crowfoot, at least, they are reaching the saturation point of annoyance over this program, really. Now, they call it annoyance; I know you do not and justifiably so. Are you nearly finished with it?

Dr. Wells: If I may be very brief, Mr. Chairman, we are not through with TB testing or brucellosis testing. In fact, we will never be through with it. We are through with vaccination as far as we are concerned and we are attempting to de-emphasize vaccination.

Mr. Horner: Calfhood vaccination.

Dr. Wells: Yes, calfhood vaccination, but with respect to tuberculosis and brucellosis we have turned very, very extensively to surveillance programs which means that we keep a check. For any individual farmer or rancher who wishes to go along with the program and back-tag his cattle as they go to slaughter, the actual findings of each one of his cattle going to slaughter are reported and kept on a file. If

at the end of the three, six or nine-year period—depending upon the disease and the circumstances in the areas concerned—his record and file shows that his cattle, having been slaughtered, do not have any evidence of this disease, he is not bothered so far as his test is concerned.

• 1055

Therefore, primarily any farmer who wishes not to be bothered with respect to the required TB and brucellosis test need only play a very small part with respect to our surveillance programs. It saves him the bother of our coming and testing his cattle and it saves us about two-thirds of the cost of testing his cattle.

Mr. Horner: Have you ironed out the difficulty you ran into in the exporting and clearing of cattle going to Russia, for example? Some of the tests—some of the cattle were coming back—

Dr. Wells: The Russians are, of course, very demanding so far as their testing procedures and the tests are concerned and we do have some reactors, but by and large we are always in a position to find the number of cattle that are required by the Russians to fulfil their disease-free conditions. In this country, Mr. Chairman, we can find more disease free cattle than any other country in the world and we will continue to supply the Russian demands.

The Chairman: May I recognize Mr. Ritchie, Dauphin.

Mr. Ritchie: Dr. Wells, is your Department involved in the inspection and grading of carcasses, particularly in small plants?

Dr. Wells: No, sir, the actual grade of cattle, beef and pork primarily is the responsibility of the Livestock Division of the Production and Marketing Branch; we are concerned with wholesomeness and health. Now, I must say that in some very, very small plants where it would be economically unsound for the Department to have both grading staff and Health of Animals Branch wholesome staff, we do the grading for the Production and Marketing Branch merely to save the cost of having extra people there, but primarily it is not our responsibility.

Mr. Ritchie: I ask this because two quite small plants in my area, I believe, are having some difficulty in getting grading and

inspection, and so on, I believe it is a problem.

Dr. Wells: May I inquire what area, sir?

Mr. Ritchie: Dauphin, Manitoba.

Dr. Wells: Oh, yes.

Mr. Ritchie: I was wondering just who is responsible directly and whether you run into this problem on occasion.

Mr. Williams: We can certainly look after it. This is the other side of the Department; it is the Production and Marketing Branch who have the responsibility for the grading and the inspection of carcasses. If you would let us have the cases, we would be pleased to look into them.

Mr. Ritchie: Yes, it is mostly a matter of information. Thank you.

The Chairman: Gentlemen, that completes my list of questioners. I am sure you would want me to express your appreciation to Mr. Williams...

Mr. Peters: Mr. Chairman, just before you do could I ask one question? What responsibility does the Health of Animals Branch have in this pregnant mare operation?

Dr. Wells: We have no specific responsibility, Mr. Peters, but because of the considerable public interest a couple of years ago we had our officers visit the majority of these premises. In addition to that we have, of course, discussed the matter with the firm who are primarily concerned in Canada.

Mr. Peters: Are you satisfied that this is not quite an abuse of horses?

Dr. Wells: I would say, sir, that we are reasonably satisfied that this is not an abuse of horses.

Mr. Horner: It is a heck of a lot easier than pulling a plow.

The Chairman: Thank you, Mr. Peters. As I was about to say—

Mr. Peters: May I ask one other question? What about the colt operation that takes place in this?

Dr. Wells: This is not our responsibility.

Mr. Peters: Why not? There are a heck of a lot of complaints in my part of the country about the number of, I would say, three or four day-old colts that come in. Most of them died. They are dumped on the market to get rid of them and obviously this is a pretty shabby set-up. Truckers coming in to community sales barns load up with 20 or 30 of these and dump them on the market. They are much too young. There is no supervision concerning the age of putting them on the market. Even calves could not put on the—

Mr. Williams: If I might say a word, the responsibility for this comes under the humane section of the Criminal Code which in Canada, of course, is administered by the Attorneys General of the provinces concerned.

• 1100

The Chairman: Thank you, gentlemen. May I conclude by extending your appreciation to Mr. Williams, Dr. Wells and the other gentleman who have attended our deliberations this morning. Shall Item 40 carry?

Item 40 agreed to.

The Chairman: Shall item 45 carry?

Item 45 agreed to.

The Chairman: Thank you, gentlemen. The meeting is adjourned to the call of the Chair.

HOUSE OF COMMONS
First Session—Twenty-eighth Parliament
1968

STANDING COMMITTEE
ON

AGRICULTURE

Chairman: Mr. BRUCE S. BEER

MINUTES OF PROCEEDINGS AND EVIDENCE
No. 11

THURSDAY, DECEMBER 5, 1968

Revised Main Estimates (1968-69) relating to Agriculture

INCLUDING FIRST REPORT TO THE HOUSE

APPEARING:

The Honourable H. A. Olson, Minister of Agriculture.

WITNESSES:

From the Department of Agriculture: Mr. S. B. Williams, Deputy Minister; Dr. J. C. Woodward, Assistant Deputy Minister (Research); Dr. R. Poirier, Assistant Deputy Minister (Economics).

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE

ON

AGRICULTURE

Chairman: Mr. Bruce S. Beer

Vice-Chairman: Mr. Marcel Lessard (*Lac-St-Jean*)

and Messrs.

Barrett,
Clermont,
Cobbe,
Côté, (*Richelieu*),
² Danforth,
Douglas,
Foster,
Gauthier,
Gleave,
Horner,

Howard (*Okanagan
Boundary*),
Korchinski,
Lambert (*Bellechasse*),
³ La Salle,
Lefebvre,
Lind,
¹ McKinley,
Moore (*Wetaskiwin*),
Muir (*Lisgar*),
Peters,

Pringle,
Roy (*Laval*),
Smith (*Saint-Jean*),
Southam,
Stewart (*Okanagan-
Kootenay*),
Thomson (*Battleford-
Kindersley*),
Whicher,
Yanakis—30.

Michael A. Measures,
Clerk of the Committee.

¹ Replaced Mr. Cadieu (Meadow Lake) on December 5, 1968.

² Replaced Mr. Ritchie on December 5, 1968.

³ Replaced Mr. Yewchuk on December 5, 1968.

ORDER OF REFERENCE

THURSDAY, December 5, 1968.

Ordered,—That the names of Messrs. McKinley, Danforth and La Salle be substituted for those of Messrs. Cadieu (Meadow Lake), Ritchie and Yewchuk on the Standing Committee on Agriculture.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

REPORT TO THE HOUSE

THURSDAY, December 5, 1968.

The Standing Committee on Agriculture has the honour to present its

FIRST REPORT

Pursuant to its Order of Reference of Wednesday, October 16, 1968, your Committee has considered the items listed in the Revised Main Estimates for 1968-69, relating to Agriculture, the Canadian Dairy Commission, the Canadian Livestock Feed Board and the Farm-Credit Corporation.

Your Committee commends them to the House.

A copy of the relevant Minutes of Proceedings and Evidence (*Issues Nos. 1 to 11 inclusive*) is tabled.

Respectfully submitted,

BRUCE BEER,
Chairman.

MINUTES OF PROCEEDINGS

THURSDAY, December 5, 1968.

(12)

The Standing Committee on Agriculture met at 9:48 a.m. this day, the Vice-Chairman, Mr. Lessard, presiding.

Members present: Messrs. Barrett, Cobbe, Côté (*Richelieu*), Douglas, Foster, Gauthier, Gleave, Horner, Lambert (*Bellechasse*), Lessard (*Lac-Saint-Jean*), Lind, Moore (*Wetaskiwin*), Peters, Pringle, Roy (*Laval*), Smith (*Saint-Jean*), Southam, Stewart (*Okanagan-Kootenay*), Yanakis—(19).

In attendance: The Honourable H. A. Olson, Minister of Agriculture; and *from the Department of Agriculture:* Mr. S. B. Williams, Deputy Minister; Dr. J. C. Woodward, Assistant Deputy Minister (Research); Mr. W. E. Jarvis, Assistant Deputy Minister (Production and Marketing); Dr. E. Poirier, Assistant Deputy Minister (Economics).

The Committee resumed consideration of item 1 of the 1968-69 Revised Main Estimates relating to Agriculture, namely

ADMINISTRATION.

The Vice-Chairman welcomed the Minister and the others in attendance.

The Minister was questioned, assisted by Mr. Williams, Dr. Woodward and Dr. Poirier.

In response to a question of Mr. Douglas, Mr. Williams agreed to have forwarded to the Clerk of the Committee, for the members, copies of the report of the Federal-Provincial Agricultural Outlook Conference 1968.

Also in the course of the questioning, it was agreed that the following document, referred to by Mr. Williams, would be printed as an Appendix to today's Minutes of Proceedings and Evidence (*See Appendix B*):

COMPARATIVE PRICES PAID BY FARMERS FOR SELECTED FERTILIZERS, CANADA AND U.S.A., 1966 and 1967.

On completion of the questioning, item 1 was carried.

In a discussion which followed, a motion was made by Mr. Gleave concerning the Board of Grain Commissioners. The Vice-Chairman deemed the motion to be out of order.

Following some further discussion, it was agreed that the Revised Main Estimates for 1968-69 relating to Agriculture, the Canadian Dairy Commission, the Canadian Livestock Feed Board, and the Farm Credit Corporation, all having been carried, would be reported and commended to the House.

On behalf of the Committee, the Vice-Chairman thanked the Minister and all officials who attended on the matter of the referred estimates.

At 12:11 p.m., the Committee adjourned to the call of the Chair.

MICHAEL A. MEASURES,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday, December 5, 1968.

The Vice-Chairman: Gentlemen, we do not have our full quorum right now. The Minister is with us for only a few minutes more because he has to join a Cabinet meeting, so I think we should carry on with our business for the day, expecting that we will have our quorum later on. Is it agreed?

Some hon. Members: Agreed.

The Vice-Chairman: We now resume discussion of Item 1 of the 1968-69 Revised Main Estimates relating to the Department of Agriculture's administration. In addition to the Minister, we have with us the Deputy Minister, Dr. Woodward, Mr. Jarvis and Dr. Poirier. As we have already heard the opening statement by the Minister at our second meeting on October 28, I think that unless the Minister has something to add we will come to the question period right away. I will recognize members as they raise their hands.

Hon. H. A. Olson (Minister of Agriculture): Mr. Chairman, I would like to say at the outset that I do not have any further statement to make at this time. I would prefer to answer questions so that we are talking about the things that the members of the Committee are particularly and specifically interested in talking about.

There is a Cabinet meeting at ten o'clock, and if I am called to that meeting I will have to leave, but I have asked that I be given an opportunity to stay with the Committee as long as possible this morning.

The Vice-Chairman: Thank you, Mr. Minister. I recognize Mr. Southam.

Mr. Southam: Mr. Minister, we appreciate that you, through necessity, have been out of the country for a few days, and I believe up into Western Canada in the last day or two. In light of the serious situation that has been developing in Western Canada due to damp grain, would the Minister like to indicate to the Committee now what steps the govern-

ment might be taking in this respect, or what action can be taken to alleviate the serious situation?

• 0950

Mr. Olson: Yes, I could. I have read the debates that have taken place, or the exchanges that took place during the question periods on two days in particular when this matter seemed to dominate the question period in the House of Commons while I was away.

It would be, of course, repetitious to go over some of the actions that have been taken, but I think perhaps it would be useful to bring the Committee members up to date on these matters, and further, to say that there is developing, and indeed it has been going on for some days, a very high degree of co-operation between the various branches of the federal government or its agencies, such as the Canadian Wheat Board and the Board of Grain Commissioners, and the provincial departments of agriculture as well as the grain trade, in moving as rapidly as is physically possible to co-ordinate all the efforts that can lead to dealing with this problem.

It is not clear, and it cannot be completely clear, how big the problem is or the magnitude of the volume of grain that is involved or, indeed, how much of it contains so much moisture that there is a real risk involved. It is not clear how much is down in those other areas around 16.5 per cent, 16 per cent, 15 per cent, and in there, which is tough grain, but of course there is no great problem of it spoiling, at least not in this kind of weather. I can tell you about the drying operations at the Canadian Government elevators, and this is of yesterday.

The Edmonton dryer is operating 24 hours a day, seven days a week, and there is sufficient grain there to continue on this basis. The dryer at the Calgary terminal is operating 24 hours a day, seven days a week, but they have had times when there was not sufficient grain right there to keep it up, but 80 cars of damp grain are expected in there over

the weekend. So this will put sufficient grain right on hand for them to continue at that pace.

The Saskatoon dryer is operating 24 hours a day, seven days a week. They too are occasionally running out of grain, but they expect to have sufficient to keep up this pace by the middle of next week. The Moose Jaw dryer is operating 24 hours a day, five days a week. More frequently they have been running out of grain because Moose Jaw is not in one of the areas where large volumes of damp grain are located, and so it has been a bit difficult to arrange the shipping so that lots of tough and damp grain move into this elevator in exact ratio to the capacity to move it out again. They expect 140 cars of tough grain into Moose Jaw by the beginning or middle of next week.

At Prince Rupert we have only very small drying equipment; it has a small capacity. I am not sure of the exact capacity of that dryer, but it has been operating five days a week, 16 hours a day. One of the problems there is that this is also an export terminal, and it is my information that they have to leave some capacity there for rapeseed and flax that is going out through that terminal, and there is only the one elevator there to accommodate this export. This complicates the physical requirement of keeping it going full blast.

In addition to this, I was in Calgary on Tuesday, December 3, and I suggested to the delegates assembled there that the grain companies are, in fact, in the best position to co-ordinate the efforts of utilizing the farm dryers and set them up in strategic positions, because they have the men in the field, they have the knowledge, they have the contacts, and I think it is also fair to say that they are far better equipped to do this. I did not get any positive response from them that they were willing to undertake this, but there certainly was no negative response either.

• 0955

I was talking to the Minister of Agriculture from Manitoba yesterday and he tells me that there are some grain companies there that are willing to undertake this co-ordination. I was unable to get a hold of the Minister of Agriculture from Saskatchewan because he was in Saskatoon at the Saskatchewan Farmers' Union convention. But this is developing into a co-ordinated effort by everyone involved.

The Board of Grain Commissioners have given assurance of the highest degree of co-operation in making sure that they do what they can to supervise and see that the grain is not damaged by overheating or any other thing that can badly damage it. As a matter of fact, the Board of Grain Commissioners have set up a free testing service to farmers to assist in the proper use of these dryers, and they are developing a program that will provide information and advice to provincial co-ordinating committees on locations and volumes of tough and damp grain, as well as the details in respect of these dryers and the location, capacity, and so on.

I have a telex here in front of me from the Board of Grain Commissioners that I have not yet read, but it relates to the Manitoba Department of Agriculture meeting. The Manitoba Department of Agriculture held a meeting on Monday, December 2, at which the trade was invited to discuss this farm drying. A provincial co-ordinating committee has been formed in Manitoba with representatives from the grain trade and the Department of Agriculture. The Board was also asked to name a representative. "A meeting to alert farmers on the problems of grain drying and to give advice". I have already mentioned that.

I am also advised that the University of Manitoba is going to hold a seminar on grain drying soon, perhaps on December 20. The Saskatchewan Department of Agriculture has called a meeting on farm drying for the morning of December 6 and the Board of Grain Commissioners will be there.

Mr. Southam: Mr. Minister, this whole debate, of course, got its incentive or origin from that statement that was made a week ago last Tuesday night by Mr. McNamara to the Canadian Transport Commission. I know that you appreciate, as I think we all do, that Mr. McNamara is one of the best qualified people in Canada on this whole problem of grain marketing and drying and all the other relative facts. It was his statement, and it is quoted here in the *Globe and Mail* as follows:

In October a survey indicated that 786 million bushels of deliverable grades of wheat were available for delivery in the current crop year, of which 380 million bushels were tough or damp.

The best information that we have—and you have this too, no doubt—is that in past experience in any year the most we have ever had to dry was 120 million bushels. Mr.

McNamara in his statement was, I think, overly optimistic when he said that we could dry 100 million to 150 million bushels of this grain because if you look at the total full running capacity of both the inland terminals and the export areas, that is, at Fort William, Port Arthur and at Vancouver, it amounts to only 12 to 13 million bushels a month.

• 1000

Now, to aggravate the situation this year, and this is what is so serious... This whole debate is non-partisan. It was introduced in the House while you were away, because of this statement of Mr. McNamara's, to alert the government and to alert the farmers themselves who have been sort of lulled into a state of complacency over it, because of the magnitude of the problem. Now, there is approximately 250 million bushels of grain to dry and I think we should have a survey made of the total drying capacity of all dryers that farmers have. We have dryers here in Ontario, possibly, that corn farmers and other farmers have used.

Perhaps there should be a policy developed in order to move these into position, because when you speak about drying grain for the next eight months, Mr. Minister, you and I know that when you get grain up to a moisture content as high as 30 per cent—and this is another thing; the variability of this moisture. It is not like some years when we took it off at 16 and 18, but in many cases it is strictly wet and it is now freezing.

You cannot move the stuff into drying position, because of the difficulty of unloading it at the terminals, coming out in lumpy, frozen chunks. I think it has to be done on the farms. When the quota was open to three bushels, this created another problem. It sort of gave the farmer a sense of complacency, feeling that something was going to be done. Well, you know and I know that we just cannot move this amount of grain and dry it with the terminal facilities so it has to be done on the farm, or we stand to lose a couple of hundred million bushels of grain between now and next spring.

There is no use in talking about eight months. The damage sets in as soon as the temperature goes up in the spring. I think—and I am speaking on a non-partisan basis—this is a major emergency and we have come up with some type of policy here in this Committee to recommend to farmers and to get as much drying equipment into their hands as possible.

Another problem is not only the availability of dryers, but the availability of cash on the farms. We went along here and amended legislation to make double cash advances which provided money to pay the farmers' fuel bills or repair bills, their taxes and current expenses, but that money has already been spent from the best knowledge that I have. Here they are sitting back on the farm now, lulled into a state of complacency and believing the 3 bushel quota will take this off their hands; it will not take half of it off their hands.

I think this is a major emergency and I know the Minister has given us an outline of what is being done as far as the dryers are concerned but this is not enough; it is not half enough.

Mr. Olson: Mr. Chairman, I am not quite sure that I could agree with that assessment of the situation. I am not trying to say that there is not a great problem, but the best information my Department could get as of yesterday is this: there is in the damp wheat category—that is moisture content—about 80 million bushels from 17 to 18 per cent; about 45 million bushels from 18 to 19 per cent moisture and 55 million bushels over 19 per cent, or a total of 180 million bushels in the damp category.

An hon. Member: Could you give those figures again?

Mr. Olson: Yes. I want you to understand that this is only estimates. This is the best we can do. About 80 million bushels in the category of 17 to 18 per cent; 45 million bushels 18 to 19 per cent and 55 million bushels over 19 per cent. In the tough category there are 100 million bushels from 16 to 17 per cent and 180 million bushels below 16 per cent. Of course, that would be between 14.5 and 16 per cent.

Perhaps there are one or two other things I should say. The terminal drying capacity at maximum is about 130 million bushels during the next six months and this, I think, is based on an operation that would withdraw up to 4 percentage points of moisture. Anything more than that, of course, has to go through a second time in some cases or they have to be very careful about raising the temperature enough to take out more than that on one pass through.

There is now, I think, additional drying capacity being installed at the Lakehead to be operational in February which will add

another 10 million bushels to the capacity. Then there are about 2,000 farm dryers in the west with a capacity of about 60 million bushels per month when they are used 8 hours a day under reasonably suitable conditions. That, of course, involves such things as the humidity and the air temperature.

As I said before, the Board of Grain Commissioners is moving as rapidly as it can and is exploring the possibility of setting up additional supplementary capacity at the inland terminals.

Mr. Southam: Mr. Minister, what steps are being taken to inform or disseminate information to the farmers with respect to the techniques of drying? I understand that rules and regulations have been laid down by the Canadian Wheat Board because of the danger involved in the technique of drying. It can deteriorate the baking qualities and when a farmer takes any wet grain to the elevator now he has to give a statement of whether it was farm dried, and so on. They take a sample and send it to the Board of Grain Commissioners to test it and if it does not test properly then it is rejected as far as milling wheat is concerned and it has to go back to feed. Now this is a very, very serious situation.

Mr. Olson: That is right, but it also happens to be the fact of the situation. If this grain is heated up or even if a very, very small number of kernels are overheated it does, in fact, spoil the milling and baking qualities.

Mr. Southam: My question, Mr. Minister is: What action is the government taking to make farmers aware of this situation? You see a lot of them are going ahead blithely feeling that they can get this grain dried and it could create a major catastrophe for them later on.

Mr. Olson: I am doing everything I can. The Board of Grain Commissioners are issuing press releases and they have some pamphlets that they are publishing for distribution and giving all the publicity that they possibly can to it. I have made statements in Western Canada and so has the Canadian Wheat Board. They had a meeting out there the other day to get as much publicity as possible.

You raised the matter of the 3 bushel quota for top damp grains having some priority over dry grain. I recognize that this could

create some kind of problem, making the farmers think that there will be capacity to move all of this grain out because of that 3 bushels, but if they are relying simply on that 3 bushels per specified acre, it would indicate that that is all the tough and damp grain they have and I do not think that is quite right.

In fact, I do not think it is right for many, many districts, and so on, but we are making it as clear as we possibly can about the limitations of the capacity of the commercial terminal drying facilities and making it clear that if the estimates we have are right that there is so much tough and damp grain that a great deal of it is going to have to be kept in condition on the farms.

Whether they can dry it and reduce the moisture down to dry grain 14.5 or do other things to get some air through it and keep it cool and keep it in condition until it can go through—there is a whole variety of techniques that can be used other than pulling it right down to 14.5 per cent moisture.

Mr. Southam: Mr. Minister, what about the question of the availability of cash for farmers to try to procure some of this drying equipment that they need?

Mr. Olson: Pardon me?

Mr. Southam: What about the question of the availability of cash in the farmers' hands to buy their own, or even in co-operation with some other farmers, drying equipment? I think it is a known fact that the total capacity for drying at the terminals is only a maximum at about 15 million bushels per month and, as we have said before, four months is about all you can estimate we will have to get past the damage period before the warm weather sets in again, so you cannot talk about eight months. It means that three-quarters of that grain has to be dried on the farms. Now, this is the crux of the problem. The farmer does not have the cash to go and buy that equipment.

• 1010

Mr. Olson: I am not so sure I would advocate that farmers go out and buy all the drying equipment they can lay their hands on and make major investments in these \$8,000 to \$10,000 machines. It is not likely they will use them every year. I know now, because I was out there for the last two days, that there are a lot of farm dryers that have finished drying the grain for the owner and some of

his neighbours. They indicated to me that they were looking for custom work, if you like.

That is the purpose of these meetings and the co-ordination, so that we can make the best use of the 2,000 farm dryers that are out there now without advocating a great deal of additional investment in equipment that may not be used very often. In my view, in the best financial interests of the farmers, I do not think it would be advisable to suggest that they go out and make all of these major investments if there are dryers—and I know there are—in many areas that have now finished the operations for the owners.

Mr. Southam: I have one more question and then I will let my case rest. The suggestion was made, and I thought a practical one, by an Ontario member yesterday that there are quite a number of pieces of drying equipment available in Ontario. It takes me back to an emergency in 1961 when we had a serious drought situation where we had to move machinery out of the province for haying, and so on.

In September, 1961 there was a supplementary estimate when the government took emergency action and I happened to be a part of the government at that time and I am speaking from experience. It was of great assistance to the farmers and I am thinking now of moving some of this available drying equipment from Ontario out to the West to supplement what is there. As you say, this equipment is very expensive, \$8,000 to \$12,000, and I think this is a matter that the government should consider.

I think we should give serious consideration to bringing in emergency legislation or a supplementary estimate to provide assistance to the farmers to get some of this equipment. If it is lying around here in Ontario and is available, I think this would be a co-operative move on the part of our agricultural industry right across Canada. It would show that we have kindred feelings between one section of Canada and another, apart from solving the emergency.

Mr. Olson: I am informed that what happened in 1961 is that the federal government shared in a program instituted by the provinces to pay some of the costs of the movement. We are also informed that the American crop drying institute have indicated that where they are sure a demand exists they are prepared to move in custom dryers and

some of these would be physically closer than some of those in Ontario.

However, that is the purpose behind and the reason for this large number of meetings that have been called, to co-ordinate the effort out there. I do not know the exact number of farm dryers that were in the West in 1961, but I am informed that in Saskatchewan in 1959 when there was also a problem there were probably less than 50 on-farm dryers at that time.

It would indicate that we have 10 or 20 times as many dryers in location so I do not really think that you can equate the two. It is going to take maximum effort and require a lot of co-operation and co-ordination to make the best use of the dryers that are already out there. I think that is the first undertaking that—

Mr. Southam: I respect the resourcefulness, imagination, ingenuity and labour of farmers. They are doing everything they possibly can to help themselves, but I think they are faced with one of the greatest emergency situations in our agricultural history. All I want to see is that this government and the provincial governments as well move in there and do everything they can to assist them to overcome this. Without a shadow of a doubt, it is one of the most serious situations facing agriculture today in Western Canada. I will let my case rest, Mr. Chairman.

The Chairman: Thank you, Mr. Southam. I will now recognize Mr. Gleave on a short supplementary question and then we will turn to Mr. Roy.

Mr. Gleave: The point that I would like follow is the cost. I think it cost me—and I am not particularly interested in having my own figures in the record—about \$800 to dry about 3,000 or 4,000 bushels of flax. These are the kinds of costs we are looking at, because when you get this real wet stuff you cannot just throw it on the heap and let it sit there, you have to move it. As the Minister said, you perhaps have to put it through the dryer at least twice if you are going to end up with a reasonable moisture content and not spoil it in the process.

• 1015

Is the Minister considering some cash assistance in relation to the cost of drying? I think I know part of the reason those custom dryers are sitting idle. Very likely it is because the people do not have the cash in hand to

pay the \$10 or \$12 an hour that some of these machines cost. Are you considering any program where you would pick up part of the cost, that perhaps 50 per cent or 25 per cent of the cost of drying might be recoverable at some point? I have a notion that unless something like this is done there will just not be enough money around to handle it. When you think in terms of drying 100 million bushels at a probable minimum cost of 10 or 15 cents a bushel you are thinking of a lot of money. This is my point.

Mr. Olson: I realize that but I am sure that members of the Committee also realize that there is a fairly wide difference between the initial price of dry grain and damp grain going into the elevator, and unless I am persuaded otherwise I think these custom dryers can be hired for that amount, whether it is 16 or 18 cents a bushel—the difference between dry and damp grain is somewhere in there—and so he gains that much by in fact drying it. So, whether he takes it to the elevator damp or whether he dries it himself, I am not sure there is going to be any great difference in what he gets for it.

In addition to that, as you well know, we have authorized a 100 per cent increase in the interest-free advances, which is 50 cents a bushel on six bushels per specified acre, which is quite a substantial increase in available cash over last year. I do not want to raise any false hopes that something will be done in addition to this, but I think it is fair to say that some very substantial amendments have been made in the last five or six weeks which will assist financially in this situation.

The Vice-Chairman: Thank you, Mr. Gleave. I will now return to Mr. Roy (Laval).

[Interpretation]

Mr. Roy (Laval): Thank you, Mr. Chairman. Mister Deputy-Minister, Mr. Minister I would like to come back this morning since we are coming back to these estimates on vote 25. During the second meeting, I asked whether the marked reduction in the quality premiums for beef carcasses was quite substantial. And in many cases, this premium or this subsidy may be completely eliminated. At the fourth meeting, I came back to this point. And before we finish with this item this morning, I would like to make some additional remarks. First, I hope my colleagues will continue to be very objective in reporting what went on in Committees, so that Opposition members are not forced to return to the

House, to say what really happened at the Committee meeting. I hope too, that we shall all be very objective during our discussions and proceedings as our only purpose is to improve the farming situation in Canada.

I am very concerned at the attitude of the hog raisers. In hog production, Ontario is the first among the provinces. Quebec comes second and then Alberta. These three provinces account for 75 per cent of Canada's total hog production. I am wondering whether we are embarking on a program or policy to promote quality.

You know that in certain areas, not only Quebec, but certainly also in other provinces, a great deal of work was done at the producers' association level to improve the quality of pork through selective breeding.

There have been cases where producers had category "A" stock, 70 or 75 per cent of the time in Dorchester county for example. So we could certainly increase the Canadian average which is about 40 per cent. The quality premiums have contributed largely to the improvement of strains and breeding and if we eliminate them, I am wondering what would be the reaction of our farmers.

We were told at an earlier meeting that the prices were established on the basis of quality. On this question, I would like to make the following remark: there is already a difference between categories A and B. How can we establish a price system so that the producer of quality pork will be properly rewarded. (Well, Mr. Chairman, I think perhaps it might...)

[English]

Mr. Olson: Mr. Chairman, I think perhaps it might be useful for me to go over some of the history of the hog premium policy. As you have noted, under Vote 25 there has been a reduction from \$9.5 million in the 1967-68 estimates to \$6.1 million in the 1968-69 estimates. This premium policy was started in 1944 to provide an incentive to upgrade the quality of hogs. At that time a premium of \$3 was paid on Grade A and \$2 on Grade B. On April 1, 1946, that was changed to \$2 for Grade A and \$1 for Grade B. Then the next change came on October 3, 1960, when they put a \$3 premium on Grade A and took the premium off Grade B altogether. It was reduced to nil.

Then on September 4, 1962, the Grade A premium was reduced from \$3 to \$2, and on April 1, 1963, it was again increased to \$3

from \$2. Then in April of 1968 it was reduced to \$2. However, as you are well aware, effective December 30, 1968, we are changing the hog gradings system from the present grading procedures to the new grading methods that have been announced, that is, with the back fat testing. It is worth noting that 42 per cent of the hogs now fall into the category of Grade A and get the premium. It is my opinion that if we are to maintain the purpose for which hog premiums were paid, that is, to provide an incentive to produce top quality hogs—this is what the customers require and demand—and with the new grading system where this can be evaluated far more clearly, that we should probably have a hog premium paid on a smaller percentage of the total hogs. When you get up to 42 per cent, then of course such a high percentage of the hog carcasses have moved into that category that it really diminishes to some extent the incentive to produce in the higher ends of hog quality. This is the reason this has been changed.

With respect to the last question, do you have any comment to make on that, Mr. Williams?

• 1025

Mr. Williams: I think it is a very important point, Mr. Chairman, that has been raised: how to provide continuing incentives to the hog growers of Canada to improve their quality. We are looking forward most hopefully to the new grading system to do just this. The new grading system will be over a very wide range of prices. A base price will be established by the industry and those hogs that are better than the standard that they have set will receive increasing levels of price. An index is going to be set up and each hog will receive an index based upon its back fat measurement. This index has been arrived at as a result of very, very extensive cut-out trials which have been conducted by this Department in co-operation with the industry and with the producer groups.

Let me give you an example. If this program were in effect, and if the price was \$30. a cwt. for a hog with an index of 100—we can call that a standard hog—and if a farmer delivers a hog with an index of 110, he will not be paid \$30 a cwt. for that hog but \$33 a cwt. If, on the other hand, he delivers a hog with an index of 90, his price per cwt. will be 90 per cent of the \$30 per cwt., or \$27 a cwt. So, a very high level of incentives will be

built into the actual pricing system for quality improvement.

[Interpretation]

Mr. Roy (Laval): Well, that is an improvement. But how are we really going to encourage the producers to improve on quality? The estimates for 1967-1968 allowed for \$10,364,000 in quality premiums. Surely, this should do something to improve the quality of strains. The present method may not be the right one but these dollars should certainly do something to improve pork quality.

We could, for example, make more breeding stock and this would ensure quality. To eliminate this premiums is to eliminate a source of income. When this change brought about concerning the prices for category "A" and "B", I was then in the industry myself and if the complaints of the producers is anything to go by that decision was certainly not appreciated.

If we now abolish these premiums, the producer will have no protection any more. You know how the prices are established on the market. There is a standard suggested price, but the actual market prices that will not be the same even within a single province, and there will be much more difference across the country. In Quebec abattoirs, subject to federal inspection, it has been found that over 30 per cent of hogs processed there did not meet federal specifications, within the federal classification according to the report.

Last year, for example, out of 2,300,000 hogs, only 1,374,00 received or went through the federal inspection. This means that over 600,000 hogs did not go through those abattoirs.

Then, you have prices which are not standard. I would like to have the assurance that we will have a standard price everywhere so that the producers will be really paid according to the standards that you establish. There certainly is a price in Quebec, but local packing plants set one price, others set their own. Will there be a standard price and how is it proposed to bring this about?

• 1030

[English]

Mr. Olson: Mr. Chairman, we do not have any authority to set prices that any packer pays. Presumably, if one packer does not pay as much as another, he is not going to get the business from the producers and I cannot

offer any suggestion that we intend to move in and insist that certain prices are paid.

To answer the first part of your question, I know that it does not matter what you cut back there will be complaints, and we have had quite a lot of that lately in many departments as well as Agriculture. It is understandable that there would be some resistance or resentment if we cut back on any program but, as the Deputy Minister has pointed out, in the new grading system there is going to be far more incentive right from the market-place itself in addition to whatever premiums we pay for the top grades to produce high quality consumer acceptable hogs.

[Interpretation]

Mr. Roy (Laval): I am concerned, sir, Canada is the country with the highest production cost for pork. I have with me some figures, metric tons, for instance, and the production cost in the United States per metric ton is less than it is in Canada.

And if you see at the report from the provincial angle, Québec, for example, you see that in the province of Québec, it is higher than in the West, that is in Alberta. So, if we reduce that premium again, our pig-farmers will do one of two things, either get out of the business altogether or go and raise their stock where the grain is.

[English]

Mr. Olson: I would just like to say that we are not removing the premium. In response to your other question about the cost factors of the inputs being higher here, we do not disagree with that but the price that is being paid in the market-place for hogs in Canada today is up substantially from what it was about a year ago, and indeed the difference in the higher price in Canada vis-à-vis the United States today more than offsets the difference in these cost factors.

I do not have the sheet with me but I had one prepared because I happened to be in Brandon opening our new R.O.P. swine testing station yesterday, and the price in Toronto on Monday was I think from around 33 cents to 35 cents, in that range, for the previous week and this is also comparable in other Canadian marketing centres. Therefore the price to the Canadian producers through their market in Canada is substantially higher than it is in the United States and, indeed, it exceeds the traditional difference taking into account those other input cost factors.

[Interpretation]

Mr. Roy (Laval): Agreed. But the United States, are tending more and more, to produce the type of pig of the grade we had before: tha tis bacon pork.

Now, coming back to that question, would there be a possibility of keeping this sum of, let us say, \$10 million, this year, and then to investing it really in aid to producers, so that they can meet future quality standards.

Making regulations is one thing but have them respected is something else again. Practically speaking, if we could re-invest that amount in the producers they could really meet the standards which will supposedly be up.

• 1035

[English]

Mr. Olson: The estimates for 1969-70 will be out some time in the spring but I could not give you an undertaking in advance of the presenting of those estimates to Parliament about what will be in there.

Mr. Peters: May I ask a supplementary, Mr. Chairman?

The Vice-Chairman: Just a moment; I have two other members who have asked for that privilege. I already have Mr. Moore, Mr. Pringle, Mr. Lambert, Mr. Lind and Mr. Horner. Is it for a supplementary question?

Mr. Peters: I will ask a supplementary, Mr. Chairman.

The Vice-Chairman: Mr. Moore is the next questioner. He has been on the list for a long time. I would like to follow the list and I will take your name.

Mr. Peters: My question is on the specific point that he was raising.

Mr. Pringle: Mine is a supplementary.

The Vice-Chairman: All right; we will clear the question on hogs if Mr. Roy is through with his questions.

Mr. Roy: Yes, thank you.

The Vice-Chairman: I recognize Mr. Gleave who was first indicate a supplementary question.

Mr. Gleave: With reference to hogs, using the present basis can you say, as the new system goes in, what percentage of hogs will be premium, what will hit the average or

what will hit the base line which is, I suppose, 100 per cent.

Mr. Olson: It is an index or grading figure; it is not a percentage figure.

Mr. Lind: Well, what is going to be premium; what is going to be on the line and what is going to be below?

Mr. Olson: I am thinking now very seriously about what is the most appropriate date on which to make the announcement. There will be one very shortly with respect to this and there two or three things we have to take into account. One is, if we make the announcement too far ahead of effective date which is December 30 are we going to interfere with the market? Will there be some hold back of hogs or will there be a rush to market that would unduly influence the markets one way or the other, perhaps adversely? I have to take that into account.

We do not like to make announcements that are going to upset the market in advance and I would not like to be pressed to make an announcement of the details because we will have to consider carefully what is the most beneficial time for the producers to release the exact details of how the premium will be paid.

Mr. Gleave: I am not interested in knowing the particular date on which it goes into effect.

Mr. Olson: That is clear; it is December 30.

Mr. Gleave: But then you cannot say at the present time how this is going to affect the flow of hogs. This is important. Actually, the way I see it is that up to now we pay the premium; that is, we put extra money in the pockets of the man who was producing a top quality product. It seems to me that under this new system we are going to go at it in just the opposite way. We are going to penalize the man who is below. I would like you to comment on it.

Mr. Olson: Oh, I thought you said we were going to penalize the man who was producing a quality...

Mr. Gleave: No, no. We are going to try to improve quality by penalizing rather than giving a bonus.

Mr. Olson: Oh, no. I would not agree that would be the effect at all.

Mr. Williams: If I might say a word here...

Mr. Gleave: All right.

Mr. Williams: The type of penalties—and I just use as an example the \$27 hog. For a person who had an index of 90, these indices which have been agreed upon between the producer organizations and the producers, the level at which they will be set, by and large at the bottom end represent differentials that exist at the present time for hogs. As you appreciate very well, there are deductions for heavy hogs and extra heavy hogs and lights and hogs falling in the off grades. This is the type of thing to which I was referring when I spoke about hogs with an index of 90 receiving 10 per cent less than those with an index of 100.

Mr. Gleave: I have one other question. Are you satisfied that the new grading system will not slow down hogs on the production line on the slaughter end?

Mr. Williams: Mr. Chairman, this matter has all been worked out with the industry. It is going to require some adjustments and those adjustments, we have been assured by the industry, will have all been made in time to put the program into effect and not interfere with the flow of hogs through the line.

Mr. Gleave: Is there any provision under this new grading system to move the grade standards on to the consumer? Will this top premium quality product appear on the shelves in the store? Now we buy blue brand or red brand beef. When this top quality bacon or this top quality pork appears on the store shelf is it going to be so, and are the medium and low qualities going to follow right through to the consumer?

• 1040

Mr. Olson: Mr. Chairman, there is a direct correlation between the amount of back fat and the fat-to-lean ratio throughout the hog. Of course, that is going to show up visually in the the cuts that are offered for retail sale and what has to be cut off, and all that sort of thing.

Mr. Gleave: No, no no.

Mr. Olson: Whether the honourable member agrees with me or not, I think it is one of the facts that housewives do not buy a very high fat-to-lean ratio if they can buy something that has a more acceptable ratio for the

same price. Perhaps you would want to comment. Is there any follow through or any intention with the industry?

Mr. Gleave: I think a great deal of effort has been spent and is being spent by the retailing industry to disguise, or to sell the product. You can trim pork; you can put fancy coloured packaging on; you can do a lot of things. It is like they used to say of the gal—the little bits of powder and little bits of paint, make the pretty lady look like what she ain't! I am saying, why not move the grade right through to the consumer so the consumer knows? Let us get this quality product right through and get a premium price right through.

Mr. Williams: If I might say a word, Mr. Chairman, a matter that has been concerning the Department of Agriculture for some time now is the question of the identification of producer grades for hogs and pork products through to the consumer. We have done some trial work on it. I have to report that at this moment we do not have any satisfactory method, largely because of the different methods of merchandising pork as opposed to beef. Beef is merchandised almost exactly as the carcass is presented to the grader. Pork is not. Pork is generally merchandised in a cut-up form and a trimmed form or in a processed form.

Mr. Gleave: Right.

Mr. Williams: For this reason we have not been able to arrive at a solution because part of the reason at least is that one of the major criteria of quality in pork is the fat-lean ratio, and this fat-lean ratio can be altered greatly during the trimming process. We have not given up but as yet we have not found a satisfactory method.

Mr. Gleave: Thank you, Mr. Chairman.

The Vice-Chairman: I recognize Mr. Pringle on a supplementary question.

Mr. Pringle: My supplementary question, Mr. Chairman, relates to the R.O.P. testing station mentioned by the Minister a moment ago which opened in Brandon. I understand that there was some thought being given to an R.O.P. testing station in British Columbia and I wonder if anything has been done or any decisions reached with regard to an R.O.P. testing station in B.C. or whether the new program of on-the-farm testing is going to change the decision as related to an R.O.P. testing station in British Columbia?

Mr. Williams: Mr. Chairman, the situation in respect of R.O.P. stations at many locations across Canada is that we are at the present moment, as Mr. Pringle pointed out, bringing into effect a changed basic R.O.P. program. We are endeavouring to evaluate that program before we make further commitments in respect of R.O.P. stations and capital expenditures in respect of them.

The station that Mr. Olson opened represented the change of a location, not the provision of any additional facilities, and had been in the plans for some time. The question of one for British Columbia, to answer the question specifically has not at the moment been decided.

Mr. Pringle: Thank you, very much.

The Vice-Chairman: Thank you, Mr. Pringle. Mr. Peters has a supplementary.

Mr. Peters: Mr. Roy was asking a number of questions about the improvement of Canadian hog production and the increase in top grades. I notice in the United States they have done considerable work recently in the use of heavy copper sulphate additives that has produced very substantial gain-grain ratio and that Canada was doing similar studies in this area. Have these progressed to the degree that the Food and Drug Directorate has approved a .7 per cent copper sulphate, which I think was being considered?

Mr. Olson: I wonder if I could ask Dr. Woodward to reply to that.

• 1045

Dr. J. C. Woodward (Assistant Deputy Minister (Research), Department of Agriculture): Mr. Chairman, we have research at Melfort on the effect of substantially increasing the copper content of hog rations on the rate of gain of the hogs. Our results have confirmed the observation of Mr. Peters. There are discussions going on now with the Food and Drug Directorate as to the admissibility of high copper pork in the dietary effect on humans.

Mr. Peters: Is it also true in your experiments that this produces a lower fat type of pork product?

Dr. Woodward: We have not done carcass analysis on these animals on the high copper rations, but the indications are that with the faster growth we get a more favourable lean-fat ratio.

Mr. Peters: Perhaps I may suggest that the Minister might be wise to step up this experiment. It appears to have been highly satisfactory in the United States, developing a much more economic top-grade production in the United States.

Mr. Olson: I will make a note of it.

The Vice-Chairman: Thank you, Mr. Peters. Mr. Horner.

Mr. Horner: Under this new system, Mr. Minister, of paying the premium for No. 1 hogs, will the subsidy, in effect, go directly to the farmers as it used to in the old system of A, B and C hogs?

Mr. S. B. Williams (Deputy Minister, Department of Agriculture): Mr. Chairman, the farmer will continue to receive his money from two sources. There will be the price on the marketplace. That was in accordance with the procedure that I previously outlined. In addition to that, there will be the hog premium which will be paid through a warrant attached to the settlement in exactly the same mechanical manner as has been the case in the past.

Mr. Horner: What will the premium be, and will it be paid only on No. 1?

Mr. Olson: We are going to make an announcement on that, Mr. Chairman, sometime between now and December 30.

Mr. Horner: Would it have to be a 100 per cent hog? Could you give the Committee that idea?

Mr. Olson: The index figure?

Mr. Horner: Yes.

Mr. Olson: No, I would prefer not to. I am not trying to be reluctant in passing this information as quickly as we can, but we have to take into account what might happen in making this announcement ahead of time.

Mr. Horner: That of course is your prerogative, Mr. Minister, but I cannot agree with it. I think that when hogs reach their weight of 200 pounds, they have got to go to market. You cannot really hold them too well.

Mr. Olson: That is right.

Mr. Horner: I do not see how your holding back on announcing the system will really affect the market run too much.

One further question. Is it not true that during the 1950s when we had a huge build-

up of surplus grain on the Prairies, many farmers swung to the production of hogs, and it seemed that the greater the surplus of grain the lower the percentage of No. 1 hogs. Would you agree with that summation to any extent?

Mr. Olson: Yes, I think generally.

Mr. Horner: You would agree with that?

Mr. Olson: Yes.

Mr. Horner: Well, are you not afraid that in this new system you are devising, you are going to help the knowledgeable hog producer, the vertical integrated hog producer, far more than the farmer who is caught with a huge surplus of grain and tends to use his own initiative and get into other production. He may not be as skilled at producing hogs, but he has a lot of grain so, you know, what is another bushel of grain or two in the hog, I am getting rid of the grain. This is the advantage he might turn to. Your new system will help, in effect, the vertical integrated hog producer far more than it will an enterprising farmer prepared to diversify his marketing of grain.

Mr. Olson: I do not agree with that. I think the new system is designed, and I hope it will be effective in encouraging everyone who is producing hogs, regardless of what category he comes in, to produce a hog product that is most acceptable in the marketplace because that is where the determination of the value of it will be.

• 1050

Mr. Horner: Oh, there is no question about it. I am just stating a fact. I think that the farmers should pay very strict attention to the type of hog they produce, and particularly when that hog goes to market. I think this is the key more than anything, really. But I have fears of this new program of yours helping the vertical integrated hog producer far more, and one can only tell really after you make the announcement and we have a chance to examine it. We are in the dark so far.

Mr. Olson: I do not think it is quite fair to say that we are in the dark as to the manner in which these hogs will be graded. That has not only been pretty well known but agreed to by the whole industry, the producers, the packers.

Mr. Horner: Well, the vertical hog producers, yes.

Mr. Olson: And anyone else who wants to take the time to read it. There was a press release that went out and there is much more detail available. As far as the other point that you make is concerned—that it is going to help some more than others—I suppose that has always been the case that whoever produces the highest quality product gets paid the most for it.

Mr. Horner: With the surplus of grain building up on the Prairies and the particular amount of damp grain on the Prairies, you should be encouraging diversification of marketing and not penalizing the diversification of marketing.

Mr. Olson: I think we should also be encouraging everyone to produce the best acceptable quality in the marketplace.

Mr. Horner: Well, I agree with that.

Mr. Olson: And if he gets the hog up to the optimum weight with the fat ratio, or the back fat test at the optimum, perhaps we should be encouraging him to feed that extra bushel to another hog and bring him up to this weight.

Mr. Horner: Yes, I agree.

The Vice-Chairman: Thank you, Mr. Horner. Now to clear up that question on hogs, I have two more supplementary questions from Mr. Roy and Mr. Foster. Then we will return to Mr. Moore who has been kind enough to let us go on.

[Interpretation]

Mr. Roy (Laval): Thank you Mr. Chairman. This is just a last comment. Pork is not marketed the same way as beef.

If we set up standards let us say of 100, 110 or 130 per cent according to quality, we contribute to an increase in the purchasing cost for the producer, fine and dandy. But how about the packers? How will they sell a pig costing three to four cents per pound more if they have to sell the final product at the same price as cheaper pork.

I mentioned earlier that presently 30 per cent of the pork in Quebec did not go through federally-inspected slaughter-houses. If we adopt this policy, all hogs will be processed in local slaughter-houses. In Quebec particularly when there is a provincial inspection, the policy may not produce the results expected by the experts. This will be quite difficult to implement in Québec because you

have, as I say, 30 per cent of the pork being processed outside federally inspected slaughter-houses. I believe that there is a risk in the implementing of such a policy at least in Quebec. Have you had representations to this effect?

[English]

Mr. Williams: Mr. Chairman, in respect to the Province of Quebec, I may say that first of all the entire system has received the approval of the national organization of the meat packers. In addition to that, our own employees in the Province of Quebec in particular have visited, I believe, all of these plants, although I would not want that to be taken as a categorical statement. They visited a great many plants that are not under federal inspection but which do have a grading service. In other words, we do have a grading service particularly in the Province of Quebec and in all provinces where there is a system of inspection that will give assurance to the Department that we are not grading hogs that have not been inspected from the health standpoint.

• 1055

The report that I have had from our officials in the Province of Quebec is that right across the province there has been very wide acceptance of this program as a method of settlement for hogs by these smaller plants.

The Vice-Chairman: Mr. Foster.

Mr. Foster: I am interested in this same subject that Mr. Roy mentioned; I am interested in the mechanics. Suppose a person sells hogs at \$30 a hundred, but on testing they only have the 90 index. What happens to the \$3 difference in price? Does this go from whoever purchased them to a federal fund, and then this is used in paying out, or what are the mechanics?

Mr. Williams: Almost without exception in Canada, hogs are sold on a rail-grade basis and as such, if the index is 100 and the example price is \$30, the producer will receive the \$30 and will receive whatever premium is payable on it. The basic reason why hogs are sold essentially on rail grade, with the producer getting the settlement based on the final grade of that, is because we do have a national system with a premium payment. So, the situation that you have described, sir, is most unlikely to happen. That is to say, the producer is not going to be paid in advance

on a hog of an unknown quality. He will be paid after it is slaughtered and after it is graded. Even where drovers operate in this country, in general they simply act as the agent of the producer in providing the trucking. Very seldom do the hogs change hands in terms of ownership.

Mr. Olson: I think perhaps your question was based on the premise that the hog that graded 90 and was paid at \$27—using this as an example—that hog may be worth \$30 and that the producer was going to get something less than that, or \$3 less. I do not think that is a fair or a correct premise. If a hog only grades 90, that carcass is less valuable.

Mr. Foster: Yes, this is true. In effect, you are paying a premium only when the indices are over 100.

Mr. Olson: Well, as an example maybe 104 or 110 or something else.

Mr. Williams: The marketplace will pay a premium, if you want to call it a premium. The marketplace will have a differential range of prices, depending upon the index.

Mr. Foster: Is there any minimum that you will go below? Is 90 the lowest, or will the index go down as far as 70?

Mr. Williams: I believe the lowest number on the scale of indices at the present moment is 69.

Mr. Foster: I see.

The Vice-Chairman: Thank you, Mr. Foster, Mr. Moore.

Mr. Moore (Wetaskiwin): Thank you, Mr. Chairman. I would like to ask the Minister if facilities are available, say within the next four months, to dry the initial 3-bushel quota for damp grain—if it all came in?

Mr. Olson: You say in the next three months?

Mr. Moore (Wetaskiwin): No, I said four, sir. It possibly could go longer, but there is always a danger involved there.

Mr. Olson: Well, our estimates are that there are about 40 million specified acres in the areas where there is tough and damp grain, which of course is 120 million bushels, and the drying capacity at the terminals during a six-month period would be 130 million bushels. Then, of course, you would add to that about 60 million bushels a month of on-

farm drying if they are used to optimum capacity. It would appear, therefore, that over a six-month period it would exceed that considerably and probably in a three-month period it would also exceed it. Of course, these are based on so many factors: a long spell of severely cold weather, for example, will call off some of these operations.

Mr. Moore (Wetaskiwin): Can you bring farm drying into this question, because actually they are not delivering farm dried grain.

Mr. Olson: If you take a three-month period with a total of perhaps 3 bushels it would look like we would have 120 million. If you take a three-month period with a terminal capacity of about 65 million, if it is going to go through there—the answer is no.

Mr. Moore (Wetaskiwin): It would be a tight squeeze, anyhow, no matter how you look at it. I have a further question. I hope it is a question, but it could be a statement. It is on dairying and I will keep it short. At the present time a new dairyman, that is an aspiring dairyman, would have only one method of obtaining a subsidy quota under the present dairy policy. I feel there has been a failure here to recognize the fact that dairying is often part of a mixed farming operation. In this light it can, therefore, be part of a very efficient farm operation, even when the dairying itself might be in a small scale. Would the Minister care to comment on that?

Mr. Olson: The specific question was that there was no way during this dairy year of 1968-69 for anyone to obtain a quota?

Mr. Moore (Wetaskiwin): Outside of the one method of buying a herd. My concern is not for this year, which is pretty well over, but for the next year. I am not asking you to forecast what the dairy policy will be, but I hope this is being kept in mind.

Mr. Olson: It has been taken into consideration. It was discussed on December 2. We had a meeting Monday and I attended a large part of it. This is one of the questions that was discussed and, as you have pointed out, we are not ready to announce all the details of the next dairy year beginning April 1, 1969, but you can rest assured that it has been discussed and there have been many representations made as to allocation of quotas or transfer of quotas within the regulations for next year.

Mr. Moore (Wetaskiwin): Thank you, that answers it.

The Vice-Chairman: Thank you, Mr. Moore.

Mr. Olson: May I also say that the Deputy Minister has just advised me that the representations that we are getting are not all on one side of the question; they are on both sides of the question you have raised.

Mr. Moore (Wetaskiwin): Well, I can see how this might be.

The Vice-Chairman: Thank you, Mr. Moore. Now, again, we have the same problem of members wishing to put supplementary questions. Should we accept them? I have Mr. Cobbe and Mr. Lind. I hope you will make it very short so that we can revert to the next questioner which will be Mr. Pringle.

Mr. Cobbe: Mr. Chairman, I will make mine very short. There is one point that has not been considered on the grain drying situation which was a very good point brought up by the hon. member. Are we going to be able to handle this 3 bushel quota delivered to the elevators? No consideration has been given this morning to the fact that elevators are already having a heating problem with the grain they have received. A lot of these elevators are establishing their own dryers right on the elevator premises to take care of a lot of this, so a lot of the figures will be distorted as the Minister has stated.

The Vice-Chairman: Would you comment on that?

Mr. Olson: I agree that there are a lot of factors involved in this whole operation.

The Vice-Chairman: Thank you, Mr. Cobbe. Mr. Lind?

Mr. Lind: I am going to a new area. I have one short question on Item 25 on page 27. I see an item in here and I raise this because a former minister of agriculture raised it in my constituency: Canadian Hunter, Saddle and Light Horse Improvement Society, a \$5,000 grant. Who does that grant go to and where? If you want to give it to me later I would be agreeable to that.

The Vice-Chairman: The question is put now and I will let the Minister answer that and we will return to Mr. Pringle. Thank you, Mr. Lind.

Mr. Olson: I am advised, Mr. Chairman, that it goes to that association, the Canadian Hunter, Saddle and Light Horse Improvement Society and we can provide you with the address if you like.

Mr. Lind: Yes, that is what I would like.

The Vice-Chairman: Thank you, Mr. Lind. Mr. Pringle?

Mr. Pringle: Mr. Chairman, I will try and keep my questions very short because I realize there are many other members who wish to ask questions.

First of all, I understand that this will probably be our last meeting on the estimates. Is that correct?

• 1105

The Vice-Chairman: We hope so, because the House will sit this afternoon and the estimates on agriculture are supposed to be called then.

Mr. Pringle: That being the case, if it is permitted, I would like to suggest that we have greatly appreciated the excellent co-operation received from the Department of Agriculture, from the Deputy Minister, the Assistant Deputy Minister and his staff and I would like it placed on the record that the Committee is very appreciative of this.

Secondly, there is one item that we have not discussed and I am wondering if we will be able to do this. It is the matter of marketing programs as related to some of the perishable farm products, such as eggs and poultry, and if we will be in a position where we might be discussing the marketing programs such as the possibility of marketing commissions or marketing boards or procurement commissions as they relate to the perishable products on farms.

Mr. Olson: Are you asking when we will get an opportunity to discuss this, Mr. Pringle?

Mr. Pringle: Yes, I am asking if it is expected that we will be able to discuss these problems at a later date.

Mr. Olson: Oh, yes, I think so. I could give a very brief report coming from the Federal-Provincial Agricultural Outlook Conference that we had on November 25 when we had a meeting with all of the ministers of agriculture across Canada. I would be pleased to discuss this at some future time. We made a great deal of progress. There was a committee made up of senior officials from provincial departments and the federal department to try and work out two things: the legal implications of this marketing legislation and the practical application of it. All I want to

say at this point is that a great deal of progress, in my opinion, has been made in getting together and having a meeting of minds so that we can get on with getting this kind of legislation into motion.

Mr. Pringle: Just one more question. Has any thought been given to approaching some of the more successful provincial marketing boards operating under provincial jurisdiction, or provincial enabling legislation at the present time, so that we might have full knowledge of what is taking place at the present time with regard to marketing boards throughout Canada?

Mr. Olson: Yes, all of these marketing organizations have been at the meetings. I think the present status is that this has been referred back to the provinces now to come forward with a proposal, although perhaps Mr. Williams or someone can advise further.

Mr. Pringle: Thank you very much. I would like to pursue it at a later date when the item is up for discussion. Thank you.

The Vice-Chairman: Thank you, Mr. Pringle. I have five more names, Mr. Douglas, Mr. Lambert, Mr. Gleave, Mr. Horner and Mr. Côté, Mr. Douglas?

Mr. Douglas: First of all, Mr. Chairman, something that was just said a moment ago prompts the first question. Is there a report of the Federal-Provincial Agricultural Outlook Conference available and could members of this Committee or members of the House of Commons be given such a report if it is available?

Mr. Williams: It is in the hands of the printers at the present moment, sir, and will be made available very shortly. I will ensure that sufficient copies are sent to the Secretary of this Committee for distribution to members.

Mr. Douglas: Thank you very much. I want to associate myself with the concern expressed by Mr. Southam at the beginning of the meeting about the damp grain situation and I feel very strongly about the need for co-ordination of drying facilities and making sure that everything possible is being done to ensure that these dryers will be busy, that they will not lie idle when they could be used somewhere else in the province. I am also particularly concerned that people in the United States who might have portable drying equipment available on a custom basis, be

notified that they might get work up here in western Canada and that any co-ordination that takes place would include such American custom operators.

I understand that the Farm Machinery Syndicates Credit Act is very useful to those farmers who decide to band together and purchase dryers and I hope that every effort is made to publicize the availability of this credit source for people who really think they need to buy dryers and who can get dryers.

• 11.10

I have a question with regard to the task force on agriculture. I presume there is something in the estimates for the cost of this; there will be a cost attached, I presume, Mr. Olson, to the task force on agriculture?

Mr. Olson: Yes.

Mr. Douglas: Does it come under professional services?

Mr. Olson: That is under Item 1, I believe.

Mr. Williams: Yes, it is under Item 1.

Mr. Douglas: Under professional and special services?

Mr. Williams: Yes, under professional and special services and there is a very large increase between last year and the current year.

Mr. Douglas: How soon do you expect at least a preliminary report from the task force?

Mr. Olson: I have asked the task force to provide us with an interim report on a number of subjects by the end of this year. That report will be used particularly by the Steering Committee and the Department for setting up the agenda for the National Agricultural Congress that we hope to convene on March 25, 1969. The interim report will be used more or less as the position papers to initiate the discussion on these matters among the delegates or the representatives who will be at the Congress later in March. Dr. Poirier, who is here, is Chairman of the Steering Committee to set up the details of that Congress and it is our hope that we will have an interim report to be used in the National Congress and then the task force will write a final report with the assistance of having had their interim report examined by people who are directly involved in the industry.

Mr. Douglas: Will one of the items that this task force will be reporting on be the subject of the two price system for wheat?

Mr. Olson: Dr. Poirier, will you reply to this question?

Dr. R. P. Poirier (Assistant Deputy Minister (Economics), Department of Agriculture): There is one that covers the full wheat industry. I do not know what is going to be in it yet, but most likely this will be discussed in that report.

Mr. Douglas: Thank you.

The Vice-Chairman: Thank you, Mr. Douglas. Mr. Lambert?

[*Interpretation*]

The Vice-Chairman: Mr. Lambert.

Mr. Lambert (Bellechasse): Thank you, Mr. Chairman. My question will be very short, the time is going fast. Does the Department of Agriculture give financial assistance towards transportation costs in cases where the hog or beef producers situated very far from slaughterhouses. Is there any federal plan of assistance or joint program with the provinces to help towards transportation costs?

[*English*]

Mr. Olson: In so far as the federal government is concerned, there is no assistance to the cost of this transportation. I am answering only for the federal government. I understand there is some by the provinces, or at least one province, perhaps more, I do not know. However, I am only speaking for the federal government.

[*Interpretation*]

Mr. Lambert (Bellechasse): Since the cost of transportation tends to increase, could not we suggest for example the federal government to consider this question, because this is a very serious problem indeed. Even the provincial governments' help, is not enough to give any equal advantages to these producers and farmers situated a long way from the abattoirs.

[*English*]

Mr. Olson: Certainly we will make a note of your representation and consider it, but I would not like to say that it is something under active consideration. However, we do assist in paying the cost of transporting feed for hog and beef production into almost all feeding areas in eastern Canada.

[*Interpretation*]

Mr. Lambert (Bellechasse): Thank you.

The Vice-Chairman: Thank you, Mr. Lambert.

[*English*]

Mr. Gleave, Mr. Lind, Mr. Horner and Mr. Côté. Mr. Gleave?

• 1115

Mr. Gleave: I was disappointed on the task force at the time it was set up that at least one person on that task force was not drawn from the farm organizations.

Mr. Olson: Task force?

Mr. Gleave: On the task force on agriculture. Of course, that is past now, but at the moment, on the proposed congress which is to be sometime in March—I forget the date the Minister mentioned—it would have seemed to me appropriate to have had on the steering committee representatives of the National Farmers Union and the Canadian Federation of Agriculture. My understanding is that neither of these organizations has been asked to put men on the steering committee; is this correct?

Mr. Olson: No, that is not correct.

Mr. Gleave: Who is their representative?

Mr. Olson: We sent an invitation to both the National Farmers Union and to the Canadian Federation of Agriculture to nominate a representative for the steering committee. Just to fill in the background here, we also asked all ten provinces to nominate one person for the steering committee and we asked the processing and marketing agencies, all of them, to nominate one. One person, Dr. Mercier, was nominated to represent the ten provincial departments of agriculture. We received a nomination from the processing and marketing industry, from all those involved and that was Mr. Leckie. However, the National Farmers Union and the Canadian Federation of Agriculture advised us that they could not agree on a nomination, and therefore they nominated one each. The fact of the matter is that there were not two positions; there was one position.

Mr. Horner: Make another position.

Mr. Olson: It was not my inclination to make the decision for them, so we nominated a very competent farmer from the Ottawa area to fill that other position. There were a number of reasons for that: along with his wide knowledge of the producers' interests,

that he is close to Ottawa and could be directly and immediately involved in the representations. I make no apology for what we did, because we invited them along with everyone else to make a nomination and they declined to do so.

Mr. Gleave: But surely, Mr. Chairman, and Mr. Minister, if there is going to be a congress of this nature, surely it would be possible to have a representative on the steering committee from each of the national organizations. Anyone who is familiar with the background would know that they would be reluctant to accept the course which was suggested to them. I think quite properly they would consider, with the number of farmers they represent, that they should each be accorded a member on the steering committee to speak for the farmers and give direction to this congress. I certainly do not expect or ask the Minister to, as he said, apologize for his decision. I simply want to say that I disagree with it. Farm organizations of this size, with their influence in the country, should be accorded a representation each. Their advice surely is very valuable.

Mr. Olson: Well, I do not disagree with that at all: that is why we invited them to nominate someone. However, I think you also have to agree that the aggregate of all ten provinces is a pretty large organization too. They agreed on one nomination, but perhaps there is some misunderstanding of the function of this committee. This committee is to set up the physical arrangements and do other things in preparation for calling the congress. There will be very, very wide representation by large numbers. We think around 140 invitations will be sent out to the producer groups, out of a total of 400 at the national congress; there certainly will be very, very wide representation from the producer groups at the congress.

• 1120

Mr. Gleave: It is your decision of course, Mr. Chairman and Mr. Minister, but the steering committee has a pretty important function both before and during the Congress.

Mr. Olson: That is what we think too, that it is so important that they should have nominated somebody.

Mr. Gleave: I still feel you could have afforded two.

The Vice-Chairman: Thank you, Mr. Gleave.

[Interpretation]

Mr. Lambert (Bellechasse): A supplementary question, Mr. Chairman.

The Vice-Chairman: Mr. Lambert.

Mr. Lambert (Bellechasse): Mr. Minister, I shall be a little indiscreet. Answer me if you wish. Will the projected convention be held before the announcement of the dairy policy for the coming year?

[English]

Mr. Olson: I have already announced the date of the congress. I am reasonably sure now that it is going to start on March 25, 1969. What you are asking me now is to give you a specific date either before or after the announcement of the dairy policy for the next year, and I am not prepared to do that at this date.

Mr. Gleave: Mr. Chairman, there is one more question I would like to ask. I noticed coming out of the Outlook Conference, the conference said that there was a 6.4 per cent increase in farm costs in 1966-67. I think that was the year. They forecasted a similar increase would occur in the coming year. That is 13 per cent, almost, in two years. Will this situation be considered by the congress?

Mr. Olson: I am sure it will be one of the important factors. Just for the sake of accuracy you said a 6.4 increase in the cost? The 6.4 increase is the index price of the inputs. No, they are not the same thing. The actual cost of increased production is 2.9 per cent?

Mr. Gleave: Pardon?

Mr. Olson: 2.9 per cent.

Mr. Gleave: I wish I could get away with that in my operation.

Mr. Horner: Interest rates were not really that much lower.

The Vice-Chairman: Thank you, Mr. Gleave. Mr. Lind.

Mr. Lind: Thank you, Mr. Chairman. Mr. Minister, I think it was on Item 45 I raised the question of the comparison between the tariffs and transportation of the products used by farmers throughout southwestern Ontario—namely, fertilizers. Could you give a breakdown on this?

Mr. Olson: Transport costs?

Mr. Lind: Transport costs. It is mainly the differential between fertilizer sold in the State of Michigan and southwestern Ontario that we are concerned with.

Mr. Olson: We do not have a specific report to give you on this, Mr. Lind. The Department of Agriculture certainly is interested, there is no doubt about that, but I wonder if representation on this particular matter would not be more properly placed before the Transport Committee and the Department of Transport who are directly involved and certainly you know, as well as I do, that as Members of Parliament you have equal access to that department as you have to this one.

Mr. Lind: I realize that but I thought that as it was mainly dealing with the cost of agricultural production, that it would be of interest to the Department of Agriculture to ascertain if there is a differential in tariff rates for these fertilizers, especially the potash that is produced in Western Canada and shipped to the east, and some of the phosphates that are produced in Quebec and brought into Ontario, having in mind that the nitrogen is manufactured along the St. Clair River in Ontario and is one of the main ingredients that entails a high cost in fertilizers.

• 1125

I am mainly interested in the reason for the differential between the American side of the border and the Canadian when we have a duty free flow of the product back and forth?

Mr. Olson: We have just been having a little conference here and maybe we can give you some useful information, Mr. Lind.

Mr. Lind: I would hope so.

Mr. Williams: First of all, sir, fertilizer materials can cross the border in either direction free of tariff. Mixed fertilizers carried a tariff of 5 per cent up until June of this year, at which time it was reduced to 3 per cent, and under the Kennedy negotiations it will disappear as of January 1, 1969. So that starting January 1 there will be no tariff in either direction.

The Department has collected some information in respect of the comparative prices paid by farmers for selected fertilizers in Canada and the United States in the years 1966 and 1967. Unfortunately we do not have it for 1968. It certainly does show some differences, and I am quite prepared to supply this

table, although there are some deficiencies in it. I could give some examples.

Mr. Horner: Make it an appendix to the Committee's proceedings.

Mr. Williams: I would be pleased to do that.

Mr. Lind: That would be fine.

The Vice-Chairman: Is it the wish of the Committee?

Some hon. Members: Agreed.

The Vice-Chairman: Fine, Mr. Williams.

Mr. Olson: Do you want one example of this?

The Vice-Chairman: Give us one example and that will be fine.

Mr. Williams: The example that I will give here is 1967, comparing prices in Ontario for a 5-20-20 fertilizer and in New York State for a 5-20-20 fertilizer. The average price paid by farmers in Canada was \$81.4 per ton. The average price paid in the State of New York for the same year for the same fertilizer was \$72.8. In each case, the figures are in the currency of the country concerned, so it would be necessary to convert the United States dollars to Canadian dollars to make it comparable in terms of money.

The Vice-Chairman: Thank you, Mr. Lind?

Mr. Lind: Have you got a 30-20-20 or something with a high nitrogen content?

Mr. Williams: I have 33.5 per cent ammonium nitrate comparing Ontario to New York.

Mr. Lind: Yes, that would be a good one.

Mr. Williams: The comparable figures for 1967 were, for Ontario \$85.9, and for New York State \$77.5.

Mr. Roy (Laval): What is the price in Canada?

Mr. Williams: It is 85.9 as compared to 77.5, each in the dollars of the country concerned.

[Interpretation]

Mr. Roy (Laval): Supplementary question. Do you therefore consider...

[English]

The Vice-Chairman: Just one moment. Are you through, Mr. Lind?

Mr. Lind: Have you anything on the State of Michigan or Toledo, Ohio?

Mr. Williams: I am sorry, I did not go far enough down the list as I was trying to be brief about it. The figures for the United States represent the average for the States of New York, Ohio and Michigan as compared to Ontario. The Ontario figures are for Ontario alone. The others represent the average for those three States. The figures that I have quoted, in other words, are the average for New York, Ohio and Michigan.

Mr. Lind: But at the present time, any mixed fertilizer at all carries only a 3 per cent duty.

Mr. Williams: That is correct, sir.

Mr. Lind: Thank you very much.

The Vice-Chairman: Thank you, Mr. Lind.

[Interpretation]

The Vice-Chairman: One short question, Mr. Roy.

Mr. Roy (Laval): In your prices, Mr. Minister, are you taking into consideration the pre-payments discounts and the early shipping bonus discounts? They are different from province to province. In the case of sal ammoniac for instances, last year there was less difference between the two prices because of the spring discount. The retail price of sal ammoniac went up as high as \$74.00 in the prairie provinces.

[English]

Mr. Williams: I am afraid I cannot answer that question directly. The figures have all been provided, the Canadian figures through the Dominion Bureau of Statistics and those of the United States through the Agricultural Prices a monthly summary of the United States Department of Agriculture.

I am afraid I would have to look into and report to you the details of the methods of arriving at these prices.

[Interpretation]

Mr. Roy (Laval): I believe these are fall figures because in the spring for the farmer the difference is less than that. Coming back to Mr. Lind's question, I think that if we could now, for instances, have potash at a more accessible price, I believe that would really encourage production.

I think that when we give a subsidy for transport, for example, for grains, the subsidy is not really given to the consumer, it goes to the producer and I believe that here if we could have potash at a more accessible

price in the East, then I believe that would be the policy which would be warmly welcomed by Eastern producers.

The Vice-Chairman: Thank you, Mr. Roy.

[English]

Mr. Lind: Mr. Chairman, to come to the tariff rate on potash, I understand that the rate the railways are charging in this area is the same as that from Mexico to Ontario; and it is certainly cheaper for the railways to roll a one-hundred ton car down into our area from Saskatchewan than to bring it in from Mexico.

They are charging \$17.60 a ton. That is \$1,760 to roll a car of potash down; and it is not subsidized. It is paying more than its share of the tariff to the railroad.

The point I wish to make is that these tariffs require revision. I think it is up to the Department of Agriculture to step in and see that the railroads revise them in the interests of agriculture, in keeping the cost of production down.

Mr. Olson: Yes, Mr. Lind, I will take note of your representations, without comment on what the activities of the Department of Agriculture ought to be. But, as you know, the Canadian Transport Commission are now, I hope, approaching the final stages in setting up acceptable costing formulas; and, of course, there are certain provisions under the Transport Act to deal with this as soon as these costing formulas have been established.

The Vice-Chairman: Thank you.

I now recognize Mr. Horner.

Mr. Horner: Mr. Chairman, I have one comment on Mr. Lind's question about railroading. It is obvious a non-competitive situation exists in the shipping of fertilizers.

I wish, however, to go back to the grain-drying problem. Is it not a fact, Mr. Olson that up until now there has been no duty on small, farmer-owned grain dryers.

Mr. Olson: Yes; that is a fact.

Mr. Horner: Therefore, the removal of the duty, which the Minister announced the other day, really did not help the individual farmers to any extent?

Mr. Olson: That was for a different class of dryer. That is certainly true.

Mr. Horner: This is the point I want to make abundantly clear.

Mr. Olson: It was going to help the farmer have additional grain-drying facilities.

Mr. Horner: Eventually, yes. Has the Government considered enlarging the drying facilities what I call the inland terminals?

Mr. Olson: The answer is yes.

Mr. Horner: Are you going to do it?

Mr. Olson: The Board of Grain Commissioners have indicated that they are ready to consider, and are moving ahead in setting up, auxiliary grain-drying facilities at those terminals, yes.

Mr. Horner: Are you prepared then to move large stationary dryers into, say, the troubled areas, such as southern Manitoba, northern Saskatchewan and northern Alberta and dry grain at a per-bushel rate? This would allow the farmer, if he cannot market that grain, to take it right back home again. At least you would then be making a concrete effort to assist in the difficult problem.

• 1135

Mr. Olson: The Board of Grain Commissioners are going to be as helpful as they can; they have already indicated that. If, however, you are talking about the truck-turn-around...

Mr. Horner: Yes; this type of an operation.

Mr. Olson: ...basis of operation, there are strategic points in addition to, and indeed other than, those at which grain terminal elevators are located, where they would be far more beneficial to farmers because of shorter distances.

This has been discussed with the Alberta Wheat Pool; I was there on Tuesday; and suggestions have been made at other places. Indeed in Manitoba some of the grain companies are now doing this.

As I said earlier, I am sure that the wheat pools, the UGG and the other grain companies are far better equipped to co-ordinate this kind of equipment because they have the men in the field, the knowledge and the expertise, and so on.

Mr. Horner: You missed the point of my question, Mr. Olson.

Is the government considering setting up what I would call truck-turn-around points? I am talking of the grain elevator companies, because they have to purchase the grain, nearly, in order to take possession of it to dry it.

Is the government prepared to move large stationary dryers into the troubled areas?

Mr. Olson: I am not sure that your definition of, or the connotation that you put on, large stationary dryers will necessarily fit into what is moving ahead now.

However, at Saskatoon, in direct response to your question, the answer is yes. They are going ahead and are setting up additional grain-drying facilities for this kind of operation.

Mr. Horner: You are speaking of the large, Government grain elevator at Saskatoon, I would imagine?

Mr. Olson: The terminal.

Mr. Horner: Are they going to buy that grain damp and store it in the terminal?

Mr. Olson: No; we are talking about this truck-turn-around basis.

Mr. Horner: Oh, you are?

Mr. Olson: Yes.

Mr. Horner: At Saskatoon?

Mr. Olson: Yes.

Mr. Horner: Is there any particular reason for your having singled out Saskatoon?

Mr. Olson: No; only because that one is definite. The others are still under consideration relative to how quickly we can set them up, and their location, and so on; but...

Mr. Horner: Yes; but you are going to set up others?

Mr. Olson: We are considering it, and we are working toward that.

Mr. Horner: Why is it that it was accepted at Saskatoon but the others are just being considered?

Mr. Olson: In many instances...

Mr. Horner: Do you believe that this is where the most damp grain is?

Mr. Olson: The proximity of the damp grain to that elevator does, I suppose, put it in a better immediate position than are any of the others; but there are locations where there is lots of...

Mr. Horner: In your opinion how far will farmers truck their grain to get it dried?

Mr. Olson: Pardon me?

Mr. Horner: What radius do you believe that turn-around point for drying grain will serve?

Mr. Olson: That is a pretty difficult question to answer. It depends on the road conditions, and on whether one can go out 20 miles, or 40 miles, or whatever the mileage may be.

We are advised, however, that in crop districts five to nine, which I believe are in the area of which Saskatoon is the centre, there appear to be about 90 million bushels of grain with a high moisture-content.

Mr. Horner: I am stressing this point, Mr. Olson, because it is a well known fact that there are something like 380 million bushels of tough and damp wheat on the prairies. I think the President of the Federal Grain Limited suggested that in total there might be as many as 800 million bushels of damp grain, or tough and damp grains; this includes flax, barley, oats and wheat.

Looking at the total picture I think the Government should be moving rapidly, because at the present date the capacity at inland terminals is something like 1.5 million bushels a month. That would not even begin to handle the desired amount.

The Saskatoon terminal may have a radius of 100 miles, but even if you accept that you will appreciate that it is not really going to serve a very big area.

• 1140

You will have to have a very minimum of a dozen such points throughout southern Manitoba and northern Saskatchewan and—to go further north—in northern Alberta.

Mr. Olson: That is why I suggested that one of the most important things for us to do is to get the whole of the grain industry involved in co-ordinating and setting up this truck-turn-around operation at strategic points.

Mr. Horner: You will not involve the whole of the industry unless you are prepared to show leadership, do you part, and then entice the others to come along with you. You cannot just dump the load on to the grain companies.

Mr. Olson: We are not; we are being as helpful as we can in every area.

Mr. Horner: I would urge upon you that one at Saskatoon will in no way suffice.

Mr. Olson: I mentioned Saskatoon only because it is the first one, and the one on which I could make a definite statement at this point in time.

It certainly is not going to be confined to Saskatoon, or even confined to five or six or eight more points. There may be far more...

Mr. Horner: Can you give the Committee some idea of how many points you have in mind?

Mr. Olson: That is the purpose of the meetings and the discussions that have been going on—to work this out on a sound, economic basis. As you know, you really have to make sure that you are doing this in a way that is going to be useful.

Mr. Horner: I agree; but with a charge of 16 to 18 cents a bushel and something like a total of 380 million bushels of wheat and 800 million bushels of grain I think there is a pretty sound economic reason for the government to step in. The net loss will not be very much, particularly if there is some permanence. They can put them in storage and wait for another year.

I do not agree, Mr. Olson—and I would like your opinion—with the Minister of Trade and Commerce's suggestion in the House the other day that these things only happen once in 20 years. There is ample evidence that with farms getting larger there is going to be greater and greater use of dryers in the years ahead, even with good weather conditions?

Mr. Olson: If some of these estimates that we have been receiving prove to be accurate a problem of this magnitude has probably never happened before. That is what the Minister of Trade and Commerce said. My hon. friend will know that it is now nine years since we had any great problem with tough and damp grain; that was in 1959.

Mr. Horner: 1959, 1961, 1953...

Mr. Olson: The drought was more of a problem that year.

Mr. Horner: 1951.

Mr. Olson: But it was in 1959 that we had a big problem like this.

Mr. Horner: I have one further question on a different subject.

Mr. Peters: May I ask a supplementary question on this subject?

The Vice-Chairman: Yes; go ahead.

Mr. Peters: Is consideration being given to the prospect of direct deliveries of damp grain to the inland terminals rather than to the country elevators?

You may remember the Committee's study of this matter a year ago. I think you, Mr Olson, were a member of that Committee at that time.

One of the problems we found was that places like Moose Jaw had been empty for a considerable period of time. The reason that deliveries were not made there was that it is really a trans-shipping point.

The suggestion was made then that people within a radius of 50 to 100 miles might be able to make deliveries there. Perhaps this would apply in this damp grain situation more than it did before.

Mr. Olson: I think we have to take into consideration a number of aspects of the history of the use of these facilities, as well as what would be most beneficial at this time.

• 1145

Consideration is being given now to whether truck deliveries or rail deliveries at these terminals would be in the best interest of the whole of the western producers. After all, people such as those where I come from, which is reasonably close to Lethbridge, perhaps should not have any greater access to them than someone living farther back, but the fact is that when the Committee was out there studying that situation the terminal at Lethbridge and the terminal at Moose Jaw were empty. The fact of the matter is that the limiting factor at that point in time in the grain marketing was the physical capacity of the railways to deliver grain into export position. There was no shortage of orders and of transport from the tidewater terminals, so that to stop grain and unload it in those terminals at that time was, in fact, not assisting in moving the largest volume into export position but did, in fact, add a cost factor of unloading and loading up again.

Since those marketing conditions have changed all of the inland terminal elevators were filled with dry grain to make use of the storage facilities there. That has changed but the Canadian Wheat Board did issue shipping orders to take sufficient quantities of that dry grain out of those inland terminal elevators so that there would be enough space around the drying facilities there to make maximum use of them. This is how these things change from time to time in the best use and the

most economic use, as far as farmers are concerned, of those terminals.

Mr. Peters: There is another question; the recommendation at that time was also made that we reorient those inland terminals to provide an export grade from the inland terminals so that all that happened at the Coast where a bottleneck had developed was a hoisting operation, an unloading operation.

Mr. Olson: I would have to check this out but I believe that for the most part the dry grain that went into storage in those inland terminals was, in fact, cleaned so that it was up to export standards when it left them. I do not make that as a categorical statement because I would have to check it, but there are cleaning facilities and machines or equipment there that will bring that grain up to export standards and I think that is the procedure that was used in filling them some time ago with dry grain.

Mr. Horner: Just one more question, Mr. Chairman. Mr. Minister, with regard to the feeding aspects of barley and other grains that are tough and damp, it is a well known fact that a feed mill cannot handle the damp grain unless it is moved right out immediately and fed, so they are not really going to be of any major assistance. Has the Department given any thought to or made any study of the new idea of glass-lined steel silos for the storing of moist barley? You actually turn it into silage and it can be stored all summer and all winter very, very moist in these steel silos.

It is my impression that there is still a heavy duty on these steel silos coming in from the United States. Has the Department given any thought to that problem and to removing the duty on them in order to assist the farmers? I am thinking of areas in northern Saskatchewan, northern Alberta and perhaps even Manitoba where they might have a tremendous amount of damp barley.

Mr. Olson: We have done some work on it. I am not prepared to give any definitive answer what would or could or should be done in this respect. Concerning your other point of whether or not there is duty, I am not sure that there is at the present time, but we can have a look at it.

Mr. Horner: Would you take a look at it?

Mr. Olson: Yes, we can have a look at it.

Mr. Horner: This is a new concept, I would say, in the drying of grain or in the handling

and storing of grain, damp grain particularly, so would the Department take a quick look at the success of these operations in the United States—they tell me they have been doing it down there—and then study the feasibility of removing the duty. I do not see them as a major grain saver but in some areas they could help many farmers who are carrying on a milking operation or a beef feeding operation and have a lot of damp barley to handle.

• 1150

Mr. Olson: There is one point here. It is a matter of cost. These silos are relatively expensive.

Mr. Horner: Oh, yes, I know.

Mr. Olson: They are used in the United States for storing high moisture corn but we can have a look at it and try to have a report for the Committee.

Mr. Horner: I know they are very expensive but I am thinking of the person who has a lot of dairy cattle or beef cattle and has a lot of barley and cannot possibly handle his damp barley before spring.

Mr. Olson: Yes.

The Vice-Chairman: Thank you, Mr. Horner.

Mr. Cobbe: Mr. Chairman, I would like to state that I know there is duty and has been on—

An hon. Member: These silos.

Mr. Cobbe: Well, I was referring more to the grain dryers, especially the batch dryers which is the type more commonly used, possibly, by individual farmers in the past. I would hope that the farm people would be given as much information as possible on the possible damage of drying grain, because if we consider bringing in custom dryers from the United States I am concerned about the fact that a lot of the farmers are not totally aware of the problems that exist with drying the grain. Extensive custom drying could prove costly to the farmer if the grain is damaged through the drying. I do not know what protection the farmer would have against a custom dryer damaging the grain.

Mr. Olson: We are very keenly aware of that problem and we are doing everything we can to make sure that they do not do such things as over-heat the grain resulting in burnt kernels, and that sort of thing, because this is a very serious matter affecting the

quality of the whole batch afterwards. We are extremely concerned about it.

Mr. Peters: Is there a pamphlet on this available to the farmers?

Mr. Olson: Yes.

Mr. Cobbe: There is another point which possibly one of you can answer. I am not thoroughly convinced yet that in our experiments we have advanced to the point perhaps we should have with regard to the production of what we call a soft wheat to be produced in Canada, due to the changing in-markets which we realize have come across us fairly hastily. Are we convinced that we are doing everything we can to produce the proper seed that the farmers should be growing for our export markets? This is something that I have not been really convinced we are keeping up. I feel that we are falling and have fallen behind in this.

Mr. Olson: I have taken the time during the last four or five months to become as well informed as I can on this, with some of the varieties that are being offered or suggested for development both here in Canada and in the United States. The position at this point in time, as far as I am concerned, is that if there are some new varieties that could be identified and would be useful for purposes other than for milling and baking, we should allow people to try to grow them.

There is not a significantly superior new variety now that meets the standards we have for milling and baking, that is, Marquis or better. We have several selected families that are coming along rather well and I do not think it will be long.

I am satisfied, after having examined this as much as a layman can, that we are at least equal to and, in my opinion, substantially farther ahead than most other countries including the United States in developing a new breed or a new family of wheat that would have the milling and baking qualities that measures up to our standards.

The Vice-Chairman: Thank you, very much. Mr. Côté.

[Interpretation]

Mr. Côté (Richelieu): Well, Mr. Chairman, when I asked you for the floor a moment ago, it was not to put a question, it was rather to make a comment on the validity of the new system of classification of accounts. The minister and deputy-minister then gave full explanation of the new system so I have

nothing to add and am personally ready to pass the estimates as soon as possible.

The Vice-Chairman: Thank you very much, Mr. Côté.

• 1155

[English]

The Vice-Chairman: Gentlemen, that concludes out study of Item 1.

Shall Item 1 carry?

Item 1 agreed to.

The Vice-Chairman: Shall the Revised Main Estimates for 1968-69 relating to Agriculture, the Canadian Dairy Commission, Canadian Livestock Feed Board and the Farm Credit Corporation be recommended and reported to the House?

Mr. Gleave: Mr. Chairman, there is one item I noticed concerning the Board of Grain Commissioners. I do not know whether anyone here would second a motion I would make, but it occurred to me that the services the Board of Grain Commissioners are providing have remained fairly static, that their facilities have not been expanded in recent years. I think the laboratory services of the Board of Grain Commissioners especially should be expanded and that this should be looked into by this Committee and reported on. I am rather new around here and I do not know the procedure that is ordinarily followed.

The Vice-Chairman: Mr. Gleave, if I remember correctly, when those gentlemen were before us it was mentioned that they planned to increase and enlarge those facilities in Winnipeg.

Mr. Gleave: I did not get that impression. I was the one who posed the question. I asked them how much expansion had taken place and their reply was that within their present facilities and their present space they did not have room really to grow. I am speaking from memory but I think this was the answer I got.

I am not satisfied with this situation and I move that the amount of space and facilities that the Board of Grain Commissioners have be carefully considered with a view to expanding the laboratory facilities especially as well as their information facilities.

Mr. Olson: Mr. Gleave, I can inform you that this matter of a larger lab with the

facilities you have generally outlined is now under study with the Department of Public Works.

Mr. Gleave: It is now under study?

Mr. Olson: Yes.

Mr. Gleave: And action will be taken, Mr. Minister?

Mr. Olson: Certainly action will be taken, but I would not like to try to give you a date.

Mr. Gleave: I hardly expected that. This would be most unusual in government circles.

There is another point I want to raise before these estimates are accepted. I asked some questions concerning cereal breeding. I do not have the Proceedings before me but as I recall we had approximately six top people on plant breeding in Western Canada, but the one that was supposed to be in Saskatchewan had been off in Africa for a matter of a year or two years, I believe. It is in the record in any case. I am not satisfied that we are spending enough money on plant breeding and plant and cereal research and I would like also to raise this question before these estimates are accepted and carried as satisfactory to this Committee.

The Vice-Chairman: Mr. Gleave, we already have carried item No. 1. We had carried the other items in the estimates and unless I am mistaken that was not so that we could do what you are proposing to do. You will have plenty of opportunity later on to express your views on that matter, maybe even today in the House, or when we consider it in the estimates for 1969 and 1970 after the Christmas recess when they will be referred to the Committee. So, if I am correct...

• 1200

An hon. Member: Correct.

Mr. Gleave: Item No. 1 is carried then? What is before the meeting at the moment?

The Vice-Chairman: Right now, if we agree, we have to return the Estimates to the House so they will be discussed this afternoon.

Mr. Gleave: I want to register my point.

The Vice-Chairman: It is taken, sir.

Mr. Gleave: I am not satisfied that the effort is being made that should be made in

these two areas of research and the operations of the Board of Grain Commissioners and I want it clearly said that I do not wish to cast any reflection on those who are presently commissioners of the Board. They are doing probably what they can do under the limitations of finance that have been imposed on them.

The Vice-Chairman: Thank you, Mr. Gleave.

Mr. Douglas: Mr. Chairman, I would like to agree with Mr. Gleave. More money should be spent on research and on grain varieties particularly.

The Vice-Chairman: Thank you, Mr. Douglas.

Mr. Olson: I just want to make one comment. I am sure that the research department, particularly on cereal plant breeding, could use more money but let us be a little objective about what has happened. I think a review of the situation over a number of years is that there have probably been more varieties developed in Canada, accepted on the North American continent, in spite of the small staff and the relatively small amount of money, than in any other comparable situation. Dollar for dollar we are getting excellent results from what goes into this particular branch of research. I can go over a whole lot of varieties that have been developed here in Canada and been accepted elsewhere and this is substantially higher than the imported varieties that have been accepted here.

Mr. Gleave: Well, Mr. Chairman and Mr. Minister, I have not failed to be impressed by the calibre of the men who are in our research facilities but I have failed to be impressed by the amount of money and support which we have given to them as a society or as a government, whichever way you want it put. My information is not only in the estimates before this Committee. I have talked to research people over the years and I am convinced that our research is inadequate. It is inadequate in the field of barley for example. We may have done better in wheat. I want clearly to leave my opinion before this Committee on this matter.

Mr. Horner: Is there any stipulation in the regulations that private feed companies cannot get into the development of new varieties, plant genetics, in any way, shape or form? Is there anything prohibiting private companies from doing this?

Mr. Olson: No, there is not but of course we have the responsibility for licensing varieties after we have tested whatever they want to present to us for tests.

Mr. Horner: I noticed that the Government gave a \$75,000 grant to Crane Canada Limited to devise a better bathroom. Is the Government considering giving any grants to encourage private industry to get into plant genetics in any way, shape or form to devise a better and a more productive feed—barley, for example or feed grains?

Mr. Olson: I am advised that we do give grants, some over a million dollars through the universities for this ...

Mr. Horner: I am not talking about the universities. I am talking about private industry, private feed companies—Ralston Purina Company Limited or whatever it may be?

• 1205

Mr. Olson: There have been some. National Research Council has made some grants, I think to the Maple Leaf Mills, Limited.

[Interpretation]

The Vice-Chairman: One moment, if you please. Dr. Woodward would like to reply.

[English]

Dr. Woodward: Mr. Chairman, assistance to industry is given under the policies administered by the National Research Council and the Department of Industry, and specifically under the Industrial Research Assistance policy which is administered by the National Research Council under which we are consulted concerning support to industry. There is a precedent for support of private plant breeding to a subsidiary of Maple Leaf Mills Limited in the form of assistance in the salaries and wages of a staff for plant breeding.

Mr. Horner: I mentioned it because I think Government should take another look at this. We have lagged behind a lot of other countries. I am not blaming anybody; maybe it is our weather, maybe it is our growth, but Mexico is coming out with new varieties of wheat, and the United States is away far ahead of the world in new varieties of hybrid corn. Perhaps we have fallen behind by not encouraging private industry to get into the

plant breeding as well as the Government and the universities.

Mr. Olson: Mr. Chairman, I do not accept at all that agricultural research in Canada is lagging behind anybody.

Mr. Horner: Do you disagree with the facts in the Economic Council's Report? I do not agree with them completely.

Mr. Olson: Neither do I.

Mr. Horner: I have always thought that where there is smoke there might be fire. I feel we should take a look at it.

The Vice-Chairman: Shall the revised estimates for 1968-69 relating to Agriculture, the Canadian Dairy Commission, Canadian Live-stock Feed Board and the Farm Credit Corporation be recommended and reported to the House?

Some hon. Members: Agreed.

The Vice-Chairman: Thank you very much. Gentlemen, I would like to thank the Minister and all the members of the Department of Agriculture who have appeared before us. We were very impressed by the quality of the members of the Department who were here to answer our questions. I would like also to add to that the name of our Chairman, Mr. Beer, who is absent today on a duty. I also express my appreciation, and I am sure the appreciation of all the members of the Committee, to our witnesses during these sessions. My thanks also to all the members of the Committee who have been very co-operative and I know it will be very interesting when we continue with the next Estimates. In the meantime we will probably have some other Committees sitting to consider other subjects which the Steering Committee will probably prepare.

Mr. Horner: Are you referring to the Wheat Board Mr. Chairman? Are we going to have them before the Committee?

The Vice-Chairman: This is not referred to the Committee yet. I do not know if it will be.

Mr. Horner: Is the Committee going to request that it be referred?

The Vice-Chairman: This will be discussed by the Steering Committee with the Department. I do not know if we will have them. Before we adjourn, Mr. Lambert, do you have a question?

[Interpretation]

Mr. Lambert (Bellechasse): Yes, Mr. Chairman. We have received an announcement from the Department of Agriculture to the effect that the present minister has been elected by the OECD Agricultural ministers' association. So, from a Canadian point of view, we should, as Canadians, welcome this appointment and we should table a motion here to congratulate the minister for having been elected to such a position which will certainly be to the advantage of the country.

The Vice-Chairman: I don't know whether this is in order to do it formally, Mr. Lambert, but I believe that the matter you just raised is extremely interesting indeed. And I believe that all members of the Committee are quite happy by your support in order to express their appreciation and congratulations to the Minister for the honour conferred on him at a recent meeting in Paris.

• 1210

The Vice-Chairman: Gentlemen, this being all for today, the Committee is adjourned at the call of the Chair. Thank you all very much.

ORDERS OF REFERENCE

TUESDAY, January 14, 1969.

Ordered,—That the following Bills be referred to the Standing Committee on Agriculture:

Bill C-155, An Act to provide compensation to farmers whose agricultural products are contaminated by pesticide residue, and to provide for appeals from compensation awards;

Bill C-154, An Act to prevent the introduction or spreading of pests injurious to plants;

Bill C-156, An Act to amend the Animal Contagious Diseases Act; and

Bill C-157, An Act to regulate products used for the control of pests and the organic functions of plants and animals.

WEDNESDAY, January 15, 1969.

Ordered,—That Bill C-112, An Act to amend the Farm Machinery Syndicates Credit Act be referred to the Standing Committee on Agriculture.

ATTEST:

ALISTAIR FRASER

The Clerk of the House of Commons

ORDRES DE RENVOI

Le MARDI 14 janvier 1969

Il est ordonné,—Que les bills suivants soient déferés au comité permanent de l'agriculture:

Bill C-155, Loi prévoyant l'indemnisation des cultivateurs dont les produits agricoles sont contaminés par les pesticides, et prévoyant des recours contre les décisions relatives à l'indemnisation;

Bill C-154, Loi ayant pour objet d'empêcher l'introduction et la propagation de parasites nuisibles aux plantes;

Bill C-156, Loi modifiant la Loi sur les épizooties; et

Bill C-157, Loi ayant pour objet de réglementer les produits utilisés pour détruire les parasites et agir sur les fonctions organiques des plantes et des animaux.

Le MERCREDI 15 janvier 1969

Il est ordonné,—Que le Bill C-112, Loi modifiant la Loi sur le crédit accordé aux syndicats de machines agricoles soit déferé au comité permanent de l'agriculture.

ATTESTÉ:

MINUTES OF PROCEEDINGS

(Text)

TUESDAY, January 21, 1969.
(13)

The Standing Committee on Agriculture met this day at 9.40 a.m., the Chairman, Mr. Beer, presiding.

Members present: Messrs. Barrett, Beer, Clermont, Cobbe, Côté (*Richelieu*), Danforth, Douglas, Duquet, Gauthier, Gleave, Horner, Korchinski, Lambert (*Bellechasse*), La Salle, Lefebvre, Lessard (*Lac-Saint-Jean*), Lind, Peters, Pringle, Roy (*Laval*), St. Pierre, Southam, Whicher, Yanakis—(24).

Also present: Mr. Alkenbrack, M.P.

In attendance: From the Department of Agriculture: The Honourable H. A. Olson, Minister; Mr. S. B. Williams, Deputy Minister; Mr. C. R. Phillips, Director General of Production and Marketing; Mr. C. H. Jefferson, Director of Plant Products Division; Dr. D. S. MacLachlan, Director of Plant Protection Division; Mr. Harvey Newman, Departmental Legal Adviser.

Following the Chairman's reading aloud of Standing Order 65(7), Mr. Lessard moved:

That the Chairman be authorized to hold meetings, to receive and authorize the printing of evidence, when a quorum is not present.

After some discussion, by agreement, the motion was withdrawn.

The Committee entered upon consideration of Bill C-155: An Act to provide compensation to farmers whose agricultural products are contaminated by pesticide residue, and to provide for appeals from compensation awards: short title—Pesticide Residue Compensation Act.

The Chairman welcomed the Minister, and Mr. Williams introduced the others in attendance.

Le MARDI 21 janvier 1969
(13)

Le Comité permanent de l'agriculture se réunit ce matin à 9 h. 40 sous la présidence de M. Beer, président.

Présents: MM. Barrett, Beer, Clermont, Cobbe, Côté (*Richelieu*), Danforth, Douglas, Duquet, Gauthier, Gleave, Horner, Korchinski, Lambert (*Bellechasse*), La Salle, Lefebvre, Lessard (*Lac Saint-Jean*), Lind, Peters, Pringle, Roy (*Laval*), St. Pierre, Southam, Whicher et Yanakis (24).

De même que: M. Alkenbrack, député.

Aussi présents: Du ministère de l'Agriculture: L'honorable H. A. Olson, ministre; M. S. B. Williams, sous-ministre; M. C. R. Phillips, directeur général de la Production et des Marchés; M. C. H. Jefferson, directeur de la Division des produits végétaux; M. D. S. MacLachlan, directeur de la Division de la protection des végétaux; M. Harvey Newman, conseiller juridique du Ministère.

Le président donne lecture du Règlement 65(7) et M. Lessard propose:

Que le président soit autorisé à tenir des réunions pour entendre les témoignages et à en autoriser la publication en l'absence d'un quorum.

A l'issue d'une courte délibération, la proposition est retirée du consentement du Comité.

Le Comité entreprend l'étude du bill C-155, Loi prévoyant l'indemnisation des cultivateurs dont les produits agricoles sont contaminés par les pesticides, et prévoyant des recours contre les décisions relatives à l'indemnisation. Titre abrégé: Loi sur l'indemnisation pour dommages causés par les pesticides.

Le président accueille le Ministre, et M. Williams présente les autres témoins.

On clause 2 of Bill C-155, the Minister made an opening statement.

Following a discussion on procedure, during which the Chairman read aloud Standing Order 75(1), the Committee proceeded with clause by clause consideration of the Bill.

On clause 2, the Minister was questioned. Messrs. Williams, Phillips and Newman also answered questions.

Clause 2 was carried.

On clause 3, the Minister, Mr. Williams and Mr. Phillips answered questions.

On a question from Mr. Gleave, the Minister agreed to provide supplementary information.

Clause 3 was allowed to stand.

At 11.48 a.m., the Committee adjourned to the call of the Chair.

Michael A. Measures,
Clerk of the Committee.

Le Ministre fait une déclaration d'ouverture sur l'article 2 du bill C-155.

Après un court débat de procédure au cours duquel le président donne lecture du Règlement 75(1), le Comité procède à l'étude du bill article par article.

Article 2. Le Ministre est interrogé. Des réponses sont également données par MM. Williams, Phillips et Newman.

L'article 2 est adopté.

Article 3. Le Ministre, M. Williams et M. Phillips répondent aux questions qui leur sont posées.

Sur une question de M. Gleave, le Ministre accepte d'apporter un complément d'information.

L'article 3 est réservé.

A 11 h. 48 du matin, la séance est levée jusqu'à nouvelle convocation du président.

Le secrétaire du Comité,
Michael A. Measures.

EVIDENCE

(Recorded by Electronic Apparatus)

Tuesday, January 21, 1969.

● 0939

[Texte]

The Chairman: Gentlemen, I think I see a quorum. I want to say how much we appreciate the promptness of the members in attending our first meeting this morning. We are breaking rather new ground. We are pioneering in a new procedure in the legislative aspect of our business. I hope that you will be tolerant with the Chairman and the Chairman will endeavour to be as co-operative and as fair in dealing with all aspects of our considerations as possible.

I want to direct your attention first of all to Standing Order 65(7), which reads as follows:

The presence of a quorum shall be required whenever a vote, resolution or other decision is taken by a standing or a special committee, provided that any such committee, by resolution thereof, may authorize the chairman to hold meetings to receive and authorize the printing of evidence when a quorum is not present.

As a consequence, it would be in order to have the following motion:

That the Chairman be authorized to hold meetings to receive and authorize the printing of evidence when a quorum is not present.

Mr. Lessard (Lac-Saint-Jean): I so move.

Mr. Whicher: I second the motion.

The Chairman: Moved by Mr. Lessard, seconded by Mr. Whicher, that the motion as read be adopted.

● 0940

Mr. Danforth: Mr. Chairman, I think we should have a discussion on that. This brings up an entirely new proposition in the committee work. Does the Committee feel it advisable to pass such a resolution until we see how the Committee is operating and unless we feel it is necessary. This morning we have a quorum present and such a resolution would not be necessary. I wonder if we are not perhaps going into this rather too quickly. The purport of this resolution would be that the Committee would then have power to sit and take

TÉMOIGNAGES

(Enregistrement électronique)

[Interprétation]

Le président: Messieurs, nous avons le quorum. Je dois vous dire combien nous sommes heureux de voir que les membres ont été très ponctuels pour cette première réunion, ce matin. Nous entrons dans un nouveau domaine. Nous abordons une nouvelle procédure législative pour nos travaux. J'espère que vous serez tolérants envers le président; le président va s'efforcer de coopérer dans tous les aspects de nos travaux.

Je voudrais d'abord attirer votre attention sur le paragraphe (7) de l'article 65 du Règlement:

La présence d'un quorum est nécessaire lorsqu'un comité permanent ou spécial est appelé à se prononcer sur un crédit, une résolution ou une autre décision; toutefois, ces comités peuvent, par une résolution, autoriser le président à tenir des réunions pour entendre les témoignages et à en autoriser la publication en l'absence d'un quorum.

Par conséquent, il serait bon que la motion suivante soit déposée:

Que le président soit autorisé à tenir des réunions pour entendre les témoignages et à en autoriser la publication en l'absence d'un quorum.

M. Lessard (Lac-Saint-Jean): J'en fais la proposition, monsieur le président.

M. Whicher: J'appuie la motion.

Le président: M. Lessard, appuyé par M. Whicher, propose que la motion, telle qu'elle vous a été lue, soit adoptée.

M. Danforth: Monsieur le président, je pense que nous devrions discuter un peu de la question parce que c'est quelque chose de tout à fait nouveau. Le comité pense-t-il qu'il est souhaitable de voter une telle résolution? Est-ce nécessaire de le faire? Ce matin, nous sommes en nombre, par conséquent, une telle résolution ne serait pas nécessaire. Je me demande vraiment si nous n'allons pas un peu trop vite.

Le but, en effet, de cette résolution, est de permettre au comité de siéger et d'entendre

[Text]

evidence with only two of its members present. I wonder if, after all, this is the way the Committee is designed to function.

I would certainly like to hear some discussion on this, especially why it is felt necessary that such a resolution should be passed.

The Chairman: I would think that you would not be expressing much confidence in your Chairman if you think that we would listen to witnesses with only two members present. After all, that would be most unreasonable. I think that the motion as presented suggests that we would be able to hold meetings and we would be able to hear evidence—with a reasonable quorum, of course—but that a quorum would be required whenever a vote is taken or whenever any other resolution or other decision is taken by a standing committee or a special committee. Actually, it really only means that we could go ahead and hear evidence without the necessity of adhering to the quorum requirement.

Mr. Korchinski: Mr. Chairman, I do not think this is a question of having confidence in the Chairman at all. I do not think this enters into the discussion. However, I do think that since more emphasis is being placed on committee work, or it would appear so under the new rules, and while we are breaking new ground, I do not think at this particular stage this resolution should be passed. I think we should make an attempt to see whether the Committee work is functioning, as is perhaps intended under the new rules, and if there does not appear to be any evidence of the general membership backing the committee work, then perhaps there is something wrong with the new rules.

I think to suggest at this particular stage that we should go ahead with the committee work, realizing that greater emphasis on committee work is now being placed in the sense that we are now studying bills—in fact, we have foregone any discussion in the House in what might normally have been the resolution stage or the second reading simply so that we could discuss it—and if we cannot even form a quorum in committee to discuss important bills that should normally have been discussed in the House, then they should go right back to the House. I suggest very strongly that I do not think at this particular stage we should entertain such a resolution.

Mr. Barrett: Mr. Chairman, I cannot conceive where their philosophy lies. If this is so important I can see no reason why we will not have a quorum. This is the first thing. Also, I can see no reason, if we do not have a

[Interpretation]

les témoignages avec deux députés présents seulement. Je me demande vraiment si, après tout, c'est de cette manière que doit fonctionner le comité. J'aimerais que l'on discutât un peu de la question, notamment, pourquoi devrait-on voter cette résolution.

Le président: Eh bien, je ne pense pas que vous fassiez preuve de beaucoup de confiance en votre président si vous pensez que deux députés suffisent pour entendre les témoins. Après tout, ce serait là très peu sage. Je pense que la résolution, telle qu'elle a été présentée, demande simplement que l'on puisse tenir des réunions et entendre des témoignages (avec un quorum raisonnable, bien sûr) mais qu'il serait nécessaire d'avoir le quorum chaque fois qu'il faudra procéder à un vote, prendre une décision ou voter sur une résolution quelconque. En fait, cela revient à dire simplement que nous pouvons aller de l'avant et entendre les témoignages sans qu'il soit nécessaire de nous en tenir à l'exigence de quorum.

M. Korchinski: Monsieur le président, je ne pense pas qu'il s'agisse de savoir si on a confiance dans le président, ou non. Je pense que c'est tout à fait hors de propos.

Mais, étant donné qu'on insiste surtout sur les travaux en comité, du moins c'est ce qui semble être le cas d'après le nouveau Règlement, je pense que, dans l'état actuel des choses, et comme nous entrons dans un domaine nouveau, je ne pense pas que cette résolution doive être votée. Il faudrait chercher à voir si le comité fonctionne comme on l'envisage peut-être dans le nouveau Règlement, mais si cette façon de procéder ne semble pas recueillir l'assentiment de tous les députés, peut-être y a-t-il alors quelque chose qui cloche dans le nouveau Règlement.

Je pense qu'il faudrait poursuivre les travaux du comité en ayant à l'idée que, maintenant, l'accent est mis sur cet aspect de la question et que nous étudions des projets de loi. En fait, nous n'avons pas discuté de la question à la Chambre lors de ce qui aurait pu être, disons, le stade de la résolution ou de la deuxième lecture, simplement pour en discuter. Alors, s'il ne peut y avoir de quorum ici pour discuter des bills qui n'ont pas été étudiés à la Chambre, on devra les renvoyer à la Chambre. Je crois fermement, à cette étape-ci, qu'on ne devrait pas tenir compte de cette résolution.

M. Barrett: Il s'agit de savoir ce que l'on veut. Si cela est si important, je ne vois pas pourquoi nous n'aurions pas un quorum. Et si on n'a pas le quorum, je ne vois pas pourquoi on ne pourrait pas entendre les témoins et

[Texte]

quorum, that we cannot listen to witnesses and listen to the regular procedure. You indicated the proviso that we are not going to have any votes, so what is their concern? If they are interested they will be here. If they are not here, then we should proceed with the witnesses that we have arranged for previously. We just cannot hold this thing up until doomsday because we do not have a quorum. Otherwise we are defeating the very purpose of discussing things in committee.

● 0945

Mr. Pringle: Mr. Chairman, there have been times when witnesses have gone to a lot of trouble and have had to postpone work in their own offices to come over to a committee and the meeting may be one short of a quorum, which essentially would require them to return to their offices or spoil their whole day, where we could have listened and we could have recorded the information that they had to give us, which would make it possible for us to at least have a continuing effect as far as the committee is concerned, even if we could not have a decision effect. I feel that we should support the resolution on that basis.

The Chairman: We have had wonderful co-operation in the committee and this motion would really only have the effect of legalizing what the Chairman has been doing anyway; that is, going ahead with the meeting at the time the meeting was called even though there might not always have been a full quorum. I really do not see that it is that urgent or important to us at this particular stage. There may be those who feel that this would be a sharp procedure and there is no thought or intention of having such a motion on the...

Mr. Southam: Mr. Chairman, may I ask where this motion originated? Who thought this up, to start with? This is a rather strange departure. I agree with Mr. Danforth that there is no reflection on you as Chairman, and I agree that I think most members on this Committee have given evidence that they have been very conscientious and serious by attending these meetings, and so on, but in my opinion if we put a motion like this through it would lead to the degeneration of the committee system rather than building it up.

The Chairman: This is a new stand. I will recognize Mr. Clermont.

M. Clermont: Monsieur le président, comme vous l'avez mentionné, ceux, qui ont préparé la nouvelle procédure s'appliquant soit à la Chambre des communes ou aux comités, ont

[Interprétation]

suivre la procédure habituelle. Alors, pour-quoi nous inquiétons-nous? Puisque nous sommes ici, eh bien! il faudrait entendre les témoins que nous avons convoqués. On ne peut pas retarder les choses éternellement, tout simplement parce qu'on n'a pas le quorum. Sinon, on est en train de nier l'existence même du comité.

M. Pringle: Monsieur le président, il y a eu des cas où les témoins ont connu beaucoup de difficultés, ont perturbé leurs travaux dans leurs propres bureaux pour venir ici au comité. Si on acceptait cette règle du quorum, il faudrait qu'ils retournassent chez eux. On aurait pu, autrement, entendre et enregistrer leurs témoignages, et cela aurait donné une continuité aux travaux du comité, même s'il ne peut prendre aucune décision. Je pense qu'il faudrait soutenir la résolution sur cette base.

Le président: Nous avons eu une très bonne coopération au sein du comité, et cette motion, en fait, n'aurait pour simple effet que de légaliser ce que le président a fait déjà, c'est-à-dire nous permettre de siéger au moment où le comité a été convoqué, même s'il n'y a pas toujours le quorum. En fait, je ne vois vraiment pas pourquoi ce serait aussi urgent pour nous, actuellement. Peut-être y en a-t-il parmi vous qui pensent que ce serait là quelque chose de très bien et qu'il n'y aurait peut-être pas besoin d'avoir recours à une motion.

M. Southam: Monsieur le président, puis-je savoir qui a présenté cette motion? En fait, c'est une situation assez bizarre. Je reconnais, comme l'a dit M. Danforth, que cela n'a rien à voir avec la question de la confiance dans le président ou non. Pour moi, soumettre une motion de ce genre entraînerait la dégénération des comités.

Le président: C'est une nouvelle attitude. M. Clermont.

Mr. Clermont: Mr. Chairman, as you mentioned, those who have prepared the new proceedings, either for the House of Commons or for the Committees have suggested in Stand-

[Text]

suggéré à l'article 65, paragraphe 7, les possibilités d'une telle résolution et j'admets avec vous, monsieur le président, que cette résolution ne devrait être mise en pratique que dans les cas où nous entendons des témoignages. Je doute beaucoup qu'un président prenne l'initiative de commencer les délibérations lorsque nous étudions une législation article par article.

Si une telle motion n'est pas approuvée ce matin, à chaque fois que vous la ramènerez, monsieur le président, il y aura des objections, pour ma part, je ne m'oppose pas du tout à ce qu'une telle résolution soit présentée au Comité pour son approbation ou son rejet.

Mr. Danforth: Mr. Chairman, may I say that by the very wording of the resolution it is just an exercise in futility. If the wishes of some committee members are overruled in this respect, all a member has to do on coming to a committee, if there is less than a full quorum, is move that the committee adjourn until such time as there is a quorum, which forces a vote and then we cannot sit anyway.

Mr. Pringle: Yes, but we cannot vote without a quorum.

Mr. Danforth: That is right, and we cannot sit if there is a motion to vote.

Mr. Barrett: That is the whole idea of the thing. It is not a case of voting. In other words, if we have witnesses here and all of a sudden half a dozen of us walk out, the meeting comes to an end.

Mr. Danforth: I appreciate that, but the resolution says unless we have a quorum we cannot vote.

Mr. Barrett: That is right, but we can still listen to witnesses.

Mr. Danforth: Then if there is less than a quorum...

The Chairman: Will you recognize the Chair, please.

Mr. Danforth: I am sorry, Mr. Chairman.

The Chairman: I think we do have a motion duly moved and seconded which could be presented, and I think it would probably carry. I do not think it would be the wish of the Committee or of the Chairman, or anyone else concerned, to limit discussion and so this discussion could go on for quite some considerable time. I think it would probably be much better to leave the motion in abeyance.

If we are not going to act on it we probably should have a motion to rescind or withdraw

[Interpretation]

ing Order 65, subsection 7, the possibility of such a resolution and I agree with you, Mr. Chairman, that this resolution should only be put into effect in those cases in which we hear witnesses. I doubt very much that a Chairman would take the initiative of starting proceedings while we submit a piece of legislation to clause-by-clause study.

If such a motion is not passed this morning, each time you will bring forward this motion, Mr. Chairman, you will hear reasons against such a motion. Personally, I have no objection whatsoever to having the motion put to the Committee for approval or rejection.

M. Danforth: Monsieur le président, puis-je dire que les termes mêmes de la résolution sont un exercice un peu futile. Si certains députés ne sont pas d'accord, eh bien! la seule chose qu'ils ont à faire, lorsqu'il n'y a pas de quorum, c'est de proposer l'ajournement jusqu'à ce que le quorum soit atteint pour voter. Et de toute façon on ne peut siéger.

M. Pringle: Mais on ne peut pas voter sans quorum.

M. Danforth: C'est exact, et on ne peut siéger lorsqu'un vote est proposé.

M. Barrett: Il n'est pas question de vote. Autrement dit, nous avons des témoins ici et, brusquement il y a six personnes qui s'en vont et c'est la fin de la séance du comité.

M. Danforth: A moins d'avoir le quorum on ne peut pas voter.

M. Barrett: C'est exact, mais on peut continuer à entendre les témoins.

M. Danforth: Alors s'il n'y a pas quorum...

Le président: Puis-je avoir la parole?

M. Danforth: Je m'excuse, monsieur le président.

Le président: Nous avons une motion clairement déposée et appuyée et je pense qu'elle serait à adopter. Je ne pense pas que ni le comité, ni le président ni personne ne souhaitent que la discussion se poursuive ainsi, elle pourrait continuer indéfiniment. Je pense qu'il serait bon de laisser la motion de côté.

Je ne voudrais pas que l'on limite la discussion, mais je ne voudrais pas non plus que

[Texte]

it, but I would not want to limit discussion and I would not want to use the whole morning in discussion. I think there would be more productive ways of using our morning. If there is not reasonable disposition on part of the Committee to accept this kind of a motion at this time, which would permit us to hear evidence even though we do not have a quorum but would not permit us to take votes unless there was a quorum, then I think there probably should be a motion to withdraw.

• 0950

Mr. Whicher: May I ask one question, Mr. Chairman?

The Chairman: Mr. Whicher?

Mr. Whicher: Somebody asked where this originated. I seconded the motion but I would also like to know where it originated.

The Chairman: This is a new standing order. This is one of the new standing orders accepted by the House.

An hon. Member: Accepted by the House.

The Chairman: It came from the Committee on the Procedure of the House that studied the rules.

Mr. Gleave: Should the motion not be withdrawn, Mr. Chairman?

The Chairman: Mr. Lessard, would you agree to withdraw the motion?

Mr. Lefebvre: Mr. Chairman, if this is a ruling which has already been accepted by Parliament, what are we arguing about it for?

Mr. Horner: It is not a rule accepted by Parliament. It is a standing order accepted by Parliament. It is a provision.

The Chairman: It is not a rule.

Mr. Horner: If it was a rule there would be no motion necessary, Mr. Chairman. It is just a provision that a committee can adopt if it so desires.

The Chairman: I would think that that is true.

Mr. Lessard (Lac-St-Jean): I will withdraw the motion.

The Chairman: It is agreed that the motion as presented will be withdrawn.

[Interprétation]

l'on passe toute la matinée à discuter de cette question. Je pense qu'il y a une meilleure façon de passer la matinée. Si le comité est décidé à accepter ce genre de motion maintenant, cela nous permettrait d'entendre des témoignages, bien que nous n'ayons pas le quorum. Mais cela ne nous permettrait pas de voter, à moins qu'il y ait un quorum. Alors je pense que l'on pourrait retirer la motion.

M. Whicher: Puis-je poser une question, monsieur le président?

Le président: M. Whicher.

M. Whicher: Quelqu'un a demandé d'où cela venait. Eh bien! moi j'ai appuyé la motion, mais malgré tout, j'aimerais aussi savoir d'où cela vient.

Le président: C'est là un nouveau règlement permanent. C'est là un des nouveaux règlements permanents qui ont été adoptés par la Chambre, à la suite de l'étude du Comité de la procédure.

Une voix: Adopté par la Chambre?

Le président: Oui.

M. Gleave: La motion ne devrait-elle pas être retirée?

Le président: Monsieur Lessard, acceptez-vous de retirer la motion?

M. Lefebvre: Si c'est un règlement qui a déjà été approuvé par le Parlement, pourquoi alors discutons-nous?

M. Horner: Ce n'est pas un règlement approuvé par le Parlement. C'est un Règlement (Standing Order) approuvé par le Parlement. C'est une disposition.

Le président: Ce n'est pas un règlement.

M. Horner: Si c'était un règlement, une motion ne serait pas nécessaire, monsieur le président. Ce n'est qu'une disposition que le Comité peut adopter, si tel est son désir.

Le président: Je crois que tel est le cas.

M. Lessard (Lac-Saint-Jean): Alors, je retire ma motion.

Le président: D'accord donc, pour que la motion telle que présentée soit retirée? C'est

[Text]

Gentlemen, we are here to discuss a number of bills which have been referred to us. I will call Bill C-155 and, if I may, I will read the title:

An Act to provide compensation to farmers whose agricultural products are contaminated by pesticide residue, and to provide for appeals from compensation awards

The short title is the

Pesticide Residue Compensation Act.

I assume you will want to discuss the body of the bill before we approve the title, so I am sure it will meet with the approval of the Committee if we go on to Clause 2.

Clause 2 of the bill, of course, has to do with the definitions, and so on, but before we go into the various definitions that are listed in Clause 2 I would like to say that we are particularly happy to have the Minister of Agriculture present this morning, who is accompanied by the Deputy Minister and his staff. I will first ask the Deputy Minister to introduce those people who are present and then we will have a brief statement from the Minister. Mr. Williams, would you introduce the members of your staff who are present, please?

Mr. S. B. Williams (Deputy Minister of Agriculture): Thank you, Mr. Chairman. On my immediate right is Mr. C. R. Phillips, Director General of the Production and Marketing Branch. To his right is Mr. C. H. Jefferson, the Director of our Plant Products Division, Production and Marketing Branch. Beside him is Mr. Harvey Newman, the Departmental Legal Adviser, and beside him is Dr. D. S. MacLachlan, the Director of the Plant Protection Division of the Production and Marketing Branch. That is the group.

The Chairman: Thank you, Mr. Williams. I now have much pleasure in asking the Minister of Agriculture, the Honourable Mr. Olson, to make a brief statement.

Mr. H. A. Olson (Minister of Agriculture): Thank you, Mr. Chairman. Members of the Committee, I would first like to concur in the remarks of the Chairman that in this Committee meeting we are breaking some new ground. At least, it is the first trial of some of the new rules that involve the detailed consideration of legislation, and particularly the clause-by-clause study that up until now has taken place in the Committee of the Whole in the House of Commons.

[Interpretation]

d'accord. Bon, messieurs, nous sommes ici ce matin pour discuter un certain nombre de choses qui nous ont été transmises. Il y a le projet de loi C-155 et si je peux vous lire le premier article. Le titre:

Loi prévoyant l'indemnisation des cultivateurs dont les produits agricoles sont contaminés par les pesticides, et prévoyant des recours contre les décisions relatives à l'indemnisation.

Et le titre abrégé:

Loi sur l'indemnisation pour dommages causés par les pesticides.

Je pense que vous voulez discuter du fond du projet de la loi avant d'approuver le titre. Donc, nous allons passer directement à l'article 2. Le deuxième titre porte sur un certain nombre de définitions et avant d'entrer dans ces définitions énumérées à l'article 2, je dois vous dire que nous sommes très heureux d'avoir parmi nous ce matin, le ministre de l'Agriculture, accompagné du sous-ministre et de ses collaborateurs. Et, je pense que je vais d'abord demander au sous-ministre de présenter ceux qui l'accompagnent et ensuite nous entendrons une brève déclaration du ministre.

Monsieur Williams, voulez-vous présenter vos collaborateurs, s'il vous plaît?

M. S. B. Williams (sous-ministre de l'Agriculture): Je vous remercie, monsieur le président. À côté de moi, j'ai M. C. R. Phillips, qui est directeur général de la production et des marchés; à sa droite, M. C. H. Jefferson, qui est directeur de la Division des produits végétaux, section de la production et des marchés; puis à côté de lui, M. Harvey Newman, conseiller juridique du ministère et à côté de lui, M. MacLachlan, directeur de la Division de la protection des végétaux, section de la production et des marchés. Voilà.

Le président: Je vous remercie, monsieur Williams. Maintenant, j'ai le grand plaisir de demander l'honorable M. Olson, ministre de l'Agriculture, de vous dire quelques mots.

L'hon. M. Olson: Je vous remercie, monsieur le président. Messieurs les membres du Comité, je voudrais, pour commencer, m'associer aux remarques du président selon lesquelles nous sommes ici en train de défricher un terrain nouveau. C'est du moins le premier essai des nouvelles règles de procédure ayant trait à l'étude, article par article, d'une législation.

[Texte]

I am very conscious of the importance to the government—and in this case to the Department of Agriculture—of this change and as far as I am concerned that importance attaches with it a great deal of responsibility on our part to be as helpful as we can in the Committee. Indeed, my attitude is that this is an extension, if you like, of the Committee of the Whole and it is my hope and, indeed, my intention that we shall give it at least equal consideration.

• 0955

For example, I hope it will be possible for me to attend all of the meetings of this standing committee while the legislation is being considered. I hope you will also appreciate, however, that for example, this morning there is a Cabinet meeting and, indeed, there will also be one on Thursday morning. I have arranged to be here today for the entire Committee meeting. However, there may be times when it will be necessary for me to go to the Cabinet meeting. Nevertheless, I hope that while legislation is before the Agriculture Committee that it will be possible for me to be excused from those Cabinet meetings so that I can be here during all the time these meetings are on.

I presume that we will have to play it by ear, Mr. Chairman, for the first few meetings, and if some problems arise respecting procedure in so far as what has been the traditional procedure in the Standing Committee as contrasted with the procedure that has taken place in the Committee of the Whole, that all of us in a spirit of goodwill, will be able to resolve those procedural problems. No doubt with this change there are going to be some new and perhaps different procedures that will have to be taken into consideration.

Mr. Chairman, with those brief remarks as to the new procedure, I really do not see any useful purpose in my going over the explanation that I made in the House of Commons at the second reading stage because it is well known and, indeed, it is printed in *Hansard*, when I briefly outlined the purpose of the bill. It is to provide for compensation to farmers whose agricultural products have been contaminated by pesticide residue. I think members will also realize that it is intended that this compensation will be paid primarily and perhaps only in cases where the Food and Drug Directorate have condemned and therefore prohibited from sale the products of a particular farm or farmer.

[Interprétation]

Je suis très conscient de l'importance que ce changement représente pour le gouvernement, et dans ce cas-ci, pour le ministère de l'Agriculture; pour ma part, à cette importance s'ajoute la très grande responsabilité de faire en sorte que notre action soit aussi utile que possible au sein de ce Comité. Personnellement, je crois que c'est là en quelque sorte le prolongement des activités du Comité plénier et nous espérons, en fait, nous avons l'intention de lui donner toute notre attention.

Par exemple, je vais chercher, dans la mesure du possible, à assister à toutes les réunions du Comité pendant que l'on étudiera ce projet de loi. Bien sûr, vous vous rendrez compte, par exemple, ce matin il y a une réunion du Cabinet, il y en aura une autre également jeudi matin; je me suis arrangé pour être ici aujourd'hui pour l'ensemble de votre séance. Néanmoins, il est possible que je doive, à un moment ou à un autre, me rendre à la réunion du Cabinet. Toutefois, j'espère que tant que le projet de loi sera à l'étude au comité de l'Agriculture, il me sera possible de ne pas assister aux réunions du Cabinet, pour participer à vos travaux.

Je présume que nous allons procéder de façon empirique, un peu, monsieur le président, au cours des premières réunions. Nous allons laisser voir venir les choses et s'il y a des problèmes de procédure qui se posent par rapport à ce qui se faisait traditionnellement au Comité dans le cadre de la procédure du Comité plénier, nous tous, dans un esprit de bonne volonté, allons résoudre ces problèmes de procédure. Sans aucun doute, ces modifications vont entraîner les débats assez différents et nouveaux dont il faudra tenir compte.

Monsieur le président, après ces quelques remarques au sujet de la nouvelle procédure, je ne crois pas qu'il soit vraiment utile pour moi de donner quelques explications supplémentaires en dehors de celles que j'avais données à la Chambre des communes lors de la deuxième lecture. Ce sont là des remarques très connues qui sont consignées au *hansard* déjà. J'y ai indiqué l'objectif de ce projet de loi, qui a pour but de fournir une indemnisation aux agriculteurs dont les produits agricoles ont été contaminés par des produits pesticides. Les membres se rendent compte évidemment que ces indemnités, ou du moins ces offres d'indemnités, ne seront payées que lorsque la direction de la Division des aliments et drogues a condamné et a interdit la vente de ces produits donnés aux agriculteurs.

[Text]

There is also a provision in Bill C-155 for a farmer to appeal the Minister's decision as to what is just compensation for the damage that was done to him in having his products prohibited from sale. Mr. Chairman, I do not think it would be useful to the Committee if I were to take the time to go through the explanation that I gave in the House at second reading.

There is one other point I would like to make, although it does not perhaps particularly relate to this bill. This is in respect to the undertaking I gave to the House that I would refer the annual report of the Farm Credit Corporation to this Committee after the main estimates of 1968-69 were passed. It is my understanding that the Committee had an opportunity for approximately three hours, give or take a few minutes, to examine the officials of the Farm Credit Corporation when their bill was before you, and it involved a somewhat wider scope than simply what was in the bill. I have no objection to that.

Also, the Farm Machinery Syndicates will be coming back to this Committee. Indeed, it has already been referred to the Committee, and if the members think that that is sufficient, then I would like to know. I do not want to renege on the commitment that I made to refer the annual report so that you can go into it on that term of reference, or if the Farm Machinery Syndicates' bill which this Committee will be studying soon would in fact provide an adequate opportunity for members to examine the officials of the FCC. Perhaps that is something we could think about between now and the time that Bill C-112 will be brought up, and if the Committee would like to have a reference from the House I will try to arrange for that.

Mr. Chairman, getting back to Bill C-155, we are now on Clause 2, which is the interpretation clause. I do not know if you wish to begin by going through this by way of questions or whether you would like to have our legal adviser, Mr. Newman, deal with each one of the terms that are defined in Clause 2. We are prepared to proceed in any way that you, Mr. Chairman, and the Committee would like.

• 1000

The Chairman: Thank you, Mr. Minister. We are grateful, of course, to you for gracing our meeting this morning and we are encouraged by the fact that you intend to attend as many meetings as humanly possible. I think we recognize that Mr. Newman is

[Interpretation]

Il y a également une clause dans ce projet de loi C-155 permettant à un agriculteur d'appeler de la décision du ministre afin d'obtenir ce qu'il appelle une indemnité équitable en compensation des dommages encourus par suite de l'interdiction mise sur la vente de ses produits. Alors, maintenant, monsieur le président, je ne pense pas qu'il soit utile pour le Comité que je donne des explications supplémentaires à ce que j'ai dit lors de la deuxième lecture à la Chambre.

Je voudrais simplement ajouter quelque chose qui, vous m'excuserez, n'a pas directement trait au projet de loi lui-même. Cela porte sur l'engagement que j'avais pris devant la Chambre de renvoyer le rapport annuel de la Société de crédit agricole devant le Comité, après l'étude des prévisions budgétaires de 1968-1969. Je crois comprendre que le Comité a déjà eu l'occasion pendant trois heures environ, à quelques minutes près, d'étudier le rapport de la Société du crédit agricole quand il y a eu le projet de loi de cette Société qui vous a été soumis et, bien sûr, je n'ai aucune objection à ce genre de choses.

Puis, il y aura les Syndicats des machines agricoles qui vont revenir à ce Comité. Il a déjà été soumis à ce Comité d'ailleurs et si les membres pensent que cela suffit, alors, j'aimerais le savoir, je ne voudrais pas donner l'impression de ne pas tenir l'engagement que j'ai pris, qui était de vous soumettre le rapport annuel pour que vous puissiez l'étudier officiellement ou si l'étude du bill des Syndicats des machines agricoles, à laquelle ce Comité procédera bientôt, vous donnait l'occasion d'interroger les représentants de la Société du crédit agricole. Mais nous aurons le temps d'y penser d'ici à ce que le projet C-112 vous soit présenté et si le Comité désire avoir une recommandation de la Chambre, je verrai à vous faciliter les choses.

Maintenant, monsieur le président, pour en revenir au bill C-155, nous passons à l'article 2 qui est l'interprétation. Je me demande si vous voulez l'étudier par voie des questions posées ou si vous préférez que notre conseiller juridique (M. Newman) traite chacune des expressions définies à l'article 2. Nous sommes à votre disposition, monsieur le président.

Le président: Je vous remercie, monsieur le ministre. Nous vous sommes très reconnaissants d'avoir assisté à notre réunion ce matin. Nous sommes encouragés par le fait que vous avez l'intention d'assister à autant de réunions que possible. Étant donné la présence

[Texte]

here and he will explain any of the definitions if it is necessary. I think probably you might expect me to hold you rather close to the clause, and if we go down each definition item by item and there are no questions, then of course Mr. Newman is going to get off easily. If there are some questions concerning any particular definition, then of course we will ask for clarification. Does that meet with the general approval of the Committee.

M. Clermont: Monsieur le président, avant de passer à l'article 2, pourrais-je faire une suggestion? Lorsque le secrétaire du Comité nous convoque à une réunion, lui serait-il possible d'indiquer, sur cet avis de convocation, le projet de loi que le Comité aura à étudier à telle date? Étant donné que plusieurs bills sont renvoyés à ce Comité, il serait très important que les députés connaissent à l'avance ceux qu'ils auront à étudier à telle date.

The Chairman: Yes, that would be quite possible. Actually, we propose to deal with the bills in the order that they were referred. Bill C-155, C-154, C-156, C-157 and then the Farm Machinery Syndicates Credit Bill. What bill will come up at each meeting will depend on how far we get in any particular day. I do not think it would be impossible to put on the notice the bill that will be before us at the next sitting.

Mr. Clermont: Thank you.

The Chairman: Are there any questions concerning any of the definitions in Clause 2? Mr. Horner (Crowfoot).

Mr. Horner: I have a question or two on Clause 2, but before we proceed, Mr. Chairman, because we are breaking new ground, I wonder if you would just clarify the exact position. A second reading has been taken out of the House. Previous to this new procedure, under second reading of a bill the whole bill was discussed and then gone into a clause-by-clause study. You are attempting here to go into a clause-by-clause study immediately. Is this going to become established practice, or is everyone finished speaking on the general principle that would be included in the second reading of the bill?

The Chairman: I am subject to correction by the Committee, but it would seem to me that we did have an opportunity for general comment on the bill in the House and the main reference to our Committee is that we would start to study the details of it clause by clause, and so on. This does not preclude...

[Interprétation]

de M. Newman, il pourra expliquer les définitions en cas de besoin. Vous devez vous attendre à ce que je vous tienne passablement près de l'article en cause. Si nous prenons chaque article de l'interprétation et s'il n'y a pas de questions, M. Newman s'en tirera alors facilement. S'il y avait toutefois des questions en ce qui concerne une définition, nous pourrions demander des explications. Êtes-vous d'accord?

Mr. Clermont: Mr. Chairman, before we move on to Clause 2, could I make a suggestion? When we are called to attend a meeting by the Clerk of the Committee, would it be possible for him to put on the Notice of Meeting the bill which the Committee is to consider on that particular date? As several bills are referred to the Committee, it would be very important for members to know ahead of time just what bill they will have to consider on a specific date.

Le président: Oui, ce serait possible. Nous avons l'intention d'étudier les bills dans l'ordre où ils ont été déferés: Bill C-155, C-154, C-156, C-157 et, ensuite, le bill sur le crédit accordé aux syndicats de machines agricoles. Tout dépendra du progrès que nous pourrions faire telle ou telle journée. Je crois qu'il serait possible de vous dire quel bill nous étudierons lors de la prochaine réunion.

M. Clermont: Merci.

Le président: Y a-t-il des questions au sujet de l'article 2? Monsieur Horner (Crowfoot).

M. Horner: J'ai une question au sujet de l'article 2. Avant de continuer, monsieur le président, étant donné ce nouveau Règlement, je me demande si vous pourriez clarifier la situation. On a enlevé à la Chambre la deuxième lecture d'un bill. Avant cette nouvelle procédure, à l'étape de la deuxième lecture d'un bill, on discutait tout le projet de loi et ensuite on l'étudiait article par article. Ici, vous essayez d'étudier immédiatement le bill article par article. Est-ce là une habitude que nous allons suivre ou est-ce qu'on a fini de parler du principe général qui serait inclus dans la deuxième lecture du bill?

Le président: Si je ne me trompe pas, il me semble que nous avons eu l'occasion de formuler nos commentaires généraux sur le bill à la Chambre même. Notre Comité devrait étudier les détails du bill, article par article.

[Text]

Mr. Horner: I have no objection to that; I just wanted to know whether you were establishing a pattern or what was the situation.

The Chairman: I think there is general willingness to facilitate the needs of the Committee in their consideration of the bill. There is no particular rush. I think the only concern in approving these bills that are before us at the moment would be the time the benefits might be made available to farmers who are out in the areas. I think that is the only overriding pressure.

Mr. Horner: One further question on the proceedings, Mr. Chairman. Is the Committee going to be able to call witnesses, to examine...

• 1005

The Chairman: I think the Minister might wish to comment on that.

Mr. Olson: May I comment on the first question that was asked, Mr. Chairman. There is a substantial difference now with this bill before us after having passed second reading because, as I understand it in the House, second reading is no longer the same as it was, that is, adoption in principle of the bill. You would then be somewhat handicapped in the detailed discussion and the amendments, and so on, on the basis that the principle had already been adopted and that anything that would violate that principle was therefore unacceptable. We are not in that position. Second reading is more of an information debate—if that is the right word, and perhaps it is not—but I would hope that members would regard this standing committee meeting as essentially the same as the Committee of the Whole on the floor of the House was in so far as this phase of the procedure is concerned.

As far as I can tell there would not be an absolute—if you want to call it that—prohibition against calling outside witnesses but I think we should approach that rather cautiously because in each bill that is referred it is pretty specific that this is the matter. It is not an investigatory committee hearing; it is a detailed study of the bill, and therefore as I understand it the terms of reference are not quite the same as if a subject matter for investigation were referred to the Committee and where outside witnesses of course would be, and usually are, called. This is a matter for the members of the Committee to do essentially the same kind of examination and I would hope under essentially the same kind of conditions as in the Committee of the Whole.

[Interpretation]

M. Horner: Je n'y vois pas d'objection, mais je me demandais si vous vouliez tout simplement créer un précédent ou quelle était la situation.

Le président: Je crois que nous sommes prêts à faciliter l'étude du bill en Comité. Rien ne presse. Le seul problème dans l'étude de ces bills, c'est la question du moment où les avantages pourront être accessibles aux cultivateurs qui sont dans les régions. C'est là la seule pression.

M. Horner: Quant à la procédure, monsieur le président, le Comité pourra-t-il convoquer des témoins?

Le président: Le ministre pourrait peut-être vous répondre.

L'hon. M. Olson: Puis-je vous dire, monsieur le président, qu'il y a une différence très marquée avec ce bill qui est devant nous et qui a été adopté en deuxième lecture, car la deuxième lecture n'implique plus l'adoption en principe du bill. Autrement nous serions quelque peu handicapés quant à l'étude détaillée ou à l'adoption d'amendements, car notre étude devrait respecter les cadres du principe. Nous ne sommes pas dans cette situation. La deuxième lecture est plutôt une discussion d'information, si c'est l'expression juste. J'espère toutefois que les députés estimeront que la réunion de ce comité permanent est essentiellement la même chose que le comité plénier de la Chambre des communes était à cet étape précis de la procédure.

D'après moi, il n'y aurait pas d'interdiction absolue à la convocation de témoins de l'extérieur, mais je crois que nous devrions peut-être y prendre garde, car chaque bill qui est déposé à un comité est plutôt précis. Il ne s'agit pas d'un comité d'enquête; il s'agit plutôt de l'étude détaillée du bill et, par conséquent, si j'ai bien compris, le mandat n'est pas tout à fait le même que si le comité avait été saisi d'un sujet à étudier, alors qu'on aurait pu convoquer des témoins de l'extérieur, comme on le fait d'habitude.

Les membres du Comité vont faire un examen du même genre et, j'espère, dans les mêmes conditions que si nous avions été en comité plénier.

[Texte]

Mr. Horner: Just on this point, Mr. Chairman; we are not exactly in the same position as the Committee of the Whole. For example, in the Committee of the Whole every member can participate and can vote. On the clause-by-clause study here only Committee members can vote. We are not in exactly the same position at all. While it may have some disadvantages, we should also take advantage of the advantages that a committee would lend itself to the passage of a bill.

For example, witnesses cannot be called in the Committee of the Whole but they can in a committee. This is why I wanted this question cleared up. Can we do this if the Committee so desires? I know of two or three very, very important problems that have arisen in Canada because of the use of pesticides. Can we call witnesses from these areas and hear their side of the story before we pass legislation? In other words, are we going to pass the legislation with our eyes open or with them closed? I want the Chairman to clear up this point. Can we call witnesses?

The Chairman: Would it not seem reasonable that this Committee is able to direct itself, and if we come to a point where we need further information, and by the calling of a witness it might provide some additional clarification and information, then I would think that it is quite possible for the Committee to agree that it might be advisable to call a certain witness. I think that is...

Mr. Horner: Mr. Chairman, bearing in mind that if you are going to call witnesses you have to give them notice of a day or two. You cannot just bring them in at the wave of your finger. They may be in British Columbia or they may be down in Southern Ontario, and we have to give this matter a little bit of forethought and planning so that we can approach these people and ask them to come before the Committee, if we feel they can lend some knowledge to the application of this legislation.

• 1010

Mr. Olson: Mr. Chairman, I do not see any prohibition in the standing orders against this or any other standing committee calling outside witnesses. However, I would like to draw to the attention of the Committee again the fact that this procedure that we are now involved in is somewhat different—in my view at least—than the matter of an ordinary reference to a committee of a subject matter to investigate. Under those conditions I think it is normal, and it has been the practice, to call outside witnesses for the purpose of get-

[Interprétation]

M. Horner: Quant à ce point, monsieur le président, nous ne sommes pas tout à fait dans la même situation que le comité plénier. Par exemple, au comité plénier, tous les députés peuvent participer et peuvent voter. Ici, seulement les membres du Comité peuvent voter sur l'étude article par article. Nous ne sommes pas du tout dans la même situation. Bien qu'il y ait peut-être des désavantages, nous devrions profiter des avantages du fait qu'un comité est propice à l'adoption d'un bill.

Au comité plénier, on ne peut pas convoquer de témoins, mais, à notre comité, on peut le faire. C'est pourquoi je demande une explication. Je connais deux ou trois problèmes importants qui ont surgi au Canada en raison de l'emploi de pesticides. Pourrions-nous alors convoquer des témoins de ces secteurs et entendre ce qu'ils ont à dire avant d'adopter la mesure? En d'autres termes, allons-nous adopter la mesure avec les yeux fermés ou avec les yeux ouverts? Monsieur le président, pouvons-nous convoquer des témoins?

Le président: Le Comité devrait se diriger lui-même. Si nous arrivons au point où il nous faut des renseignements supplémentaires et si la convocation de témoins peut nous éclairer davantage et nous donner des renseignements supplémentaires, j'ai nettement l'impression que le comité serait d'accord sur la nécessité de convoquer certains témoins.

M. Horner: Monsieur le président, il faut tenir compte du fait que si nous convoquons les témoins, il faut leur donner un préavis d'un jour ou deux. On ne peut pas tout simplement les convoquer et s'attendre à ce qu'ils y soient immédiatement. Ils peuvent être en Colombie-Britannique ou dans le sud de l'Ontario. Il faut y penser d'avance, si on veut demander à ces gens de comparaître devant le comité et nous informer.

L'hon. M. Olson: Je ne vois pas d'empêchements dans le Règlement pour ce comité ou un autre comité de convoquer des témoins. Toutefois, j'aimerais bien porter à l'attention du comité, encore une fois, que la procédure que nous suivons à l'heure actuelle est quelque peu différente, à mon sens, de celle qui serait suivie pour un sujet déferé à un comité pour fins d'enquête. Dans ces conditions, il serait normal, comme c'est la pratique, de convoquer des témoins pour obtenir leurs opinions, et leur avis sur un sujet déferé à un

[Text]

ting their opinions and their expertise on a certain subject matter that was referred to the Committee specifically for investigation. This situation is somewhat different in that we are here as legislators to consider and hopefully pass a bill that has been referred by the House to this Committee. As I said, I do not see any absolute prohibition but I would caution members not to confuse the two procedures.

Mr. Horner: On that very point, Mr. Chairman, I am not confusing the two procedures. In the past bills were sent to committee and witnesses were called. If you are going to try to differentiate between this bill and some other bill, or this type of committee meeting and previous committee meetings, all I am asking is can we call witnesses? I am under the impression that if the Committee so desires it could. It has in the past. I believe it now has the power, and the Minister is attempting to put this bill in another category. It is not an investigation. It certainly should be an investigation. We should examine very, very closely the application of pesticides in general because it is a big and important subject. It will become more important as the years progress.

Mr. Olson: Mr. Chairman, I do not wish to disagree with that. I think there should be some understanding of the difference between an investigation—if you want to call it that—and legislators legislating. Under the new rules, as the hon. members know, along with the second reading of every bill, unless an exception is taken, there goes along with the motion that it be referred to a standing committee, and this is the process that used to take place in the Committee of the Whole.

Mr. Horner: But in the past in committees we could call witnesses. For example, right off the top of my head I can think of the Transportation Committee. The railway legislation was before that Committee and we must have heard a dozen witnesses in any case.

Mr. Olson: I am not disagreeing with you at all.

Mr. Barrett: He has agreed with you three times. How many times do you have to be told, John!

The Chairman: Order, gentlemen. Will you please address the Chair. Mr. Gleave had a question.

[Interpretation]

comité pour fins d'enquête. La situation est un peu différente, parce que nous sommes ici à titre de législateurs, afin d'étudier et, nous l'espérons, d'adopter un projet de loi qui nous a été déferé par la Chambre.

Comme je l'ai dit, je n'y vois pas d'interdiction absolue, mais je vous mettrais en garde toutefois de ne pas confondre les deux procédures.

M. Horner: A ce sujet, monsieur le président, il n'y a pas de confusion entre les deux, à mon sens. Dans le passé, on déferait les bills aux comités et on convoquait les témoins. Alors, si vous voulez établir une distinction entre ce bill et un autre bill, ou ce genre de séance de comité et les séances des comités antérieurs, tout ce que je demande c'est: «Avons-nous le pouvoir de convoquer des témoins?» J'avais l'impression que le comité pouvait le faire s'il le désirait. Il l'a fait dans le passé. Je crois qu'il a toujours ce pouvoir et le ministre essaie de placer ce bill dans une autre catégorie. Il ne s'agit pas d'une enquête, mais cela devrait faire l'objet d'une enquête. Nous devrions examiner très attentivement l'application des pesticides en général, car c'est un sujet extrêmement important et il le deviendra de plus en plus au cours des années à venir.

L'hon. M. Olson: Monsieur le président, je ne veux pas être en désaccord avec cela. Je crois que nous devrions peut-être comprendre un peu quelle est la distinction entre une enquête, si vous voulez la qualifier ainsi, et les mesures de lois à adopter en vertu du nouveau règlement, comme les députés le savent, en même temps que la deuxième lecture d'un bill, à moins qu'on s'y oppose. En même temps, il y a une motion à l'effet que le projet de loi soit déferé à un comité permanent, et c'est ce qu'on faisait autrefois au comité plénier.

M. Horner: Oui, mais les comités, dans le passé, avaient le droit de convoquer les témoins. Par exemple, je songe immédiatement au Comité des transports. Avant l'adoption de la mesure sur le transport ferroviaire, nous avons entendu au moins une douzaine de témoins.

L'hon. M. Olson: Je ne suis pas en désaccord. Pas du tout.

M. Barrett: Il a été d'accord deux ou trois fois. Combien de fois faut-il qu'on vous le dise, John?

Le président: A l'ordre, messieurs. Veuillez vous adresser au président. M. Gleave avait une question à poser.

[Texte]

Mr. Gleave: No, I really wanted to make an observation on the topic that is under discussion. It seems to me that our responsibility here is to report out the particular items that are referred to us. In order to report them out, if the information that is offered to us by the people who are present is not sufficient to make an intelligent or a comprehensive decision, I think we should then be in a position to ask the Chairman to call someone before the Committee who can give us the information which we need in order to make an intelligent decision. Because of the fact that once we report this Bill out to the House we are responsible, I think we should be able to say to the House that in our opinion this Bill is in good order and we can recommend it. Actually, when it goes out of this Committee we are recommending that it be accepted as a piece of legislation. Therefore I think as a Committee we must reserve the right to call or to ask for further information when we think it is necessary. That is my attitude toward it, Mr. Chairman.

• 1015

The Chairman: I do not think there is any question about our ability to call witnesses if the Committee so chooses. Would it seem reasonable to go on with our discussion of the bill and when we come to a point where we think we should call witnesses, we will then make that decision. Is that not reasonable?

Mr. Pringle: I would like to ask one question.

The Chairman: Mr. Pringle (Fraser Valley East).

Mr. Pringle: There seems to be some doubt as to the terms of reference of the Committee as it is established at the present time in relation to the usual terms of reference which have supported standing committees in the past. I wonder if there would be any merit in our recommending that the Steering Committee meet as soon as possible and delve into the terms of reference at some length as they should apply or might apply now and bring back some recommendations, because we could have a discussion with regard to terms of reference every time we meet as new points arise. If we could do some work on our new terms of reference, is there any merit in our recommending this and arranging for that meeting so that they can report back, and then we could carry on with our business.

[Interprétation]

M. Gleave: Ce que je voulais faire, c'est surtout formuler un commentaire à ce sujet. Il me semble que notre responsabilité, ici, est de faire rapport des sujets qu'on nous défère. Et par conséquent, afin de faire rapport, si les renseignements que nous avons de la part de ceux qui sont ici, ne sont pas suffisants pour que nous en arrivions à une décision raisonnable, je crois que nous devrions alors être en mesure de demander au président de convoquer devant le comité, une personne qui pourrait nous donner les renseignements nécessaires pour en arriver à une décision intelligente. Et parce que nous sommes responsables, une fois que nous aurons fait rapport de ce bill à la Chambre, je crois que nous devrions être capables de dire à la Chambre que le bill, à notre sens, est en bon ordre et que nous pouvons le recommander. En fait, quand le bill quitte notre comité, nous recommandons qu'il soit adopté en tant que mesure législative. Par conséquent, je crois que nous devrions nous réserver, en tant que comité, le droit de convoquer des témoins ou de demander des renseignements supplémentaires lorsque nous le jugeons nécessaire. C'est l'attitude que j'adopte à ce sujet, monsieur le président.

Le président: Je ne crois pas qu'il y ait de doutes quant à nos pouvoirs de convoquer des témoins si le comité le décide. Serait-il raisonnable de poursuivre notre discussion du bill, et si nous arrivons à un point où il nous faut convoquer des témoins, nous prendrons la décision à ce moment-là.

M. Pringle: J'aimerais poser une question.

Le président: M. Pringle (Fraser Valley East).

M. Pringle: Il y a peut-être certains doutes qui planent au sujet du mandat du Comité tel que présentement établi en rapport avec le mandat traditionnel des comités permanents dans le passé. Je me demande alors s'il serait bon que nous recommandions que le sous-comité se réunisse le plus tôt possible pour étudier à fond le mandat tel qu'il doit s'appliquer ou qu'il s'applique à l'heure actuelle, et ensuite nous formuler des recommandations. Nous ne pourrions discuter le mandat à chaque réunion, au fur et à mesure qu'on soulève de nouveaux points. Alors, si nous pouvions examiner notre nouveau mandat, est-ce qu'il serait bon de recommander une telle séance afin que le sous-comité nous fasse rapport, et nous pourrions alors continuer notre travail.

[Text]

The Chairman: Mr. Barrett.

Mr. Barrett: Mr. Chairman, I would suggest that what we have been saying up until now is rather redundant. There seems to be an aura of suspicion here that we have something under the rug. There is nothing under the rug. Let me propose that we go along paragraph by paragraph, as you suggest, and when we come to an impasse we will then clear the air, but for goodness' sake let us go on. It is now 10.15 a.m. and absolutely zero has been accomplished.

An hon. Member: We are breaking new ground.

Mr. Barrett: I grant you that we are breaking new ground, but when we come to this new ground and we have a problem, let us discuss the problem when it arises. Let us not suspect that there is something erroneous and terrible about it.

The Chairman: The Committee probably feels the tenseness of pioneering in this particular field. I think probably the best way to get rid of this tenseness and to indicate that we are here to study the bill as a committee in order to make what improvements can be made and to give it the kind of consideration to which it is entitled would be to go on, and when we come to something that we are wondering about we can then take a little time and discuss it and together we will arrive at the best course of action. Are we agreed?

Mr. Korchinski: Mr. Chairman, I have something that is bothering me right now. I think it is understandable that we should spend a little time in view of the fact...

The Chairman: Does it come under Clause 2?

Mr. Korchinski: This is the very point that I want to raise. It is understandable there should be some doubt in our minds as to what factors or what procedure may be followed in the future and we have to plan our action accordingly. I know that in the past there has been some general discussion in the House and perhaps the very fact that we were helpful in trying to get the bill into Committee may have been one of the factors in not deciding how long we would spend in the House on the second reading. By way of a suggestion—and I wonder if it has any merit or not, and not necessarily at this particular stage because I have no comments to make on rule No. 1—perhaps for the future we should consider that we should always open up a bill with a general discussion on rule No. 1 but

[Interpretation]

Le président: Monsieur Barrett.

M. Barrett: Monsieur le président, tout cela est superflu. Il me semble que certains députés suggèrent qu'il y a quelque chose de louche. Il n'y a rien de louche. Et alors, poursuivons notre étude article par article, tel que vous le proposez et lorsque nous arriverons à une impasse, décidons à ce moment-là. Mais du moins, continuons notre travail. Il est maintenant dix heures et quinze et nous n'avons rien de fait.

Une voix: C'est un terrain nouveau.

M. Barrett: Oui, d'accord, mais quand il y aura un problème à soulever, réglons-le à ce moment-là. N'allons pas soupçonner que la chose est fausse et terrible.

Le président: Je crois que le comité est peut-être très conscient qu'il défriche un nouveau terrain dans ce domaine. Je vois que la meilleure façon, peut-être, d'éliminer cette tension et d'indiquer que nous sommes ici pour étudier le bill en tant que comité, l'améliorer au besoin et lui donner toute l'attention qu'il mérite; la meilleure façon de le faire serait justement de continuer notre étude et lorsque nous aurons des questions à poser, nous pourrions prendre un peu de temps pour discuter ensemble et arriver à la meilleure procédure à suivre. Sommes-nous d'accord?

M. Korchinski: Monsieur le président, j'ai quelque chose qui me préoccupe à l'heure actuelle. Je crois qu'il est raisonnable que nous passions quelque temps vue que...

Le président: S'agit-il de l'article 2?

M. Korchinski: C'est exactement la question que je veux soulever. Il est facile de comprendre qu'il puisse y avoir des doutes dans notre esprit quant à la procédure à suivre à l'avenir car il faut absolument que nous agissions en conséquence. Je sais que dans le passé il y a eu une certaine discussion générale à la Chambre, et peut-être que le fait que nous avons été consentants à déférer le bill au Comité amoindrit le temps que nous y aurions consacré à la deuxième lecture en Chambre. A titre de suggestion, et je me demande si elle a du mérite, et pas nécessairement à cette étape-ci, parce que je n'ai aucun commentaire à faire à propos du règlement n° 1, mais je me demande si pour l'avenir nous ne devrions pas commencer l'étude d'un bill par une discussion générale du

[Texte]

not necessarily pass it and leave it open. On this occasion, if the Committee so wishes, you might invite witnesses and again, as I say, have a general discussion on the whole subject of the bill and then leave it without a formal vote until the end, after you have discussed it clause by clause. That would also give you an opportunity at a later date, if you felt you wanted to hear witnesses, to give the witnesses an opportunity to come back to No. 1 and have the witnesses appear under No. 1. I am suggesting this for our consideration. Perhaps this might be a way of getting the witnesses. We will have a place where we can formally say that this is where the witnesses will be called, and perhaps there will be some sort of order in the system.

The Chairman: I think I detect that what the members of the Committee are really missing is the opportunity at the outset to say, "This is a great thing. It should have been done 20 years ago, but it was not done", and so on, or to say, "It is terrible and we propose to oppose it", and whatever else. I think what you are really missing is the opportunity to make this general kind of comment. Perhaps it is a good thing to make some provision for that kind of general observation. Do we agree that on this particular bill we will go along this way and when we come to the next bill, if it seems that we have missed that type of opportunity, then I think we could agree that we should probably consider some opening comments when we introduce the bill before the Committee.

• 1020

Mr. Pringle: I would like to go back to my original suggestion a minute ago, which we did not discuss. It seems to me that we will have a continuing problem with terms of reference unless we do something about it at the outset. Could the steering committee not meet and spend some considerable time on terms of reference and then, if necessary, have a meeting to discuss terms of reference and then continue on, even if we have to make some minor changes. I can foresee, by virtue of the fact that it is a new arrangement, our spending a considerable amount of time in just discussing these very terms of reference.

The Chairman: I should read Clause 75 under the new Standing Orders which is as follows:

75. (1) In proceedings in any committee of the House upon bills, the preamble is first postponed, and if the first clause contains only a short title it is also postponed; then every other clause is consid-

[Interprétation]

règlement n° 1 sans adopter un article précis. Et maintenant, si le comité le désire, et encore une fois comme je l'ai dit, nous pourrions peut-être avoir une discussion générale sur le sujet ou la teneur du bill et ensuite laisser l'adoption de l'article 1^{er} jusqu'à la fin après que nous aurions discuté tous les autres articles. Cela nous donnerait une chance plus tard, si nous étions d'accord que nous voulions convoquer des témoins, de leur donner une chance de revenir à l'article 1^{er} et nous pourrions les convoquer en vertu du règlement n° 1. C'est une suggestion que je vous propose. Ce serait peut-être un moyen d'obtenir des témoins. Nous aurons un endroit où nous pourrions formellement dire que des témoins seront convoqués et peut-être avoir un peu d'ordre dans le système.

Le président: J'ai l'impression que les membres du Comité manquent l'occasion de dire dès les débuts: «C'est une bonne chose et c'est ce qu'on aurait dû faire il y a 20 ans, mais ça n'a pas été fait», et ainsi de suite, ou dire par contre: «C'est affreux et nous nous y opposons». Je crois que ce qui vous manque à l'heure actuelle, c'est l'occasion de pouvoir formuler des commentaires généraux de cette nature. Sommes-nous d'accord que pour le bill devant nous, nous procédions de cette façon-ci, et ensuite quand nous étudierons le prochain bill, s'il nous semble que nous avons manqué ce genre d'occasion, je crois que nous pourrions peut-être être d'accord et prévoir la possibilité de formuler des commentaires préliminaires lorsque le bill est présenté au Comité.

M. Pringle: J'aimerais revenir à ma suggestion originale. Il me semble que nous aurons continuellement des problèmes au sujet du mandat si nous n'y voyons pas au début. Est-ce que le sous-comité directeur ne pourrait pas se réunir et consacrer un certain temps au mandat et ensuite, au besoin, consacrer une réunion complète pour la discussion de notre mandat, même s'il nous faut faire de légers changements. J'ai l'impression que nous allons passer beaucoup de temps à discuter de notre mandat en raison du fait que la procédure est nouvelle.

Le président: Je devrais peut-être vous donner lecture de l'article 75, en vertu du nouveau règlement.

L'article 75 dans les procédures en comité sur un projet de loi:

75. (1) Lors de l'étude de bills par un comité de la Chambre, on reporte d'abord à plus tard l'étude du préambule puis

[Text]

ered by the committee in its proper order; the first clause (if it contains only a short title), the preamble and the title are to be last considered.

[Interpretation]

celle du premier article si celui-ci ne vise que le titre abrégé; le comité étudie ensuite chacun des autres articles dans l'ordre, puis en dernier lieu le premier article (s'il ne vise que le titre abrégé), le préambule et le titre.

I think probably if we consider this to be a directive that we are proceeding in the right way. When we come back to Clause 1 and the title then, of course, there should probably be an opportunity for some general observations.

With regard to Mr. Pringle's committee, I am not sure but I think that is our term of reference at the moment. I think in the event that a particular situation arose as to whether we should call witness such and such or not, then I think the steering committee should meet and make a general recommendation to the Committee as a whole.

Mr. Korchinski: That is the very point. That does not make provision for any witness and we have to take that into account. Somewhere along the line we have to decide on this. For example, is it proper for a witness to appear on No. 2 or No. 3, or any part of the clauses no matter what the number is.

The Chairman: If you could find a reason for bringing a witness on No. 2. We have Mr. Newman, who will explain these definitions. If there is any other reason, fine, perhaps we could.

Mr. Korchinski: The point is that whenever a witness appeared we would probably want to cover the whole bill with the witness. So, you could not confine it to one clause unless you passed the whole bill while the witness was present. Then what do you do with the next witness, if you wanted another one? I am suggesting there should be a provision somewhere, or at least some thought given to having some system worked out so that the witnesses should appear under Clause 1, or leave it open until we have finished with them and then have an opportunity to call later witnesses.

The Chairman: I would think if we went through the bill clause by clause that as we go through we might say we will hold Clause 3, that we would like to call such and such a witness, and when we come to Clause 5 or Clause 8 as the case may be, we might stand that one because we want to call a witness. It seems to me that that would be the reasonable approach and by the time we get to the title we will then have a list of clauses that have been stood. We will know what witnesses we wish to call, and this would seem like an orderly procedure. I recognize you now, Mr. Horner.

Si nous considérons ceci comme une directive, alors nous procédons de la bonne façon. Lorsque nous retournerons à l'étude de l'article 1 et du titre, nous aurons probablement l'occasion de formuler des commentaires généraux. En ce qui concerne le comité de M. Pringle, je crois que notre mandat est celui-ci à l'heure actuelle: que si une situation particulière se présentait, à savoir si nous pouvons convoquer tel ou tel témoin, alors le Comité de direction devra formuler une recommandation générale à notre Comité.

M. Korchinski: C'est bien cela. Rien ne prévoit la convocation de témoins et alors nous revenons à ce que je disais tout à l'heure. Il nous faut décider. Est-ce que le témoin peut être convoqué en vertu de l'article 2, 3 ou les autres?

Le président: Si vous trouvez une raison de convoquer des témoins pour l'article 2, M. Newman pourrait nous apporter des précisions.

M. Korchinski: Si un témoin comparait, nous voudrions probablement discuter du bill dans son ensemble, avec le témoin. Nous ne pourrions nous limiter à un seul article. Et qu'arriverait-il du témoin suivant, s'il y en a un? Je crois qu'on devrait peut-être songer à établir un système qui nous permettrait, en vertu de l'article 1, de convoquer les témoins.

Le président: Si nous étudions le bill, article par article, rendus, par exemple, à l'article 3, nous pourrions le laisser en suspens pour convoquer tel ou tel témoin. Et ensuite, quand nous arriverons à l'article 5 ou 8, nous pourrions peut-être les laisser également en suspens afin de pouvoir convoquer un témoin. Et, ainsi, lorsque nous reviendrons à l'étude du titre du bill, nous aurons la liste de ces articles au sujet desquels nous désirons entendre des témoins.

[Texte]

Mr. Horner: Actually Mr. Chairman, I have no objection to your thought but the clauses are interrelated. Clause 2 deals with definitions, and even in the very definition of "Department". There are two departments concerned with this bill, the Department of National Health and Welfare and the Department of Agriculture. Unless the Food and Drug Directorate is going to be moved to the Department of Agriculture, there are only two departments actually concerned with this bill. I just point this out to show how the clauses are actually interrelated.

I have nothing against Mr. Pringle's suggestion of the steering committee, but I do not want the steering committee to lay down the rules for this Committee. The steering committee can decide what the order of business, or something like this, should be but it should not have any authority to lay down the rules on which this Committee is going to operate. I disagree with Mr. Pringle's suggestion.

The Chairman: The steering committee would have no authority to decide the procedure that the Committee would adopt; it would simply bring a recommendation to the Committee and the Committee would decide the procedure.

● 1025

Mr. Horner: I would like to deal with this point of hearing witnesses. For example, you say we should proceed clause by clause and if we come to a clause where we want to hear an outside witness, we could call him. If a motion were before the Committee right now that we call—and I am just using this as an example—witnesses from British Columbia, and I do not know whether it was in the Fraser Valley where the aldrin was used in the potatoes and it remained in the soil for years after, but if we called witnesses from British Columbia on that particular case to see whether or not this bill would give those farmers some guarantee or some assurance that the Food and Drug Directorate actually studied and examined the application of aldrin in that case, and whether compensation was justified or whether it was even paid, that it would take you, Mr. Chairman, some time to locate a capable witness from that area and it would take some time for that witness to get here. These are the things that are going on in the back of my mind. We want to hear from people that have been affected to see whether or not this bill is actually going to cover cases like that in the future.

[Interprétation]

M. Horner: En fait, monsieur le président, je n'ai pas d'objection à votre proposition. Mais les articles sont interdépendants. L'article 2 traite des définitions, et même de la définition de «ministère». Il y a deux ministères en cause, dans le bill: le ministère de la Santé nationale et du Bien-être social, ainsi que le ministère de l'Agriculture. A moins que la direction des aliments et des drogues ne relève du ministère de l'Agriculture, il y a deux ministères touchés par ce bill. C'est pour prouver l'interdépendance des articles que je le répète. Je ne m'oppose pas à la suggestion de M. Pringle au sujet du Comité de direction, mais je ne voudrais pas que ce comité décide quel sera le règlement de notre Comité. Le Comité de direction pourra décider de l'ordre ou des étapes à suivre dans l'étude du bill.

Le président: Le Comité de direction n'aurait aucune autorité pour décider de la procédure. Le Comité de direction formulerait une recommandation et c'est le Comité qui déciderait.

M. Horner: Revenons, si vous le permettez, au problème de la convocation des témoins. Vous dites que nous devrions procéder article par article et que si nous arrivons à un article sur lequel nous désirons entendre un témoin, nous n'aurions qu'à le convoquer. Supposons que nous désirons entendre un témoin qui habite en Colombie-Britannique, j'ignore si c'est dans la Vallée du Fraser que ces pesticides ont été utilisés et sont demeurés longtemps dans le sol pour lui demander si le bill serait, à son avis, une garantie pour les fermiers ou une assurance que la Direction des aliments et des drogues a étudié le problème, et si la compensation était justifiée ou si, même, elle a été versée, dans ce cas-là, monsieur le président, il nous faudrait du temps pour localiser un témoin de cette région et pour le faire venir jusqu'ici. Telles sont les questions que je me pose car ce que nous voulons, c'est entendre des témoins touchés par ce problème et qui pourront nous dire si ce bill couvrira ces questions, à l'avenir.

Le président: Monsieur Côté (Richelieu).

The Chairman: Mr. Côté (Richelieu).

[Text]

Mr. Côté (Richelieu): Monsieur le président, depuis près de trois quarts d'heure, nous discutons pour déterminer si nous avons le droit de faire venir des témoins, etc. On a perdu trois quarts d'heure sur cette question. Comme dans plusieurs autres comités, rien ne fonctionnera si chacun s'attend à avoir ses propres règlements.

Ces bills ont certainement été préparés par des fonctionnaires qui ont subi des pressions ou qui se sont rendus compte des problèmes. Si on discutait article par article, il ne serait peut-être pas nécessaire de faire venir les témoins dont on parle. Nous avons des personnes au ministère, qui nous donneraient tout de suite les réponses à nos questions.

Je pense qu'on perd énormément de temps. Ce sont les mêmes discussions. Je ne veux pas blâmer M. Horner, mais, nous aimerions, nous aussi, poser des questions à chaque séance du comité. Assez souvent, les règlements ne sont pas tellement respectés, de sorte qu'on n'a pas tous le droit de parole et que les mêmes répètent toujours la même chose.

Serait-il possible d'expliquer notre point de vue pendant 4 ou 5 minutes, selon les normes spécifiées pour cela, et de passer ensuite à ceux qui demandent la parole? Actuellement, je propose d'étudier article par article. Lorsqu'on aura des problèmes et que les témoins du ministère ne pourront pas nous répondre, on verra à ce moment-là.

The Chairman: Yes, we could have started out by having a general discussion of the bill and making a lot of general comments. I think we should agree that we will go through it clause by clause. When we come to a place where it is catchy, we will stop. We will take time and discuss it and decide whether or not we should call witnesses, or whatever the action of the Committee should be at that particular point.

I would hope that the Committee might agree to go along with this suggestion because we are all pioneering this process of bills being referred to committees, and if we could agree to go along and if we come to a catchy spot we will take time to decide what the right course of the Committee should be. Is there general agreement on that particular point?

Some hon. Members: Agreed.

The Chairman: Mr. Danforth?

Mr. Danforth: Mr. Chairman, I have been trying to get the floor for a very definite

[Interpretation]

Mr. Côté (Richelieu): Mr. Chairman, for about three-quarters of an hour now we have been discussing the question as to whether we have the right to call witnesses, and so forth. We have last three-quarters of an hour discussing this question. As in the case of several other Committees, nothing will work if everyone expects to have his own individual regulations.

These bills have certainly been prepared by officials who have been subjected to certain pressures or who knew that there were problems. It might not be necessary to call witnesses if we were to consider the bill clause by clause. There are people in the Department who would answer immediately to our questions.

I think we are wasting a considerable amount of time. And we remain on the same questions. I do not wish to blame Mr. Horner, but we also would like to be able to ask questions at each Committee meeting. It happens fairly often that the regulations are not closely maintained, so that all of us are not able to speak while the same people keep on repeating the same thing. Would it be possible to explain our own point of view for four or five minutes in accordance with the standards for this, and then afterwards let those who wish to speak have the floor? At the present time, I propose that we proceed with a clause-by-clause study. When problems with arise and the officials of the Department will not be able to answer us, we shall then see what is to be done.

Le président: Oui, nous aurions pu commencer par une discussion générale du bill et formuler des observations générales. J'estime que nous devrions accepter de l'étudier article par article; lorsque nous arrivons à un endroit confus, nous arrêterons. Nous déciderons à ce moment-là ce que devrait faire le Comité à ce moment-là. J'espère que le Comité acceptera cette suggestion car nous sommes tous des pionniers dans cette question du renvoi des bills aux comités. Et alors, si nous acceptons de continuer, nous prendrons le temps, lorsqu'un problème surgira de décider de la procédure à suivre.

Des voix: Accepté.

Le président: Monsieur Danforth?

M. Danforth: Si vous voulez m'excuser, je ne crois pas que vous devriez avoir à tran-

[Texte]

purpose. I do not think—if you will pardon me—that the onus should be on you, Mr. Chairman, in this regard. May I respectfully suggest that since we are pioneering new ground and since we have run into this problem, and I am sorry I did not get the floor earlier, that these are the very things that we as a committee, although we are interested in them, it is not our ultimate decision. Should we not refer this to the House leaders of our respective parties and discuss the problems as we see them and then ask the House leaders of the parties to determine among themselves the interpretation of these rules and the rules under which the Committee should act.

I think we would get much further ahead if it were done in this manner. Firstly, a decision would of necessity then be taken and, secondly, we would have a uniform procedure of the committees of the House. This is the point that I was trying to make.

The Chairman: Any further comments? Mr. Lambert (Bellechasse)?

M. Lambert (Bellechasse): Je vois qu'il y a énormément de confusion et que tous s'interrogent. J'ai une question bien précise à vous poser. Est-ce qu'on peut désigner les personnes qui sont ici, ce matin, comme des témoins, ou bien sont-elles des conseillers relevant du ministère de l'Agriculture? Si ce sont des témoins, ils ont été convoqués. S'ils ont été convoqués comme témoins, c'est que le président avait l'autorité pour le faire. C'est notre première séance sous le nouveau Règlement. Si on a déjà la possibilité d'avoir des témoins, pourquoi ne l'aurions-nous pas plus tard? Il s'agirait de s'entendre pour savoir si, ce matin, nous avons des témoins ou des conseillers.

The Chairman: The gentlemen who are present are officials from the Canada Department of Agriculture and they each specialize in some particular field, whether it be insecticides, legal interpretation, administration, or whatever else. Whether you wish to call them witnesses or advisors I think depends on which aspect of it you look at. They are here to guide and to help us and to interpret the bill in areas which may be difficult for us. I recognize Mr. Southam.

• 1030

Mr. Southam: Mr. Chairman, I have been listening with a great deal of interest to this discussion. I think that possibly one of the problems before the Committee this morning is that, as has been pointed out, we are breaking new ground and we are trying to go

[Interprétation]

cher cette question, monsieur le président. Étant donné que nous sommes des pionniers et étant donné que le problème a été soulevé, même si toute cette question nous touche, la décision ne relève pas de nous en fin de compte. Est-ce que nous ne devrions pas discuter de ce problème avec notre leader respectif en Chambre et demander aux divers leaders, en Chambre, de décider entre eux de l'interprétation qu'il faut donner à ces règlements.

Je crois que nous progresserions beaucoup plus parce que, premièrement, il y aurait une décision de prise et deuxièmement, nous aurions une procédure uniforme pour tous les comités de la Chambre. C'est la suggestion que je voudrais formuler.

Le président: Y a-t-il d'autres commentaires? Monsieur Lambert.

Mr. Lambert (Bellechasse): I see that there is a great deal of confusion. We all have questions of some kind. I have a very specific one. Are the people here this morning witnesses, or are they advisors from the Department of Agriculture? If they are witnesses, they have been called to the Committee. And if they have been called to the Committee as witnesses, it is because the Chairman had the authority to do it. It is the first meeting of this Committee under the new Standing Orders. If we can have witnesses at this stage, why should we not be able to have them at a later stage? It would be a matter of agreeing whether, this morning, we have witnesses or advisers.

Le président: Les personnes ici présentes sont des haut fonctionnaires du ministère de l'agriculture, chacun spécialiste dans un domaine donné, que ce soit les insecticides, l'interprétation juridique, l'administration, que sais-je encore. Que vous les appeliez conseillers ou que vous les appeliez témoins, cela dépend de la façon dont vous regardez les choses. En fait, ils sont ici pour nous orienter, pour nous aider et pour nous expliquer le projet de loi dans des domaines qui nous sont peut-être peu accessibles.

M. Southam: Monsieur le président, j'ai écouté attentivement ce qui a été dit et je pense que l'un des principaux problèmes qui se posent à nous, ce matin, c'est que nous entrons dans un nouveau domaine et que nous cherchons à faire le travail, non seule-

[Text]

carefully and expedite the business of not only this Committee but of the work of the House as well.

I think what we have done here is taken some new problems incorporated in this new bill a little prematurely. I am thinking of the comment that Mr. Horner made a few moments ago with respect to the work that our Transport and Communications Committee did in setting up the new Act. A great many witnesses were heard but due to the fact that it was something new the government saw fit, and we were in agreement with it, to develop a skeleton bill and they presented it to the Committee with terms of reference to call in witnesses and get the best information they could from all across Canada. I have every faith in the efficiency and ability of the departmental officials who helped the Minister develop this bill, but I think we should have had an open reference to the Committee with the terms of reference that witnesses could have been called, amendments could have been brought in the Committee to the suggested skeleton bill and then, when it was properly reviewed in committee, the Minister with the advice of his officials would then have brought in a bill and presented it to the House similar to Bill C-155. It would then have come back to the Committee and we would not have had all this discussion about witnesses because we would have already interviewed them and it would just be more or less the regular process of passing a bill, the same as in the Committee of the Whole House. I think in this particular case we have put the cart before the horse.

I think we could avoid a lot of trouble in the future if we followed this approach, have the Minister and his officials in planning new legislation—not just an amendment to an Act—consider when witnesses are required.

I can understand that we are going into something new here and we should have the advice of the people that are directly affected by the problems that this bill will cover. No doubt the departmental officials have a lot of information, but we may run into areas where we should have had these witnesses before the Committee. We are going to bog down in a case like this. We should have done a lot of this missionary work beforehand.

The Chairman: If I may make this observation, I think we should proceed and when we come to that kind of a place we will call the

[Interpretation]

ment de notre Comité mais également de la Chambre.

Je crois que nous nous sommes attaqués un peu trop vite à certains problèmes inhérents à ce bill. Je me souviens, par exemple, des commentaires de M. Horner, sur le travail effectué par le Comité des transports et communications en vue de la rédaction du projet de loi avec des attributions lui permettant de convoquer des témoins pour obtenir tous les renseignements de tout le Canada. Je ne mets pas en doute la qualité des fonctionnaires qui ont aidé le ministre à rédiger ce projet de loi, mais je pense qu'il aurait fallu officialiser le mandat du comité puis, ensuite, demander au comité d'étudier l'avant-projet de loi, et alors le ministre, aidé de ses fonctionnaires, aurait pu rédiger un projet de loi semblable au bill C-155 et le soumettre à la Chambre.

Plusieurs témoins ont été entendus, mais le gouvernement, comme c'était quelque chose de nouveau, a établi ce projet de loi et l'a soumis au Comité.

Si cela avait été fait avant, on n'aurait pas eu tout ce problème concernant les témoins parce qu'on les aurait déjà entendus et, en fait, cela aurait été simplement quelque chose de routinier. Je pense qu'on met la charrue devant les bœufs, ici. On pourrait éviter des difficultés de ce genre à l'avenir si le ministre et ses collaborateurs, lorsqu'ils préparent de nouvelles lois, pas seulement des modifications, songeaient aux témoins à convoquer.

Je comprends qu'il y a quelque chose de nouveau et il nous faudrait les conseils des gens compétents dans la matière. Il ne fait aucun doute que les responsables du ministère ont beaucoup de renseignements, mais malgré tout, nous allons nous trouver dans des situations où ces témoins auraient dû être entendus. On va s'embourber dans une législation de ce genre. Il faudrait que ce mécanisme ait été rodé à l'avance.

Le président: Si vous me permettez de faire cette remarque, je pense que nous devrions continuer nos travaux, et si nous nous heur-

[Texte]

witness if necessary. I think we are wasting time this morning by anticipating a lot of things that will never happen. Let us go as far as we can and when we have gone that far, if we need to stop and take a look at it and call witnesses, or whatever else, I am sure there will be a disposition on the part of the Committee to do that very thing.

Mr. Barrett: May I suggest, Mr. Chairman, that we proceed. May I also suggest, Mr. Chairman, that this is historical. The witnesses were called before this was put into print. When we are discussing new legislation, which we will be, we will then go through all this sort of thing.

An hon. Member: Is it new legislation?

Mr. Barrett: It is new in the sense that it is new here in print. The people who arranged this sort of a situation reviewed this before they put it into print.

Mr. Horner: Is that your image of democracy?

Mr. Barrett: Who did?

The Chairman: Order, gentlemen. Will you please direct your remarks to the Chair and avoid cross-fire, if possible. I want to recognize Mr. Roy (Laval).

M. Roy: Merci, monsieur le président. Je crois que si nous continuons à discuter, nous allons tourner en rond et notre travail sera absolument inutile.

Nous avons été convoqués ici ce matin pour l'étude du Bill C-155. Nous ne l'avons pas été pour discuter de la procédure à suivre. Je pense que tous les membres ici présents sont intelligents. Nous avons tous été élus par le peuple et quant au quorum, je crois que nous sommes tous assez consciencieux pour nous occuper du Comité de l'agriculture et discuter intelligemment.

Deuxièmement, nous avons élu un président et je suis persuadé que depuis le début, il a rempli sa tâche d'une façon remarquable, alors, il faut lui faire confiance ainsi qu'aux membres. Présentement, des doutes sont émis: aurons-nous des invités ou non? Une très grande importance doit être accordée à l'étude du bill. Il est 10 h 40; quelques-uns d'entre nous doivent se rendre à d'autres comités à 11 heures. Mais au rythme où vont les choses, nous ne pourrions prendre part à toute la discussion, ayant à nous rendre à un autre comité.

[Interprétation]

tions à cette difficulté, à ce moment-là on convoquera le témoin s'il y a lieu. Je pense qu'on perd du temps, ce matin, en anticipant des problèmes alors qu'on ne les a pas encore rencontrés. Allons jusqu'où on peut, jusqu'aux difficultés, et si nous devons arrêter, nous arrêterons, nous étudierons la question, et nous convoquerons les témoins. Je suis certain qu'à ce moment-là le comité sera tout à fait disposé à le faire.

M. Barrett: Puis-je également dire, monsieur le président, que c'est là un moment historique. Les témoins ont été convoqués avant que cela soit imprimé. Lorsque cela nous sera soumis, nous l'étudierons.

Une voix: Est-ce une nouvelle loi?

M. Barrett: Oui, c'est nouveau dans ce sens que c'est nouvellement imprimé mais, en fait, les responsables de cette situation l'ont étudiée avant de l'imprimer.

M. Horner: Est-ce là votre idée de la démocratie?

M. Barrett: Qui l'a fait?

Le président: Voulez-vous parler au président, s'il vous plaît, et éviter de parler tous ensemble. M. Roy (Laval) a la parole.

Mr. Roy (Laval): Thank you, Mr. Chairman. I believe that we are going in circles and we are wasting our time.

We have been called here this morning to study Bill C-155, and we did not come here to discuss the procedural methods. I believe that the members here are intelligent. We have all been elected by the people, and with regard to the quorum, I believe that we are all conscientious enough to carry on with the business of the Committee on Agriculture and to discuss intelligently.

Secondly, we have elected a Chairman and I believe that since his election he has fulfilled his duty in a remarkable way. Therefore, we must trust him and we must trust the members. At the present there are some doubts as to whether we are going to have people invited or not. I believe that what is extremely important is to discuss the Bill. It is twenty to eleven, and I believe that there are some among us who have other Committee meetings at eleven o'clock. The way things are going, we will not be able to participate in the entire discussion because we have to attend another Committee.

[Text]

• 1035

Alors, je suggère que nous commençons l'étude du bill, article par article et si, à un moment donné, comme l'a suggéré le président, la présence d'un représentant de la Division des aliments et drogues s'avère utile, nous pourrions le convoquer et il pourra alors répondre à nos questions.

The Chairman: Is there general agreement that we should proceed?

Some hon. Members: Yes.

The Chairman: After all, we have departmental people here who are specialists in various areas and I think we owe it to ourselves to call them and get the information they have at their disposal. If when we have concluded the clauses we are still not satisfied, we will call whoever you would like to call. Shall we proceed with Clause 2. Are there any questions concerning the interpretation of the word "Department"? Is there any question about the interpretation of the word "Farmer"?

Mr. Lefebvre: What constitutes a farmer?

Mr. Horner: Could the learned writer state specifically what he means? Is anybody that sells an agricultural product automatically a farmer? Is this the right interpretation of the definition of a farmer?

The Chairman: We should have an interpretation of this.

Mr. Olson: Mr. Chairman, I think the interpretation there is fairly clear. It says:

a producer of primary agricultural products for sale

However, perhaps Mr. Newman would like to expand on that, although it seems fairly clear to me.

The Chairman: Mr. Newman, will you use the microphone, please?

Mr. Harvey Newman (Departmental Legal Adviser, Department of Agriculture): Mr. Chairman, in considering the meaning of the definitions I think it would be helpful if we not only considered the English version, but also the French version. The definition given for "cultivateur" is in French, and it reads:

"s'entend d'un producteur de produits agricoles de base destinés à la vente"

I think the meaning is quite clear from the French version, if not from the English version. I think the English version is also fairly clear that "Farmer" means a commercial

[Interpretation]

So I suggest that we begin discussing the Bill clause by clause and, as the Chairman put it, if at a given time we need someone from the Food and Drugs Directorate, we shall call him to answer our questions.

Le président: Est-ce que vous êtes d'accord pour que nous poursuivions la discussion?

Des voix: D'accord.

Le président: Il y a des responsables du ministère, ici, qui sont spécialisés dans différents domaines, et je pense que nous nous devons de chercher à obtenir les renseignements dont ils disposent. Si, lorsque nous aurons terminé l'étude des articles, nous ne sommes pas satisfaits, à ce moment-là, nous pourrions convoquer qui nous voudrions.

Donc, passons à l'article 2. Y a-t-il des questions concernant l'interprétation du terme «ministère»? Y en a-t-il en ce qui concerne le terme «cultivateur»?

M. Lefebvre: Qu'est-ce qu'un cultivateur?

M. Horner: Est-ce que l'on peut savoir spécifiquement ce qu'on entend par cela? Quelqu'un qui vend un produit agricole est-il automatiquement un cultivateur? Est-ce la bonne interprétation?

Le président: Nous devrions en avoir une interprétation.

L'hon. M. Olson: Monsieur le président, l'interprétation est très claire. Il s'agit: «d'un producteur de produits agricoles de base destinés à la vente.» Peut-être M. Newman veut-il s'étendre un peu sur cette question, bien qu'il me semble que cela soit clair.

Le président: N. Newman, voulez-vous parler dans le micro, s'il vous plaît?

M. Harvey Newman (conseiller juridique, ministère de l'Agriculture): Monsieur le président, lorsque nous étudions le terme, je pense qu'il serait bon d'avoir non seulement la version anglaise mais également la version française. La définition du mot «cultivateur», en français se lit comme il suit:...

«s'entend d'un producteur de produits agricoles de base destinés à la vente.»

Je pense que le sens est très clair en français, sinon en anglais. Je pense que l'anglais est également clair. En effet, le «farmer» veut dire un cultivateur commercial, c'est-à-dire

[Texte]

farmer, a person in the business of producing primary agricultural products.

Mr. Horner: Does it have to be that farmer's primary business or can he be just a producer? Can he have another major business? In other words, how much of a producer does he have to be? Is there any limitation placed upon it, that the greatest share of his income must come from that produce, or anything like that?

Mr. Newman: No, not really. I would think that a court would interpret this word to mean that a farmer is a person who is in the business of farming and growing primary products. He might also have a number of other businesses and farming might constitute only a small portion of his income. But if he is in the business—and that depends on all the facts of his particular enterprises—this Act could also apply to him even though he is not a full-time farmer.

Mr. Peters: May I ask, Mr. Chairman, what other Act you referred to when you were using this designation? I know you did not do so just now, I mean in the designing of this clause. In so far as income tax is concerned, a farmer is one thing; the subsidy programs, he is another, and the loan programs of the federal government is a totally different animal. Which one of them did you refer to? Has the Interpretation Act decided what a farmer is?

• 1040

Mr. Newman: I should point out that in my opinion this Act would not be interpreted, as they say, *in pari materia* with any other Act that is on the books at this time. It was the intention of the framers of this legislation to give a very broad base to those who would be eligible for compensation under this statute. It was not designed to be restricted by interpretations that might be given to this word as found in other Acts, such as the Income Tax Act.

The Chairman: Mr. Korchinski (Mackenzie).

Mr. Korchinski: I think this is quite important because I can foresee a lot of applications by people who perhaps are not deeply involved in agriculture. I will cite a case. Suppose my grandmother has a patch of raspberries and a patch of strawberries. If she decided to offer these strawberries or raspberries for sale, is this the type of compensation that will be affected? Will these people be affected by compensation? In the case of damages, could they apply and get compensated?

[Interprétation]

qui s'occupe de ventes de produits agricoles de base.

M. Horner: Est-ce nécessaire que ce soit là la principale activité de l'agriculteur ou faut-il qu'il soit simplement producteur et qu'il ait également un autre commerce? Y a-t-il une définition en ce qui concerne la part de ces revenus qui doivent venir de la vente de ses produits de base?

M. Newman: Non, il n'y a pas de définition dans ce sens. En fait, je pense qu'un tribunal définirait un cultivateur comme quelqu'un qui a une activité agricole et qui s'occupe de la culture de produits de base. Il fait peut-être également autre chose et il se peut que la culture ne représente qu'une petite partie de ses revenus. Mais, malgré tout, si quelqu'un s'occupe de ce genre de chose et en fait son entreprise donnée, je pense que cette loi pourrait lui être appliquée, même s'il n'est pas agriculteur à temps plein.

M. Peters: Quelles sont les autres lois auxquelles vous vous êtes référés pour rédiger cette définition? Je sais que vous ne l'avez pas inventée comme cela; vous avez pris la définition fiscale des impôts sur le revenu pour les programmes de prêts du gouvernement fédéral pour l'élevage de bétail. Laquelle de ces définitions avez-vous prise? La Loi d'interprétation a-t-elle précisé ce qu'est un cultivateur?

M. Newman: Je voudrais vous dire que cette loi, d'après moi, ne doit pas être interprétée *in pari materia* avec d'autres lois figurant actuellement aux statuts. En fait, les auteurs de cette loi voulaient donner une base très large à ceux qui pourraient bénéficier de ces indemnités d'après la loi. Et il ne s'agissait pas de les limiter par une définition qui pourrait exister déjà dans d'autres lois comme la Loi de l'impôt sur le revenu, par exemple.

Le président: Monsieur Korchinski.

M. Korchinski: Monsieur le président, je pense que c'est là quelque chose de très important parce que je vois beaucoup de cas où cela pourrait s'appliquer, à des gens qui ne s'occupent pas beaucoup d'agriculture.

Disons que ma grand-mère, peut-être, a un pâturage où elle fait brouter quelques animaux. Et elle peut également cultiver et vendre des fraises et des framboises. A ce moment-là, elle a peut-être droit à des indemnités si elle a des dégâts.

[Text]

Mr. Newman: Theoretically I suppose a good case could be made out for your grandmother if she wanted to receive compensation. However, as you can see from reading the bill, a very complicated procedure has to be followed and I would think that people making frivolous claims would be discouraged under this legislation from applying for compensation.

The Chairman: Mr. Williams will comment further.

Mr. Williams: Perhaps I might say a word in further explanation. As has been pointed out, when this was drawn up the intent was to make it as broad as possible. It was our view that this would apply to any producer of any primary agricultural products. However, I think as you get further into the bill you will notice there are provisions whereby the Governor in Council by regulation can limit both the maximum and the minimum payments. The intent of that—I believe it is clause 3, subclauses (3) and (4) which might apply in the particular case you raise, sir—was simply to avoid, if possible, trivial and frivolous claims. There is a provision in it that while everybody who produces any primary product can be eligible for it, there might be limitations put on later depending upon the regulations that were drawn up in terms of maximum and minimum payments.

Mr. Korchinski: I have already marked my bill in regard to regulations because of that very fact. We can study a bill as thoroughly as we like, but then the Department can come along and by a series of regulations undo all the work that the Committee is doing or is intending to do, or any suggestions that they can make. It is simply a study later on. Perhaps another suggestion that might be made is that in the future when we are discussing bills some attempt might be made at drawing up regulations so that the Committee might look into some of these regulations. I often find in the interpretation of a bill that you may have one interpretation, but when you become involved in regulations that the Department has set up for their own convenience, everything seems to work against the people that the bill is really set up to help.

Mr. Barrett: May I suggest, Mr. Chairman, that if we do not proceed by the time we get to subclause (2) or (3). Mr. Williams will be superannuated and on pension.

• 1045

The Chairman: Order. I think we can get along without provocative comments.

[Interpretation]

M. Newman: Théoriquement, je pense que, effectivement, on pourrait tenir compte de la situation de votre grand-mère, si elle avait droit à des indemnités. Mais malgré tout, comme vous pouvez le voir dans le texte de la loi, il y a une procédure très compliquée à suivre et les gens qui font des demandes d'indemnités un peu à la légère sont très vite dissuadés.

Le président: M. Williams a d'autre chose à ajouter.

M. Williams: Je pourrais ajouter, à titre d'explication, que notre but était d'établir une base aussi large que possible, étant entendu que cela s'appliquerait à tout producteur de produits de base agricoles. Mais, bien sûr au fur et à mesure que vous avancerez dans le texte du projet de loi, vous verrez qu'il renferme des dispositions d'après lesquelles le Cabinet peut décider du montant des versements minimum et maximum. Les paragraphes (3) et (4) s'appliquant à ces cas-là sont des limites, en quelque sorte, et cela a précisément pour but d'éviter les demandes d'indemnités faites à la légère. Et par conséquent, il est prévu, dans ce texte de loi, que bien que tout producteur de denrées agricoles puisse faire des demandes, il y a des limites ultérieurement, au fur et à mesure que l'on fixe des limites maximum et minimum.

M. Korchinski: J'ai déjà remarqué qu'on peut étudier un projet de loi à fond et puis, tout d'un coup, le ministère peut arriver, par une série de règlements, à défaire, à la suite d'une étude ultérieure, tout ce que l'on a fait au Comité.

Il serait peut-être bon de suggérer qu'à l'avenir, le Comité étudie les règlements, lui aussi, non seulement le projet de loi. On donne une certaine interprétation au bill et puis plus tard, au fur et à mesure qu'on l'étudie, on s'aperçoit que le ministère, parce que cela lui facilite les choses, a fait un règlement dans lequel il donne une interprétation différente.

M. Barrett: Monsieur le président, si nous n'allons pas plus vite, M. Williams sera à sa retraite quand nous arriverons aux paragraphes (2) et (3).

Le président: A l'ordre. Je pense qu'il n'est pas nécessaire de faire des accusations provocantes.

[Texte]

An hon. Member: I am sorry, Mr. Chairman.

The Chairman: Thank you. Are we agreed on the explanation of the word "farmer"?

M. Lambert (Bellechasse): J'aurais une question à poser, monsieur le président. Le mot «cultivateur» comprendrait-il également une association de personnes, disons deux ou trois, qui dirigent une entreprise agricole sous un nom commercial?

Mr. Newman: It is a well known principle in company law that a corporation has all the status of a person, and in my opinion I think this word could be extended to include a corporation in the business of producing primary agricultural products.

The Chairman: Thank you. Are we satisfied with the interpretation of the word "farmer"? Subclause (b) reads:

(c) "inspector" means a person designated as an inspector pursuant to section 6;

Are there any questions concerning these responsibilities? Mr. Roy (Laval).

M. Roy (Laval): Qu'entendez-vous par «inspecteur»? S'agit-il d'un agronome ou d'un technicien en production végétale?

Mr. Phillips: The intention here was to provide for any type of inspector or any person with any qualifications considered necessary in order to look into the claim. It would depend on the residue and various other matters which type of person would be sent into the examination. There is nothing precise in an inspector *per se* dealing with the qualifications. He would have to be considered fully qualified to carry out the type of investigation required. You will note under this bill that it is not intended to hire additional people. It is a question of designating the right people that are in the employ of the government to examine the matter.

Mr. Danforth: Mr. Chairman, I have a question on this that is causing me some difficulty. It follows along the previous question on qualifications. I am at a bit of a loss on this. This particular subject will be under three separate Acts, and it states that the Minister may designate any qualified person. In this particular instance would the inspector not have to be connected very closely to the directions of the Food and Drugs Act? I am at a bit of a loss if this is the qualification of the inspector. The inspector would be

[Interprétation]

Une voix: Je m'excuse.

Le président: Sommes-nous d'accord au sujet de la définition du mot «cultivateur»?

Mr. Lambert (Bellechasse): One question, Mr. Chairman. Would the term "farmer" also cover an association of individuals, let us say two or three individuals, who operate an agricultural undertaking under a trade name?

M. Newman: Eh bien, il existe un principe très connu dans le Droit sur les sociétés selon lequel une société a les mêmes droits qu'un individu. Donc, par conséquent, cela pourrait également s'étendre à une société qui a pour activité la vente de produits agricoles de base.

Le président: Donc, nous sommes satisfaits de l'interprétation du terme «cultivateur»?

Article 2, paragraphe c):

«inspecteur» s'entend d'une personne désignée à titre d'inspecteur en conformité de l'article 6.

Avez-vous des questions à poser à ce sujet? Monsieur Roy?

Mr. Roy (Laval): What is an "inspector"? Is he an agronomist or a technician in plant production?

M. Phillips: Eh bien, ce que l'on voulait ici, c'est prévoir le cas de tout inspecteur ou de toute prsonne dont les compétences sont nécessaires pour étudier la demande d'indemnités. En fait, cela dépendra de la nature des pesticides et d'autres considérations. Donc, de cela dépendra la qualité de la personne que l'on enverra. Par conséquent, il n'y a pas d'inspecteurs en tant que tels pour étudier ces cas. Il faudra que ce soit une personne qualifiée pour faire l'enquête nécessaire dans le cas présent.

Vous remarquerez que l'on n'envisage pas, dans ce projet de loi, d'embaucher d'autres employés pour étudier la question, mais plutôt de recourir à ceux qui sont déjà à l'emploi du gouvernement.

M. Danforth: J'ai des difficultés à comprendre, je suis un peu perdu. On traite de cette question dans trois lois différentes. On dit que le ministre peut désigner les personnes qualifiées. Est-ce que, dans ce cas, il ne faudrait pas que l'inspecteur soit associé étroitement à la Direction des aliments et drogues? Je suis un peu perdu, si c'est là les qualifications de l'inspecteur. L'inspecteur doit dépendre du ministre. Qui est responsable de le nommer? Est-ce le ministre de l'Agriculture ou le ministre responsable de l'autre loi?

[Text]

under the direction of the Minister who is administering the Food and Drugs Act. Where does the responsibility of designating the Minister fall? Is it under the Minister of Agriculture or the Minister under whose jurisdiction the other act is placed?

Mr. Phillips: As you will see later, one of the qualifications for eligibility under this is that the Minister of National Health and Welfare through his agents has indicated that the product was not eligible for sale or would be contrary to that regulation. All of that is handled by the Food and Drug Directorate under the Minister of National Health and Welfare. The "inspector" referred to here only then relates to an inspection of the eligibility of the claim made under this bill. The other action has taken place before eligibility is established. The inspection is then made and it is assessed if it is a fair claim, was it his fault or was it not his fault, and this type of thing.

Mr. Korchinski: If, for example, there is a lot of work to be done and perhaps the nature of the work is such that it requires immediate attention, could the Minister appoint inspectors as he sees fit? Do they have to have the necessary qualifications or can they just be picked up as the need demands it?

● 1050

Mr. Olson: I think, Mr. Chairman, that Clause 6 is very clear on that point. It says:

6. The Minister may designate any qualified person as an inspector for the purposes of this Act.

If the situation should arise where additional inspectors are required, under Clause 6, the Minister may designate any such qualified person. There is no limiting language there as to the number. It has been pointed out to me that there is no right given to the Minister to hire additional personnel. It is to designate people who are already in the employ of the federal government, and presumably in the employ of the Department of Agriculture, to designate those people as inspectors for the purpose of this Act.

Mr. Korchinski: Simply because they are employed by the Department of Agriculture does not necessarily qualify them for a particular type of work. I can well imagine that perhaps you may find a lot of qualified people in the Department who can do that particular type of work. However, there might be a special case where you might run into—I cannot even dream up one at the moment—a

[Interpretation]

M. Phillips: Eh bien, comme vous le verrez plus tard, l'une des qualifications pour être éligible, c'est que le ministre de la Santé ait indiqué que le produit est invendable. Tout cela, donc, relève de la Direction des aliments et des drogues dans le cas du ministre de la Santé. L'inspecteur en dépend et il ne rapporte que sur la recevabilité de la réclamation qui a été faite. Ensuite, l'inspection doit décider si c'est une plainte recevable ou non, est-ce que c'était sa faute ou non?

M. Korchinski: S'il se présentait, par exemple, un surcroît de travail, de nature particulière, demandant une intervention rapide, le ministre pourrait-il nommer des inspecteurs comme il le veut? Doivent-ils avoir la compétence nécessaire?

L'hon. M. Olson: Monsieur le président, je pense que l'article 6 est très clair à ce sujet. Il y est dit que:

Le Ministre peut désigner toute personne qualifiée à titre d'inspecteur pour les fins de la présente loi.

Donc, il peut le faire. Il n'y a aucune limite dans le texte quant au nombre et il est à prévoir qu'ils seraient nommés par le ministre intéressé. On vient de me dire que le ministre n'a pas le droit d'embaucher du personnel supplémentaire en dehors du personnel qui est déjà employé par le gouvernement fédéral, mais il peut désigner n'importe laquelle de ces personnes comme inspecteur.

M. Korchinski: Le fait de travailler pour le ministère de l'Agriculture ne veut pas nécessairement dire qu'ils sont compétents pour un certain genre de travail. Il y a peut-être des gens très qualifiés dans le ministère qui peuvent certainement faire ce genre de travail. Je n'ai pas de cas précis en ce moment, mais vous pouvez avoir une situation où un problème de pluie, par exemple, interviendrait

[Texte]

situation where you have rain, for example, after an application of some particular pesticide. Unless that inspection were done quickly the effect on the plant might not be noted immediately. What is the procedure here? The Minister obviously cannot appoint anyone simply because he works in the Department.

Mr. Olson: Mr. Chairman, the Minister would have to find qualified people, but those qualified people would also have to be in the employ of the government under the public service Act to qualify, because there is no additional authority given in this Act to hire inspectors who are not in the public service. You said that you could not think of a situation where it would arise.

Mr. Korchinski: I will not think of one in five minutes.

Mr. Olson: I cannot think of one either. However, I think it would be fair to say that if there were some specific and special situation involving some particular technical ability which was required of an inspector, and if that person were not available within the Department of Agriculture but, for example, was available from within the Department of National Health and Welfare, I see no prohibition against that kind of an inspection.

But let us bear in mind that what we are talking about is an inspector to advise the Minister on whether the claim is proper or not. All of those things, the condemnation because of pesticide residue in the food, prohibiting it from sale, and so on, will all have taken place prior to the need for the services of an inspector under this Act.

Mr. Korchinski: All right. As you have already indicated, the type of inspector you would have would be from the civil service. It would not be the type of inspector that perhaps you have under the P.F.A.A.

Mr. Olson: No. After all, we do not expect to have this sort of thing occurring every day.

The Chairman: Gentlemen, are you satisfied with the explanation of the word "inspector"? Mr. Peters.

Mr. Peters: This inspector is only involved in the fixing of the compensation and the relationship to this Act. The technical degree would be under the Food and Drug Directorate.

The Chairman: They decide whether the products are saleable or prohibitive.

Mr. Peters: Yes. These inspectors will not do that now.

29651—3

[Interprétation]

après l'application de certains pesticides. On en remarque pas les dégâts immédiatement, surtout si l'inspection n'est pas faite immédiatement. Quelle est la procédure à suivre dans un tel cas? Le ministre ne peut pas désigner une personne simplement parce qu'elle travaille dans son ministère.

L'hon. M. Olson: Le ministre devra trouver des gens qualifiés, mais ceux-ci devront également être employés par le gouvernement, dans le cadre de la Loi sur la fonction publique, pour être qualifiés. Car, dans cette loi, le ministre n'a pas l'autorité de recruter quelqu'un en dehors de la fonction publique. Vous dites que vous n'avez pas de cas précis où cela pourrait se produire.

M. Korchinski: Je ne peux pas en trouver en cinq minutes.

L'hon. M. Olson: Je n'en ai pas non plus. Mais, on peut dire à juste titre que s'il y avait un cas spécial où il serait nécessaire que l'inspecteur ait une aptitude technique particulière, et si cet individu n'était pas disponible dans le ministère de l'Agriculture, mais l'était, par exemple, dans le ministère de la Santé nationale et du Bien-être social, je ne vois aucune raison qui empêcherait le ministre de choisir ce genre d'inspecteur.

N'oubliez pas que nous parlons d'un inspecteur chargé de conseiller le ministre sur la valeur de la réclamation. Tous les autres facteurs, c'est-à-dire, la condamnation à cause des résidus de pesticide dans la nourriture, l'interdiction de la vente, etc., seraient antérieurs à la nécessité de recourir à un inspecteur, selon cette Loi.

M. Korchinski: Très bien. Ce serait un inspecteur de la Fonction publique. Ce ne serait pas un inspecteur du genre que l'on trouve dans la Loi sur l'assistance à l'agriculture des Prairies.

L'hon. M. Olson: Non, car ces choses n'arriveront pas à tous les jours.

Le président: Messieurs, êtes-vous satisfaits des explications données pour le terme «inspecteur»? Monsieur Peters.

M. Peters: Cet inspecteur ne sert qu'à fixer le montant des indemnités; il n'intervient que dans le cadre de cette Loi. L'aspect technique relèverait de la Direction des aliments et drogues.

Le président: Elle décide si les produits sont vendables ou prohibitifs.

M. Peters: Ces inspecteurs ne prendront pas une telle décision.

[Text]

The Chairman: Are you satisfied, gentlemen? Subclause (d) reads:

"Minister" means the Minister of Agriculture;

Mr. Whicher: I want to hear the arguments on this one!

An hon. Member: What are the qualifications on this one, Mr. Minister?

Mr. Olson: Very high in the case of other people!

The Chairman: I think the next one is probably more questionable:

"Pesticide residue" means the residue of any pesticide or degradation-product thereof in or upon an agricultural product.

• 1055

Mr. Danforth: Mr. Chairman, may I pose a question on the legal interpretation of this under the Act. May I take it for granted that pesticide residue on the degradation-product covers the full gamut of controls which are used with regard to entomology and plant pathology as well? May I put it another way. Does the control deal with the control of insects only or of plant diseases, fungicides and the whole gamut?

Mr. Newman: I think it is a broad statement, Mr. Danforth. The answer to that is many of the control products which are listed under the Pest Control Products Act are considered to be products...

Mr. Danforth: Any of the chemicals involved.

Mr. Williams: Any of the chemicals that are controlled under the other Act that will be before this Committee at a later date.

Mr. Phillips: You might be interested to know, because of the interest shown earlier in the British Columbia case, that it was aldrin in that case and dieldrin was found. That is covered. It is a degradation-product, so it covers the situation where it is changed.

Mr. Horner: To proceed just a little bit further on the degradation-product aspect of this clause, let us think of the problem near the fertilizer plant at Dunnville, Ontario. For example, would that be covered under this degradation-product clause?

Mr. Williams: It is not the intention that this Bill would cover that situation.

[Interpretation]

Le président: Êtes-vous satisfaits, messieurs? Voici le paragraphe d):

«Ministre» s'entend du ministre de l'Agriculture;

M. Whicher: Il y a peut-être des nuances à faire là-dessus, monsieur le président.

Une voix: Quelles sont les qualités requises?

L'hon. M. Olson: Très exigeantes pour les autres personnes.

Le président: Le prochain point est plus discutable.

«Résidus de pesticide» s'entend des résidus d'un pesticide ou du produit résultant de sa détérioration dans ou sur un produit agricole.

M. Danforth: Monsieur le président, j'ai une question au sujet de l'interprétation juridique de cette loi. Est-ce que les résidus d'un pesticide sur le produit résultant de sa détérioration englobent toute la gamme des contrôles utilisés en entomologie et en pathologie des plantes? En d'autres mots, est-ce qu'on parle du contrôle des insectes seulement, ou parle-t-on également des maladies des plantes, des fongicides, etc.?

M. Newman: Le sujet que vous abordez est très vaste, monsieur Danforth. Plusieurs produits de contrôle qui sont énumérés dans la Loi sur les produits antiparasitaires sont considérés comme des produits...

M. Danforth: Tous les produits chimiques en cause?

M. Williams: Tous les produits chimiques sous le contrôle de l'autre Loi qui sera déférée à ce comité plus tard.

M. Phillips: Il vous intéressera peut-être de savoir que, dans un cas en Colombie-Britannique, il y avait de l'aldrine et on a trouvé du bialdrine. On a considéré que c'était un produit de détérioration. Par conséquent, vous avez la situation où un produit est transformé.

M. Horner: En ce qui concerne l'aspect «détérioration» de cet article, prenons le problème qui se pose près de l'usine d'engrais chimiques à Dunnville, Ontario. Est-ce que cela serait couvert par cet article sur la détérioration du produit?

M. Williams: Ce bill ne comprend pas cette situation.

[Texte]

Mr. Horner: Then let us take a look at the industry generally. Take the City of Sudbury, for example. Anybody farming in that area a few years ago would have suffered quite severely. That is a degradation of a product. It is the residue that falls.

Mr. Barrett: It is not directly applied.

An hon. Member: Not through pesticides.

Mr. Barrett: It is not directly applied. It is in the air; it is in your bosom. It is in all your being.

The Chairman: Gentlemen, please. Mr. Horner.

Mr. Horner: Mr. Chairman, should we not be considering something such as this Act apply to the case—if there is some justification for it—of the poisoning that has been going on near the Dunnville fertilizer plant?

Mr. Olson: Mr. Chairman, there is consideration being given to that aspect of loss, if you want to call it that, but it certainly is not included nor is it intended to be included under the provisions of this Act. This is to provide compensation to a farmer who presumably has used one of the pesticides in accordance with the recommendations and thereafter his product has been condemned for sale. It is to provide compensation in that kind of a situation.

Mr. Horner: Before pesticides can be sold on the market are they examined by the Food and Drug Directorate?

Mr. Phillips: The pesticides are not examined by the Food and Drug Directorate, they are examined by the Department of Agriculture under one of the other bills that will be before this Committee, the Pest Control Products Act, and it is a requirement of the current Act and the future one that they be efficacious for the purpose intended, and in examining the directions for use the Food and Drug Directorate are consulted to ensure that when used according to directions there will not be residues left.

What has occasionally happened in previous cases, notwithstanding this care, is that a residue has been left, but now that analytic procedures have been developed further you find them when you would not have been able to find them under the procedures 15 years ago. That would be the odd case where, notwithstanding this care, there have been cases of residue.

The Chairman: I recognize Mr. Douglas.

29651—34

[Interprétation]

M. Horner: Donc, prenons l'industrie dans son ensemble. Prenons l'exemple de Sudbury. Quelqu'un qui faisait de la culture dans cette région, il y a quelques années, aurait certainement subi des dégâts très graves. C'était là une détérioration d'un produit. C'est un résidu qui retombe.

M. Barrett: Ce n'est pas directement appliqué.

Une voix: Pas au moyen de pesticides.

M. Barrett: Ce n'est pas directement appliqué. C'est dans l'air; c'est dans vos poumons. C'est dans tout votre être.

Le président: A l'ordre. Monsieur Horner.

M. Horner: Monsieur le président, ne devrions-nous pas penser à faire appliquer ce projet de loi si cela est justifié, à ce cas d'empoisonnement près de l'usine d'engrais chimiques à Dunnville?

L'hon. M. Olson: Monsieur le président, on étudie cet aspect d'une perte, mais il n'est pas prévu qu'elle soit couverte par ce projet de loi. Il s'agit, dans ce cas précis, de fournir des indemnités à des agriculteurs qui avaient appliqué des pesticides tels que recommandés, et qui auraient ensuite subi des dégâts. A ce moment-là, ils peuvent demander une indemnité.

M. Horner: Avant qu'un pesticide soit vendu sur le marché, est-ce qu'il est examiné par la Direction des aliments et drogues?

M. Phillips: Les pesticides ne sont pas examinés par la Direction des aliments et drogues, mais par le ministère de l'Agriculture en vertu d'un autre projet de loi qui sera déferé à ce comité, la Loi sur les produits antiparasitaires. Il est prévu dans cette loi et dans l'autre que les pesticides s'appliquent conformément aux instructions prévues. Dans l'examen du mode d'emploi de ce produit, la Direction des aliments et drogues doit s'assurer qu'aucun résidu ne subsistera.

Ce qui s'est passé dans le passé, c'est que, à l'occasion, malgré ces soins, il y a eu des résidus. On a poussé plus loin la procédure d'analyse; on trouve maintenant des résidus, alors qu'avant on ne pouvait pas le faire, pour des raisons techniques.

Le président: Monsieur Douglas.

[Text]

Mr. Horner: I have one further question. I was going to suggest that perhaps item (e) could be expanded a little to include statements such as those made by Mr. Phillips that these pesticides include the ones referred to by this other Act we are talking about, the Pest Control Products Act. It does not really spell it out here. It is a kind of "chicken and the egg" situation. It seems to me there would be room in clause (e) to detail a little further what is meant by pesticide by referring to this other Act.

• 1100

The Chairman: Mr. Phillips.

Mr. Phillips: My view of it, Mr. Chairman, and I stand to be corrected by Mr. Newman, is that by not referring to that bill this is even broader.

Mr. Newman: Exactly. I think it would stretch the meaning somewhat if you referred to other Acts.

The Chairman: Mr. Horner.

Mr. Horner: Yes. I wonder in the definition of "pesticide" and "residue", and the degradation-product thereof, if any thought was given to the subject of hormones and the residue left after the use of hormones in feeds. Would this qualify? I am thinking of a case where mink were rendered sterile because of hormone residue in the feed. It was not supposed to be there, but it was.

The Chairman: Mr. Phillips will take the question.

Mr. Phillips: The diethylstilbestrol that was referred to is not a pest control product or a pesticide.

Mr. Horner: It would not be covered under this Act?

Mr. Phillips: No, it would not be covered under this Act.

Mr. Horner: Do you not think that it should be covered under this Act? Do you not think that this or similar cases could arise? Should we not perhaps branch out into that field as well?

Mr. Phillips: As Mr. Olson has indicated, the purpose of this bill was to cover two situations where residues could occur and where the Government of Canada could have been involved to a degree in this happening. One is where products were declared ineligible for sale by one agency of the government, and the other is where a product had

[Interpretation]

M. Horner: J'ai une autre question. On pourrait peut-être inclure dans le paragraphe e) des déclarations comme celles faites par M. Phillips, disant que, dans les pesticides, on mentionne également ceux prévus par la Loi sur les produits antiparasitaires. En fait, ce n'est pas très clair ici. Je pense qu'il y a une possibilité de dire clairement quels sont ces pesticides, en faisant référence à l'autre loi.

Le président: Monsieur Phillips.

M. Phillips: Monsieur le président, pour ma part, M. Newman pourra me corriger si je me trompe, je pense qu'on a plus de possibilités en ne faisant pas allusion à l'autre bill.

M. Newman: Exactement. En référant à d'autres Lois, on changerait le sens.

Le président: Monsieur Horner.

M. Horner: Je me demande si, dans la définition de «pesticide», de «résidu» et de «produit résultant de sa détérioration», on a pensé à la question des hormones et des résidus qui subsistent après l'introduction d'hormones dans les produits pour bétail. Je me souviens, par exemple, de visons qui étaient devenus stériles à la suite de la présence de résidus hormonaux dans les produits alimentaires.

Le président: M. Phillips va répondre à cette question.

M. Phillips: Le produit en cause n'est pas un produit antiparasitaire.

M. Horner: Il n'est donc pas visé par la loi?

M. Phillips: Non.

M. Horner: Ne croyez-vous pas que cela devrait relever de la loi? Ne croyez-vous pas qu'il pourrait se produire d'autres occasions du genre?

M. Phillips: Comme l'a dit M. Olson, cette loi visait deux situations où il pourrait se produire des résidus et où le gouvernement du Canada aurait pu être en cause dans une certaine mesure: tout d'abord, lorsque les produits ne peuvent pas être vendus par une agence du gouvernement, et deuxièmement, lorsqu'un produit avait été employé selon le

[Texte]

been used according to directions for a pesticide or pest control product approved under the Pest Control Products Act. It was therefore considered that there was some greater government involvement in this than otherwise and it was considered desirable that this should be covered and compensation provided.

The Chairman: Mr. Peters has a question?

Mr. Peters: In one of the other acts are we going to legislate for analytical uniformity of a particular pesticide? I am thinking of the possibility of writing into this act the right to recourse from a manufacturer if the formula was changed, thereby producing an effect that was not expected. Inspection is not provided for here. Is the right to such recourse intended in another act?

Mr. Phillips: Mr. Chairman, while there is nothing mentioned in that regard in this bill, in the over-all operation of governments and departments in Canada we have checked samples going out to the various analytical agencies working in this field to standardize testing and to assure that each of these laboratories are analyzing in the proper fashion to detect the residue. This is a continuing thing that we do in all our operations in order to keep abreast of analytical procedures.

Mr. Peters: Was there not a case fairly recently which, because seed treatment had changed, resulted in 40 per cent germination rather than the anticipated 90 per cent or 100? Was this not because of a change in pesticide control?

Mr. Phillips: That could have been but, Mr. Chairman, I think that the speaker is referring to more a matter of civil action—in other words, it inhibited the growth of the seed. It is not covered by this. However, you will note as we go along in this bill that if there is doubt about the blame that could be attached to the manufacturer of a pesticide in one of these cases the Minister, if he deems it advisable, could pay compensation without that man going to court. It then also provides that the government could go to court against that man on his behalf. If success in the case is questionable and it seems justified on the other counts, compensation can be paid and action taken to recover, if you will. That is covered in clause 5.

[Interprétation]

mode d'emploi d'un pesticide approuvé par la Loi sur les produits antiparasitaires. Le gouvernement était donc mis en cause plus que normalement, et il serait souhaitable alors qu'il y ait une indemnisation.

Le président: Vous avez une question à poser, monsieur Peters?

M. Peters: Dans l'une des autres lois, est-ce que nous aurons des mesures législatives prévoyant l'uniformité analytique des produits antiparasitaires? Par exemple, nous pourrions peut-être inscrire dans cette loi un droit de recours contre le fabricant si la formule est changée, ce qui produirait des résultats inattendus. En fait, nous n'effectuons pas d'inspection. Avons-nous l'intention d'inscrire un droit de recours dans un autre projet de loi?

M. Phillips: Bien qu'il n'y ait rien de mentionné à cet égard dans le projet de loi, dans l'ensemble des activités du gouvernement et des ministères gouvernementaux, au Canada, nous avons des échantillonnages qui sont envoyés aux diverses agences analytiques, travaillant dans ce domaine, afin d'uniformiser les essais et les tests et de voir à ce que chaque laboratoire effectue ses analyses de la bonne façon, pour essayer de découvrir les résidus; mais c'est une chose que nous faisons tout le temps, afin de nous tenir parfaitement au courant des procédés d'analyse.

M. Peters: Est-ce qu'il n'y a pas eu un cas, récemment où la formule a été changée et où il y a eu 40 p. 100 plutôt que 90 ou 100 p. 100 de semence?

M. Phillips: Je crois, monsieur le président, que l'on parle de recours plutôt en droit civil; en d'autres termes, si la semence ne germe pas ce n'est pas couvert ici, mais si vous continuez l'étude du bill, vous verrez que s'il y a des doutes au sujet du blâme ou de la culpabilité à attribuer aux fabricants de produits antiparasitaires, dans un cas comme celui-ci, le ministre, s'il le juge nécessaire, pourrait verser une indemnité sans qu'il soit nécessaire que cette personne se présente en Cours; alors, le gouvernement pourrait comparaître devant le tribunal en son nom, contre cette personne, et alors, si on trouve d'une part que le geste est justifié, on pourrait verser l'indemnité. C'est ce que prévoit l'article 5.

• 1105

The Chairman: Are there further questions concerning pesticide residue?

Clause 2 agreed to.

On Clause 3—*Minister may pay compensation.*

Mr. Danforth: Mr. Chairman, I note the procedures carried out under clause 3. Clause 3 deals with the discovery by representatives from the Food and Drugs Act of a chemical contained in certain agricultural products which might be deemed to be harmful to human consumption, or perhaps animal consumption as well, and it indicates that the Minister may take steps for compensation.

In some instances it is quite possible for these residues to be retained in the soil and to cause continuing hardship as far as production is concerned. May I enquire of the witnesses here this morning what action is contemplated by government. Will compensation be based on current production and the onus left to the primary producers to make subsequent claims, or will compensation be provided on the basis of the contemplated time that the chemicals will be in a position to restrict production—or will the primary producer in a subsequent year be prohibited from utilizing his land for the production of a specified product? I am interested in the procedure that might be undertaken in these conditions.

Mr. Phillips: Mr. Chairman, this was an area in which we have had to take extreme care with proper drafting. To cover a situation that Mr. Danforth has mentioned, will you note the second last line:

...compensation for any loss occasioned to the farmer...

That would cover the loss associated with this product being ineligible for sale, and subsequent products—in other words if the soil were contaminated. We want to be perfectly clear here. Later it goes on to say that the farmer must take such action to reduce losses. It may well be that the soil could be used for certain purposes and not others. But it is designed to cover the very situation that you have mentioned, Mr. Danforth.

Mr. Danforth: Based on the answer given—and I appreciate it—will the actual compensation be based on one claim, with one pay-

[Interpretation]

Le président: Est-ce qu'il y a d'autres questions maintenant au sujet des résidus des produits antiparasitaires?

L'article 2 est adopté.

Article 3—*Le ministre peut verser une indemnité.*

M. Danforth: Monsieur le président, je remarque que la procédure en vertu de l'article 3 concerne la découverte, par des représentants de la Direction des aliments et drogues, d'éléments nocifs à la consommation humaine ou animale, et on indique que le ministre pourrait prendre les mesures voulues pour accorder des indemnités.

Dans certains cas, il est très possible que ces résidus soient retenus dans le sol et puissent causer des difficultés continues quant à la production; est-ce que je puis demander au témoin quelle mesure entend prendre le gouvernement? Est-ce que l'indemnité sera versée en vertu de la production actuelle et est-ce qu'il appartiendra au producteur de formuler des réclamations supplémentaires, ou est-ce que l'on versera l'indemnité en fonction du tort que ces résidus pourraient causer, ou est-ce que le producteur de base, dans une année subséquente, sera empêché d'employer son sol pour la production d'une denrée agricole quelconque? Je m'intéresse aux procédés qu'on va utiliser dans ces conditions.

M. Phillips: Monsieur le président, c'est un domaine où nous avons dû faire extrêmement attention pour avoir une bonne rédaction. Quant à la situation mentionnée par M. Danforth, vous remarquerez que dans l'avant dernière ligne on dit:

Une indemnité pour toute perte subie par le cultivateur...

Ce qui couvrirait justement le produit que l'on ne peut vendre, ainsi que les produits subséquents, en d'autres termes, si le sol était contaminé. Je veux qu'il soit très clair que, plus loin, on dit que le cultivateur doit prendre telle et telle mesure pour réduire ses pertes, et il se peut fort bien que le sol puisse être employé à certaines fins et non pas à d'autres. Mais l'on veut justement couvrir la situation précise que vous avez mentionnée, monsieur Danforth.

M. Danforth: D'après la réponse que vous m'avez donnée, et je vous en remercie, est-ce que l'indemnisation elle-même se fera en un

[Texte]

ment, rather than on a continuing basis? If a farmer has had his crop contaminated and there is indication of subsequent contamination, will the compensation at that time be regarded as full compensation to the farmer or has he further recourse?

• 1110

Mr. Phillips: My understanding of it, Mr. Chairman, is this. In the drafting we took care of two areas: one was to see that the man got compensation and the other to see that the man could appeal against it. Another was to see that claims are processed as rapidly as possible and recovery made, if need be, in the case of a manufacturer, or for some other reason.

With this design I would contemplate that compensation could be made for year one, if you will, and later year two. Failing that the man would have a claim to an assessor for incomplete compensation.

Mr. Danforth: Then if my understanding of your explanation is correct, the mechanics are written into the bill so that each case can be judged on its merits.

Mr. Phillips: Exactly.

Mr. Pringle: I just wanted to ask a short question. Has any consideration been given to the requirement of posting fields where pesticides are used, stating the dangers of using such fields for the growing of certain products at a future date so that continuing contamination could be at least greatly reduced. Is there any merit to this, or are there problems which negate the suggestion?

Mr. Phillips: Mr. Chairman, we have not thought through all the details that would be necessary in—and we are coming to another section—requiring the farmer to take such care to reduce losses, but your suggestion is a very good one and it should be considered as a means of drawing to the attention of the farmer the necessity for taking care in the use of that field subsequent to its contamination.

The Chairman: Mr. Lessard?

M. Lessard (Lac-Saint-Jean): A l'article 3, paragraphe (1), alinéa b), il est dit ceci, en parlant du ministère, évidemment:

qui, de l'avis du Ministre, a été utilisé conformément aux recommandations faites par un ministère provincial de l'Agriculture, approuvées ou acceptées par le

[Interprétation]

versement pour une seule réclamation, plutôt que de façon continue. Si la récolte d'un cultivateur a été contaminée et qu'il y a un indice de contamination continue, est-ce que l'indemnité, à ce moment-là, sera considérée comme définitive ou aura-t-il le droit d'avoir recours à une autre réclamation?

M. Phillips: Si j'ai bien compris, monsieur le président, dans la rédaction du projet de loi, nous avons bien étudié deux domaines: premièrement, nous voulions faire en sorte que le cultivateur puisse obtenir une indemnité et, deuxièmement, qu'il puisse en appeler. Autre point aussi, que les réclamations soient réglées le plus vite possible pour obtenir au besoin la compensation du fabricant ou autre personne, et alors, à cet égard, nous pourrions, pour la première année par exemple, verser une indemnité et plus tard, pour la deuxième année. Sinon, le cultivateur aurait le droit de faire une réclamation auprès de l'évaluateur, en raison d'une indemnisation incomplète.

M. Danforth: Si votre explication est exacte et si j'ai bien compris, le projet de loi prévoit donc que chaque cause sera jugée individuellement.

M. Phillips: En effet.

M. Pringle: Une autre question très brève. Est-ce qu'on a étudié la possibilité d'indiquer les champs où on emploie des produits antiparasitaires, afin que la possibilité de contamination continue puisse être au moins réduite. Est-ce que cela en vaut la peine?

M. Phillips: Nous n'avons pas étudié tous les détails, qui seraient nécessaires pour exiger que le cultivateur prenne les dispositions voulues pour réduire ses pertes. Mais, votre suggestion est excellente comme moyen d'attirer à l'attention du cultivateur la nécessité de prendre un soin particulier de ce champ à la suite de sa contamination.

Le président: Monsieur Lessard?

M. Lessard (Lac-Saint-Jean): Mr. Chairman, under 3(1) (b) this is what is said:

which in the opinion of the Minister, was used in accordance with recommendations made by the department of agriculture of any province and approved or concurred in by the Department, or in

[Text]

Ministère ou en conformité d'usages recommandés, ordonnés ou acceptés par le Ministère,

Est-ce que je comprends bien que, par ce paragraphe, le gouvernement fédéral accepte donc la responsabilité d'une action ou de recommandations faites par un gouvernement provincial? Il endosse, en somme, l'action du gouvernement provincial puisque c'est l'utilisation recommandée par le gouvernement provincial? C'est bien cela?

Mr. Phillips: The purpose of these words in there is that it is a common occurrence in Canada that recommendations with respect to pesticides are put out by provincial departments, developed by committees on which a federal employee sits, and therefore to that degree there is concurrence. Also, it is a registered pesticide with those directions for use, so there is this double action of concurring, if you will.

Mr. Lessard (Lac-Si-Jean): Does the word "Department" mean the provincial department of agriculture or your department?

Mr. Williams: With a capital "D" it means our department.

Mr. Lessard (Lac-Si-Jean): It is your department?

Mr. Williams: With a small "d" it means the provincial department.

Mr. Phillips: That is important. The word "Department" in Clause 2 is spelled out that way, with a capital "D", and where it occurs that way in print you refer back to that. If it does not have a capital "D" it means some other department.

• 1115

The Chairman: Mr. Peters?

Mr. Peters: As I understand the text, this product has to be registered under the Pest Control Products Act. Do we have a registration mark or an approval mark that we put on these products?

The Chairman: Please use your microphone.

Mr. Peters: Does the Department put a stamp of approval on these after the inspection has been done and where we have registered it as safe to use under certain circumstances?

Mr. Phillips: Mr. Chairman, under the Pest Control Products Act all pesticides that are

[Interpretation]

accordance with practices recommended, directed or concurred in by the Department

Am I right in assuming from sub-paragraph (b) that the Federal Government therefore accept some responsibility for an action or recommendation made by a Provincial Government. It endorses, in other words, the action of the Provincial Government since this is the use recommended by the Provincial Government? Is this correct?

M. Phillips: L'intention de cette expression dans la loi c'est qu'il est d'usage courant au Canada que les recommandations au sujet des pesticides, émises par les ministères provinciaux, sont développées par un comité où siège un représentant du gouvernement fédéral par conséquent, il y a concordance dans ce sens-là. De plus, le pesticide est enregistré et le mode d'emploi clairement indiqué et alors, vous avez cette double mesure d'adoption ou d'approbation.

M. Lessard (Lac Saint-Jean): L'expression, le «ministère» veut-elle dire votre ministère ou le ministère provincial de l'Agriculture?

M. Williams: Ce mot écrit avec un «M» majuscule réfère à notre ministère.

M. Lessard: (Lac Saint-Jean): C'est votre ministère.

M. Williams: Écrit avec un «m» minuscule, il s'agit d'un ministère provincial.

M. Phillips: Non, mais c'est important. Le mot «Ministère», à l'article 2, est épilé de cette façon, avec une majuscule, et à chaque fois où vous le voyez ainsi écrit, c'est du ministère fédéral de l'Agriculture qu'il s'agit. S'il n'y a pas de majuscule, cela veut dire un autre ministère.

Le président: Monsieur Peters?

M. Peters: Si j'ai bien compris, le produit doit être enregistré en vertu de la Loi sur les produits antiparasitaires. Y a-t-il un sceau d'enregistrement ou d'approbation apposé sur ces produits.

Le président: Veuillez vous servir du microphone, s'il vous plaît.

M. Peters: Le ministère appose-t-il le cachet d'approbation après inspection, lorsque le produit a été enregistré et reconnu comme ne présentant aucun danger dans certaines circonstances.

M. Phillips: En vertu de la Loi sur les produits antiparasitaires, tous les produits en

[Texte]

eligible for sale must be registered. The manufacturer has presented evidence in order to establish eligibility for registration, and when the registration mark is on there it is an indication that provided the information is as specified by the manufacturer it is suitable for sale.

Mr. Peters: Could I now ask...

Mr. Phillips: I am sorry, you were referring to the number. There is a registration number on the product.

Mr. Peters: No, it was approval for use under this Act at the strength as provided. I presume that registration and approval are the same thing.

Mr. Phillips: There is a technical difference. We do not accept when a man sells a registered pest control product that we have given government approval in the sense of standing behind it and paying all claims against it. Do you see the difference?

The registration procedure is that it is registered on the basis of evidence presented to us and we have accepted it. However, the evidence may not have been presented correctly, and therefore it was an improper registration. It is in this technical sense that I mean we are not approving.

Mr. Peters: What happens—and I do not know if this is still done because it is a year or two since I farmed—if you use arsenic in bulk in treating cabbage plants, for instance? That is just an example. There must be hundreds of other approved or recommended home remedies for things like potato bugs, cabbage worms, and this sort of thing. What happens in those cases where the Department of Agriculture puts out a bulletin that says that if you use it mixed with so and so to a certain degree and it is applied at such a rate that after a period of two weeks it is acceptable for consumption.

Mr. Phillips: If I understand the question correctly, Mr. Chairman, it is what happens if they do not use it according to directions?

Mr. Peters: No. For instance, if you used arsenic compound on cabbage and there was no rain for a period of time, or some other climatic condition takes place, no dew or anything to wash this off, there would be considerably more residue than if more normal conditions were to exist, and in some cases this

[Interprétation]

vente doivent être enregistrés. Le fabricant doit avoir prouvé qu'il a droit à l'enregistrement; quand la marque d'enregistrement est appliquée, ceci indique que pourvu que les renseignements sont tels que fournis par le fabricant, le produit peut être vendu.

M. Peters: Pourrais-je demander maintenant...

M. Phillips: Vous faites allusion au numéro. Il y a un numéro d'inscription sur le produit.

M. Peters: Je veux dire approuvé en vertu de la Loi, tel que prévu. Je présume que l'enregistrement et l'approbation sont identiques.

M. Phillips: Non, il y a une différence d'ordre technique. Nous n'admettons pas, lorsqu'un homme vend un produit antiparasitaire enregistré, que nous avons approuvé le produit, dans le sens que nous l'endossons entièrement et que nous paierons les réclamations qui pourront être faites en toutes circonstances. Vous saisissez la différence?

La procédure d'inscription signifie que nous l'enregistrons en raison des preuves qui nous ont été données et que nous acceptons. Toutefois la preuve a peut-être été falsifiée et par conséquent l'enregistrement serait faussé. C'est dans ce sens-ci que nous ne l'approuvons pas.

M. Peters: Et alors, qu'est-ce qui se produit, je ne sais pas si cela se fait encore, un an ou deux se sont écoulés depuis que j'ai cultivé lorsque vous employez l'arsenic en vrac, pour les choux, par exemple? C'est un exemple pur et simple. Il doit certainement y avoir des douzaines d'autres remèdes approuvés pour les parasites. Qu'est-ce qui arrive dans ces cas où le ministère de l'Agriculture publie un bulletin pour dire que si vous faites tel et tel mélange et que vous l'appliquez selon telle et telle mesure, après une période de deux semaines la consommation est acceptable. Qu'est-ce qui arrive dans ces cas-là?

M. Phillips: Si j'ai bien compris la question, monsieur le président, c'est qu'est-ce qui se produit si on ne l'emploie pas d'après le mode d'emploi indiqué?

M. Peters: Non, par exemple, si on employait un composé de l'arsenic pour les choux et s'il ne pleut pas pour un certain temps, qu'une autre condition atmosphérique prévaut, il n'y a aucune pluie ou quoique ce soit pour nettoyer ce produit, il y aurait beaucoup plus de résidus que sous certaines

[Text]

might be turned down for marketing purposes. There is no registered pest control involved because it is—

Mr. Phillips: You are covering an unregistered product. That is not covered by this bill.

The Chairman: The bill also deals with beyond the producer's control. It must be beyond his control to a degree.

Mr. Phillips: Yes. In the very first line, you see, it says that it has to be a registered product.

Mr. Peters: This could be beyond the control of the producer in that climatic conditions obviously have an effect.

The Chairman: May I make an observation at this point. If he knew those conditions prevailed and the climate was such that it had not washed off his cabbage, he would then probably be expected to hose them off before he took them to market, so that particular situation that you envisage would not be beyond his control. Mr. Horner?

Mr. Horner: My question follows right on the heels of that. The government attempts to prove that the farmer applied the pesticide correctly before they pay any compensation. In other words, if the government can prove that the farmer was at fault, then no compensation is paid. Am I right in my assumption?

Mr. Phillips: That is correct. You are touching on a very important area and it is more difficult the other way.

Mr. Horner: How do you mean?

Mr. Phillips: It was written in such a way that the Minister did not have to be 100 per cent sure that he used it correctly in order to get compensation. It would be most difficult if you had to prove that he used it correctly.

Mr. Horner: Take the case, though, where the farmer had nothing to do with it at all. I am thinking of wind drifting the pesticide on to one farmers' field because another farmer is spraying in the next field. Would the government attempt to prove that the farmer should not have sprayed on that windy day?

Mr. Williams: Mr. Chairman, I think the answer to that would have to be that it would depend very much on the circumstances. If

[Interpretation]

autres conditions normales et dans certains cas, l'on pourrait peut-être rejeter le produit aux fins du marché. Il n'y a pas de produits antiparasitaires enregistrés dans ce cas-là.

Mr. Phillips: Vous employez un produit non enregistré. Cela n'est pas visé par la loi.

Le président: Et aussi, il faut que cela soit au-delà du contrôle du producteur, c'est indiqué.

Mr. Phillips: Oui, il est dit qu'il faut que le produit soit enregistré.

Mr. Peters: Oui, cela pourrait être au-delà du contrôle du producteur en ce sens que les conditions atmosphériques jouent un certain rôle.

Le président: Puis-je formuler une observation? Si le producteur sait que ces conditions prévalent et que les variations de la température n'ont pas permis que le chou soit nettoyé, alors il serait obligé de le faire lui-même avant de le vendre au marché. Et alors, cette situation à laquelle vous faites allusion ne serait pas au-delà de son contrôle. Monsieur Horner?

Mr. Horner: Ma question est justement supplémentaire à celle-ci. Le gouvernement essaie de prouver que le cultivateur a employé le pesticide de façon correcte avant de payer l'indemnisation? En d'autres termes, si le cultivateur était coupable, le gouvernement ne verserait aucune indemnisation. Ai-je raison, monsieur Phillips?

Mr. Phillips: Oui, vous avez raison. Mais c'est un domaine extrêmement important, c'est difficile dans l'autre sens.

Mr. Horner: Qu'est-ce que vous voulez dire?

Mr. Phillips: Nous l'avons rédigé de façon telle que le ministre n'a pas à être absolument certain que l'emploi a été conforme à la loi afin d'obtenir une indemnisation. Ce serait extrêmement difficile s'il fallait prouver qu'il l'a employé correctement.

Mr. Horner: Supposons, dans le cas par exemple où le cultivateur n'avait rien à voir à cela. Je pense, par exemple, au vent qui aurait transporté le pesticide dans le champ du cultivateur et que le responsable véritable en fût le voisin qui serait en train d'en répandre dans son champ. Le gouvernement essaierait-il de prouver que le cultivateur n'aurait pas dû le faire cette journée-là?

Mr. Williams: Je dois dire que ceci dépendrait, pour une large part, des circonstances. Si la récolte d'un fermier a été endommagée

[Texte]

one farmer had his crop contaminated because of the faulty practice of an adjacent farmer, I think our view would lie that the first action should be a civil action against the person who is using the product in a faulty manner, and not that it was an immediate position for the government to take action.

• 1120

Mr. Horner: I have another question concerning payment. Mr. Phillips, what about the case of the potatoes and the aldrin in British Columbia. The land there became contaminated to such a degree that hardly any farming could be carried on for several years after, if I remember the case correctly. Would compensation be paid to cover the entire loss for the number of years the land was ...

Mr. Phillips: Mr. Chairman, I tried to cover that one in my earlier response, which would cover the situation with this exception that later on it points out that the man must take action to reduce his loss, and that land could be used for something else.

Mr. Horner: You are familiar with the potato case. They attempted to go into dairying. They attempted to go into hay production. The residue showed up in the milk. The residue showed up in the hay. There was a great deal of contamination there for a number of years, if I remember rightly.

Mr. Phillips: Yes, Mr. Chairman, but they could have produced potatoes. This was a case of the slight residue that was a problem building up in the fat of animals, which is a progressive thing. There is a very minute, if any, residue in potatoes. But in the first instance they fed cull potatoes that contained a minute residue. But through feeding and feeding, it was retained in the fat, and it built up. In the first instance, in that case, the Department took the cattle to determine how long it would take to get rid of that, and we found that in about six weeks it would get out of the fat in the milk. So there is a distinction between a residue in a plant product and a residue in milk, because of the build-up in the fat.

Mr. Horner: Is there any limit to the amount of compensation that will be paid to any given applicant?

Mr. Olson: Mr. Chairman, there is a provision in this Act for the Governor in Council to make regulations. It is in the next clause,

[Interprétation]

par suite d'une action blâmable de son voisin, notre idée serait que la première chose à faire devrait être pour nous d'intenter une poursuite judiciaire contre la personne qui ne se conforme pas aux règles et non pas que c'était la première attitude pour le gouvernement de prendre action.

M. Horner: Autre question au sujet du versement. Dans le cas des pommes de terre et de l'aldrine en Colombie-britannique; le sol y était contaminé à tel point qu'on pouvait à peine faire quelque culture que ce soit pendant plusieurs années, si je me souviens bien. Est-ce que l'indemnisation serait payée pour absorber la perte entière pour le nombre d'années où cette terre...

M. Phillips: Monsieur le président, j'ai essayé de répondre à cette question plus tôt, ma réponse couvrant la situation, sauf que plus tard elle souligne que le cultivateur doit prendre les mesures voulues pour réduire ses pertes et que la terre peut servir à d'autres fins.

M. Horner: Vous êtes au courant du cas des pommes de terre. Ils ont tenté la production du lait. Ils ont tenté la production du foin. Les résidus sont apparus dans le lait. Les résidus sont apparus dans le foin. Il y a eu beaucoup de contamination pendant plusieurs années, si je me souviens bien.

M. Phillips: Oui, monsieur le président, mais ils auraient pu faire la culture des pommes de terre. Il s'agissait de quelques légers résidus qui créaient un problème parce qu'ils s'accumulaient dans la graisse des animaux, une réaction progressive. Il y a très peu de résidus dans les pommes de terre. Dans le premier cas, ils ont nourri les animaux avec des pommes de terre de rebut qui contenaient de légers résidus. Mais par suite de la constance de cette nourriture, les résidus ont été retenus dans la graisse et se sont accumulés. Dans le premier cas, le ministère a pris les troupeaux pour établir le temps nécessaire à la disparition de ces résidus, et on a découvert qu'il fallait environ six semaines pour qu'ils disparaissent du gras de lait. Il y a donc une différence entre les résidus dans les plantes et ceux du gras de lait, à cause de l'accumulation dans la graisse.

M. Horner: Y a-t-il une limite à l'indemnité qui serait versée à une personne donnée?

L'hon. M. Olson: Monsieur le président, il y a une disposition dans le projet de loi pour que le gouverneur en conseil puisse établir

[Text]

and I think that in those regulations we ought to take into account some maximum. Insofar as compensation is concerned, perhaps it should be a percentage of the loss that is assessed. I do not think that we should be paying 100 per cent of the losses because, as in many other acts that we have, such as the Animal Contagious Diseases Act and so on, we should not in my view have compensation high enough so that it could in any way be profitable to have this problem. So, for example, under the clause prescribing the minimum amount of loss ...

An hon. Member: Clause 3 (3) and Clause 3 (4).

Mr. Olson: ...we may prescribe both the minimums and the maximums. But in general, I think it should be something less than 100 per cent of the loss occasioned by the residue to any farmer.

• 1125

Mr. Horner: You are not going to suggest to the Committee what that percentage would be? Would it be uniform in all cases? I think we should know.

Mr. Olson: I think we have to take into consideration the number of varying factors that would be involved. But generally speaking, I think that it ought to be somewhat the same as crop insurance, for example, around 80 per cent of the loss.

The Chairman: Mr. Peters, did you have a question? You have been waiting. I recognize Mr. Korchinski. I will come back.

Mr. Korchinski: What about the minimum? What is your thinking along the lines of the minimum here?

Mr. Olson: Mr. Chairman, we have no plans at the moment for setting any particular figure. But we can see the possibility of having the need for a minimum in case we are flooded with trivial claims.

Mr. Korchinski: The other question that I have in mind at the moment is in regard to the previous owner. Take for example an owner of land that has been contaminated who suddenly gets fed up with the idea that he has a contaminated field and decides to sell out. Maybe he passes on or has to sell, or a sale has to be made. In that case and if a new owner comes in, what is the procedure here? Would the Department come in and tell the new owner what he may do on that par-

[Interpretation]

des règlements. C'est dans le prochain article et je crois que dans ces règlements, nous devrions tenir compte d'un maximum. En ce qui concerne l'indemnisation, on devrait peut-être l'établir sous forme de pourcentage de la perte évaluée. Je ne crois pas que nous devrions verser 100 p. c. des pertes, comme dans plusieurs autres lois que nous avons, comme par exemple la Loi sur les épizooties et ainsi de suite, à mon sens, nous ne devrions pas avoir une indemnisation tellement élevée qu'il soit profitable de souffrir de ce problème. Par exemple, en vertu de l'article qui établit le montant minimum de la perte...

Une voix: L'article 3(3) et l'article 3(4).

L'hon. M. Olson: Nous pouvons établir les minimums et les maximums. Mais, en général je crois qu'on devrait l'établir à moins de 100 p. c. de la perte totale causée par les résidus à tout cultivateur.

M. Horner: Avez-vous l'intention de dire au Comité quel serait ce pourcentage? Est-ce qu'il serait uniforme dans tous les cas? Je crois que nous devrions le savoir.

L'hon. M. Olson: Je crois qu'il faut tenir compte d'un certain nombre d'éléments divers qui entrent en jeu. En général cependant, je crois que nous pourrions dire que ce serait à peu près la même chose que l'assurance-récolte, par exemple, 80 p. c. de la perte.

Le président: Monsieur Peters, avez-vous une question à poser? Vous avez attendu. La parole est à M. Korchinski. Je reviendrai.

M. Korchinski: Qu'est-ce qui arrive au minimum? Que pensez-vous du minimum mentionné ici?

L'hon. M. Olson: Monsieur le président, nous n'avons pas de projets définitifs à l'heure actuelle quant au chiffre, mais nous entrevoyons la possibilité d'avoir un minimum au cas où il y aurait des petites réclamations.

M. Korchinski: L'autre question qui me vient à l'idée à l'heure actuelle concerne le propriétaire antécédent. Prenons, par exemple, le cas d'un propriétaire d'un terrain qui a été contaminé qui décide tout d'un coup qu'il en a assez et décide de vendre. Il est peut-être, décédé ou il est forcé de vendre, ou une vente doit être faite. Dans ce cas-là, si un nouveau propriétaire se présente quelle est la procédure? Est-ce que le ministère va dire au nouveau propriétaire ce qu'il peut faire sur ce

[Texte]

ticalar land for a few years? Or does the new owner take a risk on his own, thinking that perhaps the contamination has dwindled and will not be as serious as it had been previously, and go ahead and then find out later that there was more contamination than he had realized? What is the procedure here? What would one have to do in this case?

Mr. Olson: We will have to give some consideration to the situation where there is residue in the land that will show up in contamination for a long period of time, indeed for several years. However, if we make a settlement for compensation that includes certain types of farming practices that must be followed, following the payment of that compensation—this is part of the settlement that that would be attached to the land—I think that any new owner or purchaser of that land ought to be aware of the conditions.

I am not certain where the departmental responsibility would be in making it well known to some new owner that there were conditions laid down in the use of that land. If, for example, a situation arose where the land was sold and the new owner was unaware of a claim having been paid with an agreement for future use of the land until the residue had passed out of existence, that is a situation about which I am not quite sure what we would do. But certainly I think that if we made a settlement with conditions attached, it ought to be known to any new purchaser that a caveat, if you like, is against the land.

Mr. Korchinski: Since you are prepared to make it known, let me give you a case where a man passes on. Even though it may be his intention to reveal this information to any purchaser, if he passes on, that is it. I can visualize some difficulties here with the Land Titles Office, who may not necessarily accept this type of document or whatever you may decide to draft and attach it to any title. I do not know whether you are within legal boundaries. Perhaps it is a legal question.

The Chairman: Would this not have to be tested in the court to decide whether the vendor actually knew that the land was contaminated prior to the sale, and whether or not the purchaser would have recourse? I think you would have to test that one in the courts.

Mr. Olson: I think, too, Mr. Chairman, that Mr. Korchinski will find that this kind of situation is provided for in Section 5.

[Interprétation]

terrain particulier pendant un certain nombre d'années? Ou est-ce que le nouveau propriétaire prend le risque lui-même, pensant peut-être que la contamination a diminué, qu'elle ne sera pas aussi sérieuse qu'elle l'avait été auparavant, ou est-ce qu'il doit faire un effort pour savoir s'il y avait plus de contamination qu'il ne le croyait? Quelle est la procédure? Qu'est-ce qu'il doit faire?

L'hon. M. Olson: Il nous faudra nécessairement étudier une situation où les résidus dans le terrain contamineront pendant longtemps, pendant un certain nombre d'années. Toutefois, si nous accordons une indemnité qui comprend certaines méthodes de culture qui doivent être suivies, après le versement de l'indemnisation, cela fait partie du règlement joint au terrain. Et alors, tout nouveau propriétaire ou acheteur de ce terrain devrait être au courant des règlements en vigueur pour le terrain.

Je ne sais pas quelle serait la responsabilité du ministère quant à la diffusion de ces renseignements à un nouveau propriétaire qu'il y avait des règlements ou des restrictions quant à l'emploi du terrain. Si, par exemple, le terrain était vendu et que le nouveau propriétaire ne saurait pas qu'il y avait eu indemnisation et un accord conclu pour l'utilisation future du sol jusqu'à la disparition des résidus, voilà une situation où je ne sais pas trop ce que nous ferions. Mais je crois que s'il y avait un règlement comportant des conditions, les conditions devraient être communiquées au nouveau propriétaire, à savoir qu'un caveat, si vous voulez, pèse sur la propriété.

M. Korchinski: Étant donné que vous êtes prêt à nous en informer, permettez-moi de citer le cas, par exemple, du décès du propriétaire. Il avait peut-être l'intention de communiquer ces conditions à un acheteur, mais s'il décède, c'est tout. Je puis m'imaginer certaines difficultés au greffe des titres qui n'accepterait pas nécessairement ce genre de document ou tout autre document que vous pourriez décider de rédiger ou d'attacher aux titres du terrain. C'est peut-être une question juridique qui devrait être réglée.

Le président: Cette question n'aurait-elle pas été décidée en cour à savoir si le vendeur savait réellement que le terrain était contaminé avant la vente et si l'acheteur avait un certain recours? Je crois qu'il nous faudrait peut-être présenter cette cause devant un tribunal.

L'hon. M. Olson: Je pense également, monsieur le président, que M. Korchinski verra que l'on trouve une réponse à cette question à l'article 5.

[Text]

Mr. Korchinski: I will look at it later. I was just going to ask one other thing. In the event that the conditions the Department sets out are met, and a new purchaser does take over and does grow crops again, in that case there will be further compensation regardless of any lump sum that may be agreed upon by a previous owner?

• 1130

Mr. Olson: No, Mr. Chairman. I do not think we could give an undertaking that that would happen, because all of that would have to be related to the settlement of the compensation and the terms and condition of that settlement.

Mr. Korchinski: I would assume that certain conditions would be that one does not grow certain crops, as in the case where it was suggested that potatoes could be grown but not necessarily feed for cattle. So this would be one of the conditions under which one could proceed, producing certain items or products. This condition having been set out by the Department that a person can proceed with growing potatoes, then I would think that there might be a case against the Department for further compensation by a new purchaser. Would there not?

Mr. Olson: As the Chairman has pointed out, I do not think that a settlement would be null and void if the land had changed hands in so far as the Department is concerned after having paid compensation and settled.

Mr. Korchinski: What happens then? Does the land lay vacant for a period of years until the Department comes along and says, "Who pays the taxes on it?"

Mr. Olson: You are raising another problem now.

Mr. Korchinski: It is one that quite conceivably could come up and has come up.

Mr. Olson: It seems to me if a purchaser of land obtained a piece of land that was in this category, that in so far as settlement is concerned there would be grounds for a civil action that someone had sold a piece of land which was misrepresented as to what it could be used for, if that is what happened subsequently. However, there are other situations, as Mr. Phillips has explained, where new technology may show that residue was present and that information was unobtainable at the point in time when the settlement was made. That is a different situation. There is

[Interpretation]

M. Korchinski: J'en lirai le texte plus tard. Je voulais simplement demander une autre chose. Si on répond aux conditions établies par le ministère et qu'un nouvel acheteur prend la suite et fait de nouvelles récoltes, à ce moment-là, il y aurait d'autres indemnités, indépendamment de la somme forfaitaire qu'il aurait pu être convenue avec l'ancien propriétaire?

L'hon. M. Olson: Non, monsieur le président. Je ne pense pas que nous puissions nous engager dans ce sens, parce que tout cela devra être lié aux règlements des indemnités et des conditions-règlements précisément de ces indemnités.

M. Korchinski: Je suppose que ces conditions seraient que certaines cultures ne soient pas faites, et c'est là, par exemple, si les cultures ne sont pas faites comme dans le cas où on a suggéré qu'on pousse des pommes de terre, mais non nécessairement comme provende. Il pourrait y avoir ce genre de conditions qui permettrait la production de certains articles ou produits. Cette condition ayant été fixée par le ministère, une personne peut récolter des pommes de terre. Il pourrait peut-être y avoir alors une demande supplémentaire d'indemnités par le nouvel acheteur.

L'hon. M. Olson: Comme l'a souligné le président, je ne pense pas qu'un règlement en versements serait nul et non avenue si le terrain changeait de main du point de vue du ministère, une fois qu'il aura payé les indemnités?

M. Korchinski: Alors, qu'est-ce qui se passe? Le terrain reste-t-il vacant jusqu'à ce que le ministère demande à qui il appartient de payer les taxes?

L'hon. M. Olson: Vous soulevez là un autre problème.

M. Korchinski: Un problème qui peut fort bien surgir et qui d'ailleurs s'est déjà produit.

L'hon. M. Olson: Il me semble qu'un acheteur qui aura acquis un tel terrain pourrait, du point de vue du règlement des indemnités, tenter une poursuite parce qu'on lui aurait vendu une parcelle de terrain sous de fausses représentations tout au moins quant à l'usage qu'il peut en faire. Mais il y a des cas, comme l'a dit M. Phillips, où les techniques nouvelles peuvent prouver l'existence de résidus alors que ces renseignements étaient inaccessibles lorsque le règlement est intervenu. C'est là une situation différente; il n'y a pas de fausse représentation dans ce cas-là.

[Texte]

no misrepresentation involved in that kind of a situation.

Mr. Korchinski: This is the type of situation that could render our whole community quite useless in the sense of producing anything for a period of years. There are a lot of possibilities here. The Department says you do not grow it and the Food and Drug Act says you do not sell it, and according to the regulations you must pay your taxes. You must maintain it, otherwise you cannot retain the land.

Mr. Olson: That may be, but I think if you are talking about whole communities it certainly would be a well known fact in that community that the Food and Drug Directorate had in fact condemned a product for sale from that community, if the technology was advanced to the point where they could detect it at that point in time. So, I do not see any possibility of that situation arising.

The Chairman: Mr. Peters, Mr. Southam and Mr. Gleave.

Mr. Horner: Will you put my name down there as well?

Mr. Lind: Pardon me, Mr. Chairman, but I would like to speak on a point of order. Are we going to allot in rotation here as we put our names down, or...

The Chairman: Did I have your name down?

Mr. Lind: No, but I was just wondering if we should not establish early in this matter a rule about how long we have to talk and about rotating and in what order.

The Chairman: I am making a list of questioners as they indicate their desire to ask questions and then I try to recognize them in that order. If I overlook someone, I am sorry. I would ask you to draw my attention to it and make sure I know about it. I think, in order to make progress, that the Chair must not be too difficult to get along with and I will endeavour to be as fair as I possibly can. I will now recognize Mr. Peters, Mr. Gleave, Mr. Southam and Mr. Horner. Mr. Peters.

Mr. Peters: Mr. Chairman, I cannot think of any cases in my area where this has been a problem. How extensively is this problem developing in connection with this bill? Has there been a considerable record of loss in various fields because of the improper use of pesticides, or are they fairly specific and limited in scope? I cannot think of any cases

[Interprétation]

M. Korchinski: Cette situation pourrait, du point de vue production, rendre une région inutile durant plusieurs années. Le ministère peut dire: «Vous ne cultivez rien ici», la Loi relative aux aliments et drogues ajoute: «Vous ne le vendrez pas», et pendant tout ce temps vous devez payer vos taxes.

L'hon. M. Olson: Peut-être, mais si vous parlez d'une région entière, la population de cette région saura certainement que la Direction des aliments et des drogues a interdit la vente d'un produit cultivé dans cette région, si la technique moderne a progressé au point de permettre un tel jugement. Je ne vois donc pas comment cette situation peut survenir.

Le président: M. Peters, M. Southam, M. Gleave.

M. Horner: Veuillez ajouter mon nom.

M. Lind: J'invoque le Règlement, monsieur le président. Allons-nous parler dans l'ordre où nous avons demandé la parole, ou...

Le président: Aviez-vous demandé la parole?

M. Lind: Non. Je me demande si nous ne devrions pas établir, dès le début, un règlement qui fixerait la durée de nos interventions et l'ordre dans lequel nous pouvons prendre la parole?

Le président: Je note les noms de ceux qui désirent poser des questions au fur et à mesure qu'ils me font connaître ce désir et je m'efforce ensuite de leur accorder la parole selon cet ordre. Si j'oublie quelqu'un je vous prie de m'en excuser. Veuillez vous assurer que vous avez réussi à attirer mon attention. Je pense que pour progresser il ne faut pas être trop pointilleux et, je vais m'efforcer d'être aussi juste que possible. Je donne donc la parole à M. Peters, M. Gleave, M. Southam et M. Horner. Monsieur Peters.

M. Peters: Je ne vois pas de cas où cela ait causé des difficultés dans ma région. Dans quelle mesure la situation évolue-t-elle dans ce sens? Est-ce qu'il y a une répétition de ces pertes en raison du mauvais usage qui est fait des insecticides ou les dégâts sont-ils limités? Je ne puis voir aucun cas qui ait suscité un problème dans ma région et c'est pourquoi je

[Text]

in my area where this has been a problem and I am just curious about the extent of compensation. Is this going to be an expensive piece of legislation?

• 1135

The Chairman: Mr. Williams will comment on the prevalency of this.

Mr. Williams: Mr. Chairman, if I might say a word on this particular aspect of it. I think the cases fall into two broad categories. One is what might be called incidental contamination, and this happens from time to time. Usually the commodity is found somewhat remote from the farm and sometimes it is rather difficult to identify at that point. It may be in a mixed load of something, in which case it may simply be destroyed or withheld from the market and sent back for washing, or something of that nature. This happens sporadically with a frequency that is very, verly low. I would not want to say how many cases there have been in the last year, but I would think they would be easily numbered on the fingers of one hand.

We have had two other cases. One is the one to which reference has been made in British Columbia, where there has been a known source of contamination. It represented a situation that developed because of increased knowledge and increased technology as the real science of pesticides grew. The other one is much more difficult in that as yet the source of contamination is not known, but it is also a rather serious one in terms of the individual farm in that apparently the whole farm is contaminated, or at least the products coming from the entire farm are contaminated. So, in fact, we really have two cases on the record book where we have had the sort of situation that has been described here, where apparently a farm is contaminated.

The other ones, as I say, represent more incidental contamination. It is probably the sort of thing you spoke about where weather conditions did not change fast enough, or something of this nature. Those are not difficult and in general are dealt with. The other ones are the difficult ones. We do not consider that the incidence of this will be great at all. It is our hope, however, that with this Act there will be a great deal more confidence in the ability of our agricultural community to use these pesticides in accordance with the recommended methods, knowing that if they do use them in that way and they do get in trouble there will be an Act to protect them. But by no stretch of the imagination do we believe that the incidence is great. Actually our estimate within the departmental boun-

[Interpretation]

me demande quelle en est l'étendue. Cette loi entraînera-t-elle des déboursés d'importance?

Le président: M. Williams va nous dire quelques mots à ce sujet.

M. Williams: Disons qu'il y a deux grandes catégories. Il y a ces contaminations accidentelles qui se produisent de temps à autre. Règle générale, le produit est retracé loin de la ferme et peut difficilement être identifié. Il peut être mêlé à d'autres produits: il sera alors détruit ou retiré du marché et envoyé pour être lavé ou pour subir un autre traitement. Ceci ne se produit que très peu souvent. Je ne me risquerais pas à vous dire combien de cas il y a eu, l'année dernière, mais on peut certainement les compter sur les doigts d'une seule main.

Il y a eu, par contre, deux autres cas. Un cas, auquel on a fait allusion en Colombie-Britannique, où il y a eu contamination qui a été décelée à la suite de l'augmentation des connaissances techniques et des méthodes d'analyses techniques, au fur et à mesure que la science des pesticides se développait. L'autre cas est plus difficile à préciser parce qu'on ne connaît pas encore la source de la contamination. La situation est grave parce que toute la ferme est contaminée ou, du moins, tous les produits qui en proviennent le sont. Nous connaissons donc deux cas de contamination de fermes.

Les autres comme je vous l'ai dit représentent plutôt des contaminations incidentes. Il s'agit de ces cas dont vous avez parlé où, par exemple, les conditions atmosphériques n'ont pas changé assez rapidement. Ces situations, qui ne sont pas difficiles, ne posent pas de problème. Les autres cas sont plus difficiles à résoudre mais leur nombre ne devrait pas augmenter. Nous espérons que les agriculteurs auront davantage confiance dans ces pesticides et qu'ils les utiliseront sachant que la Loi les protégera s'ils devaient se trouver en face de certaines difficultés après les avoir utilisés selon les méthodes prescrites. C'est loin d'être un chiffre officiel mais nous croyons que ce programme pourrait coûter \$100,000 par année.

[Texte]

daries for the purposes of this Act is that the total cost per year will be something in the nature of \$100,000, but that is very much an off-the-top-of-our-head estimate.

The Chairman: Gentlemen, I would like the agreement of the Committee on one thing; that is, if we would start our meetings promptly and conclude at a pretty well specified time. I would propose to the Committee that we conclude our considerations at 11.45. If we were in a position to conclude our consideration of Clause 3, that would be fine. If not, then of course it would be held over. Does that meet with the general approval of the Committee?

An hon. Member: Agreed.

The Chairman: I recognize Mr. Gleave.

Mr. Gleave: I would like to pursue two matters. I am sorry I had to be out for a few minutes but my understanding, Mr. Chairman, was that this bill dealt with compensation for products. Am I wrong in this? I judge from the tenor of the discussion that it is considered that this bill also deals with the contamination of land, of real property?

Mr. Olson: Mr. Chairman, may I refer Mr. Gleave to the last few lines of Section 3 where it says that the Department may pay compensation for any loss occasioned to the farmer by reason of such pesticide residue, which I think goes somewhat beyond, and it is intended that way, the specific product that has been offered for sale at that point.

Mr. Gleave: If that is the case, I really do not know where you end. Pesticides contaminate land and they also contaminate water. Water flows. If those people concerned have really come to a conclusion on how they are going to assess this type of compensation and the full implications of it, all right, but this is what occurs to me. I have seen this happen.

• 1140

With regard to the rates of compensation, I think in terms of products the compensation should approach 100 per cent; possibly not the full 100 per cent but certainly 90 per cent because in this type of Act we are taking the position that the individual farmer is an innocent person. That is, we are taking the position that he used these chemicals in good faith, assuming that there would be no bad effects on the product, and therefore if he loses all or a part of his product he is an innocent person, and therefore I would think his compensation should approach the 100 per cent. Maybe not completely, but certainly 90 per cent.

29651—4

[Interprétation]

Le président: Messieurs, j'aimerais avoir l'accord du comité sur un point, c'est-à-dire que nous puissions commencer nos séances à l'heure et les terminer à une heure prédéterminée. Je propose que la séance prenne fin à 11h45. Si nous pouvons terminer l'étude de l'article 3 d'ici là, tant mieux. Sinon, nous continuerons plus tard. Qu'en dites-vous?

Une voix: D'accord.

Le président: Monsieur Gleave.

M. Gleave: J'ai cru comprendre, monsieur le président, que ce projet de Loi porte sur les indemnités pour les produits, ou est-ce que je me trompe? D'après la teneur des discussions il me semble que ce projet de Loi couvre également les indemnités portant sur les terrains contaminés?

L'hon. M. Olson: Monsieur si vous vous reportez à l'article 3, il y est dit que le ministre peut accorder une indemnité à un cultivateur, pour les pertes qu'il a pu subir parce que les résidus de pesticides ont provoqué certains effets imprévus.

M. Gleave: Eh bien, si c'est le cas, j'ignore où l'on va s'arrêter alors? Les pesticides contaminent le terrain et l'eau. Et l'eau coule. Si les personnes en cause en sont arrivées à une conclusion sur la façon d'établir la compensation dans ce cas, tant mieux.

Pour ce qui est du degré de compensation, lorsque l'on songe aux produits, je crois qu'il devrait être de près de 100 p. 100. Peut-être pas 100 p. 100 mais tout au moins de 90 p. 100 parce qu'au terme de cette loi, nous considérons que le fermier est innocent. Ce que nous disons c'est qu'il a utilisé ces produits chimiques de bonne foi en supposant qu'ils n'auraient aucun effet secondaire sur le produit. Donc, s'il perd son produit en tout ou en partie, il est innocent et par conséquent, je pense que l'indemnité devrait avoisiner les 100 p. 100. Peut-être pas 100 p. 100 mais au moins 90 p. 100.

[Text]

Market values are pretty rough and settlements are pretty rough even if you go at 90 per cent. I recall buying a group of feeder cattle one time and they were condemned in the stockyards. I paid for the feeder cattle and somebody sold them for half of that, and that was the settlement I got.

I think that compensation should go up around 90 per cent at least, as a minimum.

Mr. Olson: Mr. Chairman, I am of the opinion that it should be something less than 100 per cent. We have suggested that we were thinking in the same terms as crop insurance, for example. Not that they are related, but it must, in my opinion, not be profitable to have goods or products condemned.

Referring to the other part of your question, I think it is well to bear in mind the spread of the pesticide through water-flowing and that sort of thing. Before any compensation can be made under this Act, the product must be condemned by the Food and Drug Directorate. Following that we must be satisfied, not necessarily having absolute proof but at least satisfied, that the farmer used the pesticide in accordance with the recommendations. Then I think we follow your argument that the farmer becomes an innocent victim if he has done it in good faith and is prohibited from selling his product. But even under those circumstances it is my opinion that it would not be advisable to pay 100 per cent loss.

Mr. Gleave: I do not think that it compares to insurance. This is not an insurance.

Mr. Olson: This is compensation.

Mr. Gleave: Right, and that is not insurance. You are proposing to compensate individuals or groups because certain things happened over which they had no control.

There is one other point that I would like to raise, and it concerns the amount of investigation that is made before a decision is taken in regard to the release of pesticides. I think there have been pesticides and chemicals released that possibly should not have been released. In releasing a chemical we are making an evaluation. To put it brutally, you are making an evaluation that it is better to release certain chemicals to kill grasshoppers than to allow them to eat, let us say 10 per cent of the crop area in the province of Saskatchewan, or Alberta, or Manitoba. You have decided that it is better to release diel-drin than to let the grasshoppers eat this much crop. These are evaluations that we are making, and I am concerned that most of our emphasis has been upon chemicals.

[Interpretation]

La valeur commerciale est une valeur assez difficile à suivre et il peut y avoir des cas avec du bétail où on n'a eu que la moitié du produit. Je pense que ça devrait être 90 p. 100.

L'hon. M. Olson: Monsieur le président, pour ma part, je pense que cela doit être inférieur à 100 p. 100 d'après moi, il ne serait pas utile que l'on fasse, que l'on pénalise en quelque sorte ces produits.

D'autre part, je pense qu'il est bon de tenir compte de dissémination des pesticides par l'eau, etc, et il faut que le produit ait été condamné avant qu'une indemnisation soit accordée. A la suite de quoi, il faut nous assurer, non pas avoir la preuve totale, mais il faut s'assurer que le cultivateur a utilisé le pesticide comme il en avait reçu instructions. Nous partageons alors votre avis, à savoir que le cultivateur est une victime innocente. S'il a agit de bonne foi et qu'il ne puisse pas vendre son produit. Mais même dans ce cas, je pense pour ma part qu'il ne serait pas souhaitable de payer 100 p. 100.

M. Gleave: Je ne pense pas que cela puisse se comparer à une assurance, ce n'est pas une assurance.

L'hon. M. Olson: C'est une indemnité.

M. Gleave: Vous envisagez d'indemniser des individus ou des groupes d'individus à la suite d'événements dont ils n'étaient pas responsables.

J'aimerais soulever également une autre question. Autre point: l'enquête effectuée avant que soit prise la décision d'autoriser la commercialisation des pesticides. Je pense qu'il y a eu des cas où les pesticides avaient été commercialisés alors qu'ils n'auraient pas dû être mis sur le marché. Au moment de la mise sur la marché il y a une évaluation. Par exemple, vous faites une évaluation selon laquelle, par exemple, il est préférable de mettre sur le marché un produit qui va détruire les sauterelles plutôt que de les laisser détruire 10 p. 100 de la récolte de la Saskatchewan. Ce qui m'inquiète c'est que jusqu'à présent, on s'est surtout intéressé aux produits chimiques.

[Texte]

• 1145

How much time and money are we spending investigating other methods of control, biological control, upon which there has been a fair amount of work done? Are we being rigid enough before we release certain chemicals? Are we being thorough enough in knowing what's going to happen before we permit a company to release a chemical. I would like to know from the Minister or the Deputy Minister how much work is being done on this, either in his Department or by the Food and Drug Directorate, in these investigative areas.

Mr. Olson: Mr. Chairman, that I suppose will always be a matter of opinion. But it is our opinion that with the evidence provided to us by any company wishing to register a pesticide, if it is used according to the recommendations and based on the evidence that we have that it is safe—this does not rule out 100 per cent the possibility of some risk being involved—we have to do what you have suggested, that is to make an assessment on balance as to the beneficial use of this in relation to the risks. Certainly in many cases if it is not used according to the recommendations, then the risk factor is much greater. But our registration and approval for that particular product to be sold is based on the farmer using it properly.

It is a matter of opinion whether enough is being done. We are certainly trying to keep abreast of the technological developments all the time.

Mr. Gleave: Can we have information put before the Committee in due course as to how much in terms of man-hours and money is being spent by the Department of Agriculture or the Food and Drug Directorate to investigate and examine these products prior to release? How much was spent in 1966, 1967, 1965, and how much is being spent in 1968, and so on. Can we have this information?

Mr. Olson: I think that could be made available.

The Chairman: Thank you, gentlemen. I thank you for the constructiveness with which we approached our deliberations. I hope that we may be able to start promptly at 9.30 on Thursday morning. Clause 3 stands.

The meeting is adjourned.

Mr. Cobbe: Mr. Chairman, have you established a definite time of 11.45? Or is this in order to arrange your other work? Is this permanent?

29651—4½

[Interprétation]

Combien de temps passons-nous, quelle somme dépensons-nous à étudier d'autres méthodes qui ont fait l'objet de recherches? Dans quelle mesure sommes-nous aussi rigides, aussi catégoriques avant d'autoriser certains produits? Combien de vérifications y a-t-il eu de faites sur certains autres produits? Je veux demander au ministre ou au sous-ministre ce qui est fait dans son ministère ou dans la Direction des aliments et drogues dans ces autres domaines.

L'hon. M. Olson: Eh bien, monsieur le président, cela, c'est toujours une question qui varie selon les avis mais d'après nous, pour nous, nous agissons en fonction des renseignements qui nous sont fournis par une société qui veut que ce pesticide soit enregistré, sur la base des témoignages dont nous disposons, si on s'aperçoit que c'est là quelque chose de sûr, de valable et si nous ne sommes pas 100 p. 100 sûrs à ce moment-là, il faut faire comme vous le dites, une évaluation sur les avantages que l'on tirera par rapport aux risques que cela implique. Certainement, si l'usage du produit n'est pas fait conformément aux instructions, certainement le risque est plus élevé. Mais notre approbation, notre homologation du produit reposent sur une utilisation correcte du produit par le cultivateur et de toute façon nous cherchons à rester à la hauteur de l'évolution technique.

M. Gleave: Est-ce que nous pourrions savoir combien d'heures de travail, combien de sommes d'argent ont été dépensées par le ministère ou par la Direction des drogues et aliments sur l'étude des produits avant leur homologation, en 1966, 1967, 1965 et 1968?

L'hon. M. Olson: On pourrait fournir ces renseignements.

Le président: Merci, messieurs. Je vous remercie de la manière constructive dont nous avons abordé nos travaux ce matin. J'espère que nous pourrions commencer ponctuellement à 9.30 jeudi matin.

Article 3, réservé.

Merci, messieurs, la séance est levée.

M. Cobbe: Monsieur le président, avez-vous fixé 11 h 45? Ou est-ce pour tenir compte de vos autres obligations? Est-ce une décision permanente?

[Text]

The Chairman: If the Committee concurs. If we are here at 9.30 assuming that the meeting is called for that time and we sit for two hours and a quarter, that is a pretty fair sitting, and then it is about time to adjourn. We will try and follow that pattern, insofar as possible.

Mr. Cobbe: Thank you.

[Interpretation]

Le président: Si le comité se réunit à 9 h 30, que nous siégeons deux heures un quart, ce sera une bonne séance, à l'issue de laquelle il sera temps de s'arrêter. Nous essaierons d'observer ce programme, dans la mesure du possible.

M. Cobbe: Merci.

MINUTES OF PROCEEDINGS

THURSDAY, January 23, 1969.
(14)

The Standing Committee on Agriculture met at 9.40 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Barrett, Beer, Clermont, Cobbe, Côté (*Richelieu*), Danforth, Douglas, Gauthier, Gleave, Horner, Korchinski, Lambert (*Bellechasse*), La Salle, Lessard (*Lac-Saint-Jean*), Lind, McKinley, Pringle, Roy (*Laval*), Southam, Whicher, Yanakis—(21).

Also present: Messrs. Pilon, Ritchie, Stewart (*Okanagan-Kootenay*), M.P.'s.

In attendance: From the Department of Agriculture: The Honourable H. A. Olson, Minister; Mr. S. B. Williams, Deputy Minister; Mr. C. R. Phillips, Director General of Production and Marketing; Mr. C. H. Jefferson, Director of Plant Products Division; Dr. D. S. MacLachlan, Director of Plant Protection Division; Mr. Harvey Newman, Departmental Legal Adviser.

On motion of Mr. Côté,

Resolved,—That the Committee's bilingual Minutes of Proceedings and Evidence be printed in the quantity of 1,000.

The Committee resumed consideration of Clause 3 of Bill C-155, the Pesticide Residue Compensation Act.

The Minister, Mr. Williams and Mr. Phillips answered questions.

Mr. Gleave moved that—

Clause 3 be amended by adding a Subclause 3(5) as follows: The compensation paid to the farmer in any instance shall not be less than 90% of the real market value of any product at the time of loss.

(Traduction)

PROCÈS-VERBAL

Le JEUDI 23 janvier 1969
(14)

Le Comité permanent de l'agriculture se réunit ce matin à 9 h. 40 sous la présidence de M. Beer, président.

Présents: MM. Barrett, Beer, Clermont, Cobbe, Côté (*Richelieu*), Danforth, Douglas, Gauthier, Gleave, Horner, Korchinski, Lambert (*Bellechasse*), La Salle, Lessard (*Lac Saint-Jean*), Lind, McKinley, Pringle, Roy (*Laval*), Southam, Whicher, Yanakis—(21).

Aussi présents: MM. Pilon, Ritchie, Stewart (*Okanagan-Kootenay*), députés.

De même que: Représentant le ministère de l'Agriculture: L'honorable H. A. Olson, ministre; M. S. B. Williams, sous-ministre; M. C. R. Phillips, directeur général de la Production et des Marchés; M. C. H. Jefferson, directeur de la Division des produits végétaux; M. D. S. MacLachlan, directeur de la Division de la protection des végétaux; M. Harvey Newman, conseiller juridique du Ministère.

Sur la proposition de M. Côté,

Il est résolu,—Que soient imprimés à 1000 exemplaires, les procès-verbaux et les témoignages du Comité.

Le Comité reprend l'étude de l'article 3 du bill C-155, Loi sur l'indemnisation pour dommages causés par les pesticides.

Le Ministre et MM. Williams et Phillips ont répondu aux questions.

M. Gleave propose que—

L'article 3 soit modifié par l'adjonction de l'alinéa 3(5) ainsi qu'il suit: L'indemnisation versée à l'agriculteur ne devra en aucun cas représenter moins que le 90 p. 100 de la valeur marchande réelle de tout produit à l'époque de la perte.

After some discussion, by agreement the motion was withdrawn.

Clause 3 was carried.

On Clause 4, the Minister and Mr. Williams answered questions.

Mr. Gleave moved an amendment adding at the end of Clause 4, paragraph (c), the following words:

and provided that the compensation paid to the farmer shall not be less than 90% of the market value of the product at the time of loss.

After some discussion, the motion was negatived on a show of hands as follows: yeas 5, nays 10.

Clause 4 was carried on division.

On Clause 5, the Minister, Mr. Williams and Mr. Newman answered questions.

Clause 5 was allowed to stand.

At 11.49 a.m. the Committee adjourned to the call of the Chair.

Un débat s'ensuit et la proposition est retirée d'un commun accord.

L'article 3 est adopté.

Le Ministre et M. Williams ont répondu aux questions se rapportant à l'article 4.

M. Gleave propose un amendement qui ajoute à la fin de l'article 4, sous-alinéa (c) ce qui suit:

—et prévoit que l'indemnisation versée à l'agriculteur ne devra pas représenter moins que 90 p. 100 de la valeur marchande du produit à l'époque de la perte.

Après débat, la motion mise aux voix est rejetée par 10 voix contre 5 à la suite d'un vote à main levée.

L'article 4 est adopté sur division.

Le Ministre, MM. Williams et Newman ont répondu aux questions relatives à l'article 5.

L'article 5 est réservé.

Le Comité s'ajourne à 11 h. 49 de l'avant-midi jusqu'à la prochaine convocation du président.

Le secrétaire du Comité,

Michael A. Measures

Clerk of the Committee.

[Text]

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday, January 23, 1969.

• 0939

The Chairman: Gentlemen, will the meeting come to order. I suggest we start in where we left off on Tuesday. At that time I had four names on the list and I propose, with your permission, to recognize those names and proceed with the consideration of Clause 3. The names on that list are Mr. Peters, Mr. Southam, Mr. Lind, Mr. Horner and Mr. Danforth.

Before we proceed I would like to present the following to you. Starting with our meeting last Tuesday, and continuing thereafter, our Committee's Minutes of Proceedings and Evidence will be produced in a bilingual form. That is to say, they will be printed in both English and French in adjacent columns in the same issue, as is the bill before us today. The question before us is the quantity of bilingual issues to be printed. As background information I may say that previously the quantities that were printed separately were 750 in English and 350 in French. Further, another committee with bilingual issue, namely, Broadcasting, is printing 1,000 copies. If it is agreeable to the Committee, I will entertain a motion that the Committee's bilingual Minutes of Proceedings and Evidence be printed in the quantity of 1,000 copies.

• 0940

Mr. Côté: I so move.

Motion agreed to.

The Chairman: I will now recognize Mr. Southam (Qu'Appelle-Moose Mountain).

Mr. Southam: I was interested in the discussion in the concluding moments of our meeting on Tuesday with respect to Section 3, particularly subsections (3) and (4), when we discussed the matter of the minimum and maximum compensation. We had some discussion on subsection (3) but I do not think

[Interpretation]

TÉMOIGNAGES

(Enregistrement électronique)

Le jeudi 23 janvier 1969.

Le président: Messieurs, la séance est ouverte. Je propose que nous reprenions la réunion là où nous nous étions arrêtés mardi. A ce moment-là, j'avais quatre noms sur ma liste et je propose, si vous le voulez bien, que l'on donne la parole à ces personnes et que l'on poursuive l'examen de l'article 3. J'ai sur ma liste monsieur Peters, monsieur Southam, monsieur Lind, monsieur Horner et monsieur Danforth.

Avant cela, j'aimerais vous annoncer la nouvelle suivante. Désormais—et cela inclut notre séance de mardi dernier—les procès-verbaux et les témoignages de notre comité seront présentés sous forme bilingue. Autrement dit, l'anglais et le français seront imprimés en deux colonnes côté à côté dans une édition unique, comme c'est le cas pour le bill que nous avons à examiner aujourd'hui. On nous demande de décider du nombre d'exemplaires bilingues à imprimer. Pour vous donner une idée, je vous rappelle qu'on imprimait auparavant, en éditions distinctes, 750 exemplaires en anglais et 350 en français.

Il y a un autre comité, le Comité de la radiodiffusion, qui en publie 1000. Si vous êtes d'accord, je vais demander que le compte rendu bilingue soit tiré à 1000 exemplaires. Est-ce que vous êtes d'accord? Proposé par M. Côté (Richelieu).

M. Côté: J'en fais la proposition.

La motion est adoptée.

Le président: Je donne maintenant la parole à M. Southam (Qu'Appelle-Moose Mountain).

M. Southam: A la fin de notre séance de mardi, on a eu une discussion intéressante sur l'article 3, particulièrement, sur les paragraphes 3 et 4, lorsqu'on a discuté des minimum et maximum d'internité. On a discuté du paragraphe 3, mais je ne pense pas qu'on ait

[Text]

we had any discussions on subsection (4). This subsection reads:

Certain losses excepted from compensation

(4) No compensation shall be paid to a farmer pursuant to subsection (1) in respect of any loss where the loss is less than any minimum amount that is prescribed by the regulations.

Who determines what this amount should be? I would like to ask, Mr. Chairman, who arbitrates in these cases in order to decide?

The Chairman: Mr. Williams?

Mr. S. B. Williams (Deputy Minister of Agriculture): I am afraid I cannot answer that question directly, Mr. Southam, at the present moment. The intent in putting the section in there was that if there were to be numerous trivial and frivolous claims made that it would provide authority whereby the Governor in Council could set a minimum level below which payments would not be made.

Mr. Southam: Was it the intent or is it the thought that possibly the inspector who is referred to in Section 2 of this bill would be the man who would be designated to arbitrate in this case? Who would be carrying out the duties?

Mr. Williams: The Governor in Council would set the minimum amounts.

Mr. Southam: Who would do the arbitrating? Would it be the inspector that is suggested under Section 2? If you are going to arbitrate or decide on these things somebody has to go in and look over the situation and actually make the decision.

Mr. Williams: When a claim is issued the inspector would be required to assess various facts. The actual determination of the amount that might be paid in respect to the claim would presumably be settled in Ottawa, although we do not have details worked out as to how that would be done. I presume that would depend upon the complexity of the case and whether it was a new situation or not.

Mr. Southam: Mr. Chairman, this gets right down to the crux of this bill. We have had these losses in the past and we are now setting up legislation to try to compensate for it, and as far as the people who are affected by

[Interpretation]

discuté encore le paragraphe 4, qui se lit ainsi:

Aucune indemnité ne doit être payée à un cultivateur, en conformité du paragraphe (1), pour une perte lorsque celle-ci est inférieure à tout montant minimum prescrit par les règlements.

Alors, qui va décider de ce minimum? Monsieur le président, pouvez-vous nous dire qui va être l'arbitre de ces cas et qui va décider?

Le président: Monsieur Williams.

M. S. B. Williams (Sous-ministre de l'Agriculture): Je m'excuse, nous ne pouvons pas vous répondre directement, Monsieur. En introduisant cet article, nous voulions que, s'il y avait des réclamations frauduleuses, en trop grande quantité, le gouverneur en conseil puisse fixer un minimum au-dessous duquel il n'y aurait pas d'indemnité.

M. Southam: A-t-on voulu que l'inspecteur mentionné à l'article 2 soit celui qui devrait décider qui devra être l'arbitre, qui va faire l'arbitrage.

M. Williams: C'est le gouverneur en conseil qui va fixer les montants minimums.

M. Southam: Est-ce que ce sera l'inspecteur qui est indiqué à l'article 2? Parce que si vous devez faire un arbitrage, il faut décider qui va être cet arbitre, qui va prendre la décision.

M. Williams: A chaque fois qu'il y a une réclamation de faite, l'inspecteur doit faire l'évaluation de certains faits. La décision elle-même, quant à savoir le montant qui pourra être versé à titre d'indemnité pour une plainte, sera prise ici, à Ottawa, certainement, bien que cela ne soit pas encore décidé dans les détails. Cela dépendra de la complexité de la chose, et s'il s'agit d'une situation nouvelle ou non.

M. Southam: Monsieur le président, revenons au centre de l'affaire elle-même. Nous avons eu des pertes dans le passé. Nous avons maintenant une loi permettant d'y remédier et il faut aller aussi bas que possible dans

[Texte]

it are concerned, the decision is going to have to be made at the grass roots level. It would be interesting to know just what these maximum and minimum amounts are, whether it is 90 per cent or 85 per cent, what the minimum would be and just who would take the final responsibility for assessing it.

Mr. Williams: The Minister will comment on that.

The Honourable H. A. Olson (Minister of Agriculture): Mr. Chairman, we discussed this particular point at the last meeting and while we did not give a positive undertaking as to the exact percentage, I did say that we were contemplating recommending to the Governor in Council a maximum of somewhere around 80 per cent of the loss that was assessed, and at the other end there would be a minimum, as Mr. Williams has said, to deal with frivolous matters and this would be taken into account in so far as minimums are concerned.

• 0945

Mr. Southam: Thank you, Mr. Chairman. We had quite a discussion on this section on Tuesday, so that finishes my comments for the moment.

The Chairman: Thank you, Mr. Southam. I now recognize Mr. Lind (Middlesex).

Mr. Lind: Actually, Mr. Chairman, I would like to pass until a little later. I think the question about the time for each person that I had in mind has been settled.

The Chairman: Thank you, Mr. Lind. I will now recognize Mr. Horner (Crowfoot).

Mr. Horner: Mr. Chairman, I am concerned about proving whether a farmer was at fault or was not at fault. I am thinking back, Mr. Chairman, to a problem they had in Regina a number of years ago when residue was found in cream. Mr. Phillips, do you remember that particular case? Was the farmer not proven at fault in that case?

Mr. C. R. Phillips (Director General of Production and Marketing): I do not remember the case.

Mr. Williams: I remember the case quite well. As a matter of fact, there were two cases and to my recollection in neither case was it traced to any producer. This concerned products that were taken off the market by

[Interprétation]

l'échelle pour atteindre directement les gens qui sont intéressés. Il est bon qu'ils sachent quel sera ce montant maximum ou minimum, 90 p. 100, 85 p. 100, et qui décidera, en dernier ressort, de son évaluation.

M. Williams: Eh bien, M. le ministre va vous répondre.

L'hon. H. A. Olson (ministre de l'Agriculture): Monsieur le président, nous avons discuté de cette question, en particulier lors de la dernière réunion, et, bien que nous n'ayons pas donné une réponse catégorique quant au pourcentage exact, je vous ai, malgré tout, dit que nous envisagions de recommander au gouverneur en conseil de fixer un maximum d'environ 80 p. 100 des pertes évaluées, sans oublier le minimum. Ces chiffres permettraient de tenir compte des plaintes exagérées.

M. Southam: Merci, monsieur le président. Nous avons discuté de cette question mardi, effectivement. Par conséquent, je vais m'arrêter là pour le moment.

Le président: Merci, monsieur Southam. La parole est maintenant à M. Lind (Middlesex).

M. Lind: Merci, monsieur le président. Je crois qu'on a déjà répondu à ma question.

Le président: Merci, monsieur Lind. La parole est maintenant à M. Horner (Crowfoot).

M. Horner: Monsieur le président, ce qui m'intéresse c'est de savoir si le cultivateur avait raison ou tort. J'en reviens au problème qui s'est posé à Regina il y a plusieurs années monsieur le président, où l'on avait trouvé des résidus dans la crème. Vous souvenez-vous de ce cas, docteur Phillips? Avait-on trouvé qu'il y avait eu faute?

M. C. R. Phillips (Directeur-général de la Production et des marchés): Je ne me souviens pas de cette affaire.

M. Williams: Il y avait deux cas, et dans l'un comme dans l'autre, pour autant que je m'en souviens, c'était un produit qui avait été retiré du marché par la direction générale des aliments et drogues et il n'y avait aucun

[Text]

the Food and Drug Directorate. The product was butter with a residue in it that was taken off, and there was no method whereby it could have been traced to the producer at that time.

An hon. Member: Pardon me?

Mr. Williams: The producer presumably had been paid for the cream and it is my understanding, unless I do not recollect correctly, that no producer suffered any loss whatsoever. I believe there were two cases at that particular time.

Mr. Horner: You mentioned on Tuesday that there was a farm in Ontario—and I remember reading about it—where a residue was found on the produce produced on the land but no reason for it has yet been determined. When this bill is passed, will a farm such as that one be covered even if evidence of the residue was found before the passing of this bill? Do you understand what I mean?

Mr. Williams: There is no intent at the present moment to provide retroactivity in this particular bill, but I presume you are really asking the hypothetical question if a similar situation arose.

Mr. Horner: No. If a farm is still receiving damage from residue after this bill is passed, will it then be allowed to put in a claim for compensation?

Mr. Williams: I think we will have to answer that as a hypothetical question. In reply to that hypothetical question, theoretically the answer is yes, presuming there is no evidence the farmer misused pesticides, and to the best of my knowledge in that particular case there is no evidence that he did misuse pesticides.

Mr. Horner: Let us follow this line of reasoning a little further. You suggest that provided there was no evidence the farmer used pesticides—

Mr. Williams: I am sorry, misused pesticides.

Mr. Horner: —that it really did not matter if the residue was in the produce prior to the passing of this bill so long as it was also found after the passing of this bill.

Mr. Williams: I would think that would be a fair presumption, yes.

Mr. Horner: What about a case that—

[Interpretation]

moyen de remonter jusqu'au producteur. Il s'agissait de beurre qui renfermait un résidu.

Une voix: Excusez-moi?

M. Williams: Le producteur avait été remboursé et, pour autant que je sache, il n'y a eu aucune perte de la part des producteurs. Il y avait deux cas, si je me souviens bien.

M. Horner: Mardi, vous avez parlé d'une ferme en Ontario. Je me souviens d'avoir lu quelque chose à ce sujet. On avait trouvé des résidus dans le produit. Mais on n'a pas encore pu, malgré tout, expliquer ce phénomène. Lorsque cette Loi sera votée, est-ce qu'une exploitation de ce genre sera couverte même si la preuve de la présence de résidus a déjà été vérifiée? Vous voyez à quoi je veux en venir?

M. Williams: A l'heure actuelle, il n'est pas prévu que cette loi sera rétroactive. Mais, en fait, vous nous posez une hypothèse. C'est-à-dire que si une situation semblable se produisait...

M. Horner: ...eh bien, supposons que la ferme continue de subir des dégâts, une fois que la loi aura été votée. Est-ce que, à ce moment-là, elle aura toujours droit à des indemnités?

M. Williams: Eh bien, je pense qu'on peut répondre seulement de façon hypothétique. En théorie, oui, en supposant qu'il ne soit pas prouvé que le cultivateur a fait un mauvais usage des pesticides. Je ne crois pas que ce soit le cas ici.

M. Horner: Poussons le raisonnement un peu plus loin. Vous dites, qu'à condition qu'il ne soit pas prouvé que le cultivateur a utilisé les pesticides.

M. Williams: Pardon, a mal utilisé les pesticides.

M. Horner: En fait, peu importe que les résidus se trouvaient dans le produit avant que la loi ne soit votée, pour autant qu'ils s'y trouvent après.

M. Williams: Oui, c'est cela.

M. Horner: Que pensez-vous du cas où...

[Texte]

Mr. Williams: It would depend on when the action of the Food and Drug Directorate took place. I think you appreciate that, Mr. Horner.

Mr. Horner: Yes, perhaps, but I am wondering if this is a good reason, that it should not be retroactive. I am thinking of a case, and I have it here before me where cream was found in St. Vincent northern Alberta last May with a residue and the person was prohibited from shipping cream from May until the first of July. It was a loss of something like \$800 worth of produce to that one farmer. Surely it is cases like this that have prompted the bringing in of this legislation. I think in all fairness that the Minister and the Deputy Minister will admit that it is cases such as this that have prompted the bringing in of this legislation. Surely we should not just disregard them.

● 0950

Surely we should consider a retroactive period of some extent because, as I attempted to point out, if the residue is still being found it is very difficult to nail down a starting period on cases such as this because the pesticide may linger in the soil and produce a residue in the produce for a given number of years.

Mr. Williams: If that were the case, Mr. Horner, and if food subsequently produced were withheld from the market by the Food and Drug Directorate then, of course, they would be eligible. In the particular case to which you make reference I believe the Food and Drug Directorate was not involved. It was entirely provincial action that withheld this commodity from the market.

An hon. Member: Is that the Brantford case?

Mr. Williams: No, not the Brantford case, the Alberta case.

Mr. Horner: You mean the Alberta case?

Mr. Williams: That is my understanding, yes.

Mr. Horner: Was that Mr. R. P. Dickson an official of the federal government?

Mr. Williams: No, Mr. Dixon is the Dairy Commissioner for the Province of Alberta. At least, there is a Mr. Dixon who is the Dairy Commissioner for the Province of Alberta.

Mr. Horner: What authority do they have to move in and stop the sale of a product

[Interprétation]

M. Williams: En fait, tout dépendra du moment où la direction générale des aliments et drogues aura pris des mesures.

M. Horner: Peut-être, mais je me demande si c'est une raison valable pour quelle ne soit pas rétroactive. Je pense, par exemple, à un cas que j'ai sous les yeux. On avait trouvé, en mai dernier de la crème, à Saint-Vincent (Alberta), qui contenait des résidus. La personne s'est vu interdire d'expédier de la crème, jusqu'au premier juillet, ce qui a entraîné une perte d'environ \$800. Ce sont certainement les cas de ce genre qui ont occasionné la préparation de ce projet de loi et je pense qu'en toute honnêteté le ministre et ce sous-ministre devront le reconnaître. Allons-nous alors simplement les méconnaître?

Il faut certainement admettre une certaine période de rétroactivité, car si comme j'ai cherché à vous le montrer, le résidu s'y trouve toujours, il est excessivement difficile de déterminer la période de départ dans les cas de ce genre. Le pesticide peut demeurer en permanence dans le sol et causer des résidus pendant un certain nombre d'années.

M. Williams: Si tel était le cas, monsieur Horner et que le produit est retiré du marché par la direction générale des aliments et drogues, ils auront certainement droit aux indemnités. Dans le cas particulier que vous avez cité, je pense que la direction n'était pas en cause. Ce sont les autorités provinciales qui ont retiré le produit du marché.

Une voix: Est-ce l'affaire de Brandford?

M. Williams: Pas l'affaire de Brantford, mais plutôt celle de l'Alberta.

M. Horner: Vous parlez du cas de l'Alberta, n'est-ce pas?

M. Williams: D'après ce que j'ai cru comprendre. Oui.

M. Horner: Est-ce que ce M. R. P. Dixon est un représentant du gouvernement fédéral?

M. Williams: M. Dixon fait partie de la Commission des produits laitiers pour l'Alberta. Du moins, il y a un M. Dixon dans cette Commission.

M. Horner: Alors, de quel droit ont-ils pu interdire la vente d'un produit à cause de la

[Text]

because of residue? Are their inspectors trained in a similar fashion to the Food and Drug Directorate in Ottawa, or the food and drug inspectors that would be working under this?

Mr. Williams: I cannot quote the name of it but they do have a health and food act—with-out capitalizing “health” and “food”—that gives them authority to withhold products from the market that contain deleterious substances.

Mr. Horner: Thank you, Mr. Williams. I urge that a great deal of consideration be given to as broad as possible an interpretation of an effective date because of the lingering factors in this residue and pesticide problem.

The Chairman: Thank you, Mr. Horner. I recognize Mr. Danforth (Kent-Essex).

Mr. Danforth: Mr. Chairman, I have two or three short questions that I would like to pose on this particular clause of the bill. The bill says that no compensation shall be paid until the Minister receives from the Minister of National Health and Welfare written confirmation of an inspection. Once an inspector has found contamination, is it mandatory that written notification be given to the Department of Agriculture?

Mr. Williams: Only under the provisions of this Act, Mr. Danforth.

Mr. Danforth: Then am I to understand whenever an inspector turns up a case of contamination, or suspected contamination, it is automatic that the Minister of Agriculture will receive this report?

Mr. Williams: Under this Act it will be mandatory that they report to the Minister of Agriculture any commodity that they remove from the market.

Mr. Olson: I might add if I may, Mr. Chairman, that of course is also one of the requirements to pay compensation under this Act.

Mr. Danforth: This is why I want to make sure it is mandatory and that the farmer on his own does not have to pursue this in order to have the proper authorities notified.

My next question deals with the farmer who has had his crops damaged. I understand from the questions that have been answered that a farmer who feels he is eligible for government compensation could be in a position where he has had nothing to do with the actual use of chemicals and still be eligible

[Interpretation]

présence de résidus? Leurs inspecteurs ont-ils une formation semblable à celle des inspecteurs de la Direction générale des aliments et drogues qui s'intéressent à cette question?

M. Williams: Je ne me souviens pas de son nom exact mais ils ont une loi sur la qualité des produits alimentaires qui leur permet de retirer les produits du marché s'ils renferment des matières nuisibles à la santé.

M. Horner: Je vous remercie, monsieur Williams, mais je vous prie d'étudier sérieusement la possibilité d'avoir une date d'entrée en vigueur qui tienne compte du phénomène de la permanence de ces résidus et des pesticides dans le sol.

Le président: La parole est à M. Danforth (Kent-Essex).

M. Danforth: Monsieur le président, j'aimerais poser deux ou trois questions en ce qui concerne cet article. Le bill dit que «aucune indemnité ne sera payée tant que le ministre n'aura pas reçu confirmation d'une inspection». Lorsque l'inspecteur a constaté des contaminations, est-ce qu'il doit nécessairement transmettre un avis au ministère?

M. Williams: En vertu des dispositions de cette loi, oui.

M. Danforth: Dois-je comprendre alors que, chaque fois qu'un inspecteur constatera ou soupçonnera une contamination, le ministre recevra automatiquement un rapport?

M. Williams: D'après cette loi, ils devront présenter un rapport au ministre lorsqu'ils retireront un produit du marché.

L'hon. M. Olson: Je voudrais ajouter, monsieur le président, que c'est une des conditions pour avoir droit aux indemnités.

M. Danforth: Je voulais m'assurer que ce rapport est obligatoire et que le fermier n'aura pas, de son propre chef, à poursuivre l'affaire plus loin.

Mon autre question porte sur le cas où un cultivateur a subi des dégâts. Je crois comprendre, d'après les questions posées et les réponses, qu'un cultivateur peut se trouver dans une position où il n'a absolument rien eu à voir avec l'emploi réel des produits chimiques, et croire qu'il qu'il a quand même

[Texte]

for compensation should his crops show harmful residue.

• 0955

I could perhaps give you three examples of this. Number one, the drifting of chemicals from adjacent properties because of gusts of wind or other forces over which there was no control on the adjacent farms. Number two, the use of an allied chemical. Both chemicals by themselves would produce no harmful effect but when used together or are together they may cause a harmful effect. Number three, perhaps a residue of fallout from nuclear fission in some other country, or something. In these instances would the farmers be eligible for compensation if their products are withheld from the market?

Mr. Williams: Mr. Chairman, it is rather difficult to answer those hypothetical situations and yet I think in the case of the first question that was raised about drift in the wind that it could possibly happen, and probably will happen, but we would be required under this Act, of course, to satisfy ourselves that the chemical had not been misused. I suppose there would be an obligation on our part to find out if the farmer had damage as a result of having his product condemned or if he was prevented from selling it or if, indeed some of his neighbours did damage to him in that they used it improperly he could then institute a civil action, and so on. It says under Section 5.(1)(a), which we will get to:

- (a) to reduce the loss occasioned to him by reason of such pesticide residue, and
- (b) to pursue any action that the farmer may have in law against
- (ii) any person whose act or omission resulted in or contributed to the presence of the pesticide residue in or upon the product.

Mr. Danforth: I appreciate that, Mr. Chairman. Perhaps I did not illustrate my point clearly enough. May I use another illustration which can actually happen. I think all Committee members are aware that some chemicals with the addition of additives are far more powerful than they are in their original form. May I use as an illustration that perhaps one farmer has used a chemical on his crop according to specifications. Perhaps the adjacent farmer is not aware of the type of chemical used or for what purpose it is used, and the adjacent farmer may have used, for example, a miscible oil. A wind drift of miscible oil in itself would cause very little dam-

[Interprétation]

droit à une indemnisation du gouvernement si ses propres produits montrent des traces de résidus.

Je peux fournir quelques exemples. D'une part, les pesticides que le vent souffle d'une exploitation à l'autre et que le voisin ne peut pas contrôler; deuxième cas: l'utilisation de produits chimiques qui, utilisés séparément, n'ont aucun effet néfaste, mais qui peuvent produire un effet nuisible lorsqu'ils sont utilisés ensembles. Une troisième situation: les retombées radioactives résultant de l'explosion d'un engin nucléaire dans un pays voisin. Les cultivateurs auraient-ils droit à des indemnisations si leurs produits sont retirés du marché?

M. Williams: Monsieur le président, il est très difficile de répondre à ces questions hypothétiques. Je pense pourtant que la première question posée, c'est-à-dire sur les souffles de vent, est une situation qui pourrait très bien se présenter et qui se produira certainement. Dans ces cas, nous devrions, de par la Loi, nous assurer qu'on n'a pas fait un mauvais usage du produit chimique. Je suppose que nous serions obligés alors de nous assurer que le cultivateur a subi des pertes parce que ses produits ont été retirés du marché ou qu'un de ses voisins a causé des dégâts par le mauvais usage de ces produits. Mais l'article 5 (1) a) dit:

- a) pour réduire la perte qu'il a subie par suite de la présence de ces résidus de pesticide, et
- b) pour exercer tout recours que le cultivateur peut avoir
- ii) contre toute personne dont l'action ou l'omission a entraîné ou contribué à entraîner la présence des résidus de pesticide dans ou sur le produit.

M. Danforth: Monsieur le président, je n'ai peut-être pas exprimé mon point de vue très clairement. Voici un autre exemple qui pourrait se produire. Je pense que tous les députés savent que certains produits chimiques auxquels on ajoute certains additifs sont beaucoup plus puissants que s'ils étaient maintenus dans leur forme originale. Et à titre d'exemple, disons qu'un cultivateur a utilisé un produit conformément aux instructions. Le voisin ne connaît peut-être pas le genre de produit chimique utilisé ni à quelle fin et utiliser lui-même, par exemple, une huile miscible. En soi, si ces huiles étaient soufflées par le vent elles causeraient peu de

[Text]

age but a miscible oil drifting in where a specific chemical has already been applied could intensify the action of that chemical many times and therefore there could then be resulting damage in residue. This is my position. I contend that each farmer on his own acted according to the specifications, and perhaps it was an act of God that caused the actual damage to be created. Could the farmer who has had the damage and his crops withheld under the Act put in a claim for damages?

Mr. Olson: As I said, it is very difficult to answer that question specifically. If a situation like that arose we would have to take into account all of the circumstances and also the provisions of the Act. The provisions of the Act are that if a product is withheld from sale, then that is necessary before we can proceed. The second thing is that we have to satisfy ourselves that the farmer did not misuse a chemical, and under the conditions that you have outlined the farmer would not have misused the chemical with respect to the label, the recommendations, and that sort of thing. Of course, when you get into the area about whether someone else has done damage to him it is pretty hard to be precise, but under the terms of the Act it would seem to me that we would perhaps have authority to pay him if he had not misused any chemical himself.

• 1000

The Chairman: Gentlemen, may I suggest that probably the questioning has moved a little beyond Clause 3. This is difficult to separate but perhaps we could agree that probably the questioning has now moved beyond Clause 3 which has to do with compensation, minimum and maximum, and so forth; and under Clause 4 we get into a lot of other factors.

Could we agree that Clause 3 carry and then we could go on?

Mr. Danforth: I have one further short question, if I may, specifically related to this matter, Mr. Chairman. This question is almost directly opposite to the line of questioning that I have been pursuing. There are occasions when those engaged in agriculture in Canada feel that there is a delay in the registration of the use of pesticides and controls that would be very advantageous to them and which are available in foreign countries and have been for some time. This has happened on various occasions, and I am neither criticizing nor assessing fault; it just happens this way.

[Interpretation]

dégâts mais mélangées à un autre produit chimique, elles peuvent multiplier sa puissance et causer des dégâts par le présence de résidus. Je prétends que chaque fermier a suivi les instructions et que c'est peut-être la main de Dieu qui a en réalité causé les dégâts. Est-ce que le cultivateur qui a subi les dégâts peut alors demander une indemnisation?

L'hon. M. Olson: Comme je vous l'ai dit, il est très difficile de répondre à cette question de façon précise. Si une situation de ce genre devait se poser, il faudrait tenir compte de toutes les circonstances ainsi que des dispositions de la Loi. Selon la loi, si un produit est retiré de la vente, c'est la première chose à faire. Ensuite, nous devons nous assurer d'une part que le cultivateur n'a pas fait un mauvais usage des produits chimiques. Dans la situation que vous avez décrite, le cultivateur n'aurait pas fait un mauvais usage du produit chimique d'après les recommandations et les instructions, et ainsi de suite. Lorsqu'il s'agit de savoir si quelqu'un d'autre lui a causé des dégâts, c'est difficile à déterminer. Mais d'après les dispositions de la loi, il me semble que nous serions autorisés à lui accorder une indemnisation s'il n'a pas, lui-même, fait un mauvais usage du produit chimique.

Le président: Messieurs, ne croyez vous pas que les questions ont un peu dépassé l'article 3 et il est assez difficile de faire une distinction. Mais est-ce que nous ne pourrions pas convenir que les questions ont dépassé un peu l'article 3 qui porte sur les indemnisations maximums, minimums, etc. L'article 4 touche de nombreux autres points. Je me demande si nous ne pourrions pas adopter l'article 3.

M. Danforth: Si vous permettez, monsieur le président, j'ai une autre question. Elle est fondée sur les mêmes données. Il arrive que ceux qui s'adonnent à l'agriculture, au Canada, trouvent qu'il se produit des délais dans l'enregistrement et le contrôle des pesticides utilisés et que cette réglementation leur serait avantageuse. Ils sont disponibles à l'étranger et cela depuis un certain temps. Je crois que cela s'est produit à plusieurs reprises. Je ne veux critiquer ni blâmer personne mais seulement mentionner le fait.

[Texte]

Could provision be made, or is provision made, for a farmer wishing to use such chemicals to ask for exemption under this bill so that if there were contamination and his products were in fact not offered for sale he could ask for exemption under this bill? In that way the government would be under no obligation for damages or damage claims?

Mr. Olson: I will ask Mr. Phillips to comment in more detail on this, but at the moment he can bring it in without a registration; but of course, after we have passed all of these bills he will not be able to.

Perhaps Mr. Phillips would like to answer that.

Mr. Phillips: Mr. Chairman, there are two parts to this question. One relates to acceptance for registration and delays. Of course, that comes under the Pest Control Products Act which is coming up later, but it touches on this one.

Currently a farmer may, under the Pest Control Products Act, bring in for his own use without registration. If the Pest Control Products bill is passed in the form presented he will not be able to.

If we were operating under this bill and the current Pest Control Products Act he would not be eligible for compensation and there would be no requirement for him to ask exemption from this bill. He would be exempt because it was not a registered product used in accordance with the directions approved under the Pest Control Products bill.

Mr. Danforth: If any provision were made, Mr. Chairman, for the use of chemicals it would have to be made by leave of, or as an exemption under, the Pest Control Products Act—the other Pest Control Products Act—rather than under this particular bill.

The Chairman: He would not ask for exemption. He would be disqualified in the event that he made application for compensation. Would that not be correct?

Mr. Danforth: I appreciate that; but my point is that I am certain that certain segments of agriculture are going to feel that they are travelling much faster than is departmental action in this, and then any desire on the part of an individual to use such chemicals would have to be considered under the other act rather than under this bill.

Mr. Phillips: Yes.

[Interprétation]

Est-ce qu'on prévoit le cas où le cultivateur qui désirerait employer de tels produits chimiques puisse demander une exemption en vertu de cette loi afin que, s'il y avait contamination et si le produit effectivement n'était pas mis en vente, qu'il puisse demander une exemption en vertu de la Loi? Le gouvernement ne serait pas alors tenu de l'indemniser.

L'hon. M. Olson: Je vais demander à M. Phillips de commenter plus en détail, mais pour le moment, il pourrait le faire sans que cela soit inscrit. Toutefois, après l'adoption de la Loi, il ne pourra pas le faire. M. Phillips pourrait peut-être vous donner d'autres détails.

M. Phillips: Oui, monsieur le président. Il y a deux parties à cette question. La première a trait à l'acceptation de l'inscription et des retards. Ceci tombe sous le coup de la Loi sur les produits antiparasitaires, que nous verrons plus tard.

Présentement, en vertu de la Loi sur les produits antiparasitaires, un cultivateur peut le faire sans inscription. Mais si cette Loi est adoptée telle que présentée, il ne pourra pas le faire. Si nous étions régis par ce bill et par l'actuelle Loi sur les produits antiparasitaires, il n'aurait pas le droit de recevoir une indemnité car on n'exigerait pas qu'il demande d'être exempté de ce bill. Il serait exempté parce que le produit ne serait pas enregistré conformément à la Loi sur les produits antiparasitaires.

M. Danforth: Si l'on permettait l'usage des produits chimiques, monsieur le président, il faudrait le faire par l'entremise de la Loi sur les produits antiparasitaires plutôt qu'en vertu de ce projet de loi.

Le président: Il ne demanderait pas d'exemption, il serait tout simplement disqualifié. N'est-ce pas?

M. Danforth: Oui, je comprends, mais voici le point que je voulais soulever. Je suis sûr qu'il y a certains secteurs de l'agriculture qui estimerait qu'ils vont beaucoup plus vite et plus loin que tout geste posé par le ministère à ce sujet. Et si un particulier désirait employer de tels produits chimiques, il devrait le faire en vertu de l'autre loi plutôt qu'en vertu de celle-ci.

M. Phillips: Oui.

[Text]

Mr. Danforth: Thank you. I pass, Mr. Chairman.

The Chairman: Thank you, Mr. Danforth.

I recognize Mr. Korchinski (Mackenzie).

Mr. Korchinski: I have a very short question, Mr. Chairman.

An hon. Member: On a point of procedure, are you still on clause 3?

• 1005

The Chairman: Yes, sir.

Mr. Korchinski: Is the amount of money that will be available to the Minister to make compensation to be granted by way of an estimate in the House? Is this the method you will use?

Mr. Olson: Yes, that is right; there will be an item in the estimates.

Mr. Korchinski: Is it going to be a lump sum that would be available, which might determine the maximum or minimum that you might—

Mr. Olson: We are obliged to estimate the expenditures for all purposes. If this act is passed and, for example, an unexpectedly high expenditure is needed in some years to meet the provisions, this is not—

Mr. Korchinski: You would have a lot of public hearings every year or you would just simply ask for a certain amount of whatever you may require in that particular year.

The Chairman: Thank you, Mr. Korchinski. I recognize Mr. Clermont.

M. Clermont: Monsieur le président, mes questions se rapportent aux articles 4, 5, 6 et 7. Comme nous en sommes à l'article 3, je vais attendre, pour le moment.

The Chairman: Thank you, Mr. Clermont. Mr. Roy (Laval)?

M. Roy (Laval): Monsieur le président, étant donné que nous discutons des indemnités, je pense que le facteur premier dans l'utilisation des insecticides est surtout le mode d'emploi. Et avec l'expérience que j'ai pu avoir, j'ai vu des dommages causés par des insecticides, des herbicides et des fongicides. Je pense que plus de 80 p. 100 de ces dommages sont occasionnés par le mode

[Interpretation]

M. Danforth: Merci. Je cède la parole.

Le président: Merci, monsieur Danforth. Monsieur Korchinski maintenant, de Mackenzie.

M. Korchinski: J'ai une brève question.

Une voix: En sommes-nous toujours à l'article 3, monsieur le président?

Le président: Oui, monsieur.

M. Korchinski: Est-ce que la somme qui sera mise à la disposition du ministre pour les indemnités, sera prévue dans les prévisions budgétaires approuvées à la Chambre?

L'hon. M. Olson: Oui, il y aura certainement un poste aux prévisions budgétaires à cette fin.

M. Korchinski: Une somme globale ou est-ce que ce sera un maximum et un minimum?

L'hon. M. Olson: Nous sommes obligés de prévoir les dépenses à tous les postes. Si la Loi est adoptée et si, par exemple, une dépense excessivement élevée est nécessaire dans quelques années à cette fin, il n'y a rien que nous puissions faire à ce sujet.

M. Korchinski: Vous demanderiez une certaine somme, ce que vous estimez vouloir dépenser.

Le président: Merci, monsieur Korchinski. Je passe la parole à M. Clermont.

Mr. Clermont: Mr. Chairman, my questions come under clauses 4, 5, 6 and 7. As we are dealing with Clause 3 at the present time, I shall wait.

Le président: Merci, monsieur Clermont. Monsieur Roy, de Laval.

M. Roy (Laval): Mr. Chairman, as we are discussing compensation, I think that the prime factor in the use of insecticides and pesticides is primarily the directions for use.

I have seen cases of damage caused by insecticides, weed-killers and fungicides. I think that over 80 per cent of this damage was due to the way they were used. All

[Texte]

d'emploi. Tous les produits sont bons mais la façon de les utiliser, la concentration, l'emplacement peuvent influencer l'efficacité du produit.

A titre de suggestion, monsieur le président, ne pourrait-on pas demander, pour protéger autant le fabricant que le ministère qui, éventuellement, pourrait être appelé à payer une indemnité, que le mode d'emploi de ces produits-là soit bilingue? J'en connais plusieurs qui sont soit en français, soit en anglais. Mais s'ils étaient bilingues, je pense que l'on éviterait beaucoup de ces paiements d'indemnités. Le cultivateur doit lire les modes d'utilisation dans une langue qui n'est pas la sienne, alors l'efficacité de ces produits, même d'excellente qualité, est d'autant plus réduite. Je pense qu'on pourrait éviter, de cette façon, beaucoup de complications, autant pour le fabricant que pour le ministère.

Mr. Olson: Mr. Chairman, this question relates to the other bill, Bill C-154, I believe. However, I feel that we require either French or English, or both; that if a manufacturer were attempting to sell his product into a French-speaking community and he did not have French instructions on it that would be very foolish—and *vice-versa*. That would be part of the promotion of the sale. Certainly, these customers should be satisfied with the product and be able to read and understand the directions fairly clearly.

Mr. Roy (Laval): Les dommages sont causés surtout par la mauvaise utilisation des produits, pas la mauvaise qualité. Je pense que, de cette façon, on pourrait éviter des frais et au fabricant et au ministère. On découvre après enquête, dans un nombre assez élevé de cas, que le mode d'emploi n'a pas été suivi tel que recommandé par le fabricant.

Mr. Olson: I do not question that, but I am wondering whether or not it was because the label was not printed in the language that was well understood in the area. I am advised that we have not had any complaints about the label not being printed in the proper language; and, of course, in most cases the label is printed in both languages.

• 1010

The Chairman: Thank you, Mr. Roy. Mr. Gleave, on clause 3. Certain members have indicated to me that they still wish to speak on Clause 3 and I have three who have

[Interprétation]

products are good, but the directions, the concentration, the location may influence the effectiveness of the product.

Could we not, Mr. Chairman, ask as a measure of protection for the manufacturer as well as for the Department which might possibly have to pay compensation, that the directions for use for these products be bilingual? I know several products which have directions either in English or French. I think we would eliminate a great many payments of compensation if the directions were bilingual. Whenever a farmer has to read the instructions in a language which is not his own, the effectiveness of the products concerned, although they be of excellent quality, is reduced accordingly. I think that this way, we could eliminate a great many complications for the manufacturer as well as for the Department.

L'hon. M. Olson: Monsieur le président, cette question relève de l'autre bill, le bill 154 je crois. Toutefois, je crois que nous devrions exiger soit le français, soit l'anglais ou les deux. Si le fabricant toutefois, tente de vendre ses produits dans une collectivité francophone et qu'il n'a pas de mode d'emploi en français, ce serait plutôt fou, n'est-ce pas? Et l'inverse est vrai aussi. Cela fait partie de la promotion des ventes. Ces clients doivent être satisfaits de son produit et en mesure de lire et de comprendre le mode d'emploi.

Mr. Roy (Laval): Damage is caused especially because products are not used properly, not because their quality is bad. I think that this way we could reduce the number of compensation claims for the manufacturer and the Department. Upon investigation, we have discovered that in a fairly high percentage of cases the manufacturer's instructions were not followed.

L'hon. M. Olson: Je ne mets pas cela en doute mais je me demande si c'était parce que l'étiquette n'était pas dans une langue qui était bien comprise dans le secteur. Car on me dit qu'on n'a pas reçu de plaintes à l'effet que l'étiquette n'était pas imprimée dans la bonne langue. Évidemment, dans la plupart des cas, c'est dans les deux langues que l'étiquette est imprimée.

Le président: Merci, monsieur Roy. Monsieur Gleave, l'article 3? J'ai certains députés qui m'ont indiqué qu'ils veulent poser des questions sur l'article 3. Ensuite, j'en ai trois

[Text]

indicated that they wish to speak on Clause 4—Mr. Lind, Mr. Horner and Mr. Clermont.

Mr. Gleave: I wish to propose an amendment, Mr. Chairman, if that is in order at this time. It would be as an addition after clause 4.

The Chairman: Could you provide the Chair with a copy?

Mr. Gleave: Yes. I will have to write another one so that you can have a copy.

Mr. Korchinski: Is is clause 3 or clause 4?

The Chairman: Which clause do you propose to amend?

Are there any other questions while Mr. Gleave is preparing his amendment?

M. Lambert (Bellechasse): A l'article 3, paragraphe (2), alinéa b) il est écrit:

A moins que le ministre ne soit convaincu que les résidus de pesticide ne sont pas présents dans ou sur le produit par suite d'une faute du cultivateur, de son employé ou mandataire, ou d'un propriétaire antérieur...

Supposons qu'un cultivateur achète une propriété, qu'il ne sache pas qu'on a utilisé des produits antiparasitaires sur ce champ et que, par la suite, ses produits soient contaminés. Devient-il, lui, automatiquement responsable des actes de son prédécesseur? La loi prévoit-elle ces cas? Est-ce le sens de l'alinéa b)?

Mr. Olson: Yes, I think it is. I dealt with this during the meeting on Tuesday. We have to satisfy ourselves that the residue getting into the product is not by fault; that is, that they knowingly misused the chemical, whether it was the farmer himself or his employee or his agent, or indeed, if it was done prior to him purchasing the land.

In the case of a farmer buying land that is contaminated so that there is residue getting into the product, this would be a legal question of him having purchased something that is perhaps not what it was represented to be if there were high levels of chemicals in the land that were getting into the product. I do not think that the Department or the government assumes the responsibility for guaranteeing that situation and that is why it is put in the Act.

[Interpretation]

qui m'ont indiqué qu'ils voulaient poser des questions sur l'article 4: M. Lind, M. Horner, M. Clermont.

M. Gleave: Je désire proposer un amendement, monsieur le président. Je me demande s'il est recevable à ce moment-ci. Il s'agit d'une addition après l'article 4.

Le président: Pourriez-vous en donner une copie au président?

M. Gleave: Il faudra que j'en rédige une autre copie à cette fin.

M. Korchinski: S'agit-il de l'article 3 ou 4?

Le président: Quel article voulez-vous amender? Y a-t-il d'autres questions à poser pendant que M. Gleave rédige son amendement?

Mr. Lambert (Bellechasse): Under Clause 3 (2) (b), it says:

unless the Minister is satisfied that the pesticide residue in or upon the product is not present because of any fault of the farmer, his employee or agent, or of a previous owner of the land...

If a farmer purchases land and is not aware that any pesticides were used previously and subsequently some products are contaminated, does he then automatically become responsible for his predecessor's acts? Does the Bill make provision for such cases? Is that what paragraph (b) indicates?

M. Olson: Oui, je le crois. A la séance de mardi, nous avons traité de cette question. Il faut que nous soyons tout à fait convaincus que les résidus qui entrent dans le produit ne le font pas faute; c'est-à-dire que le produit chimique n'est pas utilisé à tort en pleine connaissance de cause que ce soit par le cultivateur, son employé ou son mandataire, que cela ait été fait avant qu'il achète le terrain.

Dans le cas d'un cultivateur qui achèterait un terrain contaminé de sorte que des résidus s'introduiraient dans les produits, cela pourrait être une question juridique à l'effet qu'il aurait acheté quelque chose peut-être faussé, s'il y avait vraiment un niveau très élevé de produits chimiques dans la terre qui s'introduisaient dans les produits. Je ne crois pas que le ministère ou le gouvernement assume la responsabilité de garantir la situation et c'est la raison pour laquelle on a inséré ces dispositions.

[Texte]

Mr. Horner: I have a question that deals with this provincial case. If it was proven that it was no fault of the farmer, but that the provincial laboratories ruled that the cream could not be sold, would the federal government then send out their food and drug inspector to corroborate what the provincial people have found out and thereby allow that person to receive compensation under this Act?

Mr. Phillips: Yes, this is possible. Indeed, that is what happened in the British Columbia case. The Province referred it to the Food and Drug section explaining the case as they found it, and then Food and Drug examined the matter.

● 1015

Mr. Horner: In a sense it would be almost automatic that all provincial cases would be inspected?

Mr. Phillips: I would say yes, following this bill.

Mr. Horner: In this particular case it seemed to be grain that the farmer had purchased that had the residue in it, which was thereby passed on into the cream. How many cases, or what is the feasibility of this happening again, this grain having residue in it? Why would grain have residue in it? From faulty application of the pesticide?

Mr. Phillips: Yes, Mr. Chairman, that could certainly be the case. You may recall that on Tuesday I indicated that it was suggested here that in terms of grain, it is exceptional where there is residue on grain other than materials from seed treatments. But there could be drifts from the road and so on, if somebody were applying something to the roadway.

Mr. Horner: Excuse me. It would have to be drifted right on to the mature grain itself, would it? Or could it drift into the growing plant and turn up in the seed?

Mr. Phillips: It could that way. I said material seed treatment. There is such a thing as dieldrin seed treatment too, but just to complete what I started to say and to comment on what I said Tuesday, it does not take

[Interprétation]

M. Horner: J'ai une question qui a trait à cette cause provinciale. Si on a prouvé que la culpabilité n'était pas celle du cultivateur, mais que les laboratoires provinciaux avaient décidé que la crème ne pourrait pas être vendue, est-ce que le gouvernement fédéral enverrait alors les inspecteurs de la Direction des aliments et drogues pour vérifier ce que les fonctionnaires provinciaux avaient trouvé et par conséquent permettre à cette personne de recevoir une indemnité en vertu de la Loi?

M. Phillips: Oui, c'est possible. D'ailleurs, c'est ce qui s'est produit effectivement dans le cas de la Colombie-Britannique. Les autorités provinciales ont renvoyé le cas à la Direction des aliments et drogues avec leurs explications et ensuite la Direction des aliments et drogues a examiné l'affaire.

M. Horner: Et alors, ça serait presque automatique dans un sens. Tous les cas dans les provinces seraient alors inspectés.

M. Phillips: Oui. Je dirais oui à la suite de l'adoption du bill.

M. Horner: Dans ce cas précis, il semble que c'était le grain acheté par le cultivateur qui contenait des résidus qui ont ainsi passé dans la crème. Quel serait l'aspect pratique dans ce cas-ci, est-ce que cela pourrait se produire encore une fois, est-ce que le grain pourrait comporter des résidus et pourquoi comporterait-il des résidus? A la suite de l'emploi fautif des pesticides?

M. Phillips: Oui, ça serait certainement le cas.

Si vous vous souvenez bien, mardi, j'ai indiqué qu'on m'avait dit, en ce qui concerne le grain, que c'est plutôt une exception lorsqu'on trouve des résidus dans le grain autre que le matériel provenant du traitement des semences. Il se pourrait que cela se produise à partir d'une route par exemple, si on appliquait des produits chimiques sur la route.

M. Horner: Excusez-moi, il faudrait alors que ce soit soufflé sur le grain mûr lui-même n'est-ce pas? Ou est-ce qu'ils pourraient s'introduire dans la plante croissante et qu'on pourrait les retrouver dans la semence?

M. Phillips: C'est possible. J'ai parlé du traitement de la graine de semence. Il existe aussi un traitement des semences au dieldrin, mais j'avais commencé à dire et je reprends ce que j'ai dit mardi, il ne faut pas beaucoup

[Text]

very much residue in a forage or a grain if there is continuous feeding to build up in the fat of milk.

Mr. Horner: In this particular case, the cream had the residue in May and June. You would think that at this time when cattle were on the lush spring pastures there would be less chance of this turning up with the grain having that effect.

Mr. Phillips: Unless it was a soil residue.

Mr. Horner: A soil residue of continuing nature. Should not this Act then have some retroactive effect?

Mr. Phillips: I think Mr. Oslon or Mr. Williams explained that if goods were withheld from sale following the passage of this Act, then they would be eligible for compensation. If the action of the Food and Drug Directorate was taken following the passage of this Act, then they would be eligible. But it is not designed to cover sales that were stopped prior to the passage of this Act.

Mr. Horner: Well, I think you should take a look at some of the causes that brought about this Act. There are reasons for bringing in this Act. Some of these cases were definitely justifiable for compensation, or somebody must have felt they were justified or the Act would not be before us at this time.

Mr. Phillips: The only case that has come up where it has been demonstrated that it was probably through no fault of the farmer, and related to a registered pesticide used in accordance with the directions, was the one in British Columbia where, pending the passage of legislation like this, ex gratia payments were made to all the farmers.

Mr. Lind: Did the Minister recover from the manufacturer in that case?

Mr. Phillips: No. In this case, as near as we could pin it down, a portion of it at least resulted from residue in the soil which could well have been there from using aldrin according to directions in earlier years on potatoes. A new farmer bought it and he was not in potato production. He was in milk production and produced forage on the land, and that forage contained minute quantities of residue which multiplied when it was in the milk. It was partly that reason, because one

[Interpretation]

de résidus dans la provende ou dans le grain, si la nourriture est constante pour qu'ils s'accumulent dans le gras de lait.

M. Horner: Dans ce cas précis, la crème contenait les résidus des mois de mai et juin. On serait porté à croire que le bétail étant au pâturage du printemps, il y aurait beaucoup moins de chances que cela se produise n'est-ce pas?

M. Phillips: A moins qu'il s'agisse d'un l'adoption de la loi.

M. Horner: Et alors, un résidu dans le sol de nature constante. Est-ce que la loi ne devrait pas comporter une disposition rétroactive?

M. Phillips: Je crois que M. Williams ou M. Olson a expliqué ce cas à l'effet que si on retirait ou empêchait la vente des produits à la suite de l'adoption de cette loi, ils seraient alors en mesure de s'attendre à une indemnité. Si la Direction des aliments et drogues agissait à la suite de l'adoption de la loi ils auraient alors le droit de recevoir une indemnité. Mais la loi n'est pas destinée à couvrir les ventes qui ont été terminées avant l'adoption de la loi.

M. Horner: Je crois que vous devriez peut-être examiner certaines des causes qui ont amené la rédaction de ce projet de loi. Certains des cas étaient définitivement justifiables quant à l'indemnité ou on a dû penser qu'ils étaient justifiables, autrement on n'aurait pas rédigé le projet de loi.

M. Phillips: Le seul cas qui s'est présenté où il a été prouvé que ce n'était probablement pas par la faute du cultivateur, et concernant l'emploi d'un pesticide enregistré selon les directives, est celui de la Colombie-Britannique où, en attendant l'adoption d'une loi comme celle-ci, on faisait des paiements ex gratia à tous les cultivateurs.

M. Lind: Est-ce que le ministre a pu recouvrer du fabricant dans ce cas-là les sommes versées?

M. Phillips: Non, autant que nous avons pu régler le cas, une partie au moins était le résultat de résidus dans le sol qui auraient pu s'y trouver à la suite d'avoir employé l'aldrin selon les directives bien des années auparavant pour les pommes de terre. Un nouveau cultivateur en avait acheté et ne cultivait pas la pomme de terre. Il était producteur de lait et produisait son propre fourrage sur la terre et ce fourrage contenait une légère quantité de résidus, résidus qui se multipliaient dans

[Texte]

part of the episode was through people feeding cull potatoes, and they knew they should not feed cull potatoes because there was a minute amount of residue on potatoes.

[Interprétation]

le lait. C'est en partie la raison, parce qu'une partie de cette épisode a été causée par le fait qu'on employait comme provende les pommes de terre excédentaires, et qu'on savait que ces pommes de terre ne devaient pas être utilisées parce qu'il y avait une légère quantité de résidus sur les pommes de terre.

• 1020

Mr. Williams: I think it is only fair to say, Mr. Phillips, in respect of this particular case, that it was complicated to a considerable extent by a major change in analytical techniques which took place during the course of the investigations. Our research chemists were able to detect quantities in forage with accuracy that could not have been detected earlier, when this investigation first started.

Mr. Horner: Is aldrin still used to any extent?

Mr. Phillips: Aldrin is used. It has additional cautions about using it and not using it on potato crops where you want to subsequently use it for forages, and so on.

Mr. Lind: A further supplementary on this aldrin matter. Are there many manufacturers of this product in Canada?

Mr. Phillips: Manufacturers of aldrin in Canada?

Mr. Lind: Yes.

Mr. Phillips: There are registrants in Canada. I am not certain that the product is manufactured in Canada. It is imported.

Mr. Lind: Do they expect to recover damages for this farmer in this case from the manufacturer?

Mr. Phillips: Mr. Chairman, I tried to explain earlier that at that time it could have been used according to accepted recommendations. The product had been accepted for registration for this purpose and we had no way of knowing at the time the payments were made that it had not been used those four or five years before, not in accordance with directions. It was impossible to determine whether it was. But it could have occurred if he had used it according to directions, so it was assumed he had used it according to directions.

M. Williams: Je crois qu'il serait juste de dire, monsieur Phillips, que dans ce cas-ci, il y a eu des complications considérables par suite d'un changement important dans la technique d'analyse qui s'est produite au cours de l'enquête même. Nos chimistes ont pu déterminer de façon précise les quantités qui se trouvaient dans le fourrage, chose que l'on n'aurait pas trouvée lorsque l'enquête a débuté.

M. Horner: Est-ce qu'on emploie encore l'aldrin en quantité?

M. Phillips: L'aldrin est employée. Elle comporte des avertissements supplémentaires sur son emploi pour les cultures de pommes de terre, si la récolte doit servir plus tard au fourrage, et ainsi de suite.

M. Lind: Une question supplémentaire en ce qui concerne l'aldrin. Y a-t-il plusieurs fabricants de ce produit au Canada?

M. Phillips: Des fabricants d'aldrin au Canada?

M. Lind: Oui.

M. Phillips: Il y a certainement une inscription au Canada, mais je ne suis pas du tout sûr que ce soit fabriqué au Canada, je crois qu'il est importé.

M. Lind: Est-ce qu'ils croient possible de recouvrer du manufacturier les dommages subis par le fermier dans ce cas-là?

M. Phillips: J'ai essayé de dire auparavant, monsieur le président, qu'à ce moment-là on a pu l'utiliser conformément au mode d'emploi accepté. Le produit avait été accepté pour l'inscription à cette fin et nous n'avions aucun moyen de savoir, au moment du versement de l'indemnité, qu'il avait été utilisé pendant quatre ou cinq ans mais sans qu'on se soit conformé au mode d'emploi indiqué. Cela aurait pu se produire même si on l'avait utilisé de la façon indiquée.

[Text]

Mr. Lind: Had the manufacturer warned on his label that this residue would remain in the land for four or five years?

Mr. Phillips: No, it had not. There was no such warning.

Mr. Olson: The technology at that point was not such as to indicate that in this case there would be residue that could come up in the growth of forage crops and subsequently into animal fat.

Mr. Lind: I realize that. But further to this, who is the Act to protect, the manufacturer or the farmer?

Mr. Olson: It is to protect the farmer who has his crops withheld from sale in the marketplace by Food and Drug, and that is what happened, I understand, with the milk from this farm or farms.

Mr. Lind: How many cases do we have across Canada?

Mr. Phillips: The two cases that were mentioned on Tuesday were the only cases that we are aware of at the federal level where there was a significant loss. In one case we know it was aldrin, and in the other case it is uncertain as to what it was, or what the cause was.

Mr. Lind: Two cases.

Mr. Phillips: Yes.

Mr. Williams: One case involved three farmers. I think it is fair to say the British Columbia one was not a single-farmer case.

Mr. Lind: It involved those growing potatoes in that area.

Mr. Williams: Those that had grown potatoes. In no cases were potatoes held off the market at the time.

Mr. Lind: What about the other farmers who were using this product? Was their land contaminated?

Mr. Olson: It may or may not have been. But the point in question here is that their product was not condemned, if you want to call it that, or they were not prohibited from selling the milk.

Mr. Williams: I think it is fair to say that there is evidence that there are some other

[Interpretation]

M. Lind: Est-ce que le fabricant, sur l'étiquette, avait indiqué que les résidus demeureraient dans le sol pendant quatre ou cinq ans?

M. Phillips: Non.

L'hon. M. Olson: La technique à ce moment-là n'était pas suffisamment avancée pour indiquer que les résidus pourraient se présenter plus tard dans le fourrage et par conséquent dans la graisse animale.

M. Lind: Oui je comprends, mais est-ce que le projet de loi veut protéger le fabricant ou le cultivateur?

L'hon. M. Olson: Il veut protéger le cultivateur qui ne peut vendre ses produits parce qu'il en est empêché par la Direction des aliments et drogues. C'est ce qui s'est produit, si j'ai bien compris, en ce qui concerne le lait provenant de cette ferme ou de ces fermes.

M. Lind: Combien de cas ont été signalés d'un bout à l'autre du pays?

M. Phillips: Les deux cas qui ont été mentionnés mardi sont les seuls, à notre connaissance, où il y a eu une perte considérable. Dans le premier cas, il s'agissait bien de l'aldrine, mais dans l'autre, nous n'en connaissons pas la cause.

M. Lind: Deux cas.

M. Phillips: Oui.

M. Williams: L'un des cas impliquait trois cultivateurs. Je crois qu'il est juste de dire que le cas signalé en Colombie-Britannique touchait plus d'un cultivateur.

M. Lind: Les cultivateurs touchés s'adonnaient à la culture de la pomme de terre dans ce secteur.

M. Williams: La culture de la pomme de terre, et jamais ce produit n'a été retiré du marché, à cette époque-là.

M. Lind: Qu'est-il arrivé aux autres fermiers qui utilisaient le même produit? Leurs terres ont-elles été contaminées?

L'hon. M. Olson: Peut-être, peut-être pas, mais en fait, le produit n'a pas été condamné, ou si vous préférez, on ne les a pas empêchés de vendre le lait.

M. Williams: Je crois qu'il est juste de dire qu'il y a certains autres cultivateurs dans

[Texte]

farmers in that area who have some levels of contamination in their land. But, in general, they have adjusted their production practices, they have taken the help of this and produced products that do not take it up or in which it is not a sensitive commodity.

• 1025

Mr. Lind: Are we certain of this?

Mr. Williams: In which way, Mr. Lind?

Mr. Lind: That there is no further contamination?

Mr. Williams: The products coming out of that area have been kept under scrutiny, if that is what you mean. Yes. It is a relatively very small area, a very small pocket of the total area involved. I am not certain what it is. The total valley is only some 5,000 acres in extent.

Mr. Horner: In other words, when a residue is found, the total area around that particular location is examined very closely, would you say?

Mr. Williams: The normal procedure followed by the Food and Drug Directorate in matters of this nature is that if a residue is found, it is usually found at the commercial level, somehow. That is to say, it may be in butter, it may be in bulk milk, it may be in something of that nature. The next procedure, then, is to try and trace it back to its source, and they break down their samples to the various suppliers supplying that bulk in which it was found. So, in general, the statement you have made is correct, that the whole area is scrutinized.

Mr. Horner: In that particular case, Dr. Phillips said on Tuesday that the farmers could have carried on if they had only continued growing potatoes. Yet you said it was because of the feeding of cull potatoes that the animals stored up the residue in their fat. In other words, the residue must have been in the potatoes. How could they then continue to grow potatoes? If the aldrin was in the soil, would the residue not continue to show up in the potatoes?

Mr. Phillips: The main product of the valley is potatoes, and these farmers that have the difficulty were not in potato production. But cull potatoes, as you know, are sold for next to nothing, and these farmers were buying their cull potatoes from the other people. The level of residue in a potato is infinitesimal. But the rule-of-thumb I use is that a

[Interprétation]

la région qui ont un certain niveau de contamination dans leur sol, mais en général, ils ont modifié leurs habitudes pour donner des produits qui soient sûrs.

M. Lind: Sommes-nous sûrs?

M. Williams: Dans quel sens, monsieur Lind?

M. Lind: Qu'il n'y a plus de contamination?

M. Williams: Les produits qui viennent de cette région sont examinés très attentivement. C'est une région plutôt restreinte, plutôt limitée. Je ne suis pas trop sûr de la superficie, mais il s'agirait d'au plus 5,000 acres.

M. Horner: En d'autres termes, quand on trouve un résidu, toute la région avoisinante est examinée très attentivement, si j'ai bien compris ce que vous avez dit?

M. Williams: Règle générale, la Direction des aliments et drogues trouve ces résidus au niveau commercial, c'est-à-dire dans le beurre, dans le lait ou quelque chose du genre. Ensuite, ce que fait la Direction c'est de remonter à la source. On remonte ainsi aux différents fournisseurs qui ont fourni leurs produits dans cette zone ou cette région. Vous avez donc raison de dire qu'on examine toute la région.

M. Horner: Dans ce cas particulier le docteur Phillips a dit mardi que les cultivateurs auraient pu continuer s'ils s'étaient tournés vers la culture de la pomme de terre. Mais, vous avez dit que c'est en raison du fourrage de pommes de terre que les animaux ont accumulé ce résidu dans leur graisse. Si l'aldrin se trouvait dans le sol, est-ce que le résidu ne se retrouvait pas dans la pomme de terre?

M. Phillips: Le produit principal de cette vallée c'est la pomme de terre. Les cultivateurs qui ont éprouvé certaines difficultés ne produisaient pas la pomme de terre. Mais, comme vous le savez, les pommes de terre excédentaires coûtent très peu cher et alors ils achetaient des autres producteurs les pommes de terre pour le fourrage, la provende.

[Text]

residue in feed can multiply by 11, and this is what you will get in the fat.

The Chairman: Gentlemen, I now have before me the amendment submitted by Mr. Gleave. It is moved by Mr. Gleave. It is proposed that it should come under Section 3, subsection (5). I shall read it, and then I would like to make one observation.

The compensation paid to the farmer in any instance shall not be less than 90 per cent of the real market value of any product at the time of loss.

May I suggest to the Committee that under Clause 4, section (e) ...

(e) prescribing the terms and conditions for the payment of compensation under this Act;

would probably be the time and the place for this kind of an amendment or addition or whatever else. Does that sound reasonable to the Committee? We are dealing with Clause 3. I am suggesting that the proposed amendment could probably better be dealt with under Clause 4, under (c), or under (e).

Mr. Barrett: Mr. Chairman, put it on and put it aside.

The Chairman: Is it the wish of the Committee to carry Clause 3?

An hon. Member: Carried.

The Chairman: Thank you. We will commence our consideration of Clause 4, and I will recognize Mr. Lind. You have a question?

Mr. Lind: I am on Clause 5, thank you.

The Chairman: You are on Clause 5. Mr. Horner on Clause 4.

Mr. Horner: I was concerned about regulations that are going to come out of Clause 4. Are there going to be a set of prescribed regulations as to who may sell and how it shall be sold, pesticides generally?

Mr. Olson: That is in the other Act.

Mr. Horner: Would it be all entirely in the other Act?

[Interpretation]

Le niveau de résidu dans la pomme de terre est très petit, mais le résidu dans la provende peut se multiplier par onze. Et c'est ce que vous obtiendrez dans la graisse.

Le président: Je m'excuse. J'ai maintenant devant moi le projet d'amendement proposé par M. Gleave.

Proposé par M. Gleave. Il est proposé de l'insérer à l'article 3, paragraphe e). Je voudrais en donner lecture, puis faire une remarque.

L'indemnité versée au cultivateur à chaque occasion ne sera pas inférieure à 90 p. 100 de la valeur commerciale réelle du produit au moment de la perte.

Puis-je dire que l'article 4, paragraphe e)

e) prescrivant les modalités pour le paiement d'une indemnité en vertu de la présente loi;

serait probablement le moment voulu et l'endroit voulu pour présenter un amendement de ce genre ou une addition ou quelque chose d'autre. Est-ce que cela vous semble raisonnable?

A l'heure actuelle, nous étudions l'article 3 mais je suggère que le projet d'amendement pourrait peut-être être mieux étudié à l'étape de l'article 4, au paragraphe c) ou e).

M. Barrett: Alors, mettons-le de côté tout simplement, monsieur le président.

Le président: Très bien. Alors, est-ce que le comité veut adopter l'article 3?

Une voix: Adopté.

Le président: Merci. Nous allons maintenant étudier l'article 4. Monsieur Lind d'abord, vous avez une question.

M. Lind: Non, elle touche l'article 5.

Le président: Monsieur Horner, sur l'article 4.

M. Horner: Ce qui m'inquiétait ce sont les règlements qui découleront de l'article 4. Est-ce qu'il va y avoir un certain nombre de règlements pour établir qui va vendre et comment seront vendus les pesticides?

L'hon. M. Olson: C'est inclus dans l'autre loi.

M. Horner: Est-ce que ce sera entièrement dans l'autre loi?

[Texte]

Mr. Olson: Yes, in the Plant Quarantine Act. That is Bill C-154.

Mr. Horner: Generally speaking, I would like to see as much as possible in the Act itself rather than in the regulations. I am a little bit disappointed that the Minister has gone to the trouble of outlining eight ways in which regulations will be prescribed and devised, yet in no case laying down the regulations. Surely we could have done a better job in prescribing claiming for compensation in the whole list here. Surely we could have outlined the regulations in the Act a little better, rather than just describing what the regulations shall pertain to.

• 1030

Mr. Olson: Mr. Chairman, if I may reply to that, I think that we have done in the draft here of section 4 exactly what Mr. Horner wants in giving all that detail of the manner in which the regulations will be attached to the Act; because we could, of course, have just put in subclause (h) which says:

generally for carrying out the purposes and provisions of this Act.

But in compliance with what you have just suggested we spelled it out in a great deal more detail and put that in the bill.

Mr. Horner: Look at clause (e), for example:

prescribing the terms and conditions for the payment of compensation under this Act;

Surely we are entitled to know the terms and conditions, and not just be told that they will be in the regulations.

Mr. Olson: Mr. Chairman, there are other details that are always put in the regulations for any act. A great many of the terms and conditions are laid out in clause 3, for example, and in clause 5 and in several of the other clauses there is a great deal of this spelled out; and the terms and conditions and all of the other procedures that will be in the regulations obviously must be in compliance with the clauses of this bill.

Mr. Horner: Have the regulations been drafted?

Mr. Olson: Not in legal form, nor completely.

[Interprétation]

L'hon. M. Olson: Oui, dans le projet de loi C-154.

M. Horner: Je préférerais qu'on en inclue le plus possible dans la loi plutôt que dans les règlements. Je suis un peu déçu de ce que le ministre ait indiqué huit façons d'établir les règlements mais sans préciser quels seront ces règlements. Nous aurions certainement pu faire davantage, et indiquer ces règlements dans le projet de loi même plutôt que de n'indiquer que les sujets sur lesquels porteront les règlements.

L'hon. M. Olson: Monsieur le président, si vous me permettez de répondre. Je crois qu'au cours de l'étude de l'article 4 nous avons précisément fait ce que demande monsieur Horner en donnant les détails relatifs aux modalités d'annexion des règlements à la Loi concernant les modalités dont les règlements seront annexés à la loi, parce qu'on aurait dû l'inclure par exemple, dans le paragraphe h) qui dit:

d'une façon générale, pour la réalisation des objets et l'application des dispositions de la présente loi.

Mais comme vous l'avez dit, nous l'avons mis en détail dans le projet de loi.

M. Horner: Prenons, par exemple, le paragraphe e):

prescrivant les modalités pour le paiement d'une indemnité en vertu de la présente loi;

Certainement, nous avons le droit de connaître quelles sont les conditions, les modalités, sans simplement savoir qu'elle sont incluses dans les règlements.

L'hon. M. Olson: Eh bien, monsieur le président, il y a d'autres détails qui sont toujours prévus pour les règlements de toutes les lois, quelles qu'elles soient. Vous en trouvez, par exemple, en détail à l'article 3, à l'article 5, et dans un certain nombre d'autres articles. On a bien veillé à ce que les conditions et modalités et autres conditions des règlements soient conformes, évidemment, aux articles de la loi.

M. Horner: Est-ce que les règlements ont été rédigés déjà?

L'hon. M. Olson: Pas sous une forme juridique et pas complètement.

[Text]

Mr. Horner: Could the Committee see a copy of the regulations while we are dealing with this bill—not necessarily in legal form, but in rough draft.

Mr. Olson: Mr. Chairman, it is not traditional or standard practice to provide the regulations, or, indeed, to complete the drafting of them, until we see what the Act is and it is passed.

It is pretty difficult to write regulations giving support administrative rules, so to speak, to meet the terms and conditions of the Act until we have the Act.

Another aspect, of course, is that conditions may change, and regulations have to be changed in accordance with those conditions and still meet the provisions of the Act.

Mr. Horner: I am fully prepared to agree with the Minister that conditions change and that regulations must perhaps change with times and conditions, but the rules of the House of Commons have changed. We now have the bill handed to us before we enter upon a committee study and there is no reason whatsoever for our not getting a rough draft of the regulations to assure us that this Act will be set up in complete agreement with the wishes and intent of the Committee that is passing on it.

We should have a rough draft of the regulations, rather than such a clause as clause (b), for example, prescribing the methods to be used to determine the eligibility of any farmer for compensation. Surely we can be given a rough idea.

I cited this morning a case where the provincial examiner had ruled that the products could not be sold. I asked the question, "Will all provincial examinations be re-examined by the Food and Drug Directorate?" We were told that after the Act passed perhaps they would, or we were assured they would. Surely we should have a better idea than that of the method to be used in determining the eligibility of a farmer, so that I can go home and assure my farmers of the methods that will be used in any particular case to determine whether or not he is at fault—whether he should have purchased the contaminated grain, or was at fault because he did not have the grain tested before he fed it to his cows.

• 1035

I do not think he was, but I am not assured by those loosely worded prescription that the Department may at some future date decide

[Interpretation]

M. Horner: Est-ce que le comité pourrait voir un exemplaire de ces règlements puisqu'on étudie le projet? Pas un exemplaire officiel, mais simplement un avant-projet, un brouillon.

L'hon. M. Olson: Ce n'est pas la coutume que de fournir les règlements, ni même que de terminer la rédaction de ces règlements avant de savoir ce qu'est la loi et avant que la loi soit votée.

Il est très difficile de rédiger des règlements établissant l'application administrative de la loi avant d'avoir la loi elle-même. La deuxième chose aussi, c'est que les conditions peuvent varier et les règlements peuvent devoir être modifiés en fonction des conditions, tout en respectant la loi.

M. Horner: Je suis parfaitement d'accord avec le ministre. Les conditions peuvent changer, et les règlements doivent changer en fonction des changements des conditions, mais je dois lui dire que les règlements de la Chambre des communes ont changé. Maintenant, on nous soumet un projet de loi avant de l'étudier en comité, et il n'y a absolument aucune raison pour que l'avant-projet de règlement ne puisse nous assurer que cette loi va être appliquée conformément aux désirs et aux intentions du comité.

Nous pourrions avoir un avant-projet des règlements, au lieu, par exemple, du paragraphe b): prescrivant les méthodes à employer pour déterminer le droit d'un cultivateur à une indemnité. Certainement, on pourrait indiquer de quelle manière cela pourrait être fait.

J'ai parlé, plus tôt, d'un inspecteur provincial qui avait décidé que les produits ne pouvaient être vendus.

Je pose la question suivante: est-ce que tous les examens offerts dans les provinces seront ensuite, à leur tour, réexaminés par l'inspecteur de la Direction des aliments et des drogues? On nous a dit qu'ils le seraient peut-être une fois que la loi sera votée, et même qu'ils le seraient certainement. Il est certain que si on nous indiquait la nature des méthodes d'examen, cela nous permettrait d'avoir une meilleure idée de ce qu'on va avoir. Comme cela, je peux rentrer chez moi et renseigner mes agriculteurs sur la méthode qui sera utilisée dans n'importe quel cas particulier, pour déterminer si oui ou non ce fermier était en faute, s'il avait acheté le produit contaminé, ou s'il avait tort ou non parce qu'il n'y avait pas eu de vérification auparavant. Je ne pense pas, dans ce cas-là, mais

[Texte]

that he should not have bought that grain, or that he should have had it tested before he brought it.

The Chairman: May I ask Mr. Horner if there is some obvious omission here that he wishes to draw to the attention of the Committee?

Mr. Horner: I am merely saying that this is the first bill to be passed upon under our new rules. One of the standard complaints about the old system of agreeing to the principle on second reading and then going into a clause-by-clause study in the House in Committee of the Whole was that we could not examine; and we were told that we could not call outside witnesses in the House of Commons—that we could not do a lot of things. I am suggesting now that precedent should be set, that imagination should be shown by the Minister and by you, Mr. Chairman, and that a rough draft of the regulations accompany the bill to the Committee to give us a better idea about how the provision of this bill will apply to conditions across the country.

The Chairman: After the bill has been pursued the regulations could be reviewed by the committee.

Mr. Barrett: If anybody ever wants it and you have to get it you are going to be guaranteed it.

The Chairman: Order, gentlemen. Would Mr. Horner agree that after this bill has been accepted the Committee could ask to have the opportunity of reviewing the regulations thereunder. Would that not be a very reasonable request, Mr. Olson?

Mr. Olson: The government would be in error if it drafted regulations that did not conform to the intent and spirit of the Act. This is a legislative committee, as a branch of the House of Commons, to lay down the law, and the responsibility of the department is to recommend to the Governor in Council the regulations that will give effect to the law that has been passed by this Committee and by the House of Commons.

Mr. Horner: The point I am trying to make, Mr. Olson, through you, Mr. Chairman, is that I have no question about the intent of the government, or the intent of the Minister. I am concerned about the application of the

[Interprétation]

néanmoins je n'en suis pas certain, à la lumière de cette description très vaseuse selon laquelle le ministère pourra, à une date ultérieure, trancher la question, savoir: qu'il n'aurait pas dû acheter ce grain avant de l'avoir fait analyser.

Le président: Est-ce que je pourrais demander à M. Horner s'il y a dans ce texte une omission qu'il voudrait voir réparer par le comité?

M. Horner: Eh bien, disons que c'est la première fois que nous avons un projet de loi qu'il faut voter d'après le nouveau règlement. Une des plaintes qu'il y avait toujours dans l'ancien système, c'était qu'on ne pouvait pas, à l'étape de la deuxième lecture, et au comité plénier de la Chambre, on ne pouvait pas convoquer les témoins de l'extérieurs. On ne pouvait pas faire beaucoup de choses.

Alors, ce que je veux dire maintenant, c'est qu'il faut faire un précédent. Il faut que le ministre et vous-même, monsieur le président, fassiez preuve d'imagination dans la rédaction de ce texte pour que le projet de loi qui arrive devant le comité permette au comité d'avoir une meilleure idée de l'application de cette loi selon les conditions locales.

Le président: Après que vous aurez pris connaissance du projet de loi, le comité étudiera les règlements.

M. Barrett: Si quelqu'un le veut et vous devez le demander, vous en serez responsable.

Le président: Messieurs, s'il vous plaît. Je me demande si M. Horner est d'accord pour reconnaître qu'il n'y a pas de raison, une fois que le projet de loi aura été adopté, pourquoi le comité ne pourrait pas, examiner les règlements afférents à ce projet de loi. Je pense que ce serait là une demande assez raisonnable, monsieur le ministre.

L'hon. M. Olson: Le gouvernement ferait une erreur s'il rédigeait des règlements qui ne seraient pas conformes à l'esprit de la loi. Le devoir du comité de la Chambre des communes est de préparer des lois, et il appartient au ministère de soumettre au gouverneur un conseil des règlements relatifs à l'application de la loi adoptée par le comité et par la Chambre.

M. Horner: Monsieur le président, monsieur le ministre, ce que je veux dire, c'est que je ne doute pas des intentions du ministre ni du gouvernement. Ce qui m'intéresse, c'est l'application de la loi dans la mesure où cela

[Text]

Act as it affects the farmers whom I am supposed to be here representing.

Mr. Barrett: You are supposed to be.

Mr. Horner: Before I buy a pig in a poke—a blanket set of regulations—I want to be assured, relative to such cases as I have cited. I know, for example, that in British Columbia the farmers were very dissatisfied...

Mr. Olson: There was no Act at that time.

Mr. Horner: With the compensation paid. Whether they were justified in being dissatisfied I cannot say, but I know they were.

I also know that in all probability cases will arise again if we do not know exactly what effect the application of this act is going to have and I say to you, Mr. Olson, through you, Mr. Chairman, that great consideration should be given to the thought that a rough draft of the regulations accompany bills to committee.

I am not saying they should be the exact regulations—I am not saying that I could hold you to them—but rather than asking a committee to pass a clause such as this clause 4, dealing with regulations you should give us along with it a rough draft of the regulations.

For example, you may be omitting one section, one thought, or one area of concern, and a member of the Committee could then say that he agreed with the prescribed intent of the bill but that something else should also be in the regulations.

• 1040

The member for Saskatoon-Biggar has moved a very good amendment under this clause, specifically spelling out what he believes—as I think do most of the members of this Committee—the compensation should be.

We, in the Committee, should also have a chance to examine and adjust the regulations. Members could better review the situation if they knew exactly how the regulations were going to apply to the bill, and thereby perhaps many amendments in future years could be obviated.

Mr. Olson: Mr. Chairman, I wish to assure Mr. Horner that, as he has suggested, a great deal of care will be taken by the Department in drafting the regulations so that they do, in fact, give as precisely as possible the administrative effect of the terms and conditions laid down within the law when this Act is passed.

Mr. Horner: I think I have made my point and I hope that the Minister will give it further consideration.

[Interpretation]

touche les cultivateurs que je suis censé représenter.

M. Barrett: Vous êtes censé...

M. Horner: Je veux être certain, avant de voter un texte général de ce genre, que les cas que j'ai cités... Prenez, par exemple, le cas de la Colombie-Britannique où les cultivateurs ont été très mécontents.

M. Olson: La loi n'existait pas, alors.

M. Horner: Ils étaient très mécontents de l'indemnisation qui leur avait été versée. Maintenant, est-ce qu'ils avaient tort d'être mécontents ou non, je n'en sais rien. Ce n'est pas à moi de le dire, mais disons qu'ils n'étaient pas contents. Je sais également qu'il y aura peut-être encore des cas qui vont se présenter si nous ne savons pas exactement dans quelle mesure cette loi pourra être appliquée. Je vous le dis, monsieur le président, et monsieur le ministre, il faut veiller à ce que ces avant-projets de règlements soient transmis au comité avec le projet de loi.

Je ne vous demande pas le projet complet et définitif, mais il serait préférable, avant de voter sur ce projet de loi que l'on connaisse les règlements d'application.

Par exemple, vous avez peut-être oublié un élément, un domaine, et quelque membre du comité pourrait bien dire: Oui, je suis d'accord avec les intentions qui vous ont guidés dans ce projet de loi, mais je pense que vous devriez également tenir compte de cela dans le règlement.

Le député de Saskatoon-Biggar a déposé un amendement dans ce sens, très bon d'ailleurs, où on dit très clairement ce que, d'après lui, (et je pense que c'est valable pour tous les membres du comité) devraient être les indemnités versées. Il faudrait également que nous ayons la possibilité, ici, au comité, d'examiner et d'adapter les règlements. Je pense que les députés comprendraient mieux s'ils savaient exactement comment les règlements s'appliqueront plus tard au projet de loi et évitant ainsi des modifications ultérieures.

L'hon. M. Olson: Monsieur le président, je voudrais que M. Horner soit assuré que toute l'attention dont il a parlé sera donnée par le ministère dans l'avant-projet des règlements, afin qu'ils donnent, avec le plus de précision possible, l'effet qu'auront les conditions prévues dans le projet de loi, lorsqu'il aura été adopté.

M. Horner: Je pense que j'ai expliqué clairement ce que je voulais dire et j'espère que le ministre y apportera son attention.

[Texte]

The Chairman: I will now recognize Mr. Clermont.

M. Clermont: Monsieur le président, à l'article 4...

M. Roy (Laval): J'en appelle au Règlement, monsieur le président. J'avais demandé la parole lors de l'étude de l'article 3, mais l'honorable député de Crowfoot a commencé à parler et je l'ai laissé continuer. Je voudrais mentionner ici un point concernant les résidus. Il y a deux ans, je crois, nous avions fait faire des analyses sur des épinards, et nous avions décelé des traces de nitrate dans le feuillage.

A ce moment-là, nous avons reçu une pétition, je pense, de l'Association des jardiniers maraîchers qui avait envoyé un mémoire, ici, à Ottawa. Je voudrais demander à M. Phillips s'il a reçu ce mémoire? Pour reprendre ma question: est-ce que vous auriez reçu un mémoire concernant les sources de nitrate sur les épinards?

Mr. Williams: I can only speak from hearsay in respect to this particular case. It was my understanding that representations were received by the Food and Drug Directorate of the Department of National Health and Welfare concerning the possibility of high nitrate content in certain baby foods. It is my understanding, however, that all the investigational work that has been done by the Food and Drug has indicated that there is no danger whatsoever in this country. My understanding is that there has been a problem in some parts of another country, where excessively high nitrogen fertilizers have resulted in some increase in nitrates in certain baby foods. However, I did read a report—I am not reporting factually here, I am speaking solely from hearsay—that this had been investigated in this country and there was no problem here.

Mr. Gleave: On a point of procedure, now that we are on Clause 4 may I move my motion under the appropriate section?

The Chairman: Would you agree that it probably comes under Clause (c) or (e)?

Mr. Barrett: Let him make it now. What difference does it make.

Mr. Gleave: If there is any reason it should not be considered, all right, but I fail to see why it should not be considered at this time, Mr. Chairman.

• 1045

The Chairman: I do not think there is any particular reason that it could not be consid-

[Interprétation]

Le président: Monsieur Clermont.

Mr. Clermont: Mr. Chairman, under clause 4...

Mr. Roy (Laval): Point of order, Mr. Chairman. I asked to speak while clause 3 was under consideration, but the hon. member from Crowfoot talked and I could not say what I wanted to say. I wanted to raise a point concerning residues. I think that two years ago we had some analyses made on spinach which revealed traces of nitrates in the foliage.

At that time we had received a petition, I believe, from the Market-gardeners' Association who had sent a brief here, to Ottawa. I would like to ask Mr. Phillips whether he has received this brief? To return to my question: have you received a brief regarding the sources of nitrates on spinach?

Mr. Williams: Je ne peux vous dire que ce que j'ai entendu dire dans ce cas-ci. Je croyais que la Direction des aliments et des drogues du ministère de la Santé avait reçu certains commentaires au sujet de la teneur en nitrate de certains aliments pour bébés. Je crois savoir que toutes les enquêtes qui ont été faites ont démontré qu'il n'existe aucun danger au pays. Un problème a été signalé dans un autre pays où l'utilisation de certains fertilisants a entraîné une augmentation de la teneur en nitrates dans certains aliments pour bébés. J'ai pris connaissance d'un rapport (je ne rapporte pas des faits vérifiés, mais plutôt ce que j'en ai entendu dire) qui déclarait qu'une enquête a été menée ici et que le problème n'existe pas.

Mr. Gleave: Est-ce que je peux déposer ma motion sur l'article 4, puisque nous y sommes?

Le président: Ne croyez-vous pas qu'elle tombe plutôt sous le paragraphe c) ou e)?

Mr. Barrett: Qu'il la présente maintenant. Ça ne change rien.

Mr. Gleave: S'il y a une raison qui en empêche l'étude maintenant, très bien. Mais j'ignore pourquoi elle ne pourrait être étudiée à ce moment-ci.

Le président: Je ne vois aucune raison spéciale qui nous empêcherait de le faire. Je

[Text]

ered at this time. I think that is fair because, after all, you did present the amendment under the former clause, which has since been carried. I think your point is well taken. I will recognize you and if you wish to have your amendment put, I will be so directed. Gentlemen, there may be room for a little bit of discussion here. So you want to put your amendment as an addition under subclause (c) of Clause 4? It reads:

(c) prescribing the methods to be used in determining the amount of loss occasioned to a farmer and the maximum amount of compensation to be paid with respect to any loss shall not be less than 90 per cent of the market value of the product at the time of loss;

Would you be so kind as to rewrite subclause (c) and include your amendment. We will then have it in writing and we will put it forward as soon as you have completed it. In the meantime I will recognize one or two other questioners.

Mr. Gleave: I do not see the need to rewrite it. All you need to do as I read it is simply add, "and that the compensation to the farmers shall not be less than 90 per cent of the real market value of the product at the time of loss".

The Chairman: It is a question of your writing it or I will write it myself.

Mr. Barrett: Let him write it.

The Chairman: I think it would be more appropriate if you were to write the clause and add your addition to it and then I will present it when I receive it. In the meantime I will proceed by recognizing Mr. Clermont and Mr. Barrett.

M. Gauthier: Monsieur le président, je veux vous demander si la motion du député NDP ne ferait pas plutôt partie des règlements eux-mêmes? A l'article 4, on parle de règlements et on semble donner l'autorité au gouverneur en conseil d'établir des règlements. On dit: «Le gouverneur en conseil peut établir des règlements prescrivant les procédures à suivre, etc.» On donne tout simplement, à mon avis, au gouverneur en conseil la permission de faire des règlements basés sur cette loi.

Je crois que la motion qui définit le pourcentage fait beaucoup plus partie des règlements que le gouverneur en conseil peut

[Interpretation]

pense que c'est juste parce qu'en fait vous avez soumis l'amendement lors de l'étude de l'article précédent qui a maintenant été approuvé. Je vous donne la parole et si vous voulez que votre amendement soit déposé, eh bien, je vais agir en conséquence. Messieurs, on pourrait peut-être ouvrir la discussion ici. Est-ce que vous voulez mettre votre amendement à la fin du paragraphe c) de l'article 4 qui se lit ainsi:

c) prescrivant les méthodes à employer pour déterminer le montant de la perte subie par un cultivateur et l'indemnité maximum à payer pour toute perte ne sera pas inférieure à 90 p. 100 de la valeur marchande du produit au moment de la perte;

Est-ce que vous auriez l'amabilité de modifier le texte du paragraphe c) en y insérant l'amendement, puis nous l'étudierons. Entre-temps, je donne la parole à d'autres personnes.

M. Gleave: Je ne vois pas pourquoi il faudrait le récrire. Il s'agirait simplement d'ajouter:

«pourvu que les indemnités versées aux cultivateurs ne soient pas inférieures à 90 p. 100 de la valeur marchande réelle du produit au moment de la perte.»

Le président: Si vous ne l'écrivez pas, je le ferai moi-même.

M. Barrett: Qu'il l'écrive lui-même.

Le président: Je crois qu'il serait préférable que vous écriviez le paragraphe en question et que vous y ajoutiez ce que vous désirez. Ensuite je l'accepterai. Entre-temps, la parole est à M. Clermont puis à M. Barrett.

Mr. Gauthier: Mr. Chairman, I wanted to ask you if the motion from the NDP Member would not rather be part of the regulations themselves? In clause 4 reference is made to the regulations and it would appear that the Governor in Council is authorized to make regulations. It says as follows: "The Governor in Council may make regulations prescribing the procedures to be followed, etc. In my opinion, the Governor in Council is simply given the permission of making regulations based on this Act.

I believe that the motion which defines the percentage belongs more to the regulations than that the Governor in Council may set up than

[Texte]

établir plutôt que d'être déterminée dans la proposition de ces règlements à un taux maximum de compensation. Je crois que c'est un article du règlement et non un article du bill.

The Chairman: I may say that your point is well taken. However, it is the right of the hon. member to make this kind of an amendment if he so wishes and direct it to the Chair, and I would have no alternative but to accept it and present it to the Committee. I think if we proceed that way the Committee can then decide whether they want to leave it as it is or to amend these regulations to include the suggestion made by Mr. Gleave or not. That seems like a reasonable approach. We will decide that when we come to it. In the meantime I will recognize Mr. Clermont.

M. Clermont: Monsieur le président, l'article 4 autoriserait le gouverneur en conseil à établir des règlements prescrivant la procédure à suivre pour réclamer une indemnité, etc. Lorsque ces règlements seront établis, monsieur le président, est-ce l'intention du gouvernement de publier ces règlements dans la Gazette du Canada?

The Chairman: Mr. Williams.

Mr. Williams: Yes.

The Chairman: The answer is yes. Mr. Roy, did you have a further question?

Mr. Roy (Laval): No.

The Chairman: Mr. Barrett.

Mr. Barrett: My comments were going to be made in relation to the hon. member from Crowfoot and they have been very aptly answered by the Minister, so I will not have anything further to say at this moment.

The Chairman: Thank you, Mr. Barrett.

Mr. Gleave, is your amendment ready?

Order, please. I recognize Mr. Lambert (Bellechasse).

• 1050

M. Lambert (Bellechasse): Au sujet des règlements, à l'alinéa f), on dit:

excluant tout produit agricole ou toute personne, ou toute catégorie de produits ou de personnes, de l'application de la présente loi prescrivant les conditions d'exclusion;

Je trouve excessivement large une loi qui permettrait un règlement dans ce sens-là.

[Interprétation]

being determined in the proposal of these regulations at a maximum of compensation. I believe that this is a clause of the regulations and not a clause of the bill.

Le président: Si je peux me permettre, je dois vous dire effectivement que vous avez raison de soulever cette question mais c'est à l'honorable député de faire l'amendement qu'il juge bon de faire et, s'il le veut, de le soumettre au président. Je n'aurai alors qu'à l'accepter et à le soumettre au comité. Si nous agissons ainsi, ce sera alors au Comité de décider s'il veut le laisser tel quel ou bien s'il veut amender le règlement afin d'y introduire la suggestion de M. Gleave. Il me semble que c'est là une attitude assez raisonnable. Nous en déciderons lorsque nous aborderons la question. M. Clermont a maintenant la parole.

Mr. Clermont: Mr. Chairman, Clause 4 would authorize the Governor in Council to make regulations prescribing the procedures to be followed in claiming compensation and so forth. When the regulations are set up, Mr. Chairman, is it the intention of the Government to issue them in the *Canada Gazette*?

Le président: Monsieur Williams.

M. Williams: Oui.

Le président: La réponse est affirmative. Aviez-vous une autre question à poser, monsieur Roy?

M. Roy (Laval): Non.

Le président: Monsieur Barrett.

M. Barrett: Je voulais parler sur ce qu'a dit l'honorable député de Crowfoot mais le ministre vient d'y répondre. Par conséquent, je n'ai rien d'autre à ajouter en ce moment.

Le président: Merci, monsieur Barrett. Monsieur Gleave, est-ce que votre amendement est prêt? Y a-t-il d'autres membres qui voudraient parler? Un peu d'ordre, s'il vous plaît. Monsieur Lambert (Bellechasse).

Mr. Lambert (Bellechasse): Paragraph (f) of the regulations states as follows:

...excluding any agricultural product or any person or any class of products or persons from the operation of this Act, and prescribing the conditions of exclusion;

I believe that an Act which permits this kind of regulation is excessively broad in scope.

[Text]

Mr. Olson: Mr. Chairman, this will provide authority for exclusions as has been suggested by the hon. member, but at the present time there is no plan for exclusion. However, it could be used to exclude such things as provincial farms, corporation farms or particular products if it were considered to be in the public interest.

The Chairman: Thank you, Mr. Lambert.

Are there further questioners on Clause 4?

M. Clermont: Monsieur le président, concernant l'amendement qui doit être apporté par notre collègue, M. Gleave, avons-nous le droit de discuter l'amendement, ou s'il doit être présenté par le président après un vote?

The Chairman: We will wait until the amendment has been prepared and delivered to the Chair. I will read it. Then it will be open for discussion, and at that time you will have the opportunity to comment.

M. Clermont: Je n'ai pas l'intention d'en discuter, mais je me demande si on a le droit de le faire au sujet de l'amendement?

The Chairman: Oh, yes we will. Are there further questions?

Mr. Horner: I have a question on Clause 5 if you want to entertain it now, or come back to it later.

The Chairman: I think we will hold it. I have one other questioner on Clause 5. I will put your name down and recognize you later.

Mr. Lessard (Lac-Saint-Jean): Will we hold Clause 4 for the moment?

The Chairman: We are waiting for Mr. Gleave.

Mr. Horner: Mr. Chairman, while we are waiting, I think I should draw to the attention of the Chair and the Committee that we have distinguished company this morning in the person of the Chairman for Alberta of the Regional Desk of the Prime Minister's office. I think that is quite an honour for the Committee to be supervised by someone from such an eminent place.

The Chairman: Thank you, Mr. Horner.

Mr. Horner: Mr. Chairman, I should have mentioned also that we have with us an eminent senator from Alberta taking an interest in this Committee. I wish that more senators

[Interpretation]

L'hon. M. Olson: Monsieur le président, cela permettrait des exclusions comme l'honorable député l'indique mais en fait il n'est prévu, actuellement, aucune exclusion. Mais il pourrait par exemple y avoir les fermes provinciales ou certaines sociétés dans l'intérêt public. Il serait toutefois possible de l'utiliser pour exclure les fermes provinciales, les fermes corporatives ou certains produits, si ce devait être dans l'intérêt public.

Le président: Merci, monsieur Lambert. Y a-t-il d'autres questions à poser sur l'article 4?

Mr. Clermont: Mr. Chairman, regarding the amendment to be submitted by our colleague, Mr. Gleave, are we entitled to discuss it, or does it have to be submitted by the Chairman after a vote is taken?

Le président: Nous allons attendre que l'amendement soit préparé et transmis au président. Je vais vous le lire puis nous allons discuter et à ce moment-là vous aurez la possibilité de donner vos commentaires.

Mr. Clermont: I do not intend to discuss it. I just wonder if we have the right to discuss the amendment, that is all.

Le président: Oh oui, parfaitement.

Y a-t-il d'autres questions?

M. Horner: J'ai une question sur la clause 5, si vous voulez procéder maintenant ou y revenir par après.

Le président: Je pense que nous la retiendrons. J'ai une autre question sur 5. J'inscris votre nom et vous appellerai plus tard.

M. Lessard (Lac Saint-Jean): Retenons-nous la clause 4?

Le président: Nous allons attendre que M. Gleave ait son texte.

M. Horner: Monsieur le président, je voudrais attirer l'attention du président et du comité sur le fait que nous avons des hôtes distingués parmi nous, ce matin. Nous avons le président du bureau du premier ministre pour la région de l'Alberta. Je pense que c'est un honneur pour le Comité d'être en quelque sorte d'être chaperonné par une personnalité aussi éminente.

Le président: Merci, monsieur Horner.

M. Horner: Monsieur le président, j'aurais dû également mentionner que nous avons parmi nous un sénateur qui vient aussi de l'Alberta qui s'intéresse beaucoup aux tra-

[Texte]

would take an interest in the provinces from which they come and I would like to congratulate him for being here.

Mr. Whicher: I doubt if he will come back.

The Chairman: Gentlemen, may I read the proposed amendment to Clause 4, subclause (c), to be amended to read as follows:

prescribing the minimum methods to be used in determining the amount of loss occasioned to a farmer and the maximum amount of compensation to be paid with respect to any loss; and provided that the compensation paid to the farmer shall not be less than 90 per cent of the market value at the time of loss.

Mr. Gleave: Mr. Chairman, there is an error. You said "prescribing the minimum methods", and "minimum" should not be in there. Stroke it out please in the first line.

Mr. Barrett: There should have been an error when you said 90 per cent.

The Chairman: For clarification Mr. Gleave, may I read the part again.

to be paid with respect to any loss; and provided that the compensation paid to the farmer shall not be less than 90 per cent...

Mr. Gleave: Yes.

The Chairman: Gentlemen you have heard the amendment. I will leave it open for discussion. I think the minister wishes to make a comment.

• 1055

Mr. Olson: Mr. Chairman, there are some problems about the language throughout the bill that this will raise. For example, under Clause 3, subclause (3), it says:

The compensation that may be paid by the Minister to a farmer pursuant to subsection (1) in respect of any loss shall not exceed such maximum amount as may be prescribed by the regulations.

And then in subclause (4) it deals with:

—less than any minimum amount that is prescribed by the regulations.

And so on. Many of these things would have to be changed to accommodate this amendment, although I am not going to argue about that, because we can get into a procedure problem. And it may not be the proper place

[Interprétation]

vauX de notre Comité. J'espère que nous aurons plus de sénateurs qui s'intéressent à ce genre de question, je le félicite d'être venu.

M. Whicher: (Je doute qu'il revienne.)

Le président: Eh bien, Messieurs, puis-je vous donner lecture de l'amendement prévu pour l'article 4(c) qui va être amendé de la façon suivante:

Prescrivant le montant minimum à utiliser pour déterminer la perte accordée à un agriculteur et le montant maximum d'indemnisation versée concernant la perte, à condition que l'indemnité versée au cultivateur ne soit pas inférieure à 90 p. 100 de la valeur marchande du produit au moment de la perte.

M. Gleave: Monsieur le président, il y a une erreur. Vous avez dit: «prescrivant le montant minimum à utiliser», «minimum» ne devrait pas figurer; voudriez-vous le barrer s'il vous plaît.

M. Barrett: Il doit y avoir une erreur quand vous dites 90 p. 100.

Le président: Monsieur Gleave, je veux éclaircir les choses. Je relis:

...à payer pour toute perte et à condition que la somme versée au cultivateur ne soit pas inférieure à 90 p. 100.»

M. Gleave: C'est ça.

Le président: Vous avez entendu l'amendement. Vous pouvez en discuter. Je pense que le ministre voudrait faire des commentaires.

L'hon. M. Olson: Eh bien, monsieur le président, il y a un problème de texte dans l'ensemble du projet de loi. Par exemple, à l'article 3, paragraphe (3) il est dit que:

L'indemnité qui peut être payée, en conformité du paragraphe (1), par le Ministre à un cultivateur pour une perte ne doit pas dépasser le montant maximum que peuvent prescrire les règlements.

Puis à l'article 3, paragraphe (4):

...pour une perte lorsque celle-ci est inférieure à tout montant minimum prescrit par les Règlements.

Ainsi de suite. Il va falloir tout modifier pour qu'on ait tout de façon uniforme. Enfin, je ne veux pas discuter... car nous pourrions soulever une question de procédure. Ce n'est peut-être pas le bon endroit de le faire. Mais

[Text]

for it either. But just in so far as the amendment itself is concerned, the intent of the amendment that nothing shall be less than 90 per cent of the assessed value, I am not prepared to accept that kind of an amendment, because I think we need some experience in this.

There are different commodities involved and a very wide variety of possible circumstances and conditions involved here. I think we need to take all of this into account and to have some experience with this Act and leave it as it is now in Clause 4, so that we can change them without having to have an amendment to the Act insofar as these minimum and maximum amounts are concerned.

The Chairman: I have received indications from Mr. Clermont, Mr. Horner and Mr. Barrett who wish to speak, and I will now recognize Mr. Clermont.

Mr. Gleave: Mr. Chairman...

The Chairman: I have recognized Mr. Clermont.

Mr. Gleave: ... on a point of procedure. Since I have put the amendment down, do I not have the privilege of speaking to it?

The Chairman: Well yes, I think you should.

An hon. Member: Not necessarily.

Mr. Gleave: Mr. Chairman, I have asked you for a ruling.

The Chairman: Yes, I certainly think that you should have the opportunity of speaking to the amendment. I think in fairness I should recognize you now.

Mr. Gleave: Well my purpose in this is to assure that the farmer shall have at least this much protection guaranteed to him. I recognize some of the arguments that have been put forward by the Member for Crowfoot with regard to wanting to see the regulations, because the Member from Crowfoot knows, as I do, that you can have government acts, government bills, but also people are going to administer those bills; they are going to put down regulations, and the bill gives them a fair amount of scope.

Since we are dealing with this bill, I think this is one point where the protection to the

[Interpretation]

malgré tout, en ce qui concerne l'amendement lui-même, concernant la portée de l'amendement, voulant que rien ne soit moins de 90 p. 100 de la valeur marchande. Je ne suis pas prêt à accepter cet amendement parce que je pense qu'il faudra que l'on ait quelque expérience dans ce domaine.

Il y a certains produits agricoles intéressés, différentes denrées, et une grande variété de circonstances possibles. Je pense qu'il faudra que l'on tienne compte de tous ces facteurs et que l'on ait quelque expérience en la matière. Je pense qu'il nous faut tenir compte de tout cela et qu'il faudra attendre d'avoir un certain recul pour modifier quoi que ce soit à l'article 4 afin que nous puissions la changer sans avoir besoin d'un amendement à la loi en ce qui concerne les montants maximum et minimum.

Le président: J'ai sur ma liste M. Clermont, M. Horner et M. Barrett. M. Clermont a la parole maintenant.

Mr. Gleave: Monsieur le président.

Le président: J'ai donné la parole à M. Clermont.

Mr. Gleave: Question de procédure. Étant donné que j'ai déposé l'amendement, est-ce que je n'ai pas le privilège de parler de cet amendement?

Le président: Si, je pense que vous pouvez le faire.

Une voix: Ce n'est pas nécessaire mais...

Mr. Gleave: Eh bien, monsieur le président, je vous demande la parole.

Le président: Eh bien, oui, certainement, je pense que vous pouvez dire quelques mots sur votre amendement. Oui, je pense que en toute honnêteté je dois vous donner la parole maintenant.

Mr. Gleave: Eh bien, ce que je veux faire en fait, c'est m'assurer que les agriculteurs vont au moins avoir cette protection qui leur est garantie. Je comprends les arguments qui ont été avancés par le député de Crowfoot (M. Horner) en ce qui concerne les règlements qu'il veut voir parce que le député de Crowfoot (M. Horner) sait comme je le sais moi-même qu'on peut avoir des projets de loi gouvernementaux mais qu'également il y a des gens qui devront administrer ces lois et ils vont faire des règlements administratifs et le projet de loi est assez vaste.

Étant donné que nous sommes seulement en train d'étudier ce projet de loi, je pense que

[Texte]

farmer should be the concern of this Committee. Let us not forget that the loss of a particular animal or several animals for example out of a herd is not by any means the total loss that the farmer suffers. The farmer also suffers the total inconvenience in the case of brucellosis for example. He has to go and clean up his whole premises, and so on. This is additional loss.

If in an instance of pesticide, say 25 per cent of his herd or 25 per cent of his operation was taken out and he was given compensation at 90 per cent or 100 per cent, he would still be suffering a severe loss, because his total operation would be thrown out of gear, disrupted, probably not good enough any more or economic enough any more to provide him a living.

I think it is little enough in this case where his total operation has been disrupted by some means, some pesticide or some chemical under circumstances where he was not aware what the result was going to be. I think the least we can do is say that at least he will have 90 per cent compensation for the loss he has suffered. I think this Committee should concern themselves that this much protection at least is in the body of this Act.

• 1100

The Chairman: Thank you. I will now recognize Mr. Horner.

Mr. Horner: I would like the Minister to examine his remarks on this amendment very, very closely when he has a copy of the transcript, because what he said substantiated my argument that we should have a rough draft of the regulations so that we could better interpret the application of this Act. What the Member for Saskatoon-Biggar is saying is that he wants written into the Act something which may well be in the regulation, but we do not know. We do not know. We do not even have the assurance that it will. It may well be paid in most cases. We do not know, and we want the assurance that it will. I wholeheartedly understand the reasoning in the moving of the amendment because, as the member for Saskatoon-Biggar pointed out, the losing of the cream alone for a given period of time, is not the only loss that a cream producer has. It is not the only loss, if one could only talk to those farmers. At one time I suggested that we call witnesses from British Columbia I moved that we do that because I always want to be co-operative in order to facilitate the passing of this bill. Those farmers who had the problem with the aldrin in the potatoes and in their feed could

[Interprétation]

c'est là une question où la protection pour le cultivateur devrait concerner le Comité. N'oublions pas en effet que la perte d'un animal donné ou de plusieurs bêtes données, par exemple, dans un troupeau ne représente pas la totalité de la perte subie par l'agriculteur. Il subit également des inconvénients. Par exemple, s'il y a brucellose. Il doit nettoyer toutes ses installations. Ça représente une perte supplémentaire.

Dans le cas des pesticides, si disons, par exemple, 25 p. 100 de son bétail ou 25 p. 100 de son exploitation est supprimée, il reçoit 90 ou 100 p. 100 d'indemnité, il subira toujours une perte considérable malgré tout parce que son exploitation serait interrompue, son exploitation serait perturbée. Il se peut qu'elle ne soit plus suffisamment rentable peut-être par la suite pour qu'il puisse en vivre. Je pense donc que lorsqu'une exploitation a été perturbée d'une façon ou d'une autre par des produits chimiques, par des pesticides, dans des circonstances données dont il ne connaissait pas les résultats ou les conséquences, je pense que le moins que l'on puisse faire c'est dire: Eh bien, il aura 90 p. 100 d'indemnisation vis-à-vis des pertes subies. Je pense que notre Comité devrait s'assurer qu'au moins il pourrait avoir cette protection qui figurerait dans la loi.

Le président: Merci. Je donne la parole maintenant à M. Horner.

M. Horner: J'aimerais bien que le ministre examine les observations qu'il a formulées au sujet de cet amendement de façon très étroite lorsqu'il aura reçu le compte rendu car ce qu'il a dit a prouvé justement mon argument à l'effet duquel nous devrions avoir un projet de règlements afin de pouvoir mieux interpréter le projet de loi qui est devant nous. Ce que le député de Saskatoon-Bigger (M. Gleave) veut dire c'est qu'il voudrait insérer dans la loi une chose qui pourrait fort bien peut-être se trouver dans les règlements, mais pour laquelle nous n'avons aucune assurance. Nous ne sommes même pas sûrs que cela se fasse. Je comprends très bien le mobile de l'amendement car comme, l'a souligné le député de Saskatoon-Bigger (M. Gleave), la perte de crème n'est pas la seule que subit un producteur au cours d'une période d'année. Qu'on interroge ces cultivateurs.

Un jour, j'ai proposé que nous appelions les témoins de la Colombie-Britannique. Je l'avais fait parce que je voulais aider à l'adoption de cette loi. Ces cultivateurs pourraient en effet fort bien nous dire, eux qui ont eu le problème de l'aldrine dans leurs provendes, dans leurs pommes de terre, quels sont les

[Text]

very well tell us many of the pitfalls that this Act will encounter after it is passed, many of the regulations that perhaps should be in the Act. So, without saying too much further, I support the idea that the 90 per cent clause should be written in. The Minister referred to the fact that he thought 80 per cent would be high enough because this is something along the line of crop insurance.

Crop insurance is based on a 10 year average. They pay 80 per cent on a 10 year average. They are not taking any average into account. The amendment states that at the time of the loss it may be 90 per cent. It may be less than 80 per cent of the 10 year average on a given product from the manner in which the prices of farm products have been going down lately, it may be 70 per cent. I think the Minister's rough guess is 80 per cent of the 10 year average for crop insurance. Something similar in this case would not be good enough assurance at this time. We are paying compensation for loss that occurred to the farmer through no fault of his own.

I do not really see why it should not be 100 per cent. The only one question is that it should be 100 per cent not the fault of the farmers. If it was 100 per cent not the fault of the farmers I would wholeheartedly endorse that the government pay them 100 per cent compensation because they have registered the pesticides for sale. They have examined the pesticides and said they were safe if used as prescribed, and if a farmer used them as prescribed then I do not see for one minute why he should not get 100 per cent compensation. The only question is that there is a shadow of a doubt I suppose in some cases that it was not used exactly as prescribed, but that is the only reason I am accepting the 90 per cent figure.

Certainly in my estimation it cannot be compared to crop insurance. It should not be compared to crop insurance because in most cases crop insurance is an insurance against the elements, drought, hail, and so forth. We are not insuring against the elements here. We are going ahead and registering pesticides for use as prescribed and if they are used as prescribed, then the farmer should be compensated 100 per cent. I urge all members to think about this for a minute. Do not just blindly sit there and say no and think that anything that comes from an opposition member is no good and note against it. I think you have to think about the application of the Act and the farmers who will be concerned in the years ahead. I urge all members to support this. Ninety per cent is not an impossible figure. No doubt in many cases it should be

[Interpretation]

dangers que comporte ce projet de loi, une fois qu'il sera adopté, les dangers de certains des règlements qui devraient être insérés dans la loi. Aussi, sans aller plus loin, je suis favorable à l'insertion de la clause de 90 p. 100 dans la loi. Le ministre a dit qu'il croyait que 80 p. 100 serait suffisant, étant donné qu'il s'agit d'un genre d'assurance-récolte.

Or, l'assurance-récolte est fondée sur une moyenne de 10 ans et on paie 80 p. 100 mais fondée sur une moyenne de 10 ans. Ici, dans ce cas-ci, ce n'est pas fondé sur une moyenne. L'amendement dit «au moment de la perte», c'est peut-être 90 p. 100. En fait, c'est peut-être moins de 80 p. 100 sur une moyenne de 10 ans, si l'on admet que le prix des produits agricoles a baissé dernièrement. Ce sera peut-être réduit à 70 p. 100. Je crois que, pour le ministre, il s'agit de 80 p. 100 sur la moyenne de 10 ans pour l'assurance-récolte. Une décision comparable ne serait pas suffisante, à l'heure actuelle. Nous versons une indemnité pour des dommages qui ne sont pas de la responsabilité des cultivateurs.

Je ne vois pas pourquoi ça ne serait pas 100 p. 100. Pourquoi pas 100 p. 100, si c'était 100 p. 100 pour les produits où ce n'était pas la faute du cultivateur, j'endosserais, de tout cœur, l'amendement car les pesticides ont été contrôlés et déclarés sûrs à condition d'être employés suivant les directives. Alors si le cultivateur les emploie de cette façon pourquoi ne pas lui verser une indemnité complète. Le seul doute, évidemment, qui peut planer c'est que le cultivateur ne les a pas employés de la façon indiquée. C'est la seule raison pour laquelle j'accepte 90 p. 100.

On ne peut certainement pas établir une comparaison avec l'assurance-récolte, car l'assurance-récolte est une assurance vraiment contre les conditions climatiques, la grêle, la sécheresse etc., etc. Ici, ce n'est pas le même cas, ici nous inscrivons, nous enregistrons les pesticides et leur mode d'emploi et alors, si le mode d'emploi a été suivi, le cultivateur devrait être remboursé à 100 p. 100. J'exhorte tous les députés à y songer sérieusement. Ne restez pas là tout simplement à dire non, tout simplement, parce que la proposition vient du député de l'opposition et que, par conséquent, elle n'est pas bonne. Je crois qu'il faut absolument songer à l'application même de la loi et aux cultivateurs qui seront intéressés à l'avenir. Nous exhortons donc tous les membres à appuyer cette proposition à 90 p. 100 qui n'est pas un chiffre exorbitant. Sans doute, le chiffre devrait être, dans beaucoup

[*Texte*]

100 per cent. I would think that most farmers would be satisfied with the 90 per cent. Without any further word urge all members to vote for the amendment.

The Chairman: Thank you, Mr. Horner.

Mr. Barrett: Mr. Chairman, the last remarks by the hon. member from Crowfoot indicate that the opposition do not enjoy some of our philosophy at all, and I wonder why they take the other task that anything we present is absolutely horrible.

Mr. Horner: Oh, no Mr. Chairman; in no way am I going to vote against the bill. I commend the Minister and you, Mr. Chairman, for your work in having it presented to this Committee. I in no way think it is all wrong.

The Chairman: May I ask the member to address himself to the amendment, please.

Mr. Barrett: Pardon me. It is just that the last remark touched me. However, I am talking from an actuarial point of view and when we have compensation, if it is going to be rated in the area of 90 per cent it is not a normal situation from an actuarial standpoint because it is conducive to many, many things and I will not go into that. We do not believe in Santa Clause, we have to pay our way, and there is a reasonable amount of lack of responsibility when and if these things happen, and therefore when we are paying compensation on any factor it cannot be that high. The point is that I think 90 per cent is too high.

The Chairman: Thank you, Mr. Barrett. Mr. Lind?

Mr. Lind: I am looking at it from a little different angle, Mr. Chairman. I am looking at it from the point of view of the farmer. There are other costs that should be added once this product comes under inspection. There is the time that he is required to spend on processing his claim and the inconvenience he is put to. He probably has to do some travelling to hear evidence, and what not, and I am wondering what we can put in the Act that in any way will compensate the farmer for the extra inconvenience and time lost.

• 1105

We are fast approaching the time when everybody believes they should only work 40 hours a week or less, but unfortunately the poor farmer still must operate on long hours weekly, and I think that perhaps often the best time of his day, when he has to produce

[*Interprétation*]

de cas, de 100 p. 100. Je pense que tous les cultivateurs seraient satisfaits de 90 p. 100, mais sans en dire plus long, j'aimerais demander à tous de l'appuyer.

Le président: Merci, monsieur Horner.

M. Barrett: Les dernières remarques de l'honorable député de Crowfoot indiquent que l'opposition n'apprécie pas toute notre attitude. Pourquoi faut-il qu'elle prétende que ce que nous proposons est affreux?

M. Horner: Oh non, je ne voterai pas contre le bill, monsieur le président. Je félicite le ministre d'avoir présenté le bill, je ne pense aucunement que ce soit mauvais.

Le président: Le député voudra-t-il s'occuper de l'amendement?

M. Barrett: Pardon. C'est la dernière observation qui m'a frappé. De toute façon, je me fonde sur la réalité, en disant que, lorsque nous obtenons une assurance ou une indemnité de l'ordre de 90 p. 100, ce n'est pas une situation normale. Cela pourrait conduire à plusieurs choses que je ne veux pas discuter. L'indemnité ne peut pas être aussi élevée que cela. Par conséquent, je crois que 90 p. 100 ce serait trop.

Le président: Merci, M. Barrett. Monsieur Lind?

M. Lind: J'examine la question d'un aspect tout à fait différent, monsieur le président, du point de vue du cultivateur. J'estime qu'il y a d'autres frais qui s'ajoutent une fois que le produit est contrôlé. Le temps que le cultivateur doit consacrer à la réclamation même, les inconvénients s'il doit voyager, donner des témoignages ou écouter des témoignages, je me demande si nous avons indiqué dans la loi que nous pouvons indemniser le cultivateur pour ces inconvénients.

Tout le monde commence à croire qu'on devrait travailler seulement 40 heures par semaine ou moins, et malheureusement le pauvre cultivateur lui, a toujours de très longues heures de travail au cours de la semaine et très souvent la meilleure partie de sa jour-

[Text]

his living, is taken away by one of our inspectors. I think there should be additional compensation for the inconvenience to which the farmer is put.

I am not sure if 90 per cent is the true figure or not, but I think most definitely there should be some provision in this Act for him to receive travelling allowances, and so on, if he is forced to go afield on an investigation. It is through no fault of his. He reads the directions on the can or on the bag and follows them correctly. If the manufacturer or the department which has approved this has made an error and allowed this product to be applied to areas where the soil is not compatible, it is no fault of the farmer. Why should he be asked to pay this additional amount in time and energy? I think we should look at the conditions under which these payments are made and the long, drawn-out time that he has to wait for his money. Thank you, Mr. Chairman.

The Chairman: Thank you, Mr. Lind. Mr. Douglas (Assiniboia).

Mr. Douglas: My questions are somewhat along the same lines. Mr. Gleave and others in favour of this amendment suggested that the Act only provides for compensation for the actual products condemned. I am not sure, but in my reading of the Act it does not limit payments to such losses. Cannot losses be interpreted to include other losses such as business losses, and on, other losses that might be involved besides the direct loss of the product.

The Chairman: Thank you, Mr. Douglas. Do you wish to comment on that, Mr. Olson?

Mr. Olson: Perhaps I should comment on this. The point that Mr. Douglas has just raised is one that I was going to raise in reply to Mr. Horner and Mr. Gleave because in Clause ...

Mr. Horner: On a point of order, Mr. Chairman.

The Chairman: Would you permit the Minister to complete his statement and then I will hear you.

Mr. Horner: I wish to rise now on a point of order. I want you to rule or to advise me on this. Once an amendment is moved the speaker can speak only once on it? Am I right, or wrong?

[Interpretation]

née, lorsqu'il doit gagner sa vie, justement, étant, est prise par un de nos inspecteurs. Alors je crois qu'on devrait y voir et assurer une indemnité supplémentaire pour les inconvénients auxquels les cultivateurs sont soumis.

Que le chiffre de 90 p. 100 soit réaliste ou non, je ne saurais le dire de façon juste, mais je crois qu'il est très sûr que nous devrions inclure, dans le projet de loi, une disposition prévoyant des indemnités de déplacement pour le cultivateur obligé de s'absenter en raison de l'enquête, car ce n'est certainement pas sa faute à lui, s'il lit les directives, s'il les suit, s'il les suit exactement, alors que le fabricant et le ministère qui approuvent le produit se sont trompés et ont permis qu'il soit employé dans un sol ou un terrain qui n'est pas propice, ce n'est certainement pas la faute du cultivateur et alors pourquoi lui demanderait-on de faire les frais du temps perdu et de sa fatigue? Je crois que nous devrions examiner les conditions dans lesquelles on verse ces indemnités ainsi que le temps mis au versement. Merci, monsieur le président.

Le président: Merci, monsieur Lind. Monsieur Douglas (Assiniboia).

M. Douglas: Ma question est dans la même ligne. L'argument de monsieur Gleave au sujet de cet amendement suggère que la loi ne prévoit qu'une indemnité pour le produit qui a été condamné. Je ne suis pas certain mais mon interprétation du projet de loi ne limite pas ces indemnités à cette seule perte. Est-ce qu'on ne pourrait pas interpréter l'expression perte comme voulant dire les autres pertes, par exemple les pertes commerciales et les autres qui pourraient être en cause en plus de la perte directe du produit?

Le président: Merci, monsieur Douglas.

L'hon. M. Olson: Le point soulevé par M. Douglas était un point que je voulais justement soulever moi-même, en réponse à monsieur Horner et à monsieur Gleave.

M. Horner: A l'ordre, monsieur le président.

Le président: Voulez-vous, s'il vous plaît, laisser terminer le ministre? Puis, je vous donnerai la parole.

M. Horner: Non, un rappel aux Règlements immédiatement car ce que vous m'avez dit au sujet de l'amendement, une fois qu'on a proposé l'amendement, une personne ne peut prendre la parole qu'une seule fois; ai-je raison ou non.

[Texte]

An hon. Member: You are wrong.

An hon. Member: You had better watch yourself!

MR. Horner: Am I right or wrong?

An hon. Member: If either amendment rules, you are out!

Mr. Horner: On an amendment?

The Chairman: We are in committee. That would be a new departure in this Committee. We have spoken many times. After all, the Minister is here more or less as a witness and as an adviser...

Mr. Horner: Never less; much more.

Mr. Olson: Mr. Chairman, the point that Mr. Douglas has raised is a very valid one, that the loss is not necessarily confined to the value of the product condemned.

Indeed, if we were to follow the arguments of Mr. Horner and Mr. Gleave, that the payment should be not less than 90 per cent of the actual value of the product, be it milk or animals or whatever, the amount that this would, in many cases, actually return to the farmer would be something substantially less than any loss occasioned to the farmer by reason of such pesticide residue as is included in clause 3. Therefore, I think it would be undesirable to have that kind of percentage in, or as an addition to, the clause.

• 1110

I might also point out that this Act does not require the Department to prove absolutely—if I may so put it—that the farmer may, or may not, have had some percentage of responsibility. We can pay a loss if we are satisfied that he used the product according to the directions, but to obtain absolute proof is something else.

There may be a case where, in assessing the whole situation, we come to the conclusion that there is a 50 - 50 responsibility.

If this kind of clause were to put in the department and the government would have to be satisfied that the farmer was completely exonerated from any fault or responsibility, or even the possibility of them, to pay the kind of loss envisaged by the 90 per cent, or more.

It seems to me, therefore, that it would be in the interest of the farmers, taking into account the many and varied conditions that

[Interprétation]

Une voix: Vous avez tort.

Une autre voix: Vous feriez mieux de vous surveiller.

M. Horner: Ai-je raison ou non?

Une voix: Amendement ou pas, vous avez tort.

M. Horner: Sur un projet d'amendement.

M. le président: Je crois que nous sommes en comité et c'est certainement une chose nouvelle dans notre comité. Je crois que nous avons parlé à plusieurs reprises et après tout, étant donné la présence du ministre qui est ici plus ou moins comme témoin et comme conseiller...

M. Horner: Néanmoins...

L'hon. M. Olson: Le point soulevé par M. Douglas, monsieur le président, est un point très valable à l'effet que la perte n'est pas nécessairement restreinte à la valeur du produit perdu et effectivement, si nous voulions suivre l'argument de M. Horner et M. Gleave à l'effet que l'indemnisation ne devrait pas être moins que 90 p. 100 de la valeur réelle du produit, que ce soit du lait, des animaux ou peu importe.

Je crois alors que le montant dans plusieurs cas rapporterait aux cultivateurs une somme bien moindre que la perte occasionnée aux cultivateurs par un résidu de pesticide tel qu'on le trouve dans l'article 3. Et par conséquent, je trouve que cela ne serait pas bon d'avoir ce genre de pourcentage ajouté au projet de loi.

Je pourrais peut-être aussi ajouter que cette disposition n'exige pas que le ministère ait à taire la preuve formelle, si vous me permettez d'employer cette expression, que le cultivateur ait ou n'ait pas eu un certain degré de responsabilités. Et que nous pouvons, par conséquent, verser une indemnité si nous sommes convaincus qu'il a employé les produits en conformité des directives. S'il fallait obtenir une preuve concluante, cela serait tout à fait autre chose. Il se pourrait qu'il y ait des cas où, dans l'évaluation de la situation, nous pourrions en arriver au point où la responsabilité serait partagée moitié moitié.

Par conséquent, le gouvernement, si nous avons cette disposition, devrait être convaincu que le cultivateur n'est pas du tout responsable avant de verser l'indemnité pour la perte, soit 90 p. 100 ou plus; et alors, à mon sens, que cela serait dans l'intérêt des cultivateurs, tenant compte de toutes les con-

[Text]

could arise, to have enough flexibility to enable us to pay, for example, a 50 - 50 claim, or something other than a 100 per cent absence of responsibility, if I may so put it.

The Chairman: I now recognize Mr. La Salle (Joliette).

M. La Salle: Deux mots, monsieur le président, au sujet de cet amendement. Je pense que de plus en plus aujourd'hui, le public réclame une certaine sécurité et comme dit le ministre, dans les cas où il est clair que le cultivateur n'a aucune responsabilité, je pense qu'il serait bon qu'on lui garantisse 90 p. 100 sur la perte totale du produit et des déplacements, comme d'autres membres de ce Comité l'ont signalé. Je crois qu'il est nécessaire aujourd'hui que le cultivateur puisse être assuré d'un montant minimum.

Il est entendu qu'il est peut-être difficile d'appliquer ce chiffre là où le cultivateur peut être en partie responsable mais si ceci est reconnu par les estimateurs, dont la qualité n'est pas mise en doute, je crois bien que le cultivateur serait heureux de savoir que dans les cas où il n'est aucunement responsable, il est assuré d'un minimum de 90 p. 100. La classe agricole mérite toute notre sympathie et l'aide que nous devons lui accorder.

The Chairman: Thank you, Mr. La Salle. The question arises whether or not this type of amendment might later be interpreted as settling a maximum instead of a minimum. In other words, it might become a ceiling instead of a floor, as intended by the mover.

I recognize Mr. Southam.

Mr. Southam: Thank you, Mr. Chairman. I wish to support Mr. Gleave's amendment. It follows through, I think, on the basis of the earlier suggestion of my colleague, Mr. Horner, that there is nothing very specific in this set of regulations. It leaves too much to the discretion of the Governor in Council.

I am assuming that in the case of compensation if a farmer is eligible in the first place it is through no fault of his and that that is why he is making application.

The Minister mentioned just a few moments ago that it might be only, say, 50 per cent. I think we are getting altogether out of line here. It appears to me that anybody making a claim would then run into an argument on the odd occasion about what the compensation should be.

It goes back to my earlier remark when the proceedings first opened this morning, that we should have a set minimum and maximum amount that would be paid. This would elimi-

[Interpretation]

ditions possibles que s'il fallait que nous versions par exemple une réclamation évaluée à responsabilité partagée, ou autre que 100 p. 100 d'absence de responsabilité, si je peux ainsi dire.

Le président: Monsieur La Salle, (Joliette).

Mr. La Salle (Joliette): With regard to this amendment, Mr. Chairman, I think that the public as a whole now demands more security, as stated by the Minister, in those cases where it is clear that the farmer has no responsibility, I think it would be good to guarantee him 90 per cent of the total loss on the product as well as on travelling allowances, as mentioned by other members of this Committee. I think that today it is necessary for the farmer to be assured of a strict minimum.

Of course, it is very difficult to apply this figure where the farmer is responsible to a certain extent. But if this is recognized by the assessors—and I do not want to place any doubt on them—I think that it would be very much appreciated on the part of the farmers to know that where there is no responsibility, the farmer is assured of a minimum of 90 per cent. Of course, I recognize that we must be very sympathetic and helpful to the farmers.

Le président: Merci, M. La Salle. Je poserais donc la question quant à savoir si ce genre de projet d'amendement pourrait plus tard être interprété comme étant un maximum plutôt qu'un minimum. En d'autre terme, cela pourrait devenir un plafond plutôt que le plancher tel que le proposeur le demande. Je donne maintenant la parole à M. Southam.

M. Southam: Monsieur le président, je voudrais appuyer l'amendement de M. Gleave et, étant donné que ce qu'a dit plus tôt M. Horner, il n'y a rien de très précis dans cette question des règlements sauf le fait que c'est le gouverneur en conseil qui les établit. Et alors, je présume que dans le cas de l'indemnité, si le cultivateur y a droit dès le début, c'est parce que ce n'est pas de sa faute, qu'il remplit une demande.

Le ministre a mentionné tout à l'heure qu'il aurait peut-être une responsabilité partagée ou mitigée. Mais il me semble que nous sortons tous du sujet, car il m'apparaît que toute personne qui formulerait une réclamation ferait donc face à l'argument quant à savoir quel devrait être le montant de l'indemnité. Et alors, je reviens à ce que j'ai dit au tout début, ce matin, c'est que nous devrions avoir un minimum et un maximum stricts. Nous pourrions alors éviter ces sortes d'altercation

[Texte]

nate these types of altercations, and a person could have some assurance that the Act was going to carry out the original intent of it.

I think as does Mr. Lind, the member of the Committee who spoke a few moments ago and who supported the amendment. He felt that even 90 per cent was not exorbitant because, as was pointed out, when such damage takes place, there are so many other intrinsic costs that it is hard to define what is the exact amount. Taking into account the inconvenience and the travelling expenses incurred in having to go to put in a claim, or have a hearing, and so on, it may be that 90 per cent will ultimately represent only 50 or 60 per cent of the total costs involved.

Therefore, I maintain that to establish a minimum of, say, 90 per cent is reasonable and rational within the intent of the Act.

The Chairman: Thank you, Mr. Southam. I have on my list Mr. Pringle, Mr. Whicher and Mr. Horner.

I recognize Mr. Pringle.

Mr. Pringle: Mr. Chairman, I am rather concerned about the form the discussion is taking at the present time. It seems to me there is a danger of establishing precedents. Governments have been known to establish precedents, relative to labour unions, which have been considered by some to have been a bit disastrous.

• 1115

Every company or organization engaged in dealing with, and providing products to farmers is subject to requests for adjustments, and certainly subject to complaints, especially when dealing in livestock, and almost any other commodity.

I have a great deal of respect for farmers. I have been one. I am quite sure that nobody is making any accusations.

I have however, been involved in situations, or deals, where they have made complaints and requested adjustments and have received adjustments and compensation for problems.

In relation to pesticides I know of one situation where the adjustment was not generous, and considered by most to be most generous, but in which the adjustment has not been satisfactorily settled relative to the farmer. I am not sure that it ever could be.

I could refer to the baby chick or the turkey poult business—I would hate to make a statement without referring to it—but contingency liability is becoming a great problem within this industry. In the case of livestock they make a complaint on the basis that the

[Interprétation]

et une personne aurait une certaine assurance que la loi fonctionnerait. Je pense, comme M. Lind, un des membres du comité l'a dit, tout à l'heure, en appuyant l'amendement, en précisant qu'il estimait que 90 p. 100 n'était pas exorbitant. Comme on l'a déjà dit, lorsque des dommages de ce genre se produisent, il y a beaucoup d'autres frais implicites, directs ou indirects. Si l'on tient compte des inconvénients, des frais de voyage occasionnés lors de sa réclamation, pour assister à l'audience et par conséquent, 90 p. 100 à la longue pourrait peut-être représenter 50 ou 60 p. 100 de la perte totale. Et alors, je trouve que détailler un minimum de 90 p. 100, c'est raisonnable en vertu de la loi.

Le président: J'ai maintenant M. Pringle, M. Whicher et M. Horner.

M. Pringle: Je me préoccupe un peu du genre de discussion que nous avons à l'heure actuelle et de la tournure du débat. J'ai l'impression qu'il est dangereux de créer des précédents. Les gouvernements, dans le passé, ont déjà créé des précédents pour les syndicats ouvriers qui ont été considérés dans certains secteurs comme étant désastreux.

Chaque compagnie ou chaque organisation qui fournit ou s'engage à donner un produit ou fournir un produit au cultivateur est sujette aux plaintes et aux demandes d'ajustement particulièrement dans le domaine du bétail et presque dans tous les produits. J'ai beaucoup de respect pour les cultivateurs, j'ai été déjà cultivateur moi-même et je suis presque sûr que personne ne lance des accusations.

Mais j'ai aussi passé par une certaine situation où les cultivateurs formulaient des plaintes et où on nous réclamait des ajustements et recevaient une indemnité en compensation de leurs problèmes. J'ai donc l'impression que dans certains domaines, même en ce qui concerne les pesticides, je connais une situation où l'ajustement a été très généreux, mais du point de vue du cultivateur, l'ajustement restait insatisfaisant. En d'autres termes, je me demande si cela pourrait se produire.

Si vous me le permettez, je pourrais parler du commerce des petits poulets ou des dindons mais je n'aimerais pas être obligé de le faire sans notes. Les responsabilités imprévues deviennent une très lourde responsabilité et un très lourd fardeau dans cette indus-

[Text]

product was faulty when they purchased it and, of course, the minute that livestock changes hands it comes under the management of an entirely new setup. However, there has been at least one case where a \$500 order for baby chicks received an adjustment of \$24,000 by virtue of the eggs that they did not lay, and by virtue of a lot of things that did not happen, but were considered to be contingent liabilities.

I hope that in our deliberations we will take into consideration that the preparation of this bill has been given a considerable amount of thought and that it is the intention of the government to compensate or there would not be the Act in the first place. But if we are going to establish a precedent and say, "Thou shalt pay contingent liability", and establish 90 per cent, or some ceiling, or some floor, this could be construed as a pattern that you are establishing for industry, and I think it would be most unfair to do this especially before you have at least consulted these people in industry.

We are sitting here as members of an agriculture committee basically interested in the welfare of the farmer, unquestionably. But I think we also have a responsibility to industry within Canada and I would be very concerned if you are going to set up an established precedent here which could do a great deal of harm in connection with the dealings which are continually taking place within the agricultural industry.

The Chairman: Thank you, Mr. Pringle. I recognize Mr. Whicher.

• 1120

Mr. Whicher: I agree with what Mr. Pringle said. There is a great deal of common sense to it, and there is not anybody around this table, I am sure, who is not 100 per cent sympathetic with the farmers. Most of us represent rural ridings; I do myself. We are sent here, as the Member for Crowfoot said, to represent those farmers. And of course we want them to get just and legitimate compensation. But the fact is that not only are we responsible to the farmers but we are responsible to the taxpayers of Canada and we have to think out legislation such as this.

There are only a few farmers concerned. The figures that were quoted by the Deputy Minister the other day are astonishingly low, the number that could be involved in any year if a catastrophe came along. But these farmers must have some responsibility them-

[Interpretation]

trie. Quand on formule une plainte, dans le cas du bétail, surtout, fondée sur le fait que le produit était fautif lorsque l'agriculteur l'a acheté, au moment où le bétail change de main, il est alimenté d'une façon complètement différente. Mais il y a eu au moins un cas où une commande de \$500 de poussins a été l'objet d'une réclamation de \$24,000 en raison du fait que les œufs ne se sont pas éclos, et en raison des autres facteurs divers mais considérés comme imprévus.

J'espérais donc que nous pourrions prendre en considération le fait que le projet de loi a été rédigé avec un soin considérable et que l'intention du gouvernement est de verser une indemnité, sinon, le projet de loi n'existerait pas. Si nous voulons créer un précédent et dire: on doit payer les frais imprévus et établir, un plafond de 90 p. 100 ou un plancher; ceci pourrait alors être considéré comme un principe que l'on formulerait pour l'industrie, et je trouve que ce serait injuste d'agir ainsi avant même d'avoir consulté les gens de l'industrie.

Nous sommes ici en tant que membres d'un comité de l'agriculture, et nous nous intéressons avant tout au bien-être de l'agriculteur, sans aucun doute. Mais je crois que nous avons aussi une responsabilité envers l'industrie au Canada, et je serais fort inquiet si nous établissions ici un précédent qui pourrait causer beaucoup de tort dans le domaine des transactions qui se font sans cesse au sein de l'industrie agricole.

Le président: Merci, monsieur Pringle. Je donne la parole à M. Whicher.

M. Whicher: Je partage entièrement l'avis de M. Pringle. Je trouve que cela est plein de bon sens, et il n'y a personne, ici, j'en suis sûr, qui ne compatisse à 100 p. 100 avec les agriculteurs. La plupart d'entre nous représentons des circonscriptions rurales, y compris moi-même. Comme l'a dit l'honorable député de Crowfoot, nous sommes ici pour représenter les agriculteurs. Évidemment, nous voulons qu'ils reçoivent cette indemnité juste et légitime. Mais le fait que nous sommes responsables non seulement envers les agriculteurs, mais aussi envers les contribuables du Canada, et qu'il nous faut donc organiser très attentivement cette sorte de projet de loi.

Il n'y a que quelques agriculteurs en cause. Les chiffres qu'a indiqués le sous-ministre l'autre jour sont étonnamment peu élevés—je veux parler du nombre de personnes qui auraient à souffrir d'une année catastrophique. Mais il faut que les agriculteurs assu-

[Texte]

selves too. That is the way life is. There is a certain amount of luck in this thing all the way through. Some people get sick and some are healthy all through their lives. This is the way it is. Some people get burned out, some people have automobile accidents, and some people unfortunately are going to have some trouble with pesticides.

I think the government has been very fair in presenting this bill. They must be sympathetic or they would never have put the bill here in the first place. They are making it so that no farmer can have a catastrophic loss. The Minister pointed out that not only is he willing to pay on the loss of the crop, but in the costs and the farmer getting back into business, and so forth. I think, like Mr. Pringle, that in setting a figure of 90 per cent here, we would be setting a precedent.

I think that to some extent, at least whether we are in opposition, and I am a professional at that because I have been in opposition longer probably than anyone else around this table—I think that we must recognize that these bills are presented with a great deal of thought, not only by the Minister but by the civil servants concerned. Not that they do not make mistakes. I do not mean that. But I think that they have given just and legitimate reason why the figure of 90 per cent should not be involved.

The Chairman: Mr. Horner.

Mr. Horner: I would just like to comment on Mr. Pringle's and Mr. Whicher's statements about the taxpayer and the industry being afraid of setting precedent. The bill itself is setting precedent. And for years and years industry has laid down the pattern for the farmers to follow. Let us not be a little bit ashamed about the farmers or the farmers' causes having to lay down a few patterns for industry. And I say that to rebut Mr. Pringle's remarks.

Now let us look at the Minister's remarks. He said that, for example, it may fifty-fifty. It may be 50 per cent the fault of the farmer, and 50 per cent the fault of the chemical. And still the claim would be paid. Let us go back to look at Clause 3, subclause (2), which reads:

(2) No compensation shall be paid to a farmer pursuant to subsection (1) unless the Minister... (b) is satisfied that the pesticide residue in or upon the product is not...

[Interprétation]

ment eux aussi une part de responsabilité. C'est ainsi que va la vie. Il y a toujours une part de hasard, dans toute chose. Il y a des gens qui tombent malade, et d'autres qui sont en bonne santé toute leur vie. Certains périssent dans des incendies, d'autres ont des accidents d'automobile, et, malheureusement, d'autres encore vont avoir des ennuis avec les produits antiparasitaires.

Je trouve que le gouvernement a été très équitable en présentant ce projet de loi. Il doit être compatissant, ou il ne l'aurait jamais présenté. Il s'assure de ce qu'aucun agriculteur ne pourra subir de perte catastrophique. Comme l'a dit le ministre, il est prêt à verser une indemnité non seulement pour la perte de la récolte, mais aussi pour permettre à l'agriculteur de se rétablir dans son exploitation. J'estime, comme M. Pringle, que, si nous fixions un chiffre de 90 p. 100, nous créerions un précédent.

Et j'estime que jusqu'à un certain point, même si nous faisons partie de l'opposition—et je suis expert en la matière, car j'ai probablement été dans l'opposition beaucoup plus longtemps que n'importe qui ici—nous devons reconnaître que ces projets de loi sont conçus avec beaucoup de soin, non seulement par le ministre, mais aussi par les fonctionnaires en cause. Non pas qu'ils ne se trompent jamais. Ce n'est pas ce que je veux dire. Mais j'estime qu'ils ont donné des raisons justes et légitimes pour que l'on n'inclue pas le chiffre de 90 p. 100.

Le président: Monsieur Horner.

M. Horner: Je voudrais faire quelques brèves observations sur les déclarations de M. Whicher et de M. Pringle au sujet du contribuable et de l'hésitation de l'industrie à créer un précédent. Le bill même crée un précédent et depuis des années l'industrie a établi la règle à suivre pour les agriculteurs. N'avons pas honte maintenant d'établir au nom des agriculteurs quelques règles que l'industrie aura à suivre. Et je dis cela pour montrer la fausseté des observations de M. Pringle.

Examinons ce qu'a dit le ministre. Il a dit, par exemple, que la responsabilité peut être partagée à parts égales: ce peut être 50 p. 100 la faute des agriculteurs et 50 p. 100 celle des fabricants de produits chimiques. Et l'on versera l'indemnité malgré tout. Revenons au paragraphe (2) de l'article 3, où il est dit:

Aucune indemnité ne doit être payée à un cultivateur en conformité du paragraphe (1) à moins que le Ministre...
b) ne soit convaincu que les résidus de pesticides ne sont pas présents dans ou sur le produit,

[Text]

and I emphasize the word "not".

...present because of any fault of the farmer...

Any fault of the farmer. Now the Minister said a minute ago that the farmer could be 50 per cent at fault. That word that reads "any", would to me be "some". And I want the Minister to clear this up. Can a farmer receive compensation if he is 50 per cent at fault in the use of the pesticide under this Act?

Mr. Olson: Well, Mr. Chairman, just very briefly. What I said has been misinterpreted. I am tempted to say something else about that, but it may be the usual thing for the Member for Crowfoot to do. But I will not say that this morning.

Mr. Horner: Certainly, say whatever you have on your mind. If I misinterpreted you, I want to know how.

The Chairman: Order, please.

Mr. Olson: Mr. Chairman, I did not say that. I said that it may be difficult if not impossible to get absolute proof that there was no fault, and the word "any" fault, on the farmer. I have to be satisfied that the farmer was not a fault, or there was any fault. But the next step—and I explained that—to obtain absolute proof with the technology that we have may not be possible. And that is the qualification that I made.

Mr. Horner: Did you not go on and use the figure of 50/50?

Mr. Olson: Yes I did.

Mr. Horner: Are you still ashamed to say it?

Mr. Olson: I did.

Mr. Horner: I am now asking you this question. If there is reasonable thought in the government's mind that the farmer may well have been at fault by 50 per cent and the chemical company at fault 50 per cent, will the claim be paid under this Act?

Mr. Olson: It is a question of being able to prove it, absolutely.

Mr. Horner: In other words, if you can prove the farmer is 50 per cent at fault, you will still pay it?

Mr. Olson: If we get into that kind of situation, Mr. Horner, as I have mentioned, the burden of absolute proof will be very difficult to obtain, and that is the reason that I mentioned the figure.

[Interpretation]

et j'insiste,

ne sont pas présents dans ou sur le produit par suite d'une faute du cultivateur.

Le ministre a dit tout à l'heure que le cultivateur pourrait avoir une part de responsabilité de 50 p. 100. A mon sens, il faudrait dire «quelque» faute, non «une» faute. J'aimerais que le ministre éclaircisse cette question. Est-ce que le cultivateur peut être indemnisé au titre de la loi s'il est à demi responsable de la présence des résidus?

L'hon. M. Olson: Monsieur le président, bref on a mal interprété ce que j'ai dit. Je dirais bien autre chose, que c'est courant pour le député de Crowfoot, mais je m'en abstiendrai ce matin.

M. Horner: Dites le fond de votre pensée. Si je vous ai mal interprété, je voudrais bien savoir de quelle façon.

Le président: A l'ordre.

L'hon. M. Olson: Monsieur le président, ce n'est pas ce que j'ai dit. Il sera peut-être difficile, sinon impossible, d'obtenir la preuve absolue que le cultivateur n'est pas en faute ou qu'il n'y a aucune faute, mais il faudra en avoir la certitude. Ensuite, comme je l'ai expliqué, c'est qu'il pourra être impossible, avec les moyens techniques dont nous disposons à l'heure actuelle, de le prouver sans l'ombre d'un doute.

M. Horner: N'avez-vous pas ensuite dit que les torts étaient des deux côtés?

M. Olson: En effet.

M. Horner: Vous oseriez le répéter?

M. Olson: Oui.

M. Horner: Je vous demande maintenant, si le gouvernement estime de façon raisonnable que le cultivateur a une part de responsabilité de 50 p. 100 et que le fabricant est responsable à 50 p. 100, est-ce que l'indemnité sera versée, en vertu de cette loi?

L'hon. M. Olson: Il importe de le prouver sans l'ombre d'un doute.

M. Horner: En d'autres termes, si l'on peut prouver que le cultivateur est responsable à 50 p. 100, on verse l'indemnité quand même?

L'hon. M. Olson: En pareil cas, monsieur Horner, comme je l'ai déjà dit, il est très difficile d'en avoir la preuve absolue, c'est pourquoi j'ai lancé ce chiffre.

[Texte]

Mr. Horner: What is the meaning in Clause 2 that we have already passed then, by "not any"? "Any" would be "some". "Some" would be 5 per cent, if you ask me. "Some" would be 10 per cent.

Mr. Olson: I really do not see any point, Mr. Chairman, in repeating over and over again the same arguments that I have made, and the statements that I made are just as valid now as they were ten minutes ago. So there is no use repeating the same thing.

The Chairman: Thank you, Mr. Minister. Mr. Gleave wished to be recognized. Mr. LaSalle wished to be recognized. The question has been called. May I have the indulgence of the Committee to recognize Mr. Gleave on a brief question.

Mr. Barrett: Take a vote. Let us go on with the question. I asked for it.

Mr. Gleave: Thank you, Mr. Chairman. I just wanted to point out that one of the witnesses said that on practically all occasions up to now when the question of compensation to the farmer has come up, it has been as a result of the Food and Drug Directorate finding a residue in some marketable product that was in the hands of the consumer or going to be in the hands of the consumer. And it was as a result of these findings and this investigation that they moved back to the farmer or to the source and said that here is the source of this contamination, steps will have to be taken to correct it, and this farmer will have to dispose of property or take property out of production. He will have to dispose of livestock or he will have to do this or that.

According to our witnesses, these are the circumstances under which these occasions have arisen. And looking at this Act, I would expect that in the future these will be the occasions under which again compensation will be asked or called for. It will not be the farmer who will go to some authority and say he thinks he has a contaminated farm, and ask that someone come down and take a look at it and give some compensation. This is not going to happen. It is going to be the other way around, as has been described to us by our witnesses. Farmers are not looking for sympathy. Under these circumstances they are looking for justice. There is plenty of protection for the Department in this Act Clause 5(1) reads:

No payment of compensation shall be made to a farmer pursuant to this Act in respect of a loss occasioned to him by reason of pesticide residue...

[Interprétation]

M. Horner: Que signifie l'expression «une faute» dans le paragraphe (2) que nous avons déjà adopté, d'ailleurs? Une faute est une faute. La part de responsabilité pourrait bien être de 5 p. 100, ou bien 10 p. 100.

L'hon. M. Olson: Je ne vois pas du tout la nécessité, monsieur le président, de répéter cent fois le même argument que j'ai déjà formulé. Ce que j'ai déjà dit, il y a dix minutes, tient toujours. C'est inutile alors de le répéter.

Le président: Merci, monsieur le ministre. M. Gleave voulait la parole, M. LaSalle aussi. On a demandé la mise aux voix. Avec la permission des membres du comité, j'accorde-rai la parole pour un moment à M. Gleave.

M. Barrett: Passons à la mise aux voix, je l'ai demandée.

M. Gleave: Merci, monsieur le président. Permettez-moi simplement de signaler ce qu'un des témoins a dit, soit que dans tous les cas d'indemnisation, ou peu s'en faut, qui se sont posés jusqu'ici, la Direction des aliments et drogues avait décelé des résidus dans un produit quelconque destiné à la consommation ou déjà vendu. Or, c'est à la suite de telles enquêtes et de telles constatations qu'elle a trouvé la source de la contamination et décrété les mesures correctives à prendre: disposer de la propriété, faire cesser l'exploitation, se débarrasser des bestiaux, et ainsi de suite.

D'après les témoins, voilà les cas où des situations de ce genre se sont produites. J'espère qu'à l'avenir ce seront là les conditions dans lesquelles les indemnisations seront demandées ou versées au titre de la présente mesure. Ce n'est pas le cultivateur qui ira voir les autorités et qui leur dira: «Voilà, ma ferme est contaminée, je crois, est-ce que vous pouvez faire vérifier la chose et puis m'indemniser?». Cela ne se produira jamais. Ce sera toujours le contraire, comme nous l'ont déjà fait remarquer les témoins. Les fermiers ne sont pas en mal de sympathie. Les fermiers ne cherchent pas de sympathie mais la justice. La loi protège le ministère. L'article 5 dit:

Aucune compensation ne sera accordée à l'agriculteur en vertu de cette Loi pour une perte subie à la suite de la présence de résidus de pesticide.

[Text]

And then it goes on. There is protection here for the Department. What I am interested in seeing in this Act is adequate protection for the farmer who is going to suffer the loss, and who is going to suffer a loss of much greater consequence than the simple product that is removed from his farm.

The Chairman: Mr. Gleave, I think that point was made in your earlier remarks. Mr. La Salle.

M. La Salle: Je reconnais que la majorité des députés ont beaucoup de respect pour la classe agricole, ils ont tout de même peur du précédent et je me demande si cette crainte d'aider le cultivateur est justifiée, car il est urgent qu'une garantie quelconque leur soit donnée. La comparaison faite entre l'industrie et la classe agricole me surprend aussi, car c'est un fait que l'industriel, tout comme l'ouvrier qui travaille à l'usine, est protégé par différentes sortes d'assurances dont le cultivateur ne bénéficie pas.

Alors, je reviens à cette suggestion que j'avais faite tantôt. Le ministre mentionne qu'il est difficile d'avoir une preuve concluante, mais là où il est sûrement possible d'en avoir et dans les cas où il y en a, je pense que la garantie de 90 p. 100 n'est pas exagérée, en autant que nous considérons d'abord le principe de la non-responsabilité pour le producteur ou le cultivateur. Je crois qu'il y a certainement des cas où il y a des preuves évidentes que le cultivateur n'est pas responsable et à ce moment-là, je suis d'avis que l'indemnité de 90 p. 100 peut ou pourrait facilement s'appliquer, toujours dans le but d'assurer au cultivateur une sécurité qui le rendra plus heureux et que je considère nécessaire.

The Chairman: Thank you. Mr. Barrett?

• 1130

Mr. Barrett: Mr. Chairman, I would like to make one comment while we are talking about responsibility. In going through the farms in my area I have watched these farmers using sprays, and all this sort of thing. It says specifically that you shall wear respirators, you shall do this, you shall do that. I have yet to see a farmer using a respirator as prescribed, so there is a certain amount of responsibility in any area, and I feel that this is the time for the question.

The Chairman: Thank you. Your question has been called...

M. Lambert (Bellechasse): Voudriez-vous, s'il vous plaît, relire l'amendement qui a été proposé par M. Gleave?

[Interpretation]

Mais je voudrais savoir si le cultivateur qui subit une perte beaucoup plus grande en fait, dont les répercussions ont une bien plus grande portée, que le produit qui aura été retiré, est suffisamment.

Le président: Je pense, monsieur Gleave que nous en avons déjà parlé. Monsieur La Salle, s'il vous plaît.

Mr. La Salle: I recognize that the majority of the Members have a great deal of respect for the agricultural community. Nonetheless, they are frightened by precedents and I wonder whether this fear of helping farmers is justified because there is an urgent need to give them some sort of guarantee. The comparison between industry and the agricultural sector surprises me too because it is a fact that both industrialists and workers employed by industry are protected by various kinds of insurance plans which are not available to farmers.

Therefore, I come back to the suggestion I made earlier. The Minister says that it is difficult to have conclusive evidence, but where it is definitely possible to have conclusive evidence, and in cases where there is conclusive evidence, I believe that the 90 per cent guarantee is not exaggerated inasmuch as we consider first the principle of responsibility for the farmer or the producer. I believe there certainly are cases where there is definite evidence that the farmer is not responsible, and in those cases I believe that the 90 per cent indemnity could easily be applied so as to provide the farmer with security which will make him happier and which I consider as necessary.

Le président: Merci. Monsieur Barrett?

M. Barrett: Monsieur le président, je voudrais faire une remarque pendant qu'on parle de responsabilité. Lorsque je visite les exploitations de ma région, je vois comment les gens utilisent les produits de pulvérisation. Il est dit clairement: Vous devrez porter des masques, vous devrez faire ceci et cela. Je n'en ai jamais vu porter des masques selon les instructions. Il y a donc une certaine responsabilité. Je pense que c'est le moment de poser cette question.

Le président: Merci, votre question...

Mr. Lambert (Bellechasse): Would you please read again the amendment that was moved by Mr. Gleave?

[Texte]

The Chairman: I will read the question and then I will present it to the meeting and the vote will be called. Clause 4, subclause (c), is to be rewritten to read as follows:

prescribing the methods to be used in determining the amount of loss occasioned to a farmer and the maximum amount of compensation to be paid with respect to any loss and provided that the compensation paid to the farmer shall not be less than 90 per cent of the market value of the product at the time of loss;

M. Lambert (Bellechasse): Monsieur le président, cela ne s'appliquerait-il pas plutôt à d) qu'à c), puisqu'il s'agit d'un minimum?

An hon. member: The question has been asked three times, Mr. Chairman. What difference does it make whether it is asked six, seven or eight times. Put it and dismiss it.

An hon. member: Or carry it.

An hon. member: Either one.

The Chairman: We are dealing with Clause 4, subclause (c). I think it is listed under the proper clause.

M. Lambert (Bellechasse): On paie ainsi un maximum et un minimum.

Justement, il faudrait que cela apparaisse à d), puisqu'on dit un minimum de 90 p. 100.

An hon. member: I think it should be written over again. You had better spend some more time on it, Mr. Gleave.

The Chairman: Gentlemen, is there any question as to the wording of the amendment as it is written?

Some hon. members: No.

The Chairman: Those in favour of the amendment? Those opposed to the amendment?

Gentlemen, I declare the amendment lost.

• 1135

An hon. member: Mr. Chairman, I move we adjourn.

The Chairman: Gentlemen, that type of motion is not debatable, but I think one or two gentlemen indicated they wanted to ask some further questions.

Are there further questions on Clause 4? Shall Clause 4 carry?

Clause 4 agreed to on division.

[Interprétation]

Le président: Je vais relire la question puis la soumettre au comité pour le vote.

L'article 4, alinéa c) est rédigé ainsi:

prescrivant les méthodes à employer pour déterminer le montant de la perte subie par un cultivateur et l'indemnité maximum à payer pour toute perte à condition que l'indemnité versée à l'agriculteur ne sera pas inférieure à 90 p. 100 de la valeur marchande du produit au moment de la perte.

Mr. Lambert (Bellechasse): Mr. Chairman, would this not apply to (d) rather than (c), since it is a minimum?

Une voix: La question a déjà été posée trois fois, monsieur le président. Qu'importe d'ailleurs qu'elle ait été posée sept ou huit fois. Qu'on la pose et qu'on l'écarte.

Une autre voix: Ou qu'on l'adopte.

Une autre voix: L'un ou l'autre.

Le président: On parle de l'article 4, alinéa c). C'est bien cela...

Mr. Lambert (Bellechasse): Thus, a minimum is paid, and also a maximum.

This should appear under (d), since we mention a minimum of 90 per cent.

Une voix: Je crois qu'il faudrait la rédiger de nouveau et que M. Gleave devrait s'y attarder davantage.

Le président: Messieurs, est-ce qu'il y a des questions à poser sur le texte de l'amendement?

Des voix: Non.

Le président: Tous ceux qui sont d'accord avec l'amendement? Ceux qui s'opposent à l'amendement?

Messieurs, je déclare l'amendement repoussé.

Une voix: Monsieur le président, je propose que l'on lève la séance.

Le président: Messieurs, ce genre de motion n'est pas discutable. Je pense qu'il y a encore une ou deux personnes qui veulent poser des questions. Y a-t-il d'autres questions concernant l'article 4? Est-ce que l'article 4 est adopté? L'article 4 est adopté, sur division.

[Text]

Thank you, gentlemen. There are two gentlemen who wish to ask some questions on Clause 5, Mr. Lind and Mr. Horner. Mr. Lind, please.

Mr. Lind: Referring to subclause (5), Recovery of overpayment, it says:

... as a debt due to Her Majesty.

I would like an explanation of what this means.

The Chairman: Mr. Williams or the Minister?

Mr. Olson: If, following payment of compensation, Mr. Chairman, it is found that the farmer was not entitled to all or any portion of the compensation, he is required to refund the same. It relates to such things as false information, falsification of documents, purchase of land, use of land known to be contaminated with residues, and that sort of thing. It is a matter of the recovery of overpayment. This is deemed to be a debt due and payable to Her Majesty.

Mr. Lind: Yes, but suppose he is in bankruptcy. Is the government going to come ahead of all the other creditors?

Mr. Phillips: A farmer cannot go into bankruptcy.

Mr. Lind: I am serious about this because I do not see why a farmer cannot go into bankruptcy.

Mr. Barrett: This is not the place to discuss that, Mr. Lind.

Mr. Lind: It is in the area of a debt due to Her Majesty.

Mr. Olson: To answer your question specifically, not under this provision. As I understand it, it is simply to make the debt legal without having to have it established by law.

Mr. Newman: I might mention, Mr. Chairman, that this is a provision which is common to many statutes and it merely sets up a statutory cause of action should the government decide to take legal action against a farmer who has received more compensation than he is entitled to under the terms of the statute. It is merely to facilitate legal action.

Mr. Lind: I agree that it is in many statutes, but I want to know why it is in the statutes.

Mr. Newman: Excuse me, Mr. Chairman. It sets up a statutory cause of action. As you may well be aware, in order to have a cause of action you have to base it on some princi-

[Interpretation]

Merci messieurs. Deux personnes désirent poser des questions sur l'article 5, M. Lind et M. Horner. Monsieur Lind.

M. Lind: A l'alinéa 5) le recouvrement des paiements excédentaires, il est dit:

... les dettes dues à Sa Majesté.

J'aimerais que l'on me donne une explication.

Le président: M. Williams ou le Ministre?

M. Olson: Si, à la suite du paiement d'une indemnité, l'on s'aperçoit que le cultivateur n'a pas droit à la totalité ni à une partie de cette indemnité, il doit restituer le montant en cause. Il s'agit des fausses déclarations, des faux documents, de l'achat et de l'utilisation de terres que l'on sait contaminées, et ainsi de suite. C'est une question de recouvrer les paiements excédentaires qui sont reconnus comme une dette due à Sa Majesté.

M. Lind: Et s'il a fait faillite? Est-ce que le gouvernement va intervenir à la tête des créanciers?

M. Phillips: Je ne vois pas comment un agriculteur peut faire faillite.

M. Lind: Je parle sérieusement car il est bien possible qu'un agriculteur déclare faillite.

M. Barrett: Il n'y a pas lieu de discuter de cela dit, monsieur Lind.

M. Lind: Ça entre dans le contexte des dettes dues à Sa Majesté.

L'hon. M. Olson: Pour répondre à votre question, si je comprends bien, il s'agit de légaliser la dette sans avoir à recourir à la loi.

M. Newman: Monsieur le président, il s'agit là d'une disposition qui est valable pour beaucoup de statuts et ne fait qu'établir un cadre juridique au cas où le gouvernement déciderait d'intenter une action en justice contre un agriculteur qui a touché une indemnité à laquelle il n'a pas droit aux termes de la loi. C'est une façon de faciliter la procédure juridique.

M. Lind: Je reconnais effectivement que cela figure aux statuts, mais je voudrais savoir pourquoi elle y figure?

M. Newman: Monsieur le président, il s'agit d'établir un cadre juridique. Comme vous le savez certainement, pour que l'on puisse intenter une action, il faut que cela repose

[Texte]

ple of the common law or on some statutory provision. This saves any argument as to whether there is a legal debt under the provisions of the common law, or under the Civil Code, or in any other provision. It is down there in black and white in statutory form.

Mr. Lind: Who does this protect?

Mr. Newman: It protects the Crown.

Mr. Lind: The inspectors or who?

Mr. Olson: The taxpayers, Mr. Lind.

Mr. Lind: The taxpayers?

Mr. Olson: Yes. If anyone has obtained taxpayers' money out of the national treasury by, as I have pointed out falsification of documents or fraud of any kind. It protects the taxpayer's interest.

Mr. Lind: Are there not other legal methods to protect the taxpayer rather than this one?

Mr. Olson: I suppose there are, but as has been pointed out by Mr. Newman, it is in many of the statutes so that you have a base from which to collect or reclaim money that has been obtained under false pretenses or the other conditions spelled out.

Mr. Lind: Why is it always false pretenses? Maybe it is by false analysis. What about that case? It still can be used.

Mr. Olson: As I understand it, it provides that if it is established that the money has been paid out incorrectly—improperly—then it is a debt due and payable to the Crown.

Mr. Lind: To the Crown, yes. But it takes precedence over all other debts. Not only that, but any other debt any time.

● 1140

Mr. Newman: This would have to be read in conjunction with the Bankruptcy Act.

Mr. Lind: Not necessarily.

Mr. Newman: In case of bankruptcy it would, because this does not specially refer to bankruptcy.

Mr. Lind: In a proposal of bankruptcy it carries the same weight, does it not?

Mr. Newman: Like what?

[Interprétation]

sur un principe de droit coutumier ou un principe statutaire quelconque. Cela tombe, soit sous le code civil, soit sous le droit coutumier, etc. C'est indiqué clairement ici, noir sur blanc, dans les statuts.

M. Lind: Monsieur le président, qui est protégé dans ce cas-ci, alors?

M. Newman: La Couronne.

M. Lind: Les inspecteurs, ou qui?

L'hon. M. Olson: Les contribuables, monsieur Lind.

M. Lind: Les contribuables?

L'hon. M. Olson: Oui. Si l'argent est retiré du Trésor à la suite d'une falsification, d'une fraude, etc., c'est le contribuable qui doit être protégé.

M. Lind: Est-ce qu'il y a d'autres méthodes plutôt que celle-là pour le protéger?

L'hon. M. Olson: Il y en a peut-être, certainement. Mais, comme M. Newman vous l'a indiqué, dans de nombreux statuts vous avez une base vous permettant de récupérer, de recouvrer l'argent qui a été versé à tort.

M. Lind: C'est peut-être une mauvaise analyse, ce n'est pas toujours nécessairement une falsification.

L'hon. M. Olson: Non, en fait, ce que je crois savoir, c'est que cela indique clairement qu'il est prévu que, s'il est prouvé que l'argent a été versé incorrectement, injustement, eh bien, c'est alors une dette qui doit être remboursée à la Couronne.

M. Lind: Mais, cela a préséance sur toutes les autres dettes. Et aussi sur n'importe quelle dette, à tout moment.

M. Newman: Eh bien, cela devrait être étudié à la lumière de la Loi sur la faillite.

M. Lind: Pas nécessairement.

M. Newman: S'il y a un cas de faillite, certainement que cela s'appliquerait. Mais ici, il ne s'agit pas directement de faillite.

M. Lind: Mais, en cas de faillite, cela a la même valeur, n'est-ce pas?

M. Newman: Par exemple?

[Text]

Mr. Lind: It takes precedence over all other creditors, does it not?

Mr. Newman: Yes, but this particular provision does not specifically relate to bankruptcy. And in order to consider the effect this would have on a bankrupt farmer or a farmer who has submitted a proposal of bankruptcy, you would have to refer to the provision of the Bankruptcy Act which deals with priority of payments or priority of creditors.

Mr. Lind: What legal procedures would you have to go through to collect this debt? Let us suppose that through no fault of the farmer but through the fault of the people that are recommending the compensation they have recommended an amount too great and then they want to reclaim it. What procedure do you follow?

Mr. Newman: The normal procedure for collecting debts would be followed. In other words, usually demands are made by the department concerned—in this case it would be the Department of Agriculture—and the farmer would be informed that in the opinion of the members of the department he is legally indebted to reimburse the Crown. If no action is obtained, in that case then legal action could be commenced in the Exchequer Court of Canada by the filing of the information, and then the case ultimately would be heard by a judge if there was no settlement in the interim. So a judge of the Exchequer Court would have the final word. Of course there would be the normal appeal procedures from the judgment of the Exchequer Court.

Mr. Lind: Is there any legal assistance for the farmer in this case to protect his rights, or does he have to bear this out of his own pocket?

Mr. Newman: That would depend on the provincial laws. If he qualifies under a provincial legal aid scheme, yes. He would be protected in that way. But if there were no legal aid schemes in effect in his province, then he would have to bear the costs like any other litigant.

Mr. Lind: Virtually if it is proven that the fault is in the manufacture of the product, in that the instructions on the can were not satisfactory to the Food and Drug Directorate that accepted it, then is the farmer still liable for this?

Mr. Newman: That is another question. The fault of the farmer is only relevant insofar as he has over-collected from the Crown, if I may use that term.

[Interpretation]

M. Lind: Elle donne préséance sur tous les créanciers, n'est-ce pas?

M. Newman: Il faut, pour que cela soit appliqué à un cas de faillite, que l'on se réfère à la Loi sur la faillite.

M. Lind: Monsieur le président, quelle est la procédure pour recouvrer cette dette? Supposons que ce n'est pas le fermier qui soit en tort, mais plutôt ceux qui ont recommandé que l'on verse cette indemnité, et qu'ensuite on s'aperçoit qu'ils se sont trompés. Alors, quelle est la procédure que vous envisagez, à ce moment-là?

M. Newman: La procédure normale de recouvrement des dettes serait applicable, c'est-à-dire que le ministère intéressé fait une demande, en l'occurrence, ici, le ministère de l'Agriculture, et le cultivateur est avisé, alors, que, de l'avis des responsables du ministère de l'Agriculture, il est légalement endetté à l'égard de la Couronne. Il n'y a pas d'action à ce moment-là, mais il se peut qu'il y en ait une devant la cour de l'Échiquier du Canada. Et, à ce moment-là, il y aurait audience devant un juge, au cas où il n'y aurait pas eu règlement dans l'intervalle. Donc, autrement dit, c'est la cour de l'Échiquier qui aurait le dernier mot. Mais on pourrait alors en appeler du jugement.

M. Lind: Est-ce que le cultivateur peut être aidé dans cette affaire pour être protégé dans ses droits? Ou, est-ce qu'il doit se débrouiller tout seul?

M. Newman: Au fait, cela dépendra des lois provinciales. S'il a droit à une aide judiciaire, il pourra être aidé; à ce moment-là, il serait protégé. Mais, s'il n'y a pas de caisse d'assistance judiciaire dans sa province, alors, il serait seul.

M. Lind: En fait, si, à la fin, on s'aperçoit que c'est le fabricant du produit qui a tort et que les instructions sur la boîte n'étaient pas conformes à ce qu'elles auraient dû être, alors que la direction des aliments et drogues les avait acceptées, est-ce que le cultivateur est toujours responsable, malgré tout?

M. Newman: Là, c'est tout à fait autre chose. La culpabilité du cultivateur n'existe que s'il a trop perçu de la Couronne, si vous me permettez d'utiliser le terme.

[Texte]

Mr. Williams: Mr. Chairman, if I might answer in part Mr. Lind's last question, the intent of subsection (2) of section 5 is that if there appears to be a great deal of doubt or some doubt as to whose fault or where the fault lies, subsection (2) of section 5 authorizes the Minister to make payments of compensation to the farmer and then later collect from the manufacturer, if it is his view the blame is difficult to assess and it may be difficult for the farmer to go and get this. In other words, there is this opportunity really for the Minister to intervene with the manufacturer on the part of the farmer. The intent was to provide that protection to the farmer, where it was a difficult and complex case. The compensation would be paid, with the Minister then taking recourse against the manufacturer.

Mr. Lind: Is this clause included in all acts where we give compensation on any cases?

Mr. Williams: I cannot answer that specifically about all acts. This declaration of an overpayment as being a debt to the Crown is included in many other acts, but I would not say all acts.

Mr. Newman: I will give an example. You will find this clause in the War Veterans Allowance Act, whereby war veterans may claim an allowance if their income does not reach a certain minimum. But if they give false information or it turns out that they did not really qualify, then the Crown has the right to recover through the provisions of a section very similar to subsection (2) of the proposed section 5.

Mr. Lind: Thank you, Mr. Chairman.

The Chairman: I have one other questioner. Mr. Horner, do you have lengthy questions?

Mr. Horner: No, my questions are generally quite brief. It may take me quite a while to get the answers.

The Chairman: It is now 11.45, and unless there is some disposition on the part of the Committee to conclude consideration of clause 5, we will adjourn and we will meet again. You will be notified by the Chair.

[Interprétation]

M. Williams: Pour revenir à la dernière question de M. Lind, à l'article 5 (2), il est dit que le ministre peut si l'on ne sait pas qui est responsable, qui est coupable,

exercer pour le compte du cultivateur tout recours contre un fabricant...

Si, d'après lui, il est difficile de vérifier qui est coupable, autrement dit, il y a toujours cette possibilité pour le ministre d'intervenir auprès du fabricant et de se mettre, en quelque sorte, du côté du cultivateur; autrement dit, il le protège. Si le versement a été fait, à ce moment-là, le ministre peut intervenir auprès du fabricant.

M. Lind: Est-ce qu'il y a des cas où, de toute façon, nous donnerions une indemnité à tout instant, à tout moment, dans telle circonstance.

M. Williams: Je ne peux pas répondre à cela. Cet excédent de paiement représentant une dette à l'égard de la Couronne figure dans plusieurs lois, mais non dans toutes.

M. Newman: On le voit, par exemple, dans la Loi sur les allocations aux anciens combattants. Par exemple, un ancien combattant peut demander une allocation si son revenu n'atteint pas un minimum donné, mais, s'il fournit des renseignements erronés ou si, vraiment, il n'a pas droit à l'allocation, à ce moment-là, la Couronne a le droit de recouvrer la somme. En vertu de la loi, rédigée dans des termes semblables à ceux de l'article 5 (2), ici, elle peut récupérer l'argent.

M. Lind: Merci, monsieur le président.

Le président: Une autre question? Monsieur Horner, vous avez une question?

M. Horner: En fait, ma question est très brève. Il faudra peut-être longtemps pour que j'obtienne une réponse, mais enfin.

Le président: Il est 11h45 et, à moins que l'on veuille terminer, si l'on reconnaît qu'on a terminé l'article 5, on peut lever la séance. Vous serez avisés de la prochaine séance par le président. La séance est levée.

REPORTS TO THE HOUSE

WEDNESDAY, January 29, 1969.

The Standing Committee on Agriculture has the honour to present its

SECOND REPORT

Pursuant to its Order of Reference of Tuesday, January 14, 1969, your Committee has considered Bill C-155, the Pesticide Residue Compensation Act, and has agreed to report it without amendment.

A copy of the Minutes of Proceedings and Evidence relating to this Bill (*Issues Nos. 12, 13 and 14*) is tabled.

Respectfully submitted,

Le président,
BRUCE S. BEER,
Chairman.

WEDNESDAY, January 29, 1969.

The Standing Committee on Agriculture has the honour to present its

THIRD REPORT

Pursuant to its Order of Reference of Tuesday, January 14, 1969, your Committee has considered Bill C-154, the Plant Quarantine Act, and has agreed to report it with the following amendment:

In Clause 7, Sub-clause 2, line 1, after the word "shall", insert the word "knowingly".

A copy of the Minutes of Proceedings and Evidence relating to this Bill (*Issue No. 14*) is tabled.

Respectfully submitted,

Le président,
BRUCE S. BEER,
Chairman.

RAPPORTS À LA CHAMBRE

LE MERCREDI 29 janvier 1969.

Le Comité permanent de l'agriculture a l'honneur de présenter son

DEUXIÈME RAPPORT

Conformément à l'ordre de renvoi du mardi 14 janvier 1969, le Comité a étudié le Bill C-155, Loi sur l'indemnisation pour dommages causés par les pesticides, et est convenu d'en faire rapport sans modification.

Un exemplaire des procès-verbaux et témoignages relatifs à ce bill (*fascicules n^{os} 12, 13 et 14*) est déposé.

Respectueusement soumis,

LE MERCREDI 29 janvier 1969.

Le Comité permanent de l'agriculture a l'honneur de présenter son

TROISIÈME RAPPORT

Conformément à l'ordre de renvoi du mardi 14 janvier 1969, le Comité a étudié le Bill C-154, Loi sur la quarantaine des plantes, et est convenu d'en faire rapport avec la modification suivante:

A l'article 7, paragraphe 2, ligne 1, après le mot «faire» et avant la virgule, insérer le mot «sciemment».

Un exemplaire des procès-verbaux et témoignages relatifs à ce bill (*fascicule n^o 14*) est déposé.

Respectueusement soumis,

(Text)

MINUTES OF PROCEEDINGS

TUESDAY, January 28, 1969.

(15)

The Standing Committee on Agriculture met at 9.38 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Barrett, Beer, Clermont, Côté (*Richelieu*), Danforth, Douglas, Downey, Gauthier, Gleave, Howard (*Okanagan Boundary*), Lambert (*Bellechasse*), Lessard (*Lac-Saint-Jean*), Lind, McKinley, Peters, Pringle, Roy (*Laval*), Stewart (*Okanagan-Kootenay*), Whicher, Yanakis—(20).

Also present: The Hon. D. S. Macdonald, M.P.; Senator Hastings.

In attendance: From the Department of Agriculture: The Hon. H. A. Olson, Minister; Mr. S. B. Williams, Deputy Minister; Mr. C. R. Phillips, Director General of Production and Marketing; Mr. C. H. Jefferson, Director of Plant Products Division; Dr. D. S. MacLachlan, Director of Plant Protection Division; Mr. Harvey Newman, Departmental Legal Adviser.

The Committee resumed consideration of Clause 5 of Bill C-155, the Pesticide Residue Compensation Act.

Clauses 5, 6, 7 and 8 were carried, in the course of which Messrs. Williams, Phillips and Newman were questioned from time to time.

After some questions, Clause 9 was allowed to stand.

Clauses 10, 11, 12, 13, 14, 15, 16 and 17 were carried, in the course of which the Minister and the aforementioned Departmental officials answered questions from time to time.

At 11.37 a.m., the Committee adjourned to 3.35 p.m. this day.

(Traduction)

PROCÈS-VERBAUX

Le MARDI 28 janvier 1969.

(15)

Le Comité permanent de l'Agriculture se réunit ce matin à 9 h. 38, sous la présidence de M. Beer, président.

Présents: MM. Barrett, Beer, Clermont, Côté (*Richelieu*), Danforth, Douglas, Gauthier, Gleave, Howard (*Okanagan Boundary*), Lambert (*Bellechasse*), Lessard (*Lac-Saint-Jean*), Lind, McKinley, Peters, Pringle, Roy (*Laval*), Stewart (*Okanagan-Kootenay*), Whicher, Yanakis—(20).

De même que: L'hon. D. S. Macdonald, député, et M. Hastings, sénateur.

Aussi présents: Du ministère de l'Agriculture: L'hon. H. A. Olson, ministre; M. S. B. Williams, sous-ministre; M. C. R. Phillips, directeur général, Direction de la production et des marchés; M. C. H. Jefferson, directeur de la Division des produits végétaux; M. D. S. MacLachlan, directeur de la Division de la protection des végétaux; et M. Harvey Newman, conseiller juridique du Ministère.

Le Comité reprend l'examen de l'article 5 du Bill C-155: Loi sur l'indemnisation pour dommages causés par les pesticides.

Les articles 5, 6, 7 et 8 sont adoptés. MM. Williams, Phillips et Newman ayant été interrogés entre temps.

Après quelques questions, le Comité réserve l'article 9.

Les articles 10, 11, 12, 13, 14, 15, 16 et 17 sont adoptés, le Ministre et les représentants du Ministère susmentionnés ayant été interrogés.

A 11 h. 37 du matin, le Comité s'ajourne jusqu'à 3 h. 35 de l'après-midi.

AFTERNOON SITTING
(16)

The Committee resumed at 3.35 p.m. this day, the Chairman Mr. Beer, presiding.

Members present: Messrs. Barrett, Beer, Clermont, Côté (*Richelieu*), Danforth, Douglas, Gleave, Howard (*Okanagan Boundary*), Lambert (*Bellechasse*), Lefebvre, Lessard (*Lac-Saint-Jean*), Lind, McKinley, Peters, Pringle, Roy (*Laval*), Stewart (*Okanagan-Kootenay*), Whicher—(18).

Also present: Senator Hastings.

In attendance: Same as at the morning sitting.

On clause 9 of Bill C-155, Mr. Gleave moved an amendment:

That subsection (a) of clause 9(1) be deleted.

After some discussion, the motion was negated on a show of hands: YEAS 3, NAYS 11.

Following further questioning of the Minister, assisted by Messrs. Williams and Newman, Mr. Danforth moved an amendment to clause 9, sub-clause 1:

Deleting the words "of this Act" after the word "provision" and inserting the words "as set out under sections (1) and (2) of clause 8".

After some discussion, the motion was negated on a show of hands: YEAS 6, NAYS 9.

Clause 9 was carried.

On clause 1, there were some questions; and Mr. Williams, in reply to Mr. Gleave, referred to the following three documents which, it was agreed, would be printed with today's proceedings:

Research Funds and Manpower in Pesticides Research in Canada, Voted 1966-67, Estimated 1967-68 (*Appendix F*).

Estimated Expenditure by Canadian Pesticide Industry on Research during 1967-68 (*Appendix G*).

Estimated Expenditure by Canada Department of Agriculture Research

SÉANCE DE L'APRÈS-MIDI
(16)

Le Comité se réunit de nouveau cet après-midi à 3 h. 35, sous la présidence de M. Beer.

Présents: MM. Barrett, Beer, Clermont, Côté (*Richelieu*), Danforth, Douglas, Gleave, Howard (*Okanagan Boundary*), Lambert (*Bellechasse*), Lefebvre, Lessard (*Lac-Saint-Jean*), Lind, McKinley, Peters, Roy (*Laval*), Stewart, (*Okanagan-Kootenay*), Whicher—(18).

De même que: Le sénateur Hastings.

Aussi présents: Les mêmes personnes qu'à la séance du matin.

Sur l'article 9 du Bill C-155, M. Gleave propose une modification:

Que l'alinéa *a*) du paragraphe (1) de l'article 9 soit supprimé.

Après débat, la proposition est rejetée, par un vote à main levée, par 11 voix à 3.

Le Ministre, aidé par MM. Williams et Newman, répond à d'autres questions, puis M. Danforth propose une modification au paragraphe (1) de l'article 9:

Que l'on remplace les mots «de la présente loi», qui suivent le mot «disposition», par les termes «énoncés dans les paragraphes (1) et (2) de l'article 8».

Après débat, la proposition est rejetée, par un vote à main levée, par 9 voix à 6.

L'article 9 est adopté.

Sur l'article 1, on pose quelques questions, et M. Williams, en réponse à M. Gleave, mentionne les trois documents suivants, que l'on décide d'imprimer en appendice aux délibérations d'aujourd'hui:

Fonds destinés à la recherche et effectifs consacrés à la recherche sur les antiparasitaires au Canada. Crédits votés 1966-1967. Estimations 1967-1968 (*Appendice F*).

Estimation des dépenses faites par l'industrie antiparasitaire pour la recherche, 1967-1968 (*Appendice G*).

Branch during 1967-68 (*Appendix H*).

Clause 1, the title and the Bill were carried, and it was agreed that the Chairman would report Bill C-155 without amendment.

The Committee entered upon consideration of Bill C-154: An Act to prevent the introduction or spreading of pests injurious to plants: short title—the Plant Quarantine Act.

On Clause 2, the Minister gave an introductory statement.

Clauses 2, 3, 4, 5 and 6 were carried, in the course of which the Minister, Mr. Williams and Mr. Phillips answered questions from time to time.

On Clause 7, Mr. Douglas moved an amendment to sub-clause (2) line 1:

Inserting the word “knowingly” after the word “shall”.

The motion was carried and clause 7 was carried as amended.

Clauses 8, 9 and 10 were carried, with questions on the latter two.

Clauses 11 and 12 were considered in their order and each was allowed to stand.

At 5.37 p.m., the Committee adjourned to 8.08 p.m. this day.

EVENING SITTING (17)

The Committee resumed at 8.08 p.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Barrett, Beer, Clermont, Côté (*Richelieu*), Danforth, Douglas, Downey, Gleave, Howard (*Okanagan Boundary*), Lambert (*Bellechasse*), Lessard (*Lac-Saint-Jean*), McKinley, Moore (*Wetaskiwin*), Peters, Pringle, Roy (*Laval*), Stewart (*Okanagan-Kootenay*), Whicher—(18).

In attendance: Same as at the morning sitting, plus Mr. C. L. Stevenson, Chief,

Estimation des dépenses faites par la Direction de la Recherche du ministère de l'Agriculture, 1967-1968 (*Appendice H*).

L'article 1, le titre et le Bill sont adoptés, et l'on décide que le président fera rapport du Bill C-155 sans modification.

Le Comité passe à l'examen du Bill C-154: Loi ayant pour objet d'empêcher l'introduction ou la propagation de parasites nuisibles aux plantes—dont le titre abrégé est: Loi sur la quarantaine des plantes.

Sur l'article 2, le Ministre fait une déclaration préliminaire.

Les articles 2, 3, 4, 5 et 6 sont adoptés, le Ministre, ainsi que MM. Williams et Phillips, ayant répondu à des questions dans l'intervalle.

Sur l'article 7, M. Douglas propose une modification à la première ligne du paragraphe (2):

Que l'on insère, après le mot «faire» et avant la virgule, le mot «sciemment».

La proposition est adoptée, et l'article 7 modifié est adopté.

Les articles 8, 9 et 10 sont adoptés, les deux derniers ayant fait l'objet de questions.

Les articles 11 et 12 sont examinés l'un après l'autre, et tous deux sont réservés.

A 5 h. 37, le Comité s'ajourne jusqu'à 8 h. 08 ce soir.

SÉANCE DU SOIR (17)

Le Comité se réunit de nouveau ce soir à 8 h. 08, sous la présidence de M. Beer.

Présents: MM. Barrett, Beer, Clermont, Côté (*Richelieu*), Danforth, Douglas, Downey, Gleave, Howard (*Okanagan Boundary*), Lambert (*Bellechasse*), Lessard (*Lac-Saint-Jean*), McKinley, Moore (*Wetaskiwin*), Peters, Pringle, Roy (*Laval*), Stewart (*Okanagan-Kootenay*), Whicher—(18).

Aussi présents: Les mêmes personnes qu'à la séance du matin, et, de plus, M.

Feeds Fertilizers and Pesticides Section,
Plant Products Division.

On clause 11 of Bill C-154, Mr. Newman gave an explanation.

Clause 11 was carried.

On clause 12, Dr. MacLachlan gave a statement and following some questions, that clause was carried.

On clause 13, the Minister, and Messrs. Williams, Phillips and Newman answered questions.

Clause 13 was carried.

Clauses 14, 15, and 1 were carried as were the title and the Bill in that order.

It was agreed that the Chairman would report Bill C-154 with amendment.

The Committee entered upon consideration of Bill C-157: An Act to regulate products used for the control of pests and the organic functions of plants and animals: short title—the Pest Control Products Act.

On clause 2, the Minister gave a brief statement and following some questions, clause 2 was carried.

On clause 3 there were questions and that clause was carried.

On clause 4, the Minister, Mr. Williams and Mr. Jefferson answered questions.

Clause 4 was allowed to stand.

At 9.30 p.m., the Committee adjourned to the call of the Chair.

C. L. Stevenson, chef de la Section des aliments du bétail, engrais et antiparasitaires, Division des produits végétaux.

Sur l'article 11 du Bill C-154, M. Newman donne une explication.

L'article 11 est adopté.

Sur l'article 12, M. MacLachlan fait une déclaration, puis, après quelques questions, l'article est adopté.

Sur l'article 13, le Ministre, ainsi que MM. Williams, Phillips et Newman répondent à des questions.

L'article 13 est adopté.

Les articles 14, 15 et 1 sont adoptés, ainsi que le titre et le Bill, dans cet ordre.

Il est décidé que le président fera rapport du Bill C-154 avec une modification.

Le Comité passe à l'examen du Bill C-157: Loi ayant pour objet de régler les produits utilisés pour détruire les parasites et agir sur les fonctions organiques des plantes et des animaux—dont le titre abrégé est: Loi sur les produits antiparasitaires.

Sur l'article 2, le Ministre fait une brève déclaration, puis, après quelques questions, l'article 2 est adopté.

Sur l'article 3, on pose des questions, puis cet article est adopté.

Sur l'article 4, le Ministre, ainsi que MM. Williams et Jefferson, répondent à des questions.

L'article 4 est réservé.

A 9 h. 30 du soir, le Comité s'ajourne jusqu'à nouvelle convocation du président.

Le secrétaire du Comité,

Michael A. Measures,

Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Tuesday, January 28, 1969

• 0939

The Chairman: Gentlemen, I think if we could come to attention, we could start our meeting.

When the Committee rose on Thursday last we were considering Clause 5 of Bill C-155. Of those on my list to recognize I had Mr. Horner; Mr. Horner is replaced by Mr. Downey.

Before we proceed with that part of the meeting, I would like to have the opportunity of presenting the Minister to you because he has a statement that he would like to make at the outset. Mr. Minister?

The Hon. H. A. Olson (Minister of Agriculture): Mr. Chairman, there are two things I wish to mention. The Canadian Agricultural Congress is slated to begin here on March 24. I would like to have an expression from the Committee as to how we should handle the invitations to the Members of Parliament. There are two ways, I suppose. One is that we could invite a certain number to be delegates and the rest of the Committee as observers. It is not clear in my mind what you would wish, but you might think about this: that if we issued an invitation to all the members of this Committee, I believe it is 30, to be observers to the Congress, then you of course would have that degree of freedom, I suppose, to attend all the workshops and so on that will be taking place, and indeed the plenary sessions.

On the other hand, if we were to invite some as delegates, it would restrict those people somewhat to paying particular attention to whichever section they were assigned to. On balance, I think you might like to have an invitation as observers to the whole of the Congress and then feel free to attend wherever you like. However, I think perhaps we could try to find five or perhaps six invitations for full delegates if you would like to have it that way.

• 0940

The other point I would like to bring up, Mr. Chairman, is that it is rather important

[Interpretation]

TÉMOIGNAGES

(Enregistrement électronique)

[Interprétation]

Le président: Messieurs, si vous voulez bien faire silence, nous allons ouvrir la séance.

Lorsque nous avons ajourné nos délibérations jeudi dernier, nous en étions à l'examen de l'article 5 du Bill C-155. J'avais sur ma liste le nom de M. Horner, qui est aujourd'hui remplacé par M. Downey.

Avant que nous ne passions aux questions, j'aimerais donner la parole au ministre, qui a une déclaration à faire dès maintenant. Monsieur le ministre.

L'hon. H. A. Olson (ministre de l'Agriculture): Monsieur le président, il y a deux choses que j'aimerais mentionner. Le Congrès canadien de l'agriculture doit débiter ici le 24 mars. Je voudrais que le Comité me fasse savoir comment il veut que nous procédions en ce qui concerne les députés à inviter. Il y a deux façons, je crois. Nous pourrions, soit inviter un certain nombre de députés à être délégués, et le reste du Comité pourrait se rendre au Congrès en tant qu'observateurs. Je ne suis pas très sûr... de savoir ce que vous voulez. Mais nous pourrions envoyer une invitation à tous les membres du Comité. Je crois que vous êtes trente. Vous pourriez être observateurs au Congrès et vous auriez naturellement une certaine marge de liberté qui vous permettrait de participer aux divers ateliers et autres qui seront organisés et également aux séances plénières.

Par ailleurs si nous invitons certains des députés comme délégués, cela leur permettrait de ne s'intéresser qu'à certaines sections particulières, pour lesquelles ils ont été désignés. Par ailleurs vous pourriez être invités comme observateurs à l'ensemble du Congrès et assister aux séances que vous voudrez. Quoi qu'il en soit, nous pourrions peut-être envoyer cinq ou six invitations de délégués à part entière, si vous voulez.

Il y a autre chose dont je voudrais parler, monsieur le président. Il est assez important

[Text]

that I should be at another meeting for about half an hour. If the Committee would not mind I would like to ask their permission to leave at ten o'clock and return shortly after 10:30.

Mr. Barrett: No problem.

The Chairman: Would you want an expression of opinion on the first matter?

Mr. Olson: Yes.

Mr. Douglas: Could I ask a question on the first matter Mr. Chairman? What is the difference in the standing of an observer and a fully qualified delegate? Is there that much difference in their conduct, or what they may be permitted to do at the meeting?

Mr. Olson: I think there would be this much difference, that if you were one of the 400 delegates, you would then have to make a choice and be assigned specifically to the workshop or whatever it is that is dealing, for example, with the wheat and oil seeds economy or the dairy section or whatever else. Are there going to be nine?

Mr. S. B. Williams (Deputy Minister of Agriculture): Seven.

Mr. Olson: There are going to be seven of those.

Mr. Williams: There will be seven subjects; there will be 20 workshop groups.

Mr. Olson: There will be 20 workshop groups, and I think if you were a delegate you would then have to accept the responsibility of confining your activities there and making your contribution there. If, on the other hand, you were an observer, perhaps I should say a participating observer, then you would have the freedom to move around to all of these if you wanted to.

An hon. Member: What are the dates?

Mr. Olson: It begins the 24th. It is for three days starting on the 24th.

Mr. Pringle: Mr. Chairman, is an agenda and the format of the Congress available as yet?

Mr. Olson: We have a draft agenda, yes. I am not saying that it is the final one, but it is the first draft.

Mr. Douglas: Would observers be able to speak at these different workshops, or take

[Interpretation]

que je me rende à une autre réunion pendant une demi-heure, et si le Comité veut bien m'excuser, je voudrais lui demander la permission de partir à 10 hres et de revenir un petit peu après 10 hres et demie.

M. Barrett: Il n'y a pas d'objection.

Le président: Voulez-vous que les membres du Comité vous donnent leur avis en ce qui concerne la première partie de vos questions?

M. Olson: Oui.

M. Douglas: Puis-je poser une question concernant la première partie, monsieur le président. Quelle est la différence entre le statut d'observateur et le statut de délégué à part entière? Est-ce qu'il y a une grosse différence dans ce qu'ils doivent faire ou ce qu'ils peuvent faire lors de la réunion?

M. Olson: Si vous êtes un des quatre cents délégués, vous devez faire un choix et être nommé à un des ateliers, appelez ça comme vous voulez, par exemple en ce qui concerne l'économie du blé et des oléagineux ou l'industrie laitière. Y a-t-il neuf comités?

M. S. B. Williams: Sept.

M. Olson: Il y a sept comités de ce genre.

M. Williams: Il y a sept sujets et vingt groupes d'ateliers.

M. Olson: Il y a 20 groupes d'ateliers.

Si vous étiez délégués, vous devriez alors accepter la charge de limiter vos activités et de contribuer uniquement à un seul comité.

Par contre, si vous étiez observateur, un observateur avec certains droits de participation, vous auriez le droit de vous rendre d'un comité à un autre, vous pourriez assister, selon votre désir, aux comités qui vous intéressent.

Une voix: Quelle est la date du Congrès?

M. Olson: Il dure trois jours et commence le 24.

M. Pringle: Est-ce que vous avez déjà l'ordre du jour et le programme du congrès?

M. Olson: Nous avons déjà un projet d'ordre du jour. Il n'est pas définitif mais c'est en tous cas, un avant-projet.

M. Douglas: Est-ce que l'on pourra prendre la parole à ces différents ateliers? Est-ce

[Texte]

part in the proceedings, or just be listeners? Ask questions, or what have you?

Mr. Olson: I do not quite know what to say about that. I am not sure that we have discussed that point. So far this would be a special arrangement for the Committee because we have no general arrangements for observers except for the international people who will be here; the agriculture attaches to the embassies and other international groups who will not be participating.

• 0945

The Chairman: Mr. Barrett has a question.

Mr. Barrett: Mr. Chairman, I think if we all went as observers then we would be in that category without being specific delegates per se. I think this would be a reasonable position. I am talking personally. I would much prefer to be an observer because I would like to wander about to see exactly what the situation is, and not necessarily participate.

Mr. Olson: Without being tied?

Mr. Barrett: That is right.

Mr. Danforth: Mr. Chairman, may I make an observation here? My understanding is that this Congress is a fact-finding meeting between the various segments of industry and government departments.

The Chairman: Would you please use the microphone?

Mr. Danforth: As my understanding is that this Congress is a fact-finding meeting between various segments of the agricultural industry and various members of the government and the Department of Agriculture, and because it was necessary to limit the delegations, I think the number 400 was used, I feel that it would be perhaps not a fortunate occurrence to name a number of delegates from the Standing Committee on Agriculture. If we were invited in as observers, since it is a general meeting, I do not think anyone would be disposed to prevent us asking pertinent questions or carrying on as participants. I think we would be prepared to accept the role as observers and play it by ear after we were at the meeting.

The Chairman: Are there other views? Mr. Lessard?

[Interprétation]

qu'on pourra participer aux réunions ou simplement être observateurs? Est-ce qu'on pourra poser des questions?

M. Olson: Je ne sais pas très bien quoi vous répondre. Je ne sais pas si on a déjà étudié la question. Jusqu'ici il s'agirait de prendre des dispositions spéciales pour le Comité, car il n'y a pas de dispositions générales pour les observateurs en dehors des représentants internationaux qui assisteront au congrès. L'Attaché agricole, les attachés agricoles des ambassades et des autres organismes internationaux n'y participeront pas.

Le président: M. Barrett veut poser une question.

M. Barrett: Monsieur le président, nous pourrions être tous observateurs. Nous serions dans cette catégorie sans être des délégués en soi. Je pense que ce serait raisonnable. Je parle de mon propre point de vue. Je préférerais être un observateur, en ce qui me concerne, car je voudrais pouvoir aller d'un endroit à l'autre pour évaluer la situation dans son ensemble et non participer formellement.

M. Olson: Sans être lié personnellement?

M. Barrett: C'est ça.

M. Danforth: Monsieur le président, je voudrais faire une remarque. Je crois comprendre qu'il s'agit d'un congrès d'étude visant les différents secteurs de l'agriculture et le gouvernement.

Le président: Voudriez-vous utiliser le micro?

M. Danforth: Si j'ai bien compris, ce congrès est une réunion d'étude entre les différents secteurs de l'agriculture et les représentants du gouvernement et du ministère de l'Agriculture et comme il a été nécessaire de limiter le nombre des délégués, on l'a fixé à 400. Je pense qu'il serait sans doute assez bon de nommer un certain nombre de délégués parmi les membres du Comité permanent de l'Agriculture. Si nous sommes invités en tant qu'observateurs, puisqu'il s'agit d'une assemblée générale, cela ne nous empêchera pas de poser des questions pertinentes ou de nous conduire comme des participants. Nous serions prêts, je crois, à accepter le rôle d'observateurs et ensuite d'agir ou de juger à mesure que la réunion avancera.

Le président: Y a-t-il d'autres opinions? Monsieur Lessard.

[Text]

Le président: Monsieur Lessard.

M. Lessard (Lac-Saint-Jean): J'aimerais avoir une réponse du ministre à la question posée par M. Danforth. Si nous assistons comme observateurs seulement, nous sera-t-il permis de participer au débat, d'émettre une opinion, ou devons nous nous contenter d'écouter passivement?

Mr. Danforth: That is the crux of the whole problem.

Mr. Olson: I think we have to give some further consideration to that, because what we will be involved in here, of course, is, for example, what to do with the other observers and supporting staff that are brought along by the actual delegates, for example the provincial governments. I think there are 50 nominations to be received from all ten provincial governments. My hope would be that we can make some arrangement so that there can be some participation, particularly by the members of this Committee. But I think we would have to give some further consideration to that, if it is going to be the same category as other observers.

The Chairman: Mr. Lambert has a question.

M. Lambert (Bellechasse): Monsieur le président, à ce congrès, est-ce surtout des organisations agricoles qui présenteront des mémoires, ou bien est-ce que les cultivateurs qui y participeront auront la possibilité d'exprimer leurs points de vue?

D'autre part, les membres du Comité qui assisteront à ces réunions pourront-ils également prendre part aux délibérations? Je suppose, par exemple, le cas d'un député qui est en même temps un cultivateur (comme c'est mon cas). Lui sera-t-il possible, en vertu des règlements, évidemment, d'exposer son point de vue comme membre du Comité et aussi (en se plaçant de l'autre côté de la frontière) comme cultivateur?

Mr. Olson: Well, there will be 140 delegates invited from the producer groups, the producer organizations, the Canadian Federation of Agriculture, the Farmers' Union and other producer groups, the commodity groups, the dairy industry, and so on. You ask, can you express your opinion as a member of the Committee and then as a farmer? Well, the only way that you could be a representative of a farm group is if a farm group nominated you as their delegate.

As to this I do not know, but we are not going to name the persons who will be invited; we are going to issue the invitations in

[Interpretation]

The Chairman: Mr. Lessard.

Mr. Lessard (Lake St. John): I would like to have a reply from the Minister concerning Mr. Danforth's question. If we attend as observers only, will we be allowed to participate in the debates, to voice an opinion, or will we have to be passive and just listen?

M. Danforth: Je crois que c'est le cœur même du problème.

M. Olson: Je crois que nous devons étudier un peu plus à fond cette question car ici, il s'agira par exemple de savoir ce que nous ferons avec les autres observateurs et le personnel de soutien qui viendra avec les délégués. Les gouvernements provinciaux, par exemple, délégueront 50 personnes. J'espère que nous pourrions faire certains arrangements afin d'obtenir une certaine participation, principalement de la part des membres de ce Comité. Mais nous devons étudier la question à savoir si vous serez des observateurs comme les autres ou non.

Le président: M. Lambert aimerait poser une question. Monsieur Lambert.

Mr. Lambert (Bellechasse): Mr. Chairman, at this Congress, will it be especially farm organizations that will present briefs or will farmers participating in it be able to express their point of view?

On the other hand, will Committee members who will attend these meetings be able to participate in the debates? Let us take the case of a Member of Parliament who is also a farmer, as I am. Will it be possible for him, in accordance with the Standing Orders, of course, to express his point of view as a Committee member and also—by placing himself on the other side of the fence—as a farmer?

M. Olson: Il y aura 140 délégués venant des producteurs, des organisations agricoles, de la Fédération canadienne de l'agriculture, des syndicats agricoles, des différents groupes représentant les producteurs de denrées, de lait, etc.... Mais vous me demandez si vous pouvez exprimer votre opinion en tant qu'agriculteur et en tant que membre du Comité? La seule façon d'être un représentant d'un groupe agricole serait d'être nommé délégué d'une association agricole. Je ne sais pas si c'est possible.

Mais nous n'allons pas nommer les individus qui seront invités. Nous enverrons des paquets d'invitations à chacun des organismes

[Texte]

bulk to each of the organizations and they will provide us with the names of their nominees.

• 0950

There may be another way we could do it, and that would be to have three or five or six official delegates and rotate them from day to day, plus all of the other members of the Committee as observers. I think there might be a problem if we were to say that the members of this Committee will be observers but shall have all the rights of participation except perhaps moving motions and I do not think there will be any motions. In other words, I am not sure what position we would find ourselves in, when this congress is really for the purpose of giving some advice to government and to Parliament as a result of their thinking out these matters, if we dominated, the discussion while they were trying to give us this advice. Do you see what I mean?

The Chairman: Mr. Clermont, Mr. Danforth and Mr. Gleave have indicated they would like to ask questions. Could we hear their questions before arriving at a decision?

M. Clermont: Monsieur le président, je voudrais exprimer mon opinion personnelle. Je crois qu'il serait préférable, comme membres du comité de l'agriculture, que nous assistions à ces assises seulement comme observateurs parce que cette réunion a été convoquée pour connaître l'opinion des experts ou des personnes versées en agriculture. Je sais que nous sommes intéressés aussi, mais je préférerais que nous assistions seulement à titre d'observateurs car nous aurons l'occasion, plus tard, d'apporter nos commentaires ou d'étudier le rapport de ce comité.

The Chairman: Thank you, Mr. Clermont.

Mr. Danforth: Mr. Chairman, I was very interested in Mr. Clermont's remarks. I think he has a point. However, may I suggest to the Minister, through you Mr. Chairman, that he has opened up this subject this morning and has given us several alternative proposals. Since this meeting is not until March 24 perhaps it would not be necessary to have a consensus this morning. This would give us an opportunity to consider this matter further. It would also give the Minister and his officials an opportunity to pursue the various suggestions made this morning. Perhaps something could be worked out on the status of observers, with power to contribute if necessary. However, it might be found that this would not be feasible. Perhaps he would like this matter considered further and an opinion formed at a later date.

[Interprétation]

qui nous fourniront ensuite le nom des membres de leur délégation. Il y a peut-être une autre façon de procéder: avoir 3, 5 ou 6 délégués officiels et les faire changer de comités à tour de rôle chaque jour. Et tous les autres membres du Comité agiront en tant qu'observateurs.

Il pourrait y avoir un problème si nous disions que les membres du comité sont des observateurs mais auront toutes les prérogatives de participation en dehors peut-être de proposer des motions et je ne pense pas qu'il y aura des motions non plus. En d'autres termes, je ne sais pas quelle serait notre situation alors que ce congrès est réellement là pour aviser le Parlement et le gouvernement au sujet de ces questions, si nous dominons les discussions alors que ces gens essaient de nous donner leur avis. Cela crée une situation étrange.

Le président: M. Thomas, M. Danforth, M. Gleave veulent poser des questions. Nous pourrions peut-être entendre leurs questions avant d'arriver à une décision.

Mr. Clermont: Mr. Chairman, I would like to voice my point of view. Personally I believe that as Committee members we should sit as observers only, because this meeting is being held to note the opinion of experts or people interested in the good of agriculture. I know that as committee members we are also interested in this, but I would prefer it if we attended as observers only, since later on we will be able to voice our opinion or discuss the report of this Committee.

Le président: Merci, monsieur Clermont.

M. Danforth: J'ai été très intéressé par ce qu'a dit M. Clermont. Je pense qu'il y a du bon dans ce qu'il dit. Je voudrais suggérer au ministre par votre intermédiaire monsieur le président, la chose suivante: Il a abordé cette question ce matin et il nous a donné plusieurs possibilités et comme cette réunion n'aura lieu que le 24 mars, il ne sera peut-être pas nécessaire d'avoir un consensus ce matin. Nous aurons alors la possibilité d'étudier cette question plus à fond. Ceci donnera la possibilité au ministre et à ses fonctionnaires d'étudier les diverses possibilités que nous avons avancées ce matin. Peut-être que quelque chose pourrait être trouvée au sujet du statut d'observateur avec possibilité d'intervenir si nécessaire. Toutefois, on trouverait peut-être que cela n'est pas possible. Le ministre voudra peut-être étudier cette question plus à fond et nous pourrions prendre une décision un peu plus tard.

[Text]

The Chairman: Thank you, Mr. Danforth.

Mr. Gleave: Mr. Chairman, I am not particularly anxious to get into a long range discussion at such a conference. However, as there are going to be people there presenting papers and points of view, I would like to be in a position of being able to ask some questions because the conclusions that conference reaches will affect decisions made in this Committee later.

I would agree with Mr. Danforth's suggestion, that possibly having had this discussion the Minister may be able to come in with certain procedural proposals for the Committee at a later time and, if the Committee accepts his proposals or modifies them slightly, we can then take it from there.

Mr. Olson: All right, Mr. Chairman, I will accept the suggestion that we have further discussion.

I would also like you to bear in mind that this is not exclusively a federal conference. We are making the physical arrangements here but all the provincial governments are also participating—and every one of them has agriculture committees. You will have to take that fact into account as well when determining the status of the observers.

• 0955

The Chairman: Thank you, Mr. Olson. We will look forward to your return at 10.30.

Gentlemen we will proceed with consideration of clause 5, Bill No. C-155. Does anyone wish to ask questions?

Mr. Downey: Mr. Chairman, since I am just temporarily replacing Mr. Horner on this Committee I am not aware of what actually has transpired on Clause 5. However, in looking over this clause it would definitely seem to me that there would be very little likelihood of any farmer being able to collect any compensation under it, because in order to do so he would have to launch and be successful in an action against the manufacturer. It would seem to me that in the general course of events the average small farmer would in all likelihood be reluctant to start a case against a major manufacturer, and there would be a great possibility that the case might be unsuccessful even though there was considerable merit on his side. Due to the nature of pesticides and this type of thing it is never just a matter of being black and white; it is a difficult thing to prove.

Could I have some clarification on this.

[Interpretation]

Le président: Merci, monsieur Danforth.

M. Gleave: Monsieur le président, je ne tiens pas particulièrement à faire des interventions trop profondes à cette conférence. Cependant, il y aura là des gens qui présenteront leur opinion ou des mémoires, et je voudrais pouvoir poser des questions aussi, car les conclusions de cette conférence affecteront les décisions qui seront prises plus tard au comité. Donc, je suis d'accord avec M. Danforth. Après avoir entendu ces avis, le ministre pourra revenir et nous donner son avis en ce qui concerne la procédure ultérieurement, et si le comité accepte ces propositions ou peut-être les modifie un peu, nous pourrons ensuite aller de l'avant.

M. Olson: Monsieur le président, j'accepte la suggestion que nous discuterons la question plus tard à nouveau.

J'aimerais souligner qu'il ne faut pas oublier que ce n'est pas exclusivement une conférence fédérale. Nous organisons cette conférence, mais tous les gouvernements provinciaux y participent également, et chacun de ces gouvernements provinciaux a un comité d'agriculture. Donc, vous devrez en tenir compte également lorsque vous établirez au statut d'observateur.

Le président: Merci, monsieur Olson. Donc, nous vous attendons à 10 h. 30.

Messieurs, nous allons continuer nos discussions et nous allons passer à l'article 5 du bill C-155.

Est-ce que vous avez des questions à poser, messieurs?

M. Downey: Monsieur le président, comme je remplace temporairement M. Horner à ce Comité, je ne suis pas au courant de ce qui s'est passé quant à l'article 5 à la dernière réunion. Toutefois, à l'examen de cet article, il me semble absolument qu'il est très peu probable qu'un agriculteur puisse recevoir des compensations en vertu de cet article, car il semblerait que pour y arriver, il devrait poursuivre le fabricant et avoir gain de cause. Il me semble qu'en général le petit agriculteur ou l'agriculteur moyen, selon toute probabilité, éprouvera quelque répugnance à poursuivre un fabricant important et il est tout à fait possible qu'il n'ait pas gain de cause même si son point de vue était parfaitement défendable. Étant donné la nature des pesticides et produits de ce genre, il y a des nuances. Il ne s'agit pas de noir et de blanc sans nuance. C'est difficile à prouver.

Puis-je avoir des explications à ce sujet?

[Texte]

The Chairman: Thank you, Mr. Downey. I will ask Mr. Williams to answer your question.

Mr. S. B. Williams (Deputy Minister of Agriculture): When this clause was drafted it was the intent that the Minister should have the right to require that the farmer take whatever steps the Minister felt necessary to obtain suitable redress from the manufacturer. It does not, however, require that this action be taken by the farmer before the Minister may make any award. In addition to that, it does not require as a matter of strict fact that this be done; it is only if in the view of the Minister it should be done. In addition to that, subsection (2) of the Act makes special provision for the Minister assuming this responsibility on the part of the farmer if the Minister considers it advisable to do so.

Mr. Downey: Do I understand though that the farmer would definitely have to start an action before any compensation could be paid?

Mr. Williams: No, that is not the intent of the section. It is only if in the view of the Minister the farmer has taken whatever steps were necessary (a) to reduce the loss, which might be simply washing some potatoes for example, and (b) to take whatever steps the Minister has deemed necessary to obtain redress from the manufacturer—which may be nil.

Mr. Downey: Do you not think that there might be some latitude taken in the interpretation? The way it is stated here it could be construed to mean that an action would have to be taken. To my mind, it would be more workable if it was set out that if sufficient proof were produced to the Minister the Crown could probably initiate an action against the manufacturer.

Mr. Williams: This is provided for under subsection (2).

• 1000

The Chairman: Thank you, Mr. Downey.

Mr. Danforth: Clause 5(1) states:

No payment of compensation shall be made to a farmer pursuant to this Act in respect of a loss occasioned to him by reason of pesticide residue in or upon an agricultural product until the farmer has taken any steps that the Minister deems necessary...

[Interprétation]

Le président: Merci, monsieur Downey. Je vais demander à M. Williams de répondre à votre question.

M. S. B. Williams (sous-ministre de l'Agriculture): Lorsque cet article a été rédigé, les législateurs pensaient que le ministre devrait avoir le droit d'exiger que l'agriculteur prenne les mesures jugées nécessaires par le ministre pour obtenir des dommages-intérêts du fabricant. Cependant, l'article ne demande pas que l'agriculteur entame les poursuites avant que le ministre ne le demande. On n'impose pas à l'agriculteur de le faire. C'est uniquement si le ministre pense qu'on doit le faire. L'article 2 comporte aussi des dispositions spéciales qui permettent au ministre de prendre cette responsabilité au nom de l'agriculteur si le ministre juge qu'il est bon de le faire.

M. Downey: Dois-je comprendre que l'agriculteur devrait entamer des poursuites avant de pouvoir recevoir toute indemnité?

M. Williams: Non. Ce n'est pas le but de l'article. C'est uniquement si de l'avis du ministre, l'agriculteur a pris a) les mesures nécessaires pour compenser les pertes soit par exemple laver les pommes de terre et b) a pris des mesures jugées nécessaires par le ministre pour obtenir des compensations du fabricant, peut-être rien.

M. Downey: Ne pensez-vous pas qu'il pourrait y avoir une certaine marge en ce qui concerne l'interprétation? Avec ce libellé, on pourrait interpréter qu'il faut entamer des poursuites. A mon avis, il serait plus pratique de dire que si une preuve suffisante est apportée au ministre, la Couronne peut entamer des poursuites.

M. Williams: Cela est prévu à l'article 2.

Le président: Merci, monsieur Downey.

M. Danforth: Dans l'article 5, on lit:

Aucune indemnité ne doit être payée à un cultivateur, en conformité de la présente loi, pour une perte subie par lui par suite de la présence de résidus de pesticide dans un ou sur un produit agricole tant que le cultivateur n'a pas pris les mesures que le Ministre juge nécessaires...

[Text]

But subclause (7) of this same clause says:

Except as provided by this Act, no compensation paid under this Act shall in any way interfere with or lessen the right of an aggrieved person to any legal remedy...

I am at a loss to know why subclause (7) is necessary under subclause (2) it is the intent that the Minister takes no action until legal action has been taken.

The Chairman: Mr. Phillips will reply.

Mr. Phillips: Mr. Chairman, in drafting this bill we tried to cover a situation which recognized that there might be a case against the manufacturer by the farmer and it may be a difficult case to prove, to make it as easy as possible for the farmer to get compensation if he were in difficulty. If it appeared that there were a case against the manufacturer in the opinion of the Department of Justice, and it would be a difficult one, it provides for compensation and agreement by the farmer that the government could take action on behalf of the farmer.

This latter subsection was placed there to make it clear that this would in no way impinge on the right of the farmer to take whatever action he liked against another farmer—you mentioned the example of a spray and so on—to make it perfectly clear this would in no way inhibit the rights of a farmer to get legal remedy.

Mr. Gauthier: Or against the government?

Mr. Phillips: Against the government? I am not certain of the implications in law of that point, but if he has rights of taking the government to court then he would still have according to this. I am not certain whether he has the rights at the moment.

Mr. Danforth: Mr. Chairman, this ties in, as I see it, with subclause (6). It seems that the Department has almost unusual powers in this regard because as it was explained by Mr. Phillips, it is left to the opinion of the Department whether or not a farmer must take legal action before being eligible for compensation, and under the regulations as prescribed in subclause (6), the Department may set out any regulations under which compensation may be paid and the degree of compensation that may be paid. As I read this, there could be a variance in the amount of payment made to two companion farms if it is left entirely to the discretion of the offi-

[Interpretation]

mais au paragraphe (7) de ce même article, on lit:

Sauf les exceptions de la présente loi, aucune indemnité payée en vertu de la présente loi n'atteint, ni ne réduit en aucune façon le droit à toute réparation légale que peut avoir une personne lésée

Comment se fait-il que le paragraphe (7) soit nécessaire lorsque l'intention du paragraphe (2) est que le ministre ne peut pas agir avant que des poursuites soient entamées.

Le président: Pouvez-vous répondre, monsieur Phillips?

M. Phillips: Monsieur le président, lorsqu'on a rédigé ce projet de loi, nous avons essayé de répondre à une situation qui reconnaît que l'agriculteur pouvait poursuivre le fabricant et qu'il aurait peut-être du mal à avoir gain de cause, et, pour aider le plus possible l'agriculteur à obtenir réparation s'il a été lésé. Si le ministère de la Justice s'aperçoit qu'il y a faute de la part du manufacturier, la loi prévoit l'indemnisation de l'agriculteur, et l'accord de ce dernier permettant au gouvernement d'agir en son nom.

Cet alinéa a été placé ici pour montrer que cela n'empêcherait absolument pas l'agriculteur de poursuivre un autre agriculteur, par exemple, dans le cas de pulvérisation, etc. Il est parfaitement clair que cela n'empêcherait nullement l'agriculture de prendre une action légale.

M. Gauthier: Contre le gouvernement?

M. Phillips: Contre le gouvernement, dites-vous? J'ignore exactement ce que la loi prévoit dans un tel cas. Mais s'il a le droit d'intenter des poursuites envers le gouvernement, il devra néanmoins se conformer à la loi. J'ignore s'il a le droit de poursuivre à l'heure actuelle.

M. Danforth: Monsieur le président, cela se rattache donc à l'article n° 6. Il semble que le gouvernement a des pouvoirs presque inusités à cet égard, car, d'après l'explication de M. Phillips, on laisse le soin au ministère de déterminer si le cultivateur doit intenter des poursuites judiciaires avant d'obtenir une indemnisation. D'après les règlements établis en vertu de l'article 6, on peut établir n'importe quel règlement au terme duquel l'indemnisation et le montant de cette indemnisation doit être établi. Comme je le comprends, il pourrait y avoir une différence dans le montant des paiements consentis à des fermes voisines, et cela est laissé entièrement à la

[Texte]

cials, as is stated here. It seems to me that there are no substantial guidelines here. It is left wide open to the discretion of an official whether compensation shall be paid and the degree to which compensation shall be paid.

Mr. Phillips: Mr. Chairman, the purpose of subsection (6) is that you get into a situation where there is a product that is ineligible for sale, and let us say the compensation arising out of that might be \$15,000. This provides authority for the Minister to do something with that product, to take the residue out if the over-all cost would be less than \$15,000 by so doing. That is what subsection (6) is. It provides authority to do something with the product to reduce the loss to the government. In other words, the net cost to the government would be less than that \$15,000. And we had to get authority some place for the expenditure of funds.

• 1005

Le président: Monsieur Clermont.

M. Clermont: Monsieur le président, le paragraphe 2 de l'article 5 est-il complémentaire au paragraphe (1), alinéa b)? A l'alinéa b) on dit que si le cultivateur ne poursuit pas le fabricant qui pourrait être en faute, le ministère pourrait retenir toute indemnité.

The Chairman: I think our equipment was delayed there, Mr. Clermont. Would you repeat your question please?

M. Clermont: Voici, monsieur le président. Le paragraphe 2 de l'article 5 est-il complémentaire au paragraphe (1), alinéa b) du même article? A l'alinéa b), on dit que si le cultivateur, s'il le croit nécessaire, doit poursuivre le fabricant, et s'il ne le fait pas, toute indemnité peut être retenue par le ministère.

The Chairman: We seem to be having a little technical difficulty. Mr. Phillips, can you answer the question?

M. Clermont: Voici ma question, pour la troisième fois, monsieur le président; j'espère que vous ne considérez pas cela comme trois questions. Le paragraphe 2 de l'article 5 est-il complémentaire au paragraphe (1), alinéa b), du même article? On dit, à l'alinéa b) l'article 5, paragraphe (1), que le cultivateur doit poursuivre le fabricant, s'il le croit nécessaire. Autrement, son indemnité va être retenue par le gouvernement.

Mr. Phillips: Mr. Chairman, as I understand the question, it relates to subclauses (2) and (5) and...

[Interprétation]

discretion des fonctionnaires, comme on l'a déclaré ici. Il me semble qu'il n'y a pas de directives substantielles, on laisse tout cela à la discrétion des fonctionnaires qui décideront si on doit indemniser et dans quelle mesure il faut le faire.

M. Phillips: Monsieur le président, l'objet de l'alinéa 6 vise une situation où il s'agit d'un produit invendable dont l'indemnisation, en l'occurrence, pourrait atteindre \$15,000. Cette disposition permet au Ministre de disposer du produit, du résidu, si le coût global de cette action ne dépasse pas \$15,000. C'est la raison de la disposition n° 6. Elle permet de disposer du produit afin de réduire les pertes que doit subir le gouvernement. Autrement dit, le coût net que devra assumer le gouvernement sera de moins de \$15,000. Il fallait que ces dispositions concernant ces dépenses existent quelque part.

The Chairman: Mr. Clermont.

Mr. Clermont: Mr. Chairman, is subclause 2 of clause 5 a supplement of subclause 1, paragraph (b)? It is said in paragraph (b) that if the farmer does not take any action against their manufacturer, who might be at fault, the Department may withhold all compensation.

Le président: Je pense que le matériel de l'interprétation simultanée ne fonctionnait pas comme il faut. Voulez-vous répéter, s'il vous plaît?

Mr. Clermont: Mr. Chairman, is subclause 2 of clause 5 a supplement to subclause 1, paragraph (b) of the same clause? Paragraph (b) states that if the farmer considers it necessary, he must take action against the manufacturer, and should he fail to do so, the Department may withhold all compensation.

Le président: Nous avons une petite difficulté technique. M. Phillips pouvez-vous répondre à la question?

Mr. Clermont: Mr. Chairman, I shall repeat my question for the third time, and I hope you will not consider this as three questions. Is subclause 2 of clause 5 a supplement to subclause 1, paragraph (b) of the same clause? Paragraph (b) of clause 5 states that the farmer must take action against the manufacturer if he believes it is necessary. Otherwise, compensation will be withheld by the government.

M. Phillips: Monsieur le président, si je comprends bien la question, il s'agit des paragraphes 2 et 7.

[Text]

Mr. Clermont: Not subclause (5), Mr. Phillips, subclause (2) and (1), paragraph (b).

Mr. Phillips: Yes. Subclause (2). Its relationship to subclause (1) is that if the Minister deems it unnecessary at that stage for the farmer to take action against the manufacturer and compensation is awarded, he would, before doing so, require the farmer to agree that action could be taken on his behalf in order to recover moneys from the manufacturer.

Mr. Clermont: Mr. Phillips, the farmer can do it on his own too? He could do it according to subclause (1)?

Mr. Phillips: Yes, he could do it on his own before compensation. I would not contemplate that if compensation were paid, that it would be paid if he were not prepared to agree for action to be taken. But on the other hand, if a decision were taken in that way then there is the other section relating to receipt of money from the manufacturer and recompense to the government of such compensation that were paid.

Mr. Clermont: Thank you.

The Chairman: Thank you, Mr. Clermont. Mr. Danforth.

Mr. Danforth: Mr. Chairman, I would like to ask a question I think most farmers would be interested in. Under the terms of this section, would it be possible for farmers to obtain redress from both the company in question and the government? As an example, let us suppose that the farmer brings an action against the company and obtains compensation to a degree which in the opinion of the farmer is not sufficient to cover the loss that he has incurred, or sufficient to fully cover the loss from some of his products being restrained from the market for any reason. Do you see under the terms of this act that it would be possible for a farmer to obtain further redress from the government?

• 1010

Mr. Phillips: I think it would be possible, particularly when you take into account the right of appeal. It may be that in the judgment of the government he got all he should have from the manufacturer if he took the case, but he might not think so. And he could appeal, saying that he should have received more, appeal against the government. You will see it when we come to that appeal section.

[Interpretation]

M. Clermont: Non, pas 5. Il s'agit du paragraphe 2 et du sous-alinéa b) du paragraphe 1.

M. Phillips: Le paragraphe 2. Voici comment ce paragraphe se rattache au paragraphe 1. Si le Ministre juge qu'il n'est pas nécessaire à ce moment-là que l'agriculteur intente des poursuites contre le fabricant et qu'une indemnité est versée, il demandera avant que le cultivateur le fasse, que ce dernier permette qu'on intente des poursuites en son nom pour recouvrer un montant du manufacturier.

M. Clermont: Monsieur Phillips, est-ce que le fermier peut également poursuivre? Peut-il le faire en vertu du sous-alinéa 1?

M. Phillips: Oui, il peut le faire de son propre chef, avant d'être indemnisé. Pour ma part, je ne suppose pas que, si l'indemnisation est versée, l'agriculteur soit payé à moins que ce dernier ne soit prêt à accepter que la poursuite soit intentée. Par contre, si l'on prenait une décision de ce genre, il y a aussi d'autres dispositions concernant les fonds reçus du fabricant et les compensations versées au gouvernement pour l'indemnisation versée.

M. Clermont: Merci.

Le président: Merci bien, monsieur Clermont. Monsieur Danforth.

M. Danforth: J'aimerais poser la question suivante qui, je crois intéresse nombre d'agriculteurs. En vertu de cet article, sera-t-il possible pour un cultivateur d'obtenir une indemnisation, et de la compagnie en cause et du gouvernement? Admettons, par exemple, que le cultivateur poursuive une compagnie et obtienne ainsi une indemnisation qui, dans une certaine mesure, et de l'avis du cultivateur, n'est pas suffisante pour couvrir les pertes qu'il a encourues, vis-à-vis de certains de ses produits rendus impropres à la consommation pour diverses raisons. En vertu de la loi, le cultivateur pourra-t-il obtenir d'autres indemnisations du gouvernement?

M. Phillips: Je crois que cela sera possible surtout si l'on tient compte du droit d'appel. Il se peut que, d'après l'opinion du gouvernement, le cultivateur ait obtenu tout ce qu'il était en droit de recevoir de la part du fabricant. Mais, il n'est peut-être pas de cet avis, et il pourrait en appeler et réclamer davantage. Il s'agira alors d'un appel contre le gouvernement; nous y reviendrons lorsque nous étudierons l'article concernant la droit d'appel.

[Texte]

The Chairman: Gentlemen, shall clause 5 carry?

Clause 5 agreed to.

The Chairman: I direct your attention to clause 6.

Mr. Peters: Mr. Chairman, in relation to clause 6, why are these inspectors not designated now. If we are going to have a lot of these small administrative problems, why are we not designating what branch of the Department or other departments will handle this. It could be either the Food and Drug Directorate or the Department of Agriculture, but in my opinion we should have an indication of what department is going to administer it.

Mr. Williams: The Minister throughout this bill refers to the Minister of Agriculture, and it is only the Minister of Agriculture who will have authority to designate inspectors under this bill.

Mr. Peters: He can designate any inspector he wishes, according to this. He could designate food and drug, or . . .

Mr. Williams: Yes; but it will be the Minister of Agriculture's authority.

Mr. Peters: But my point is that we should have an indication of who is going to inspect it, because it is going to make considerable difference, if it is PFRA, or food and drug, or fruit and vegetable, or meat inspectors who are going to be involved.

The Chairman: Mr. Williams?

Mr. Williams: The intent at the present moment, Mr. Chairman, is that these will be continuing employees of the Department of Agriculture, and where their normal day-to-day duties would lie would depend very much on the particular case. In certain cases, for example, it might be some of our research officers, if a major research problem were involved; if it were a problem related to fruit and vegetables it could be the fruit and vegetable people; if it were to be a problem associated with seed, it could be those in our Plant Products Division. It would depend almost entirely on the nature of the problem under investigation at the time. But the intent is that they will be full-time, continuing employees of the Department of Agriculture.

The Chairman: Thank you, Mr. Peters. Are there further questions on Clause 6?

Clause 6 agreed to.

29653—2½

[Interprétation]

Le président: Messieurs, l'article 5 est-il adopté?

L'article 5 est adopté.

Le président: Et maintenant, nous en venons à l'article 6.

M. Peters: Monsieur le président, en ce qui concerne l'article 6, pourquoi ces inspecteurs ne sont-ils pas désignés immédiatement? Si nous allons avoir certains problèmes d'ordre administratif, pourquoi ne pas alors choisir le service ou la section, la division du ministère qui s'en occupera? Cela pourrait être soit le Directeur des aliments et drogues ou le ministère de l'Agriculture; à mon avis, on devrait nous indiquer quel sera le ministère chargé de l'exécution de cette loi.

M. Williams: Le ministre de l'Agriculture a le pouvoir de désigner les inspecteurs aux termes de la Loi.

M. Peters: Il peut désigner qui il veut. Il pourrait désigner quelqu'un de la Direction des aliments et drogues.

M. Williams: Oui, mais ce sera la responsabilité du ministre de l'Agriculture.

M. Peters: Mais ce que je signale justement, il me semble qu'on devrait nous indiquer qui va jouer le rôle d'inspecteur car il risque d'y avoir des différences considérables selon qu'il s'agit de la direction des aliments et drogues, d'un inspecteur des fruits et légumes, ou d'un inspecteur des viandes.

Le président: Monsieur Williams?

M. Williams: Nous avons présentement l'intention de nommer des fonctionnaires permanents du ministère de l'Agriculture comme inspecteurs et leurs tâches quotidiennes dépendront évidemment des cas particuliers. Un cas particulier exigera peut-être un chercheur, s'il s'agit d'un problème de recherches. Mais s'il s'agit de fruits et de légumes, ce sera quelqu'un de la section des fruits et légumes. Si c'est un problème intéressant les semences, il relèvera de la Direction des produits végétaux. Tout dépendra de la nature du problème en cause. Mais il s'agira vraisemblablement d'un fonctionnaire permanent du ministère de l'Agriculture.

Le président: Merci, monsieur Peters. Y a-t-il d'autres questions sur l'article 6?

L'article 6 est adopté.

[Text]

The Chairman: I direct your attention to clause 7. Have you any questions, Mr. Peters?

Mr. Peters: This is an old fashioned clause. Why have we not given any consideration to the Bill of Rights in relation to this clause? Obviously we are not using any new process of law such as the obtaining of warrants, or court orders, and so on. Obviously this is in conflict with the purpose of the Bill of Rights.

It is my understanding that before any of this legislation could be introduced it would have to be certified by the Department of Justice not to be in conflict with that Act. This matter of an inspector entering upon property at anytime to seize books and goods is obviously in conflict with the Bill of Rights.

The Chairman: Mr. Williams?

Mr. Williams: I might say that the entire group of clauses from clause 6 through clause 10 are basically standard administrative procedures to permit effective implementation of various acts of the government.

Your statement about the Bill of Rights is perfectly correct, and these have all been cleared through Justice for non-contravention of the Bill of Rights.

Mr. Peters: The Bill of Rights does demand the use of due process of law. I am not particularly interested in that side of it, except that I just do not think it is in keeping with other acts.

If you had a complaint from a farmer you would be able to enter his neighbour's property and seize his seed, or agricultural product, or anything you wish under the provisions of this bill, without due process of law, even if he did not want you to do so. The same would be true, of course, for the manufacturer. I am not so interested in protecting him, but I think we still should...

• 1015

Mr. Clermont: Why not? Does he not have the same right?

Mr. Peters: That is the point. By due process of law he has that right. I am not particularly interested in protecting him...

Mr. Clermont: The Bill of Rights applies to everybody.

Mr. Peters: ...but I think that due process of law would warrant that he be protected to that extent.

If you will remember, Mr. Chairman, when the Bill of Rights was introduced I used the

[Interpretation]

Le président: Passons donc à l'article 7. Monsieur Peters.

M. Peters: Puisqu'il s'agit d'un article qui me semble désuet, pourquoi n'avons-nous pas songé à la Charte des droits de l'homme dans le contexte de cette disposition? Il est évident que nous n'avons pas recours à de nouvelles procédures juridiques comme les mandats, ordonnances du tribunal, et ainsi de suite. C'est évidemment à l'encontre des objectifs de la Charte des droits de l'homme.

Je crois comprendre qu'avant de présenter cette mesure, le ministère de la Justice doit nécessairement certifier qu'elle ne va pas à l'encontre de la Loi. Il s'agit notamment du privilège accordé à l'inspecteur d'entrer dans une propriété privée pour examiner les livres et saisir les marchandises. C'est évidemment contraire à la Charte des droits de l'homme.

Le président: Monsieur Williams.

M. Williams: Je puis dire que toutes ces dispositions, de l'article 6 à l'article 10, sont les procédures administratives normales pour la mise en œuvre des diverses lois de l'État.

Votre déclaration au sujet de la Charte des droits de l'homme est tout à fait juste et nous avons obtenu la certification du ministère de la Justice qu'elle ne pêche en rien contre la Charte.

M. Peters: La Charte des droits de l'homme exige qu'on s'en tienne à la procédure juridique. Cet aspect ne m'intéresse peut-être pas particulièrement mais il me semble qu'on déroge de la procédure habituelle. Dès qu'un cultivateur se plaint on pourrait alors, en vertu de cette loi, s'introduire dans la propriété voisine, saisir les produits agricoles, les livres, et ainsi de suite, aux fins de l'inspection, même si le cultivateur refuse. Il en serait de même pour les fabricants. Je ne suis pas particulièrement intéressé à les protéger, mais...

M. Clermont: Pourquoi? N'ont-ils pas les mêmes droits?

M. Peters: Selon la procédure juridique, oui, il aurait le droit. Je ne suis pas particulièrement intéressé à le protéger...

M. Clermont: La Charte des droits de l'homme vaut pour tout le monde.

M. Peters: Mais je crois que la procédure juridique lui accordera au moins cette protection.

Vous vous souviendrez, monsieur le président, que lorsque la Charte des droits de

[Texte]

argument, not that I was opposed to the Bill of Rights, that we had passed the seed Grains Act that year and that there was a standing order to the effect that no bill totally contrary to another bill can be introduced in a session. The Seed Grains Act, or some such act, had said that an inspector may enter on to premises and seize books, and so on, any time at his convenience. This, of course, was contrary to the Bill of Rights, and there was considerable legal argument at that time. We were assured that from that date none of these clauses would be inserted in this way.

This is obviously one of the old clauses, and it applies to almost everything the Department of Agriculture uses. Inspectors have an unlimited amount of power. I merely suggest that in this clause there should be some protection from inspectors, as set out in the Bill of Rights. In the agricultural field this is wide open. Inspectors enter any time they wish. They do not have any of the relationship to law that exists in other agencies.

We discussed this with the officials of the Department of Justice and we discovered that a girl was looking at the relationship between the Bill of Rights and new legislation. We found that all she did was to correct grammatical mistakes in the bills. She did not really know what her job was for. She certified them without really ever having been told what she was certifying them for. She looked for grammatical mistakes and at sentence structure, made a couple of corrections and then initialled them. Obviously, this is still in conflict.

The Chairman: I will now recognize Mr. Gleave.

Mr. Gleave: I tend to agree with the previous speaker. This gives wide powers to the individual to enter upon a farm premises, or, as someone else has mentioned, business premises, without a search warrant. He can simply appear there some morning and say, "I think I should look your premises over," and go and do so. More than that, he can seize documents and material that is you there. I think the income tax people have this right.

What I am concerned about all through this bill is that a great deal of the protection is for the government, not the farmer. This Bill is

[Interprétation]

l'homme a été présentée, j'ai déclaré alors non pas parce que je m'opposais à la Déclaration des droits de l'homme, que la loi sur les provendes avait été adoptée au cours de la même année, et que selon le règlement aucun bill qui soit totalement contraire à un autre bill ne peut être présenté au cours d'une session. La loi des graines de semence ou une loi de ce genre disait que l'inspecteur peut s'introduire dans les locaux pour vérifier les livres, et ainsi de suite à n'importe quel moment selon son bon plaisir. C'est évidemment contraire à la Charte des droits de l'homme et ceci a entraîné beaucoup d'argumentations d'ordre judiciaire. On nous avait assurés qu'aucun article de ce genre ne serait inséré.

Il s'agit ici évidemment d'un de ces articles qui s'applique pratiquement à tout ce que le ministère de l'Agriculture utilise. Les inspecteurs du ministère de l'Agriculture jouissent de pouvoirs illimités. Je suis d'avis que ces articles devraient offrir une certaine protection, conforme à la Charte des droits de l'homme, contre les inspecteurs. Dans le domaine agricole il n'y a pas de restriction. Les inspecteurs peuvent s'introduire dans les champs à volonté. Il n'y a pas là de restriction d'ordre légal, comme ailleurs.

Nous avons discuté de cette question avec le fonctionnaire du ministère de la Justice et nous avons constaté qu'une jeune fille s'occupait d'établir les rapports entre la Charte des droits de l'homme et les nouvelles lois. Et tout ce qu'elle faisait, c'était de corriger les erreurs grammaticales dans les projets de loi. Elle ne savait pas en quoi son travail consistait. Ses directives n'étaient que d'ordre grammatical et orthographique. Elle apportait quelques corrections et paraphait ensuite les projets de loi. Il y a évidemment une antinomie ici.

Le président: La parole est à M. Gleave.

M. Gleave: Je tombe partiellement d'accord avec le préopinant. Je crois qu'on donne des pouvoirs considérables aux inspecteurs en leur permettant d'entrer dans des fermes ou dans des entreprises commerciales sans mandat de perquisition. Ils peuvent se présenter sans préavis et dire: «je dois inspecter vos locaux.» Je dirais même plus, ils peuvent saisir les documents et l'équipement. Je crois que les préposés à l'impôt sur le revenu jouissent de ces droits.

Ce qui me préoccupe dans ce bill, c'est que le gouvernement est beaucoup plus protégé que les cultivateurs. Je crois que l'objet du

[Text]

actually designed as much to protect the government as the farmer—perhaps even more.

At the present time government can move on to a farmer's premises and say: "You have certain pollution here which is unacceptable to the community"—which is what this bill is all about—and it can take certain action against that farmer. If the farmer can show that he is the innocent victim of a product which has been duly licensed by the government for distribution I would assume that he would have recourse to the law and could say to the government, "You have disrupted my operation. You have caused me so much loss", and could possibly recover.

When this Act goes into effect, however, the action which the farmer may take against the government would, I think, although I am not a lawyer, be circumscribed by this Act. He can only do the things which this Act permits him to do in recovering from the government any loss which he has sustained as a result of government action. He is limited by the scope of this bill.

• 1020

This bill does not even say how much the government has to pay. The Executive Branch may, in its wisdom, decide how much, if anything, they are going to pay. They have to pay him something, but there is nothing to say that they have to pay him any given amount.

What concerns me all through this bill is the lack of protection for the farmer whose premises are going to be inspected—how they are going to be judged, what the situation is, and what he may, or may not, recover. This particular clause 7 simply underlines the whole tenor of the bill.

The Chairman: I will ask Mr. Newman to comment, and then I will recognize Mr. Barrett.

Mr. Newman: Mr. Chairman, on Mr. Peters' question on the Bill of Rights, being a legal expert he well knows that the question of...

Mr. Barrett: A which?

Mr. Newman: I think he is generally recognized as a legal expert.

An Hon. Member: Take a bow, Arnold!

Mr. Newman: His fame has preceded him. I have heard of him; and if I have heard of him he must be a legal expert!

I should like to say that the question of due process has received a great amount of con-

[Interpretation]

bill est de protéger autant le gouvernement que les cultivateurs, peut-être même davantage.

A l'heure actuelle, le gouvernement peut envoyer un inspecteur chez un cultivateur en disant: «Il y a ici une pollution qui est inacceptable pour la collectivité», et voilà justement l'objet du bill. Si le gouvernement prend certaines mesures à son égard, le cultivateur peut tenter de démontrer qu'il a été la victime innocente d'un produit dont le gouvernement a autorisé la distribution. Je suppose que le cultivateur peut alors avoir recours à la loi et dire au gouvernement: «Vous avez nui à mon exploitation. Vous avez occasionné des pertes», et demander une indemnisation. Mais une fois que la loi sera en vigueur, les actions qu'il pourrait intenter contre le gouvernement seront circonscrites par la Loi. Il ne pourra faire que ce que la loi lui permet de faire pour obtenir du gouvernement une indemnisation des pertes subies par suite de l'initiative du gouvernement. Il est ainsi restreint par la partie de ce projet de loi.

Le bill ne dit même pas quel montant le gouvernement doit payer. L'État pourra, dans sa sagesse, décider du montant à payer, s'il y a lieu. Il devra payer quelque chose aux termes de la loi mais il n'y a rien qui précise quel montant. Ce qui m'inquiète dans ce bill, c'est le manque de protection accordée au cultivateur dont la ferme sera inspectée, de quelle façon il sera jugé, quelle est sa situation, et ce qu'il pourra récupérer ou non. L'article 7 ne fait que mettre en lumière la teneur du bill.

Le président: Je demande à M. Newman de commenter et je donnerai ensuite la parole à M. Barrett.

M. Newman: Monsieur le président, en ce qui concerne la question de M. Peters se rapportant à la Charte des droits de l'homme, comme il est expert juridique, il sait très bien que la question...

M. Barrett: Il est quoi?

M. Newman: Je crois qu'il est reconnu comme expert juridique.

Une voix: Chapeau bas.

M. Newman: J'ai entendu parler de lui, sa réputation l'a précédé; si j'ai entendu parler de lui, c'est qu'il est certainement un expert juridique. Je voudrais ajouter que la question a été étudiée de très près par les tribunaux et

[Texte]

sideration in the courts, and the resolution of the problem, I think, is far from final exactly what is due process. It is my opinion that if searches and seizures are permitted by specific legislation, then they are being carried out with due process. There is specific statutory authority for the investigation or seizure of a product. To my knowledge no court has ever held such a statutory provision in conflict with the Bill of Rights.

Mr. Peters: Mr. Chairman, I think that this is true. There have been a number of court cases but none of them have been satisfactorily—they really have never been terminated in making that decision whether the Bill of Rights did cover this or not. I know of an instance where a farmer was in two or three types of farming and one of these, the dairy part of it, ran into difficulty with a disease—brucellosis, perhaps, but I do not think so—one of the diseases, and the farm was quarantined with a total quarantine. This meant that the rest of the farm operation had to be terminated and the farm was closed down and had to remain so for a period of several years as re-contamination kept developing.

It seems to me that to protect the farmer the person should go with a court order to enable this section of the proposed act to be applied against that person. Otherwise it is only the inspector's opinion that this section applies—not that this section applies, but that some other section applies—and he uses this section as his total power to make decisions that are not court decisions in any stage, not even in the final stage; the final conclusion is made by the inspector rather than under the process of law. It may not terminate in compensation at all, but the disruption takes place and it seems to me that is what the Bill of Rights was all about.

There is a section in the Bill of Rights—there is no law passed after 1962, or whenever the Bill of Rights was passed, which will be in conflict with that; yet it seems to me this is. You may have looked at it as you are supposed to, but I suggest that this clause is totally in conflict with that position. It gives the power to the inspector. This is why I asked about the inspectors, because it is inspectors from various sections of the Department of Agriculture who are going to have the power of first saying that this contamination exists; they are going to decide what will be done about that contamination, whether there will be a quarantine or whether the goods will be destroyed or whether the goods will be washed, or what will be done. This decision will be made by the Department; the farmer will have no recourse against it. If you say he has to wash the product before it

[Interprétation]

la résolution du problème est loin d'être définitive. A mon avis, si les recherches et les saisies sont autorisées par des mesures législatives, elles sont effectuées en bonne et due forme. Les enquêtes et les saisies sont clairement autorisées par la loi pour certains produits. A ma connaissance, aucun tribunal n'a jamais considéré que de telles dispositions étaient contraires à la Charte des droits de l'homme.

M. Peters: Monsieur le président, je crois que c'est vrai. Il y a eu un certain nombre d'affaires soumises aux tribunaux, mais on n'a jamais décidé de manière définitive si la Charte des droits de l'homme prévoyait ce cas ou non. Par exemple, je connais le cas d'un agriculteur qui avait deux ou trois types différents d'exploitation, dont une laiterie, avec laquelle il a eu des difficultés, dues à une maladie—peut-être la brucellose, mais je ne crois pas—et son exploitation entière a été mise en quarantaine. En conséquence, l'agriculteur en question a dû annuler toute son exploitation agricole pour un certain nombre d'années, en raison de la contamination qui continuait à se développer.

Il me semble que, pour protéger l'agriculteur, la personne devrait avoir une ordonnance du tribunal pour appliquer cet article de la loi envisagée. Sinon, c'est seulement l'inspecteur qui décide que cet article, ou plutôt un autre, s'applique, et il utilise son plein pouvoir de prendre des décisions qui ne sont des décisions du tribunal à aucune étape, pas même à la dernière étape; la décision finale est prise par l'inspecteur, et non en application de la loi. L'affaire ne se termine pas forcément par une indemnisation, mais il y a tout de même eu dérangement, et il me semble que c'est à cela qu'a trait la Charte des droits de l'homme.

Il y est prévu qu'aucune loi adoptée après 1962 ou, enfin, après la date d'adoption de la Charte des droits de l'homme, ne pourra être contraire à cette charte; pourtant, il me semble qu'ici il y a un conflit.

J'estime que cet article est en contradiction absolue avec cette disposition. Il donne plein pouvoir à l'inspecteur. C'est pourquoi j'ai soulevé la question des inspecteurs, car ce sont des inspecteurs de divers services du ministère de l'Agriculture qui vont être habilités à constater qu'il y a une contamination. Ils pourront prendre une décision en ce qui concerne les mesures à prendre à la suite de cette contamination, à savoir, s'il y aura une quarantaine, ou si on lavera les denrées, ou si les produits seront détruits, etc... Cette décision sera prise par le ministère, et l'agriculteur n'aura aucun recours. Il devra, par exemple, si vous l'ordonnez, laver le produit avant de

[Text]

is sold, then he will have to wash it. If you say he has to do something else, then he will have to do that. The decision will be made and the final compensation will be made on the decision the inspector makes. The farmer really has recourse against the decision that is made. I consider that the inspector is given the power of a court. This has been true in all the Department of Agriculture. I do not know of any other branch of government that has the power that an inspector in the Department of Fisheries and the Department of Agriculture may have. The compensation is not always in keeping with the action that the inspector may take.

The Chairman: Mr. Newman may have a comment and Mr. Williams has a comment.

Mr. Newman: First of all, Mr. Chairman, the function performed by the inspector is purely administrative, and I think it would greatly hamper the operation of this proposed act if he were to be unduly encumbered by having to obtain a court order. Perhaps I should just confine my answer to my opinion. Whether or not this is a desirable method of having inspection carried out is up to Parliament to decide. I think in any event that it is not in conflict with the due process section or any other section of the Bill of Rights that has been brought to my attention. It is eminently proper from a legal point of view.

Mr. Williams: Mr. Chairman, Mr. Peters raised two questions on which I would like to comment very briefly. The first one was that it would be an inspector of the Department of Agriculture who would first determine that there was contamination. I do not think that will be the case. I think under this proposed act it will be an employee of the Food and Drug Directorate of the Department of National Health and Welfare who will first determine whether there is contamination. You may recall that in the earlier part compensation is only payable upon certification by the Minister of National Health and Welfare that in fact the food or the agricultural product is contaminated and needs to be removed from the market; therefore we must presume, I believe, that the original entry on the farm, if it involves an entry on the farm, which it may not because the goods may have been intercepted at a creamery, for example on something of that nature, will be the responsibility of another department.

I think the government's intent here is very well illustrated by the fact that the government has in this legislation made provision for appeals against its own finding. Later, as

[Interpretation]

le vendre. Il devra faire tout ce que vous voudrez. Et l'indemnisation finale sera décidée par l'inspecteur. L'agriculteur n'aura absolument aucun recours contre ces décisions. J'estime que l'on donne à l'inspecteur le même pouvoir qu'à un tribunal. Cela est vrai de tout le ministère de l'Agriculture. Je ne connais aucune direction du gouvernement qui ait des pouvoirs aussi étendus qu'en ont les inspecteurs du ministère de l'Agriculture ou du ministère des Pêcheries. Et l'indemnisation n'est pas toujours appropriée aux mesures prises par l'inspecteur.

Le président: Je crois que M. Newman a une observation à faire, ainsi que M. Williams.

M. Newman: Monsieur le président, je voudrais dire que les fonctions de l'inspecteur sont des fonctions d'ordre administratif. Je crois que l'application de cette loi serait entravée si l'inspecteur devait d'abord obtenir une décision d'un tribunal. Je devrais peut-être simplement donner mon opinion. C'est au Parlement de décider si cette méthode de procéder à l'inspection est souhaitable ou non. A mon avis, cet article ne me semble pas contraire à l'article pertinent de la Charte des droits de l'homme. Et il me semble parfaitement acceptable du point de vue juridique.

M. Williams: M. Peters a soulevé deux questions. Je voudrais y répondre très rapidement. La première est que ce serait à l'inspecteur du ministère de l'Agriculture de déterminer s'il y a eu contamination. Je ne crois que c'est le cas. En application de la loi, ce sera l'employé de la direction générale des aliments et drogues du ministère de la Santé nationale et du bien-être social qui déterminera la contamination. Il est indiqué dans la première partie que la compensation n'est payée que s'il y a un certificat signé par le ministre de la Santé nationale et du Bien-être social, selon lequel l'aliment ou le produit est contaminé et doit être retiré du marché.

Donc je pense, que la visite à la ferme, s'il y a lieu, et ce qui n'est pas forcément le cas, car le produit peut avoir été saisi à la crème-rie, relèvera d'un autre ministère.

L'intention du gouvernement ici est très bien illustrée par le fait que le gouvernement a prévu dans cette mesure législative une possibilité d'appel contre ses propres conclu-

[Texte]

we go through the bill you will come to the area, Part II of the proposed act, that provides for an appeal procedure. Therefore it is not going to be the inspector who has the final say as to what compensation may or may not be paid; it is not going to be the Department that has the final say. It is going to be a court, if the farmer is displeased with the level of compensation that receives.

The Chairman: Mr. Barrett had a question earlier.

Mr. Barrett: It was not a question Mr. Chairman; it was a comment in relation to the gentleman across the way, Mr. Gleave, indicating all the tender areas of this sort of substance. There was no tender area, of course, if a farmer wanted to receive 90 per cent of his problem. This was perfectly welcome. He is welcome on the premises. Of course this is a different outlook and I grant you that Mr. Peters has a different philosophy, but I can suggest that there is a need for speed in certain areas. I think that any deterrent factor is not a good factor. This is what they are seeking. I think somewhere along the line, and I do not agree with it.

• 1030

Mr. Danforth: Mr. Chairman, my question is supplementary to the line of questioning Mr. Peters was following. May I question either Mr. Williams or Mr. Phillips, or Mr. Newman. Under clause 7(1), is this the same terminology as used to permit inspectors to enter any premises under Food and Drug or Agriculture? For example, does this terminology allow inspectors to go into supermarkets to follow an investigation? Are supermarkets then obliged to co-operate to the same degree, or could it be that inspectors under this bill can enter the premises of the Department of Agriculture where experimental plots may have been conducted using these specific chemicals? Is the Department of Agriculture, and are supermarkets and super-chains subject to the same terms and conditions as set out here in respect to farm premises?

Mr. Williams: Yes. This bill does not limit the type of premises which an inspector may enter. I am not saying that the general provisions are identical, word for word, with the provisions in the older statutes. I think the major change, if it can be considered a major change, has been the addition of the words "any reasonable time". In Previous Acts inspectors were not even required to go in at a reasonable time, and I do not think they previously required that he had to reasonably

[Interprétation]

sions. Vous verrez plus loin, dans la loi, à la Partie 2 qu'il y a une procédure d'appel. C'est pourquoi l'inspecteur n'a pas le dernier mot en ce qui concerne les compensations à payer ou à ne pas payer, ni le ministère. Ce sera un tribunal si l'agriculteur n'est pas satisfait des compensations qui lui sont offertes.

Le président: M. Barrett avait demandé la parole.

M. Barrett: Ce n'est pas une question, monsieur le président, mais un commentaire. M. Gleave a parlé des domaines délicats. Il n'y a évidemment pas de domaines délicats si l'agriculteur reçoit une compensation de 90 p. 100. A ce moment-là l'inspecteur sera bien accueilli. J'admets que la situation est différente et que M. Peters a une philosophie assez différente à ce sujet. Je pense qu'il faut que ce processus soit très rapide. A mon avis les facteurs préventifs ne sont pas acceptables. C'est ce qu'ils essaient d'introduire et je ne suis pas d'accord.

M. Danforth: Une question pour compléter la série de questions de M. Peters. Je m'adresse soit à M. Williams, M. Phillips, ou M. Newman. En l'application de l'article 7, alinéa 1), est-ce que la terminologie est la même qui permet aux inspecteurs de pénétrer dans des locaux en vertu de la Loi des aliments et drogues de l'Agriculture? Est-ce que cette terminologie permet aux inspecteurs de se rendre dans les supermarchés pour poursuivre leur étude? Est-ce que les supermarchés doivent collaborer dans la même mesure ou bien est-ce que les inspecteurs peuvent en vertu de la loi s'introduire au ministère de l'agriculture où des essais ont peut-être été faits sur ces produits chimiques? Est-ce que le ministère de l'Agriculture, les chaînes de supermarchés, les super-marchés sont soumis aux mêmes conditions définies pour les locaux agricoles?

M. Williams: Oui. Le projet de loi ne limite pas le genre d'endroits où peut pénétrer un inspecteur. Je ne dis pas que les dispositions générales sont identiques, mot pour mot, aux lois précédentes. Je pense que le changement le plus important consiste en l'addition de l'expression «à tout moment raisonnable». Dans les lois précédentes, on n'exigeait pas que l'inspecteur se rende dans un délai raisonnable, et je ne pense pas qu'auparavant on exigeait raisonnablement son avis et on créait

[Text]

believe there was a problem. Perhaps that is not enough of a concession in the right direction but, as has been pointed out, there always is a problem in respect of these matters to get quick action. I do not believe, with a very few exceptions—and the exceptions lie largely in the area of livestock health—that our inspectors have ever been accused under other Acts—you mentioned the question of entering retail stores and supermarkets, and that authority is provided under the Canada Agricultural Products Standards Act and the authority is essentially the same as this authority—of having abused the powers that they have been granted under these various Acts. At least, I have not heard of it. That does not mean to say that it cannot happen. I am obviously not issuing any guarantees at this moment. It is a matter of administrative procedures and the type of training that these people receive that normally action is not taken until it is at a fairly obligatory stage, and under this bill I would expect it would usually be at the request of the farmer himself.

Mr. Danforth: I just have a further supplementary and then I am finished, Mr. Chairman. May I ask Mr. Williams if under the normal interpretation of this bill, the farmer would have the same privileges as any department of agriculture where this chemical may have been used and may have been certified? In other words, that the inspector would have the same recourse to action in a governmental department as he would in a farming enterprise?

Mr. Williams: I would say so, Mr. Danforth, yes. By way of illustration I might say, for example, that when our research stations wish to bring prohibited material into this country they must go through exactly the same procedures in respect of our various Acts as a farmer would have to go through. If they wish to bring in pesticide material for experimental work or certain types of vegetation that are not normally allowed in this country other than under permit, we require them to go through the same procedures and obtain the same sort of permits as are required by any practicing farmer.

The Chairman: Mr. Douglas.

Mr. Douglas: I was also a little concerned about the question raised by Mr. Peters. It seems to me that we have not had too many cases where such inspection would be required. I would have liked to have seen something referring to a court order to gain access to all this material. It seems a little drastic, when you read this, that an inspector

[Interpretation]

ainsi un problème. Ce n'est peut-être pas une concession suffisante dans la bonne direction, mais, comme on l'a fait remarquer, il est toujours difficile d'agir rapidement dans ce domaine. Je ne crois pas, à quelques rares exceptions près et ces exceptions résident essentiellement dans le domaine de la santé du bétail. Je ne crois pas que nos inspecteurs n'aient jamais été accusés en vertu d'autres lois. La Loi sur les normes des produits agricoles et des produits alimentaires prévoit le droit de pénétrer dans les super-marchés ou dans les locaux de ce genre. Je crois que nos gens n'ont jamais été accusés (ou du moins j'en ai jamais entendu parler) ils n'ont jamais été accusés d'avoir abusé de leurs pouvoirs. Cela ne veut pas dire que cela ne peut pas se produire. Je ne veux pas vous donner de garanties. Mais c'est une question de procédure administrative et du genre de formation que reçoivent ces gens. Normalement, ces mesures sont prises seulement en cas d'obligation réelle, et j'espère qu'en vertu de cette loi, une telle action ne se fera que sur requête de l'agriculteur lui-même.

M. Danforth: Question supplémentaire. Je voudrais en finir, monsieur le président. Puis-je demander à M. Williams, si d'après l'interprétation normale de la Loi, l'agriculteur aurait les mêmes prérogatives que tous les ministères de l'Agriculture lorsque ces produits chimiques ont pu être utilisés et acceptés? Autrement dit, l'inspecteur aurait les mêmes recours vis-à-vis d'un service de l'État que vis-à-vis d'un agriculteur?

M. Williams: Je dirais que oui, monsieur Danforth. Par exemple, lorsque l'une de nos stations expérimentales désire importer au Canada des produits interdits, elle doit respecter la même procédure en vertu de nos diverses lois, que devrait respecter un agriculteur. Si elle veut importer des pesticides pour des travaux expérimentaux ou bien un certain type de végétation normalement prohibés au pays, sauf sous permis, nous lui demandons de suivre la même procédure et d'obtenir le même genre de permis que celui qu'on exige des agriculteurs en opération.

Le président: Monsieur Douglas.

M. Douglas: Je m'intéresse aussi à la question de M. Peters. Il me semble que nous n'avons pas eu beaucoup de cas où des inspections de ce genre seraient exigées. J'aurais aimé que l'on se réfère à des décisions judiciaires donnant un droit de perquisition à ces gens? Il semble vraiment un peu fort, à lire ces lignes, qu'un agriculteur voie un jour arri-

[Texte]

could appear some day and say he has all this authority and the farmer is subject to it, without knowing what the statute says, and so on. Perhaps it would foul up other situations if you put a provision in this bill requiring a court order for this inspection, but it would seem to be a reasonable request as far as this bill is concerned.

• 1035

Mr. Williams: I should point out, Mr. Chairman, that in so far as this bill is concerned it presumably would not come into play unless the farmer asked for compensation. While I admit this gives the inspector authority to enter on to his neighbours property or, presumably, into a retail outlet that might have been selling this pesticide or into a manufacturer who was manufacturing this particular pesticide, presumably it is not going to happen unless the case has been brought to the government's attention through the Food and Drug Directorate and the farmer has requested it or the government itself has undertaken action to provide compensation.

Mr. Gleave: I have a supplementary question, Mr. Chairman, relating to the circumstances of the case in British Columbia. This was not at the request of the farmer, was it? This was as a result of the Food and Drug Directorate discovering certain contamination and the government moved from there. In this particular instance did the farmer request the government to move in?

Mr. Williams: In so far as the case in British Columbia is concerned, as I pointed out earlier, the placing of the agricultural product under detention was not carried out under this proposed Act. In that case it was carried out under the Food and Drugs Act of the Department of National Health and Welfare and presumably it would be carried out in cases that would come under this particular legislative provision. However, subsequent to that the farmers in British Columbia asked the government for assistance, and at that time the government sent people in there to take samples and to do various things at the invitation of the farmer. At that time there was no legal authority to go in other than at the invitation of the farmer.

The Chairman: I have Mr. Pringle, Mr. Howard and Mr. Clermont, on my list.

Mr. Pringle: Mr. Chairman, I believe this point has been covered but I think it should be reemphasized at this time. In the course of consumer protection we have inspection staffs

[Interprétation]

ver un inspecteur lui disant qu'il a toute autorité pour agir et que l'agriculteur doive s'y soumettre sans avoir connaissance des articles de la Loi. S'il y a une disposition dans la Loi concernant un mandat judiciaire nécessaire pour procéder à une perquisition, cela risquerait de fausser les autres situations, mais il me semble que c'est une demande tout à fait raisonnable vis-à-vis de la présente loi.

M. Williams: En ce qui concerne cette Loi, monsieur le président, cela ne jouerait que si l'agriculteur réclame une indemnité. Cependant, je reconnais que cela donne à l'inspecteur l'autorisation de pénétrer chez son voisin ou chez un détaillant qui a présumément vendu ce pesticide ou chez le fabricant de ce pesticide particulier. Cela ne se produira très probablement pas à moins que ce cas n'ait été porté à l'attention du gouvernement par l'intermédiaire du Directeur des aliments et des drogues ou que l'agriculteur ou le gouvernement n'aient entrepris eux-mêmes une action en dommage.

M. Gleave: J'ai une question supplémentaire en ce qui concerne les circonstances de ce cas de la Colombie-Britannique. Était-ce à la demande de l'agriculteur, ou était-ce à la demande du Directeur des aliments et des drogues qui avait constaté une certaine contamination que le gouvernement a agi? L'agriculteur a-t-il demandé au gouvernement d'agir dans ce cas-là?

M. Williams: En ce qui concerne l'affaire de Colombie-Britannique, comme je l'ai dit plus tôt, la séquestration du produit agricole n'a pas été effectuée en vertu de ce projet de loi. Elle a été faite en vertu de la Loi sur les aliments et les drogues du ministère de la Santé et du Bien-être social. Cela se ferait dans le cas d'affaires tombant sous le coup de cette dernière loi. Mais ultérieurement, les agriculteurs de la Colombie-Britannique ont demandé l'aide du gouvernement et à ce moment-là, à la demande des agriculteurs le gouvernement a envoyé des inspecteurs pour prendre des échantillons et pour prendre diverses mesures. A l'époque, il n'y avait pas de dispositions qui permettaient à l'État d'agir, sauf sur l'invitation de l'agriculteur.

Le président: J'ai sur ma liste, M. Pringle, M. Howard et M. Clermont.

M. Pringle: Monsieur le président, je pense que l'on a déjà abordé ce point, mais je pense que je me dois d'y revenir. Nous avons du personnel d'inspection pour la protection des

[Text]

and many inspectors are required to make continuous inspections of meats and various products at the chain store level to be certain that the food is wholesome, that it is of the proper grade and that it is being properly presented to the consumer for purchase.

The suggestion has been made that when an inspector enters any premises he should do so by authority of a court order. I believe that by doing this we would encumber the staff of the Department of Agriculture and the various other departments in such a way that it would almost make this impossible. The expense alone would be very high and I really think it would have a deterring effect on the value of the entire inspection service. I think this Act should stand as it is, because here again we would be endeavouring through one Act to establish a precedent which possibly the people involved could refer to in trying to circumvent the work and the necessary inspection that is taking place every day throughout the country with regard to the protection to the consumer, and I think we should definitely allow the Act to stand as it is at the present time.

The Chairman: Mr. Howard.

Mr. Howard (Okanagan Boundary): Mr. Chairman, aside from the Civil rights problem, there is a practical problem involved here which it seems to me could be corrected. That is, that the bill empowers an inspector to go into any business or farm and seize records. There is no limit stated as to how long they may hold the records. It seems to me that it would be a practical consideration if provision were made, when an inspector seizes records, if copies of those records as required were made and the originals returned to the person concerned. We are not talking about a criminal case.

● 1040

We are talking about an inspector having the right to go into any business anywhere in the chain of distribution and seize a chunk of a man's business records, and it can be a difficult hazard for somebody trying to carry on business to suddenly find that one department of government has removed some of his records. He cannot fulfil his obligations to the tax department or the other business obligations that he has. I have seen instances of this kind of action—not by the Department of Agriculture but by other departments—which causes considerable difficulty for the people concerned.

Mr. Williams: Mr. Chairman, while I am not prepared to give any legal view on the

[Interpretation]

consommateurs et plusieurs inspecteurs doivent faire des inspections continuelles des viandes et d'autres produits au niveau des chaînes de magasins afin de s'assurer que les aliments sont sains, conformes aux normes et présentés de façon normale aux consommateurs.

On a suggéré que lorsqu'un inspecteur perquisitionne, il doit le faire en vertu d'un mandat judiciaire. Je crois qu'en pratiquant ainsi, nous surchargeons les employés du ministère de l'Agriculture et des divers autres ministères d'une façon qui rendrait l'application de la Loi presque impossible. Les dépenses seules seraient très élevées, et je pense que cela aurait un effet très néfaste sur le rendement de l'ensemble du service d'inspection. Je pense qu'on ne devrait rien changer à ce projet de loi car, une fois de plus, nous établirions un précédent qui serait tel, qu'il permettrait à certaines personnes de circonvier et d'éviter le travail d'inspection qui est conduit tous les jours à travers le Canada afin de protéger le consommateur. Je pense donc, personnellement, que nous devrions laisser ce projet de loi sous sa forme actuelle.

Le président: Monsieur Howard.

M. Howard (Okanagan-Boundary): Monsieur le président, à part le problème des droits civiques, un problème particulier surgit qui, selon moi, pourrait être corrigé. Le projet de loi permet aux inspecteurs de se rendre dans les fermes ou dans les magasins et de saisir des documents. Aucune limite concernant le temps pendant lequel ils peuvent garder ces documents n'est établie. Du point de vue pratique, on pourrait prévoir qu'un inspecteur fasse copier les dossiers et les documents et renvoie les originaux à l'intéressé. Ce n'est pas un cas criminel dont il s'agit.

Il s'agit d'un inspecteur qui a le droit de perquisitionner dans n'importe quel commerce, à n'importe quel point d'une chaîne de distribution et saisir certaines parties des dossiers d'un commerçant et cela est très ennuyeux pour un commerçant de voir qu'un ministre lui a confisqué une partie de ses livres. Il ne peut pas remplir ses obligations vis-à-vis des autorités fiscales ou ses autres obligations commerciales. J'ai vu ce genre de mesures prises par d'autres ministères que le ministère de l'Agriculture et elles soulèvent de grosses difficultés pour les intéressés.

M. Williams: Bien que je ne sois pas prêt à donner un avis juridique à ce sujet, M. New-

[Texte]

matter—perhaps Mr. Newman will do so—it was the intent of Clause 7 (1) (b) that while the farmer or the institution concerned would be required to produce the documents, all he could take away from the premises would be copies or extracts from them. At least that was the intent of it.

Mr. Newman: Where that intent is carried out by the words of the legislation.

Mr. Williams: With the understanding that this does not give them authority to carry away original documents.

Mr. Howard (Okanagan-Boundary): No, only copies.

The Chairman: Does that answer your question, Mr. Howard?

Mr. Howard (Okanagan-Boundary): Yes, Mr. Chairman.

The Chairman: Mr. Clermont?

M. Clermont: Monsieur le président, à l'article 7, paragraphe 2, il est question de «certificat de nomination». De quel genre de certificat parle-t-on, monsieur Williams? Est-ce que, sur le certificat, il y aura la photo de l'inspecteur et sa signature pour permettre à la personne qui reçoit sa visite de l'identifier?

Mr. Williams: That is correct, Mr. Clermont. The type of certificate is an identification certificate signed and issued by the Department—a permanent type of card with the man's photograph or various other identification on it.

Mr. Clermont: This would be more or less an identification paper.

Mr. Williams: An identification paper to ensure that he is in fact an inspector under this act.

Mr. Clermont: Thank you.

The Chairman: Mr. Roy.

M. Roy (Laval): Monsieur le président, on a beaucoup parlé de protection au niveau du cultivateur, mais je pense que la question concernant le consommateur, soulevée par M. Pringle est certainement importante. Je ne voudrais pas m'éloigner du sujet. Lors de la dernière réunion, j'avais soulevé le fait que nous avions eu une contamination due à des sources de nitrate sur des feuilles d'épinard. Monsieur le sous-ministre nous avait dit que ces produits n'étaient pas canadiens, mais plutôt des produits importés des États-Unis.

[Interprétation]

man le fera peut-être, l'objet de l'article 7(1)b) est le suivant: c'est que le cultivateur ou l'institution en cause devraient fournir tous les documents, mais tout ce qu'il pourrait saisir effectivement serait des copies ou des extraits de ces documents. C'était du moins le but de l'article.

M. Newman: En autant que la loi le précise.

M. Williams: Et en autant que ceci ne leur permet pas de s'emparer des originaux.

M. Howard: Non, uniquement des copies.

Le président: Ça répond à votre question?

M. Howard: Oui.

Le président: Monsieur Clermont.

Mr. Clermont: Mr. Chairman, under Clause 7 (2), we speak of "an appointment certificate". What kind of a certificate would this be, Mr. Williams? Would there be a photograph of the inspector on the certificate along with his signature to allow the person who is being visited to be able to identify the inspector?

M. Williams: C'est exact, monsieur Clermont. C'est un certificat d'identité signé et émis par le ministère, une carte permanente sur laquelle se trouvent sa photo et d'autres renseignements.

M. Clermont: Ni plus ni moins, une carte d'identité.

M. Williams: Oui, un document qui confirme qu'il est vraiment l'inspecteur désigné.

M. Clermont: Merci.

Le président: Monsieur Roy.

Mr. Roy (Laval): Mr. Chairman, we have spoken a great deal of protection at the level of the farmer, but I think that Mr. Pringle's question dealing with the consumer is certainly important. But I do not want to stray from the subject. At the last meeting I had raised the matter that we had had some contamination on spinach leaves due to nitrate products. The Deputy Minister had told us that these were not Canadian products, but that they were imported from the United States.

[Text]

A l'entrepôt des fruits et des légumes de Montréal, par exemple, est-ce que l'inspecteur est autorisé à prélever des échantillons sur les laitues qui ont été arrosées deux ou trois jours avant? Est-ce que l'inspecteur a réellement cette autorisation à l'entrepôt de Montréal? Est-ce qu'il fait des prélèvements de tissus ou d'échantillons de feuilles de laitue ou d'autres produits, comme le céleri, pour justement déterminer les sources de contamination possible due à l'application d'herbicides, d'insecticides ou encore à des taux de fertilisation trop élevés?

Mr. Williams: Mr. Chairman this authority about which Mr. Roy has spoken lies with the Department of National Health and Welfare. They do have such authority, and I, obviously, would not be in a position to comment as to whether or not it is being taken at an effective rate or not, other than to give my personal view that it is, that they do have an effective procedure. In general their procedure is to take bulk samples and then trace them back.

There is one point I would like to correct on which there might be some misunderstanding. When I replied about the question of spinach at the last meeting, I had not intended to imply that this was on goods that had been imported into Canada. I had intended to imply that to the best of my knowledge, the only case known to date referred to canned spinach that had not entered this country; it had been found in the United States. To the best of my knowledge none of this nitrate, excess nitrate in spinach, has been found in Canada on either Canadian produce or imported produce.

M. Roy (Laval): A ce moment-là, certains producteurs d'épinards ont fait des pressions au sujet de ce contenu qui a contribué à diminuer le marché de consommation des épinards. Cela diminuait alors les possibilités des producteurs d'épinards.

• 1045

Si je comprends bien, ces pouvoirs ne relèvent pas de l'inspecteur dont on discute actuellement. Cela relève du ministère de la Santé nationale et du Bien-Être social.

Mr. Williams: That is correct, Mr. Chairman.

The Chairman: Shall clause 7 carry?
Clause 7 agreed to.

The Chairman: Gentlemen, I direct your attention to clause 8:

No person shall obstruct or hinder an inspector in the carrying out of his duties

[Interpretation]

At the fruit and vegetable terminal in Montreal, for instance, does the inspector have the authority to take samples of lettuce that has been watered two or three days previously? Does the inspector actually have this authorization at the Montreal fruit and vegetable terminal? Does he take samplings of lettuce leaves or other green vegetables such as celery, to determine the possible sources of contamination through weed-killers, insecticides, or too high a level of fertilizers?

M. Williams: Cette autorité dont M. Roy a parlé appartient au ministère de la Santé nationale et du Bien-être social. Évidemment, je ne serais pas en mesure de commenter si vraiment on prend ces mesures. Tout ce que je pourrais vous dire, c'est mon opinion personnelle, c'est qu'ils ont vraiment une procédure efficace. Normalement, ils prennent des échantillonnages en vrac.

J'aimerais bien soulever un point qui pourrait peut-être comporter quelques malentendus. Quand j'ai répondu à la question sur les épinards, lors de la dernière réunion, je n'avais pas l'intention de dire qu'il s'agissait de produits importés au Canada. J'avais l'intention de dire qu'au meilleur de ma connaissance, le seul cas avait été signalé aux États-Unis.

Cet excès de nitrate dans les épinards n'a pas été signalé au Canada, ni dans les produits canadiens ni dans les produits importés.

Mr. Roy (Laval): At that time some spinach producers made representations regarding this canned spinach which contributed in reducing the spinach consumption market. It reduced the scope of spinach producers too.

If I understood correctly, these powers do not come under the jurisdiction of the inspector about whom we are speaking at the present time. It comes under the Department of National Health and Welfare.

M. Williams: C'est exact.

Le président: L'article 7 est-il adopté?
L'article 7 est adopté.

Le président: Article 8, maintenant, messieurs.

8. (1) Nul ne doit gêner ou empêcher un inspecteur dans l'exercice des devoirs ou

[Texte]

or functions under this Act or the regulations.

Are there questions? Shall clause 8 carry?

Clause 8 agreed to.

Gentlemen, your attention to clause 9, which deals with Punishment—

Offences and Penalties.

Are there questions? A question, Mr. Danforth?

Mr. Danforth: Mr. Chairman, I would like to deal, if I may, with subclause (2) under clause 9 which deals with the prosecution of an offence. I have two questions. What is meant by an offence committed by an employee or agent? Does that refer to the obstruction of the inspection of misleading information, or withholding information? Or is the offence the actual carrying out of the spraying operation or being directly responsible for a cause of contamination?

Mr. Williams: Mr. Chairman, it refers to the former, not the latter. This act does not create as an offence the presence of a residue, for example, on a product.

Mr. Danforth: The second part of my question, Mr. Chairman, is what is the status of an employer where perhaps an employee has inadvertently created misinformation or has, in fact, caused an obstruction with regard to the duties of an inspector? Is there any recourse or government action towards an employer if this has been done inadvertently, and what is the government's position against the employee, if such a process is carried out when an inspector is about to carry out his duties?

Mr. Williams: Mr. Chairman, I find that question somewhat difficult to answer. The intent of subclause (2) is that the employer, or the accused in this case—this is presuming the action is laid against the employer. It could under this, of course, be laid against an employee in which case, of course, this portion of the act does not apply. But let us say it is laid against the accused who in this case is an employer. This makes it incumbent upon the employer to have taken action that would, shall I say, inhibit the employee from doing whatever the accused is charged with. In other words, he is responsible unless he can establish that the offence was committed without his knowledge, and that he had exer-

[Interprétation]

fonctions que lui confèrent la présente loi ou les règlements.

Y a-t-il des questions à poser? Monsieur est-il adopté? Adopté.

Messieurs, l'article 9, maintenant.

Infractions et peines

Y a-t-il des questions à poser? Monsieur Danforth.

M. Danforth: Monsieur le président, si vous me le permettez, j'aimerais bien parler de l'alinéa 2 de l'article 9, qui traite d'une poursuite lorsqu'il y a infractions. J'aurais deux questions à poser. Tout d'abord, qu'est-ce qu'on veut dire par «infraction prévue par la présente loi de la part d'un employé ou d'un agent». Est-ce que c'est parce qu'il aurait gêné l'enquête, parce qu'il aurait caché certains documents ou certains renseignements, ou donné de faux renseignements? Ou l'infraction provient-elle du fait que le terrain a été vaporisé et que ce geste est à l'origine de la contamination?

M. Williams: Il s'agit du premier cas, c'est-à-dire le fait de gêner l'enquête, de cacher certains renseignements, etc. Il n'y a pas infraction simplement parce qu'un résidu est retracé dans un produit.

M. Danforth: Ma deuxième question, monsieur le président. Qu'advient-il si un employé a, par mégarde, donné de faux renseignements ou gêné l'inspecteur dans l'exercice de ses fonctions? Est-ce que le gouvernement a un recours vis-à-vis de l'employeur, même si la chose a été faite par mégarde, et quelle est l'attitude du gouvernement à l'égard de l'employé, si telle procédure est suivie lorsqu'un inspecteur est en fonction?

M. Williams: Monsieur le président, je trouve très difficile de répondre à cette question. L'alinéa 2, vise l'employeur ou l'accusé, dans le cas qui nous occupe, en autant qu'on intente une poursuite contre l'employeur. Évidemment, on pourrait le faire contre l'employé aussi en vertu de la loi, mais disons que la poursuite est intentée et que l'accusé est l'employeur. Il appartient à l'employeur d'empêcher son employé de poser le geste dont il est accusé. En d'autres termes, il est responsable à moins qu'il puisse prouver que l'infraction a été commise sans sa connaissance personnelle et qu'il avait pris toutes les mesures voulues pour empêcher cette infraction.

[Text]

cised due diligence to prevent the commission of the offence.

Mr. Danforth: My understanding, Mr. Williams, then is that if in the processing of a claim under this act it is brought about that there has been misinformation by an employee which might alter the conditions drastically, that it was without the knowledge of the employer, and can be proved to be without the knowledge of the employer, it does not, in any way, jeopardize the employer with regards to action by the government?

Mr. Williams: I think that is a difficult one because we have an additional clause that says that if the accused established that the offence was committed without his knowledge, that is one thing. But it says or consent and, it says:

that he exercised all due diligence to prevent its commission.

I think this really says that an employer simply cannot take recourse in the fact that he did not know that his employee did such a thing, if it would be reasonable to expect that he should know that his employee might do that, and should have warned his employee not to do it, for example. This, I believe, is the interpretation of:

that he exercised all due diligence to prevent its commission.

• 1050

Mr. Newman: I think you might say that even though he did not have knowledge, he might have condoned certain actions on the part of the employee or even connived in these actions even though he did not have actual knowledge of the acts which led to the creation of the offence.

The Chairman: Are you satisfied Mr. Danforth?

Mr. Danforth: The only conclusion I can draw, Mr. Chairman, from this is that where such a happening has taken place it seems to me that once again the interpretation is directed entirely in favour of the government agencies in this instance. I am just at a loss to have defined the status of, for example, a farmer who has instituted a claim for compensation under this Act and then finds in the middle of the proceedings that perhaps some misinformation has been obtained without his knowledge or permission; what his status will be with regard to the government agencies; whether he will be liable for punishment under this Act or to what degree it will affect

[Interpretation]

M. Danforth: Donc, monsieur Williams, si lors de l'étude d'une réclamation faite en vertu de ce bill, on se rend compte qu'un employé a soumis des renseignements qui pourraient changer la situation et ceci, sans la connaissance de l'employeur, et qu'on puisse prouver que c'est sans la connaissance de l'employeur, cela ne met nullement l'employeur en danger.

M. Williams: La situation se complique parce qu'une autre disposition prévoit que si l'accusé peut prouver que l'infraction a été commise sans sa connaissance, c'est différent. L'article dit également «ou son consentement» et ajoute que la personne

s'est dûment appliquée à prévenir sa commission.

Tout ce que cela veut dire, c'est que l'employeur ne peut tout simplement pas prétendre qu'il ne savait pas que son employé avait posé tel geste. Il serait raisonnable de s'attendre qu'il sache que l'employé pouvait s'approprier à poser ce geste et qu'il lui dise de s'en abstenir. Je crois que c'est là l'interprétation qu'il faut donner quand on dit que cette personne

s'est dûment appliquée à prévenir sa commission.

M. Newman: Vous pourriez dire que même s'il n'en savait rien, il aurait pu excuser certains gestes de l'employé, même s'il ne savait pas ce que faisait l'employé, ce qui constituait l'infraction, qu'il ait tout fait.

Le président: Êtes-vous satisfait de la réponse, monsieur Danforth?

M. Danforth: La seule conclusion que je puisse en tirer, monsieur le président, c'est que là où une telle chose s'est produite, il me semble qu'une fois encore l'interprétation est entièrement en faveur des organismes du gouvernement. Je me demande comment on définit, par exemple, la situation d'un cultivateur qui a fait une demande d'indemnisation en vertu de cette loi et qui, au cours de l'information, découvre que l'on a peut-être obtenu des renseignements faux sans sa connaissance ou sans sa permission. Quelle sera alors sa situation vis-à-vis des autorités gouvernementales? Sera-t-il passible d'une punition, en vertu de la présente Loi? Jusqu'à

[Texte]

the claim for compensation that he has proceed with.

Mr. Williams: Mr. Chairman, I might say that in so far as this portion of the bill is concerned, which deals with offences and penalties, it will of course not be administered by the Department but will be administered by the courts. Presumably the Department, if they were in a position to feel that an offence had been committed would, through the Department of Justice, lay a charge against the offending person and it would be up to the courts then to decide whether or not the accused had exercised due diligence in, shall I say, warning his employee not to commit these offences or whether he had not exercised due diligence and whether or not the offence was committed with or without the accused's knowledge. But it would not be the Department that would judge this matter.

Mr. Danforth: I see.

The Chairman: Mr. Clermont.

Mr. Clermont: Monsieur le président, au paragraphe 2, article 9, version française, je lis:

ou un mandataire de l'accusé, que cet employé ou mandataire soit ou non identifié ou qu'il ait été poursuivi ou non pour cette infraction,

Je lis la version anglaise:

by an employee or agent of the accused whether or not the employee or agent is identified or has been prosecuted for the offence

La version anglaise semble quelque peu différente de la version française «qu'il ait été poursuivi ou non». En français on dit: «qu'il ait été poursuivi ou non», en anglais on ne semble pas dire la même chose, seulement «s'il a été poursuivi».

The Chairman: There appears to be some conflict in the translation. Could we take that under review?

Mr. Clermont: Certainly.

The Chairman: Mr. Gleave.

Mr. Gleave: Mr. Chairman, in Clause 9, subclause (1) paragraph (a), as I understand this—of course, not being a legal man—but an indictable offence brings him under the criminal law. I find it a little strange at this point to bring a person under the criminal law in this sort of a situation. You have grey areas here where a judge will have to decide whether, as has been mentioned, an employer

[Interprétation]

quel point cela affectera-t-il la demande d'indemnisation qu'il a faite?

M. Williams: Monsieur le président, pour ce qui est de cette partie du bill—celle qui a trait aux infractions et aux peines—elle ne sera bien sûr pas exécutée par le ministère, mais par les tribunaux. Il est probable que si le ministère croyait qu'il y avait eu infraction, il intenterait, par l'entremise du ministère de la Justice, des poursuites contre la personne coupable, et ce serait alors au tribunal de décider si l'accusé avait ou non vraiment tout fait pour, disons, prévenir son employé de ne pas commettre cette infraction, et si elle avait ou non été commise à sa connaissance. Mais ce ne serait pas au ministère d'en décider.

M. Danforth: Je vois.

Le président: Monsieur Clermont.

Mr. Clermont: Mr. Chairman, subclause (2) of Clause 9 of the French version states the following:

or agent of the accused whether or not the employee or agent is identified or has been prosecuted for the offence

This is the English version:

by an employee or agent of the accused whether or not the employee or agent is identified or has been prosecuted for the offence

The English version seems to be somewhat different from the French version. The French says: "has been prosecuted or not" and the English version does not seem to say the same thing. It simply says: "has been prosecuted".

Le président: Il semble y avoir une contradiction dans la traduction. Pourrions-nous examiner cela plus tard?

M. Clermont: Certainement.

Le président: Monsieur Gleave.

M. Gleave: Monsieur le président, je ne sais pas si j'ai bien compris l'alinéa a) du paragraphe (1) de l'article 9, mais il me semble qu'un acte criminel amène la personne sous le coup du droit pénal. Je trouve plutôt étrange de faire tomber une personne sous le coup du droit pénal dans une situation comme celle-ci. Il y a ici des domaines assez vagues où le juge devra décider, comme on l'a déjà dit, si

[Text]

is or is not responsible. The judge is going to have to make a decision. We are presently in the House removing people from the scope of the criminal law. Under this bill we propose to bring certain individuals under the scope of the criminal law because they have done certain things with chemicals. If this section provided for a person being fined under civil law, as I understand it, then possibly it would be acceptable. But this is pretty touchy.

• 1055

I had a hired man go out one day with a sprayer and it just so happened the wind was in the right direction so he sprayed a neighbour's rapeseed. The neighbour was justifiably incensed, because his rapeseed was spoiled. I just cite this instance to show you what can happen here and I do not think we should invoke the criminal law. I think rather that a person who violates the law should be subject to a fine or something of this nature. If I am wrong I would like someone to correct me. Am I right that this brings the individual under the criminal law?

The Chairman: Mr. Williams?

Mr. Williams: This is correct. It brings the individual under the criminal law but the offence is not the offence of applying the pesticide. The offences are the offences referred to in Clause 8 above. For example, if he took criminal action to restrain and beat up an inspector going in or if there was fraud involved in the application for compensation, things of this nature are the offences that are created under this act. The example that you pointed out in respect of the rapeseed would not be an offence under this act. It would have nothing to do with this act.

Mr. Gleave: But I still do not think he should come under the criminal law. If he beat up an inspector, the criminal law would apply. He has assaulted somebody; therefore, he is subject to the ordinary law that applies to those who beat up other people. If he commits a fraud, surely he is subject to the ordinary applications of the law which apply to anyone who commits a fraud or a criminal act. I still do not think that in this act it should be, because once you put in an act that it is an indictable offence, then the scope can be wider than that.

In the United States a few years ago under the combines law they put a number of executives in jail from one of the electrical companies, if I remember. In the United States apparently this can be done. I can get as incensed against combines as anybody else

[Interpretation]

oui ou non l'employeur est responsable. C'est lui qui va devoir prendre cette décision. A l'heure actuelle, à la Chambre, nous enlevons des catégories de gens de la coupe du droit pénal. Alors que dans ce bill nous nous proposons de faire tomber des gens sous le coup du droit pénal simplement pour avoir causé des dommages avec des produits chimiques. Si l'article prévoyait que la personne ait à payer une amende en vertu du code civil, ce serait peut-être acceptable. Mais ceci est une question plutôt délicate.

Un jour, j'ai envoyé un employé vaporiser des plantes, et il s'est trouvé que, le vent soufflant dans cette direction, cela a arrosé le champ de colza du voisin, qui était à juste titre enragé, car cela avait gâté son colza. Je vous cite tout simplement cet exemple pour vous indiquer ce qui pourrait se produire. Et je ne pense pas que nous devions faire passer cela sous le coup du droit pénal. Il faudrait plutôt imposer à la personne coupable une amende ou quelque chose de ce genre. Si j'ai tort, que quelqu'un me corrige. Ai-je raison de croire que cela met la personne sous le coup du droit pénal?

Le président: Monsieur Williams.

M. Williams: Oui, c'est exact. Cela met la personne sous le coup du droit pénal, mais l'infraction, ce n'est pas d'appliquer des produits antiparasites. Les infractions sont celles que l'on mentionne à l'article 8. Par exemple, s'il avait commis un acte criminel en s'attaquant à l'inspecteur pour l'empêcher de pénétrer sur les lieux ou s'il y avait eu fraude dans la demande d'indemnisation, il s'agirait d'infractions auxquelles s'appliquerait la présente loi. L'exemple que vous avez cité au sujet du champ de colza ne constituerait pas une infraction aux termes de cette loi.

M. Gleave: Je ne crois tout de même pas qu'il doive relever du droit pénal. S'il avait battu un inspecteur, le Code criminel s'appliquerait. Il aurait attaqué quelqu'un, et il serait donc soumis à la loi ordinaire applicable dans ces cas-là. S'il s'agissait de fraude, il serait soumis aux dispositions normales de la loi à l'égard de toute personne qui commet une infraction criminelle. Je ne crois malgré tout pas que cela doive être dans la présente loi, car une fois que vous précisez dans une loi qu'il s'agit d'un acte criminel, la portée peut en être plus vaste.

Aux États-Unis, il y a quelques années, en vertu de la loi sur les coalitions, on a emprisonné plusieurs dirigeants d'une compagnie d'électricité, si je me souviens bien. Il semble qu'aux États-Unis la chose soit possible. Je peux être aussi enragé que quiconque contre

[Texte]

but I do not think an individual should be subject to the criminal law other than when he commits a crime, and the ordinary courts can decide that. I think the penalties in here should say that he can be taken under the civil law. If someone has a better answer, I am willing to hear it, but I am not prepared to go along with this.

The Chairman: Mr. Newman will make a comment.

Mr. Newman: Mr. Chairman, first of all we should point out that it is no less criminal if you proceed by way of summary conviction than if you proceed by way of an indictment. Any legislation creating offences brings a person under the "Criminal Law". Neither offence would be an offence under the Criminal Code. It would still be an offence under the particular legislation. Of course, when you proceed by way of summary conviction or by indictment certain procedural aspects of the Criminal Code come into play.

The only difference between an indictable offence and an offence punishable on summary conviction is the procedure that is followed in trying the offence. For example, if you proceed by way of summary conviction it is generally considered to be less serious and a magistrate or provincial judge would have absolute jurisdiction to hear the case. If you proceed by way of indictment there is a much more complex procedure involved. For example, instead of having the case heard by a provincial court judge or magistrate, the accused would have an election. He could elect to have his case heard by a magistrate or provincial court judge, a county court judge or even request trial by judge and jury. Also if you proceed by way of indictment I believe that the provisions of the Identification of Criminals Act would come into effect and that the police would have the right to have the accused photographed and fingerprinted because he was charged with an indictable offence.

• 1100

However, the normal way of proceeding with prosecutions for violations of federal statutes other than the Criminal Code is to proceed by way of summary conviction. Only if there are repeated offences, a number of repeated offences, or if, in the opinion of the law officers of the Crown, the offence is extremely serious will the Crown or the government proceed by way of indictment. But I should like to emphasize that making it punishable on indictment or by way of sum-

[Interprétation]

les coalitions, mais je ne pense pas que des personnes doivent être passibles des dispositions du code criminel à moins d'avoir commis un crime et c'est alors aux tribunaux ordinaires à en décider. Je crois que les peines prévues ici devraient être celles qui relèvent du droit civil. Si quelqu'un a une meilleure solution, je suis prêt à l'écouter, mais je ne suis pas d'accord avec ces dispositions.

Le président: M. Newman a une observation à faire.

M. Newman: Tout d'abord, monsieur le président, je crois que nous devrions peut-être souligner que l'acte n'est pas moins criminel si l'on procède à une condamnation sommaire que si l'on procède à une accusation. Toute loi qui établit des cas d'infraction fait tomber la personne sous le coup du droit « criminel ». Aucune de ces infractions ne relèverait du Code criminel, mais elles resteraient des infractions au terme de cette loi. Évidemment, quand on procède à une condamnation sommaire ou à une accusation, certains aspects de la procédure du Code criminel entrent en jeu.

La seule différence entre un acte criminel et un acte punissable par condamnation sommaire est la procédure que l'on suit dans la poursuite de la cause. Par exemple, si l'on procède à une condamnation sommaire, on considère normalement que c'est moins sérieux, et un juge d'instruction ou un juge provincial du tribunal provincial a toute compétence pour entendre la cause. Si l'on procède à une accusation, la procédure est beaucoup plus complexe. Par exemple, au lieu de passer devant un juge de tribunal provincial ou devant un juge d'instruction, l'accusé pourrait choisir soit de voir sa cause entendue devant un tribunal de simple police, devant un tribunal provincial ou devant une cour de comté, soit de demander juge et jury. En outre, si l'on procédait à une accusation, je crois que les dispositions de la Loi sur l'identification des criminels entreraient en jeu, et que la police aurait le droit de photographier le prévenu et de prendre ses empreintes digitales, puisqu'il serait accusé d'un acte criminel.

Toutefois, la façon normale de procéder dans le cas de poursuites pour violation de statuts fédéraux autres que le Code criminel est de porter une condamnation sommaire. Si, de l'avis des conseillers juridiques de la Couronne, le délit est extrêmement grave, la Couronne pourra alors procéder par voie d'accusation.

Mais, j'aimerais souligner que si l'on adopte la méthode d'accusation ou par procédure sommaire, cela ne change nullement la qua-

[Text]

mary conviction in no way changes the quality of the offence. It is no less criminal if it is an offence by way of summary conviction than by indictment, and there is no such thing really as a civil offence providing for fine or imprisonment.

Mr. Gleave: Well, Mr. Chairman, to follow it up, why not leave it that it is an offence punishable on summary conviction? In (a) a person could be imprisoned up to two years for a violation of this proposed Act; that is what it says and I suppose it means what it says.

Mr. Newman has pointed out that there are two alternatives open to the government for prosecution. In my opinion (b) is sufficient. I take the point of view that (b) is sufficient for now, that (a) should be taken out, and if two or three years from now the Department of Agriculture can come to this Committee, or come to Parliament and say: "Under (b) we cannot control the circumstances which we are facing" then they can ask for (a). However, as one member of this Committee, I am not just ready to go along with putting a clause in here that we are going to make people criminals—they will probably make themselves criminals—but tag them as criminals and put them in jail for two years under these circumstances.

Just to complete this, Mr. Chairman, I doubt very much if we are dealing with the circumstances where people want to evade the law and want to abuse the law. I think we are dealing with a circumstance where people find themselves in a position in which they did not expect to find themselves. And this probably applies to the manufacturer and the distributor just as much as it applies to the farmer. We are in a no man's land with these chemicals. Anyone who has used them knows it.

The Chairman: Mr. Gleave you would probably agree that this particular part of Clause 9 does not really refer to the circumstances under which a farmer may find himself, but rather applies to Clause 8, Section (2) where he deliberately tries to defraud. This is the part to which it really refers.

Mr. Newman: Yes.

The Chairman: It has nothing to do, in my opinion, with the fact that a farmer finds himself in the position of having his product barred from the market because of a residue. It deals only with the fact that he has attempted to defraud and misrepresent.

[Interpretation]

lité du délit. Ce n'en est pas moins un acte criminel, que l'on procède par voie de procédure sommaire ou par voie d'accusation. Il n'y a pas de délit civil prévu en l'occurrence, pour lequel serait prévue l'amende ou la prison.

M. Gleave: Monsieur le président, dans ce cas, pourquoi ne pas laisser la disposition telle quelle, soit un délit punissable sur déclaration sommaire de culpabilité. D'après la disposition (A) un accusé pourrait être condamné à une peine allant jusqu'à deux ans de prison pour la violation de cette future Loi.

M. Newman a signalé qu'il y a deux solutions possibles, deux méthodes que peut adopter le gouvernement concernant les poursuites judiciaires. A mon avis, la deuxième formule suffit. Il me semble que la disposition (B) suffit pour le moment, que le sous-alinéa (A) devrait être éliminé. Et, si dans deux ou trois ans, le ministère de l'Agriculture s'adresse au Comité ou au Parlement, et déclare qu'en vertu de l'alinéa (B) il ne peut pas contrôler les événements, il pourra alors nous demander de restaurer l'alinéa (A). A titre de membre de ce comité, je ne suis pas prêt à adopter une disposition qui aura pour but de faire de ces gens des criminels et de les rendre passibles d'emprisonnement pendant deux ans en vertu de ces circonstances.

Je doute fort, monsieur le président, qu'il s'agisse ici de circonstances telles que les gens désirent contourner ou mépriser la loi. Mais, je crois que ces gens se trouveront dans une situation dans laquelle ils ne comptaient pas se trouver. Cela s'applique aux fabricants et aux distributeurs, tout autant qu'aux cultivateurs. Il s'agit ici d'une zone grise en ce qui concerne les produits chimiques; tous ceux qui les ont utilisés le savent.

Le président: Vous reconnaissez, monsieur Gleave, sans aucun doute, que cette disposition de l'article 9 n'a pas trait aux circonstances ou à la situation dans laquelle un cultivateur pourrait se trouver. Cela se rattache plutôt au paragraphe 2 de l'article 8, où il y a eu acte frauduleux. Voilà la véritable partie à laquelle cet article se réfère.

M. Newman: Oui.

Le président: A mon avis, cela n'a rien à voir avec le fait que l'agriculteur voit ses produits bannis du marché à cause de résidus. Il s'agit simplement du fait qu'il est coupable de fraude et de fausses représentations.

[Texte]

Mr. Gleave: As far as I am concerned at this point in time, under the circumstances we are facing in the use and distribution of chemicals, I am not ready to see anyone faced with a two-year jail sentence. Some judge is going to decide whether he has attempted to defraud somebody under this proposed Act.

The Chairman: Gentlemen, I have Mr. Douglas and Mr. Peters who wish to ask questions on Clause 9. In view of the fact that there has been some conflict with regard to the translation of Section (2), Clause 9, I am wondering whether the Committee might agree to stand Clause 9 until we have the clarification, and then we might proceed with further questioning and either approve or disapprove the Clause. Would that meet with the concurrence of the Committee?

• 1105

Mr. Danforth: Mr. Chairman, I would say Mr. Gleave is quite correct in his point of view, because in spite of the explanation given by Mr. Newman it does state a person who violates any provision of the Act; it is not confined to Clause 8. It states "any provision of this Act".

The Chairman: Have you got a comment?

Mr. Newman: Yes, Mr. Chairman. Perhaps the hon. Member could point out provisions that could be violated which would lead to a charge being laid, other than the ones dealing with obstruction of inspectors or what is essentially fraud.

Mr. Danforth: Mr. Chairman, each Clause following Clause (2) deals with the claims and the procedures which may or may not be followed, and a violation on the part of the parties involved of any of the terms as prescribed under Clause 9 could lead to a punishable offence, because this is what it states: a violation of any provision of the Act.

Mr. Newman: I could just briefly say, Mr. Chairman, that there would have to be a deliberate illegal act on the part of an accused before charge would be laid, or could be laid. I still would like to have a specific example, because quite frankly how a person could be charged for using pesticide wrongfully eludes me. The Act does not provide for such a course of action being taken.

[Interprétation]

M. Gleave: A ce moment-ci et dans les circonstances qui se posent, lorsque l'on traite de l'usage et de la distribution des produits chimiques, je ne suis pas du tout prêt à voir qui que ce soit passible de deux années de prison, parce que seul un juge peut décider, si quelqu'un est coupable ou non, si quelqu'un a essayé de commettre une fraude au terme de la loi.

Le président: J'ai ici M. Douglas et M. Peters sur ma liste qui désirent poser des questions sur l'article 9. Comme il y a eu certaines difficultés de traduction du paragraphe 2 de l'article 9, le Comité voudra peut-être consentir à remettre à plus tard l'étude de l'article 9.

Nous pourrions peut-être passer à d'autres questions. Est-ce que cela vous convient?

M. Danforth: Monsieur le président, si l'on me permet d'ajouter que, d'après vos explications, je crois que le point de vue de M. Gleave est exact, en dépit des explications que vient de nous donner M. Newman. Néanmoins, il semble que pour quelqu'un qui enfreint n'importe quelle disposition de la loi, on ne se confine pas à l'article 8; on dit: n'importe quelle disposition de la loi.

Le président: Avez-vous un commentaire à faire là-dessus?

M. Newman: Monsieur le président, j'aimerais que les députés nous signalent d'autres dispositions qui pourraient être enfreintes et qui pourraient donner lieu à une accusation autre que celle qui a trait à l'obstruction du travail des fonctionnaires: la fraude.

M. Danforth: Monsieur le président, chaque article, par suite de l'article 2, parle des procédures qui peuvent être suivies ou non. Et, une infraction commise par les partis en cause, au terme de l'article 9, pourrait donner lieu, pourrait constituer un délit punissable, car on dit bien: Une infraction à n'importe quelle disposition de la loi.

M. Newman: Je voudrais brièvement ajouter, monsieur le président, qu'il faudrait qu'il y ait un acte illégal et délibéré de la part du prévenu avant que des accusations puissent être portées. J'aimerais encore avoir un exemple précis de ce que vous dites car, franchement, je ne vois pas comment une personne pourrait être accusée d'avoir mal utilisé des pesticides. La Loi ne prévoit pas une action dans de tels cas.

[Text]

Mr. Danforth: Mr. Chairman may I follow the courses suggested by the Chairman in order that I might have time to prepare my case in depth for the legal advisor?

Mr. Peters: It sounds good anyway.

The Chairman: I will direct your attention to Clause 10.

A complaint or information in respect of an offence under this Act may be heard, tried or determined by a magistrate or a justice if the accused is resident or carrying on business within his territorial jurisdiction, although the matter of the complaint or information did not arise in that territorial jurisdiction.

Are there any questions on Clause 10?

Mr. Peters: Is the implication there that where the goods are delivered to a market beyond the territory of the offence, the hearing would then be in the area where the offence took place rather than in the area where the goods were delivered or where the seizures were made?

The Chairman: Mr. Newman will comment.

Mr. Newman: Mr. Chairman the normal rule is that a magistrate has territorial jurisdiction to hear charges arising out of offences which took place in his territory. For example, a provincial magistrate in Saskatchewan would have jurisdiction to hear complaints arising out of offences which happen in Saskatchewan, but under this proposed Act, for example, an inspector could have been obstructed in Alberta, but the person charged with the offence might reside in Saskatchewan. Normally the magistrate would not have jurisdiction to hear this case, but because of this particular provision in the statute he could proceed with the case.

• 1110

The Chairman: Any further questions? Shall Clause 10 carry?

Mr. Peters: How would this apply to imported contaminated goods? Would it cover that?

The Chairman: There would be no compensation anyway.

Mr. Newman: It is not a question of the goods. It is a question of acts.

[Interpretation]

M. Danforth: Monsieur le président, puis-je alors suivre la formule qui est suggérée par le président? J'aurai peut-être le temps de présenter mon plaidoyer si nous différons l'article 9, si cela vous convient.

M. Peters: Il me semble que cela soit acceptable.

Le président: Ainsi, nous passons à l'article 10:

Une plainte ou dénonciation relative à une infraction prévue par la présente loi peut être entendue, instruite ou jugée par un magistrat ou un juge de paix, si l'accusé réside ou fait des affaires dans le territoire sous la juridiction dudit magistrat ou juge, même si le fait qui a donné lieu à la plainte ou dénonciation ne s'est pas produit dans ce territoire.

Y a-t-il des questions?

M. Peters: Quelle est vraiment la signification de cet article, lorsque les marchandises sont livrées sur un marché qui se trouve en dehors du territoire où le délit a été commis, l'enquête ou le procès aurait-il alors lieu là où le délit a été commis, plutôt qu'à l'endroit où les marchandises ont été livrées ou saisies?

Le président: M. Newman commentera.

M. Newman: Monsieur le président, la procédure normale établit qu'un magistrat possède une juridiction territoriale aux fins d'instruire des causes résultant de délits qui ont eu lieu dans son district. Ainsi, par exemple, un magistrat provincial, en Saskatchewan, aurait juridiction, pour entendre des plaintes résultant de délits qui ont été commis ou qui ont eu lieu en Saskatchewan aux termes de cette Loi.

Par exemple, si un inspecteur aurait été empêché de perquisitionner sur les lieux, en Alberta, mais que la personne accusée habite la Saskatchewan, le magistrat n'aurait normalement pas le droit de procéder, mais grâce à cette disposition particulière, il pourra instruire et entendre la cause.

Le président: Y a-t-il d'autres questions? L'article 10 peut-il être adopté?

M. Peters: Comment cet article pourrait-il s'appliquer aux matières contaminées importées? Est-ce que la loi prévoit ce cas?

Le président: Il n'y aurait pas d'indemnisations de toute façon.

M. Newman: Ce n'est plus une question de matières, c'est une question de lois.

[Texte]

The Chairman: Shall Clause 10 carry?

Some hon. Members: Carried.

Clause 10 carried.

The Chairman: Gentlemen we will proceed with Part II, Compensation and Appeals, Clause 11, and I direct your attention thereto. Are there questions?

Mr. McKinley: How long do they have to appeal?

Mr. Williams: I think it is covered in Clause 12(2).

The Chairman: Shall Clause 11 carry?

Clause 11 agreed to.

The Chairman: Gentlemen, I draw your attention to Clause 12. I understand that the question asked by Mr. McKinley is answered in Clause 12.

Mr. Williams: Three months, or such longer period as the Assessor may allow.

The Chairman: Are there questions on Clause 12?

Mr. Danforth: On Clause 12(1) we are back to the basis where there is the maximum compensation. Once again we have it left entirely to the Department in this case where it says, "maximum compensation prescribed under this Act". We have the government action where minimum bases are established whereby no compensation may be claimed under such minimum standards as prescribed, and now we have maximum compensation prescribed under this Act. In looking at this bill, we, as members of this Committee, have no idea what this maximum will be. It is suggested if my memory serves me correctly, that perhaps 80 per cent could be set as a figure for this. I have two questions.

1. Has the Department determined that an 80 per cent maximum shall be prescribed?

2. Is it possible for the officials concerned to change the maximum from time to time?

The Chairman: I believe the Minister will comment.

Mr. Olson: As discussed before, the Department will have no right to set the maximum; it is provided for maximums to be set by Governor in Council under Clause 4, I believe. Of course, we will be making recommendations, obviously, to the Governor in Council. To answer the second part of your question, yes, if it is in the Act, as it is, that

[Interprétation]

Le président: L'article 10 est-il adopté?

Des voix: Adopté.

L'article 10 est adopté.

Le président: Ainsi, nous passons donc à la deuxième partie de la loi: «Appel des décisions relatives aux indemnités», article 11. Y a-t-il des questions sur l'article 11?

M. McKinley: Quel est le délai d'appel?

M. Williams: Vous trouverez la réponse à l'article 12, paragraphe (2).

Le président: L'article 11 est-il adopté?

Adopté.

Le président: J'attire votre attention sur l'article 12. Je crois comprendre que la question posée par M. McKinley reçoit sa réponse à l'article 12.

M. Williams: Trois mois, mais l'évaluateur peut accorder un plus long délai.

Le président: Y a-t-il des questions sur l'article 12?

M. Danforth: A l'article 12, paragraphe (1), on parle d'indemnité maximum. Encore une fois on laisse au ministère le soin de déterminer l'indemnité maximum accordée aux cultivateurs. C'est la décision du gouvernement en ce qui concerne le minimum en vertu duquel aucune indemnité ne peut être réclamée, et maintenant nous avons la compensation maximum prescrite aux termes de cette loi. Nous, membres du comité, n'avons aucune idée de ce que peut constituer cette indemnité maximum. Si je ne me trompe, je crois qu'on pourrait avancer 80 p. 100 comme indemnité maximum. Voici mes questions:

1. Le ministère a-t-il déterminé que le maximum prescrit soit de 80 p. 100?

2. Les fonctionnaires en cause pourront-ils changer le maximum à l'occasion?

Le président: Le ministre voudra sans doute répondre?

M. Olson: Le ministère n'aura pas le droit d'établir le maximum. On prévoit, à l'article 4, que le maximum sera déterminé par le gouverneur en conseil. Bien entendu, nous allons formuler des recommandations au gouverneur en conseil.

Et pour répondre à votre deuxième question: oui. Dans la loi telle quelle, le gouver-

[Text]

these can be set by Governor in Council, then of course they can be changed from time to time.

Mr. Danforth: Can the Minister indicate if the Department has contemplated a maximum, and could he suggest to the Committee now what this maximum might be?

Mr. Olson: Based on some experience, as I said when we were on clause 4, we are thinking in terms of about 80 per cent, but I suggest that there are some complexities involved in this depending on the product, for example. Then assessing these losses will have to be spelled out to some extent in the regulations as to procedure and that sort of thing. There are so many variables here that we think that we need to have some experience, but generally speaking, as has been said, we are thinking in terms of about 80 per cent of the loss. I think we need this latitude to apply maximums to various commodities, if that is the way it is going to be laid down, and also to change it from time to time as we gain experience in assessing and paying compensation in this regard.

• 1115

Mr. Danforth: Mr. Chairman, may I, through you, ask the Minister a further question. I can foresee very many grave difficulties in such a procedure. May I give an example where perhaps damage is done to a commodity on two adjacent premises, or perhaps two premises in two different communities and the produce from one of the premises is sold on the wholesale market to the wholesale trade and perhaps the other gentleman is a market gardener and his produce goes retail. Certainly there is going to be quite a difference in the moneys obtained from each of these producers. Would the 80 per cent compensation be prescribed on the wholesale value, the retail value, or the value received through normal trade channels? This could be quite a factor when a farmer under this act is claiming compensation.

Mr. Olson: So far as arriving at those values is concerned, I think that we would take into account the normal market value that that farmer did or could have received had the product been sold, at whatever level he is dealing.

Mr. Danforth: The Minister is telling me then that two farmers for similar damage in a like commodity could, under this proposed act, obtained two varying degrees of compensation, even though each is assessed to the same degree under the act.

[Interpretation]

neur en conseil peut établir ces montants, et changer ces proportions à l'occasion.

M. Danforth: Le ministre peut-il nous indiquer si le ministère a songé à un maximum quelconque, et peut-il dire au comité quel sera éventuellement ce maximum?

M. Olson: D'après les expériences passées, comme je l'ai dit lorsque nous en étions à l'article 4, nous songions à 80 p. 100 des pertes. Je suis d'avis qu'il y a certaines complexités en cause, selon les produits, par exemple. Il faudra que, dans une certaine mesure, l'évaluation des pertes soit prévue dans les règlements.

Il y a tellement de données variables que nous ne pouvons pas fixer un chiffre. Il faudrait une certaine expérience. C'est pour cela qu'en général, comme on l'a dit, nous songeons à 80 p. 100 des pertes. Je crois que nous avons besoin de cette latitude pour appliquer les maximums à divers produits et aussi à changer éventuellement la proportion à l'occasion, au fur et à mesure que nous aurons de l'expérience pour déterminer l'indemnisation.

M. Danforth: Monsieur le président, puis-je poser une autre question au ministre? Je puis prévoir de graves difficultés à cette procédure. Puis-je donner un exemple, en l'occurrence, notamment, lorsqu'il y a des avaries causées à un produit dans deux localités différentes, mettons. Si le produit d'un endroit est vendu sur le marché en gros, et si, dans l'autre cas, les produits sont vendus au détail, il y aura sûrement alors, toute une différence dans les sommes qu'obtiendront ces deux producteurs. Est-ce qu'une indemnité de 80 p. 100 sera prescrite sur la valeur au détail, sur la valeur en gros, ou d'après les voies normales de commerce? Ce sera un facteur très important lorsqu'un fermier, aux termes de la loi, réclamera une indemnité.

M. Olson: En ce qui concerne ces valeurs, je crois que nous tiendrons compte de la valeur marchande normale que le cultivateur aurait reçue si le produit avait été vendu.

M. Danforth: Le ministre m'apprend que deux cultivateurs pourraient obtenir des degrés variables d'indemnité, même si les deux sont évalués de la même façon, aux termes de la loi, pour les mêmes produits.

[Texte]

Mr. Olson: No, I did not say that. What I said was that we would take into account the normal market value of wherever that product was being sold as a consideration for loss of product in so far as the over-all loss is concerned.

Mr. Danforth: But my point is, Mr. Chairman, that one could be in the position of a wholesaler and the other in the position of retailer and the actual values could be in a wide degree of variance.

Mr. Olson: I think you have helped us to answer some of the other questions, Mr. Danforth. This is a good example of why we should not be putting in a specific amount. Presumably if a farmer is selling in the retail market, as opposed to the wholesale market, he would have substantially greater expenses involved, so all these other factors are involved in assessing the loss.

Mr. Danforth: Then my point is valid when I say that under the circumstances two producers could, under a prescribed 80 per cent, receive quite a degree of variance in their compensation.

Mr. Olson: I suppose that it is also true that if the loss occurred, for instance, on potatoes in Prince Edward Island, or on potatoes in the lower Fraser Valley where there was a substantially difference in the market value of those potatoes, that is true.

Mr. Danforth: If I may use an example with the very same potatoes, Mr. Chairman, it could be that one producer of potatoes is shipping to a wholesale market, for example Montreal, and another producer equal in size is selling his potatoes to the tourist trade at a roadside stand; there certainly would be a difference in the actual selling price of the potatoes and the value to the producer. This is my point.

Mr. Olson: But wherever that product was intercepted and therefore at that point withdrawn from the market, there would be a market value that could be fairly easily established at that point. That, of course, is what would have to be taken into account.

The Chairman: I recognize Mr. Douglas.

Mr. Douglas: It seems to me that Mr. Danforth's argument is a very good argument against establishing any figure such as 90 per cent or 80 per cent or any other figure in the legislation, and there is no figure established.

[Interprétation]

M. Olson: Non, ce n'est pas ce que j'ai dit. J'ai dit que nous tiendrions compte de la valeur commerciale normale là où le produit est vendu pour évaluer les pertes globales.

M. Danforth: Précisément, monsieur le président, un producteur pourrait vendre sur le marché, en gros, et l'autre, en détail, et, par conséquent, il pourrait y avoir beaucoup de variantes en ce qui concerne la valeur marchande.

M. Olson: Je crois que vous nous aidez à répondre à certaines des autres questions, M. Danforth. Il s'agit là d'un bon exemple de la raison pour laquelle nous ne devrions pas inscrire dans la loi des sommes spécifiques, car si un cultivateur vend au détail, comparative-ment au marché en gros, il y aurait beaucoup plus de dépenses en cause, et par conséquent tous les autres facteurs, je crois, entreraient en jeu.

M. Danforth: Par conséquent, mon point est valide, lorsque je dis que, dans les circonstances, les cultivateurs pourraient recevoir des sommes différentes, même si la proportion est la même.

M. Olson: C'est vrai aussi, si on subissait des pertes, par exemple, sur les pommes de terre, dans l'île du Prince-Édouard ou dans la vallée du Fraser où la valeur marchande était assez différente. Ce serait aussi le cas.

M. Danforth: Si vous me permettez de prendre les pommes de terre comme exemple, il se peut fort bien qu'un producteur de pommes de terre les expédie à un marché en gros, à Montréal, par exemple, et qu'un autre producteur vende ses pommes de terre aux touristes, le long de la route. Il y aura sûrement une différence dans le prix de vente des pommes de terre et dans la valeur que cela rapporte aux producteurs.

M. Olson (ministre de l'Agriculture): Mais là où ces produits sont interceptés et, à ce point, retirés du marché, il y aurait une valeur marchande qui pourrait être assez facilement assignées, à ce moment-là. Et c'est précisément ce qui entrerait en ligne de compte.

Le président: Monsieur Douglas.

M. Douglas: Il me semble que c'est un bon argument contre l'insertion de chiffres précis dans la loi. Et il n'y a justement pas de chiffre qui soit suggéré. M. Olson a dit que cette idée de 80 p. 100 pourrait être une

[Text]

Mr. Olson I understand has said that this 80 per cent idea could be a guideline, but not necessarily laid down as a standard.

Mr. Gleave: I am directing this question to the legal adviser. Am I right in assuming that once the appeal process is set up, the individual or the company concerned cannot use due process of law, to use the term, or the ordinary courts—whatever is the proper term—to seek the compensation to which he thinks he may be entitled?

• 1120

Mr. Newman: Mr. Chairman, normally, if it were not for this appeal provision, I have grave doubts whether there would be any so-called due process to the ordinary courts at all. It would be a purely administrative decision on the part of the government. By the addition of this appeal provision he does have a right to contest the decision of the Minister. By the insertion of this part of the bill the farmer is being given more rights than he would have under the normal law.

Mr. Gleave: That is a matter of opinion. I asked a specific question. Does this preclude his going to the ordinary courts?

Mr. Olson: Maybe I could answer that. If you are talking about the due process of law and the right of a farmer or anyone else to take action, to initiate litigation and to recover a claim under a civil action if he has been done damage by some other person, I do not think that that is involved at all in this Act. That would still be open to him if he thought he could prove that some other party had in fact done something or committed an act that he could prove resulted in damage to him. This appeal section deals only with a farmer's right to appeal the amount of compensation that was set by the Minister.

Mr. Gleave: But once this appeal process is set up this would be the only avenue that the farmer or anyone else would have if he decided he had not received enough compensation, and he would not be able to go to other courts. Is that not correct?

Mr. Olson: Could I answer your question by asking you a question? Where else could he go for compensation? There is no such act or any provision at all at the moment.

Mr. Gleave: I am merely trying to establish—I am not saying it is right or wrong—

[Interpretation]

directive générale et ne pas constituer la normale.

M. Gleave: J'aimerais poser une question au conseiller. Une fois que cette procédure d'appel sera établie, est-ce que cela signifiera que les personnes ou les sociétés en cause ne pourront pas utiliser le processus normal de la loi ou les cours ordinaires, quel que soit le terme pertinent, pour essayer d'obtenir l'indemnisation à laquelle elles croient avoir droit?

M. Newman: Normalement, monsieur le président, n'était-ce cette disposition d'appel, je doute fort qu'il puisse y avoir un processus de droit ordinaire. Ce sera une décision purement administrative de la part du gouvernement. En ajoutant cette procédure d'appel, on a le droit de contester la décision du ministre. En insérant cette partie du bill, le cultivateur a plus de droits qu'il aurait normalement.

M. Gleave: J'ai posé une question bien particulière. Est-ce que cela l'empêche de s'adresser, de passer par le tribunal régulier.

M. Olson: Je vais essayer de répondre à vos questions.

Si vous parlez de processus légal normal comme du droit du cultivateur ou de qui que ce soit de lancer une poursuite pour recouvrer les réclamations au civil; autrement dit, s'il a subi des dégâts par suite de l'action de quelqu'un d'autre, je ne crois pas que cela se trouve dans la loi. S'il peut prouver qu'une autre partie ou quelqu'un d'autre a commis un acte qui soit nuisible, il pourrait en réclamer. Cet article, sur les dispositions intéressant les appels, ne traite que des droits du cultivateur d'en appeler du montant de l'indemnité qu'a fixée le ministre.

M. Gleave: Ma question était la suivante: Aux termes de la Loi lorsque cette procédure d'appel est établie, c'est la voie normale à laquelle doit recourir le cultivateur s'il estime qu'il n'a pas reçu suffisamment d'indemnités. Et il ne peut pas s'adresser à d'autres tribunaux, n'est-ce pas?

M. Olson: Quel autre recours a-t-il? Il n'y a pas de dispositions, il n'y a pas d'autres lois à l'heure actuelle sur ce point.

M. Gleave: J'essaie simplement d'établir, je ne dis pas que c'est bien ou mal, qu'une fois

[Texte]

that once this appeal process is set up then the farmer may not go to another court and that this appeal is his only avenue. Am I right?

Mr. Phillips: As I interpret the gentleman's question, once a compensation decision has been made he can appeal against that decision. There is nothing in here—and indeed he is protected—that would allow him to take civil action against some other person who was a party to his loss. That was covered in subclause (7).

Mr. Williams: If I might clarify this—maybe I will just add to the confusion—it is my understanding, Mr. Chairman, that Mr. Gleave is asking whether this in any way inhibits the farmer's ability to take legal action against the government for compensation.

Mr. Gleave: Right.

Mr. Williams: It is my understanding at the present moment and until this law is passed that the farmer has no rights whatsoever to take any action against the government to provide compensation.

Mr. Gleave: I am primarily interested in what his position is after this act is passed.

Mr. Williams: My understanding is that after this act is passed he will solely have this act, because he has no rights under any other act. This is my understanding based on other rulings that have been made—for example, under our Health of Animals Act, where he has been awarded compensation and there is no right of appeal because the Act does not provide it.

Mr. Gleave: Then I assume that this appeal court would be bound to consider the appeal of the farmer in light of the regulations set up under this act. Am I correct that if an Order in Council establishes the level of the compensation which the farmer may receive then, under this act, if the farmer brought an appeal he could only appeal the rates set under the regulations of this act?

• 1125

Mr. Williams: That is correct, Mr. Gleave, up to any maximum that may have been set by Governor in Council authority.

Mr. Gleave: Thank you.

The Chairman: Mr. Douglas.

[Interprétation]

que cette procédure d'appel est établie, le cultivateur n'a pas d'autre recours.

M. Phillips: Si j'ai bien compris, une fois qu'une décision a été arrêtée au sujet de l'indemnisation, il peut en appeler contre cette décision. Il n'y a rien là-dedans qui lui permet d'intenter une poursuite civile contre une personne qui a été partie à ses pertes. Cela a été couvert par la paragraphe 7.

M. Williams: Je crois comprendre, monsieur le président, que M. Gleave nous demande si cela empêche le cultivateur d'intenter des poursuites contre le gouvernement.

M. Gleave: C'est exact.

M. Williams: A l'heure actuelle, et jusqu'à ce que cette loi soit adoptée, le cultivateur n'a aucun recours contre le gouvernement sur des questions d'indemnité.

M. Gleave: Ce qui m'intéresse, c'est quelle sera sa position après que cette Loi aura été adoptée.

M. Williams: Après que la Loi aura été adoptée, il n'aura que le recours de cette Loi, car il n'y a aucun droit de prévu par n'importe quelle autre Loi. C'est ce que je comprends d'après les autres décisions qui ont été traitées par exemple aux termes de notre Loi sur les épizooties où on accorde certaines indemnités, mais il n'y a pas de droit d'appel.

M. Gleave: Une autre question que je voulais poser, c'est celle-ci: En ce qui a trait à cet appel, à cette cour d'appel ou ce tribunal d'appel, il faudrait considérer, étudier l'appel du cultivateur à la lumière des règlements qui ont été établis aux termes de la Loi. Ai-je raison? Si le décret du Conseil avait établi que c'est là le niveau de l'indemnité que le cultivateur recevra aux termes de la Loi, si le cultivateur interjette un appel, il ne peut en appeler que contre la proportion établie aux termes de la Loi.

M. Williams: C'est exact, M. Gleave, jusqu'au maximum, quel qu'il soit, établi par décret du Conseil.

M. Gleave: Merci.

Le président: Monsieur Douglas.

[Text]

Mr. Douglas: That was really the point I wanted clarified. Under clause 4 (c) the government may set maximums on the compensation it pays and, if they do so, unless the award falls short of that maximum there is no appeal.

Mr. Williams: I think that is correct. I think the basic principle here is that his right of appeal is against the departmental decision, not against the total government position on it.

Mr. Douglas: Well it quite conceivably could be that the government would not set a maximum and in that case he could appeal the award, whatever it might be.

Mr. Williams: That is right, if there were no maximum set.

The Chairman: Are there any further questions?

Mr. Danforth: Mr. Chairman, it suddenly occurs to me that Mr. Gleave may have a point in the observation he made about the position of the farmer under this act. Am I correct that under this proposed act there is no injury committed unless a government-appointed inspector so designates that a commodity shall be withheld from the market.

Mr. Olson: That is correct.

Mr. Danforth: There is no claim then that a farmer can bring for compensation unless it is under the provisions set out in this act. That is the very point of the act, as I understand it. In other words, the government lays down the prescribed guidelines under which compensation may be claimed from the government; then the government by Governor in Council ruling designates what compensation may be paid; the government appoints the inspector to see whether or not there has been injury; the government appoints an assessor who will assess the amount of the claim; the government appoints those to whom an appeal may be made—and once the government takes action and the appeal has been either granted or denied, that is the last recourse that a farmer has. Am I correct in this assumption? If so, would I be correct in saying that this seems to be weighed a little in favour of the government as far as the farmer is concerned?

Mr. Olson: No, I do not think you would be correct in saying that at all unless you are willing to say that the government in some way could influence the court, and I do not think that that is a fair statement.

[Interpretation]

M. Douglas: Voilà ce que je voulais savoir. Aux termes de l'article 4(c), le gouvernement peut fixer des maximums d'indemnités, et, sauf cas d'indemnité inférieure, il n'y a pas d'appel.

M. Williams: Je crois que c'est exact. Le principe fondamental en cause c'est que le droit d'appel est contre la décision du ministre et non pas contre la position du gouvernement.

M. Douglas: Mais il se peut que le gouvernement n'établisse pas de maximum, et alors l'appel serait possible contre n'importe quelle indemnité.

M. Williams: C'est juste.

Le président: Y a-t-il d'autres questions sur cet article?

M. Danforth: Monsieur le président, il me semble tout à coup que M. Gleave avait peut-être raison lorsqu'il a exposé la situation du cultivateur dans le contexte de cette loi. Aux termes du projet de loi, nous la concevons, il n'y a pas, n'est-ce pas, de tort de commis avant que l'inspecteur nommé par le gouvernement, ait déclaré qu'un produit doit être retiré du marché?

M. Olson: C'est exact.

M. Danforth: Il n'y a aucune réclamation que puisse formuler un cultivateur sauf dans le contexte des dispositions de la présente loi. C'est le but principal de la loi, si je comprends bien. En d'autres mots—le gouvernement, par décision du décret en conseil, détermine les modalités de la réclamation. Le gouvernement nomme l'inspecteur pour voir si oui ou non il y a eu perte. Le gouvernement nomme aussi le fonctionnaire d'évaluer le montant de la réclamation. Le gouvernement désigne ceux à qui on va présenter un appel. Et une fois que le gouvernement passe à l'action et que l'appel a été accordé ou refusé, c'est le dernier du cultivateur. Est-ce que j'ai raison? Ai-je raison de dire que cela semble favoriser le gouvernement plutôt que le cultivateur?

M. Olson: Non, je ne pense pas que vous ayez raison à moins que vous ne vouliez dire de quelque façon que le gouvernement influencerait les tribunaux et je ne pense pas que ce soit juste.

[Texte]

Mr. Danforth: I am not casting any aspersions on the court; I am just saying that it seems that the farmer is standing on an island alone where this act is concerned.

Mr. Richard: If we wanted to leave him on an island we would never pass the act in the first place.

Mr. Olson: I think that the process under this act, Mr. Danforth, is pretty typical of all the laws that we have the way that they are enforced and the way that they are handled—entirely according to the statutes, all of them. This course that you have outlined is not peculiar to this act.

The Chairman: Mr. Peters.

Mr. Peters: How is the farmer or the offended party made aware of what the Order in Council may be in relation to a specific maximum.

Mr. Olson: It will be published in the *Canada Gazette*, which of course is mandatory. But in addition to that we will give publicity within the limits that we are capable of giving it. Now that certainly does not guarantee that every farmer in the country is going to know precisely what his rights are but we will be doing some publications.

• 1130

Mr. Peters: Will not the agent, whoever he may be, that will make the decision in the first instance before the appeal is structured be in a position to provide this type of information?

Mr. Olson: Certainly.

The Chairman: Mr. Douglas.

Mr. Douglas: I hope that we are not setting up two different completely opposed camps here. I do not think the government is an ogre.

Mr. Olson: Not this government.

Mr. Douglas: The government would not be proposing a law like this if they were absolutely opposed to giving the farmers compensation. I think that the government intends to treat farmers fairly in this respect. Furthermore, I think that the provision for appeal guarantees that farmers will be dealt with fairly if they feel that they have not been.

Mr. Olson: I think that it is worth repeating that the whole purpose of this act is to have parliamentary approval and authority to pay compensation. If we were trying to set up an act not to pay compensation, all we need do is not bring the act in.

[Interprétation]

M. Danforth: Je n'ai pas l'intention de déprécier les tribunaux. Je dis simplement qu'il semble que le cultivateur soit condamné à l'isolement du point de vue de cette loi.

M. Richard: Dans ce cas, nous n'aurions pas du tout adopté de lois.

M. Olson: Je pense que le processus aux termes de la Loi, monsieur Danforth, est caractéristique de toutes les lois que nous avons dans les recueils législatifs et ces dispositions ne sont pas propres à celle-ci.

Le président: Monsieur Peters.

M. Peters: Monsieur le président, j'aimerais savoir comment le cultivateur ou la partie qui a subi des pertes, saura quelle est la teneur du décret du conseil intéressant le maximum?

M. Olson: Cela sera publié dans la *Gazette du Canada*. C'est obligatoire, bien entendu. Outre cela, nous en donnerons publicité dans les limites possibles. Cela ne garantit sûrement pas que chaque cultivateur va savoir précisément quels sont ses droits, mais nous allons annoncer ces décisions.

M. Peters: Mais l'agent responsable ne va-t-il pas, avant l'expiration au délai d'appel, fournir ces renseignements?

M. Olson: Si, sûrement.

Le président: Monsieur Douglas.

M. Douglas: Monsieur le président, j'espère que nous n'établissons pas deux camps tout à fait opposés ici. Le gouvernement ne doit pas être un ogre.

M. Olson: Pas ce gouvernement-ci!

M. Douglas: Le gouvernement ne proposerait pas de loi. J'ai l'impression que le gouvernement a l'intention de traiter le fermier avec justice. Les possibilités d'appel garantissent au fermier qu'il sera traité avec justice s'il est d'avis qu'il ne l'a pas été.

M. Olson: J'ai l'impression qu'il vaut la peine de répéter que le seul objet de ce bill est l'obtention de l'approbation parlementaire nécessaire au paiement de cette indemnité. Si nous n'avions pas voulu verser l'indemnité, nous n'aurions pas présenté la mesure.

[Text]

An hon. Member: We could also limit the amount.

Clause 12 agreed to.

On clause 13—Powers of Assessor.

Mr. Danforth: I am interested in subclause (1) (c) of clause 13 which says:

refer the matter back to the Minister for such further action as the Assessor may direct

Once we have gone through a compensation claim to this degree, where compensation has been granted and an appeal made, what could be referred back to the Minister for action in these circumstances?

The Chairman: Mr. Phillips, would you please comment?

Mr. Phillips: This paragraph was put in for the express purpose of reducing the staff required by the assessor. The assessor examines the claims and says, "Well, it seems to me that I need information on five things in order to make a proper judgement". So before making a decision he would refer it back to the Minister and require the Minister's staff to get this information. And if he so desires, indeed, in doing it it might be brought to the attention of the Minister that there was an error made in the compensation and that it should be changed because of this added information. In that case then the individual could go to the assessor again, if he did not agree with this, and the assessor would have this additional information on which to make a judgement.

Mr. Danforth: This is prior to a decision?

Mr. Phillips: Yes.

Mr. Danforth: That is fine.

Mr. McKinley: Would not this same information be available in the original assessment made by the inspector?

Mr. Phillips: Well in my response, Mr. Chairman, I have indicated that in the opinion of the assessor it might not have been sufficient information on which the decision was taken, that he would not take a decision without additional information and would refer it back and say, "I want the following information; would you please get it".

Mr. McKinley: There would be no information that would not be available previous to the inspector's reporting?

[Interpretation]

Une voix: Nous pourrions également fixer le montant maximum de l'indemnité.

L'article 12 est adopté.

A l'article 13: Pouvoirs de l'évaluateur.

M. Danforth: Je m'intéresse à l'alinéa (c) du paragraphe (1) de l'article 13 où il est dit que l'évaluateur peut:

renvoyer l'affaire au Ministre pour qu'il y soit donné la suite que peut ordonner l'évaluateur.

Quand nous avons atteint ce palier, c'est-à-dire que l'indemnité a été versée et un appel logé, que pourrait-on renvoyer au ministre?

Le président: Monsieur Phillips pouvez-vous commenter s'il vous plaît?

M. Phillips: Nous avons inséré cet alinéa uniquement pour réduire le personnel requis par l'évaluateur. L'évaluateur qui examine la réclamation pourrait se dire: «Il me semble que j'aurais besoin d'un renseignement sur 1, 2, 3, 4, 5 points afin d'en arriver à un jugement juste et équitable.» Ainsi il renverrait la question au ministre et demanderait au personnel du ministre d'obtenir ces renseignements. Il pourrait en profiter pour attirer l'attention du ministre sur le fait qu'il y a eu erreur dans l'indemnité et qu'elle pourrait être modifiée en s'appuyant sur ces nouveaux renseignements. Et dans ce cas, la personne en cause pourrait s'adresser à nouveau à l'évaluateur et ce dernier aurait en main de nouveaux renseignements qui l'aideraient à en arriver à une décision.

M. Danforth: Avant la décision?

M. Phillips: Oui.

M. Danforth: Merci.

M. McKinley: Est-ce qu'il ne s'agirait pas des mêmes renseignements dont l'évaluateur disposait au début?

M. Phillips: Dans ma réponse, monsieur le président, j'ai indiqué que l'évaluateur a pu croire qu'il ne possédait pas assez de renseignements et qu'avant de rendre sa décision, il a demandé qu'on lui en fournisse d'autres.

M. McKinley: Il s'agirait de renseignements qui n'étaient pas disponibles auparavant?

[Texte]

Mr. Olson: It may have been available but it may not have been obtained, and at this point he wants to obtain it.

Clause 13 agreed to.

On clause 14—Sittings and hearings.

Mr. Peters: Would the assessor hold the hearing in the area in which the offence takes place or in the area in which the claimant resides? There may be a difference, you know.

Mr. Olson: Well we would hope that this would provide for the hearings to be scheduled to accommodate the appellant and others concerned with an appeal.

• 1135

Clause 14 agreed to.

On clause 15—Procedure

The Chairman: Clause 15 reads:

Subject to the approval of the Governor in Council, the Assessor may make such rules respecting the conduct of appeals and the procedure for the bringing of appeals as he deems necessary to enable him to discharge his duties under this Act.

Mr. Danforth: Mr. Chairman, is this just the normal wording that one would expect to find in procedures of this kind?

Mr. Newman: I do not know whether the word "normal" is proper. It is slightly unusual procedure to have an assessor hear such appeals, but it is not unusual in cases similar to this. For example, when the Tariff Board was set up the Tariff Board Act provided that tariff boards had the right to make procedural rules. This power is also given to the Exchequer Court of Canada, but in the case of this court I do not think it has to be approved by Governor in Council—has an absolute right to make its own rules and procedures. So this slightly limits the assessor—in fact it might limit the assessor more than the normal wording.

Clause 15 agreed to.

Clauses 16 and 17 agreed to.

The Chairman: Gentlemen, we stood Clause 9. I would suggest to the Committee that we break for lunch, that we endeavour to have the conflict in translation clarified, that we present to you clause 9 immediately after lunch, and then go back to clause 1.

The meeting is adjourned.

[Interprétation]

Mr. Olson: Ils étaient peut-être disponibles mais il ne les avait pas et désirait, à ce moment-là, les obtenir.

L'article 13 est adopté.

A l'article 14—séances et auditions.

Mr. Peters: Est-ce que l'évaluateur est tenu d'avoir la séance dans la région où se produit l'infraction ou dans la région où réside le réclamant? Il peut y avoir une différence.

Mr. Olson: Nous espérons que les séances pourraient avoir lieu là ou cela ferait l'affaire de l'appellant et des autres personnes en cause.

L'article 14 est adopté.

A l'article 15—procédure.

Le président: L'article 15 dit:

15. Sous réserve de l'approbation du gouverneur en conseil, l'évaluateur peut établir les règles, concernant la conduite des appels et la procédure d'introduction des appels, qu'il juge nécessaires pour lui permettre de s'acquitter de ses fonctions en vertu de la présente loi.

Mr. Danforth: Monsieur le président, est-ce la terminologie ordinaire que l'on trouve dans les procédures de ce genre?

Mr. Newman: Je ne sais pas si l'expression normale est juste. C'est une procédure plutôt inusitée que l'évaluateur entende les appels, mais ce n'est pas inusité dans des cas semblables. Par exemple, lorsque la Commission du Tarif a été établie, la Loi sur la Commission du Tarif prévoyait que les commissions de tarif aient le droit d'établir les règles de la procédure. Ce pouvoir a aussi été donné à la Cour de l'Échiquier du Canada. Mais dans le cas de cette cour, je crois que cela nécessite l'approbation du gouverneur en conseil. Elle a le droit absolu d'établir ses propres règles de procédure. Ceci veut donc dire que nous limitons quelque peu l'évaluateur, en fait, peut-être, plus que le libellé ordinaire.

L'article 15 est adopté.

Les articles 16 et 17 sont adoptés.

Le président: Eh bien, messieurs, nous avons réservé l'article 9. Je suggère que nous suspendions la séance pour dîner. Nous essaierons de résoudre le conflit de la traduction. Nous étudierons l'article 9 immédiatement après et ensuite, nous reviendrons à l'article premier.

La séance est levée.

[Text]

AFTERNOON SITTING

• 1535

The Chairman: Gentlemen, I see a quorum. When we adjourned for lunch we had stood clause 9 of Bill C-155. I believe that Mr. Phillips wishes to clarify clause 9(2) and I would be pleased if he would address the meeting at this time.

Mr. Phillips: Mr. Chairman, I checked with the translation office and I was informed that in their opinion the French says the same as the English.

The Chairman: Thank you, Mr. Phillips.

M. Lessard (Lac-Saint-Jean): Monsieur le président, cette question a été soulevée par M. Clermont, je crois à la séance de ce matin; or, celui-ci préside ce après-midi une réunion du Comité des finances, du commerce et des questions économiques. Nul doute qu'il prendra bonne note de la réponse de M. Phillips.

The Chairman: Do we have the general agreement of the Committee to accept the explanation given by Mr. Phillips?

Some hon. Members: Agreed.

The Chairman: Shall Clause 9 carry?

Mr. Gleave: Mr. Chairman, if it is in order, I would move that subclause (a) of clause 9 be deleted.

The Chairman: Would you please write that out so that I will be able to present it to the meeting?

Gentlemen, I now have an amendment that reads as follows: "that subclause (a) of clause 9 be deleted."

Mr. Danforth: Mr. Chairman, may we have some discussion on the amendment before it is put? I personally would like to ask a question of some of the witnesses here in this regard.

The Chairman: May I give Mr. Gleave, the mover of the amendment, an opportunity to speak to the amendment and then I will recognize you.

Some hon. Members: Agreed.

Mr. Gleave: Thank you, Mr. Chairman, the reason I moved to delete it is that its inclusion in the act would indicate our readiness to put somebody in jail for two years for offences he might commit under this act. Now the offences may be fairly serious, but I am not prepared at this time to go that far. We are left with subclause (b) which allows

[Interpretation]

SÉANCE DE L'APRÈS-MIDI

Le président: Messieurs, nous sommes en nombre. Quand nous avons levé la séance à l'heure du déjeuner, nous nous étions réservé l'article 9 du bill C-155. Je crois que M. Phillips veut un éclaircissement de l'article 9 (2). Je serais donc heureux si M. Phillips voulait vous adresser la parole.

M. Phillips: J'ai vérifié auprès du Bureau des traductions et on m'a dit qu'à leur avis, le français dit exactement la même chose que le texte anglais.

Le président: Merci, monsieur Phillips.

Mr. Lessard (Lac-St-Jean): Mr. Chairman, this question had been raised by Mr. Clermont at this morning's sitting. This afternoon, however, Mr. Clermont is presiding over the Committee, on Finance, Trade and Economic Affairs. I think however he will note the answer given by Mr. Phillips.

Le président: Serions-nous d'accord, au Comité, d'accepter l'explication donnée par M. Phillips?

Des voix: D'accord.

Le président: L'article 9 est-il adopté?

M. Gleave: Monsieur le président, si c'est conforme au Règlement, je propose que le paragraphe a) de l'article 9 soit supprimé.

Le président: Écrivez cela et je vais le présenter au Comité. Messieurs, j'ai un projet d'amendement qui se lit ainsi: «que le paragraphe a) de l'article 9 soit supprimé».

M. Danforth: Y a-t-il quelque chose à dire au sujet de l'amendement avant que ce soit passé au vote? J'aimerais, pour ma part, poser quelques questions à certains témoins.

Le président: Est-ce que je pourrais donner à M. Gleave, le proposeur de l'amendement, l'occasion de parler? Et ensuite je vous repasserai la parole.

Des voix: D'accord.

M. Gleave: La raison pour laquelle j'ai proposé qu'on supprime cet article, c'est que, si on l'inclut dans la loi, cela indique que nous sommes prêts à emprisonner quelqu'un pendant deux ans pour des infractions qu'il aurait pu commettre en vertu des dispositions de la présente loi. Ces infractions peuvent être assez graves, mais je ne suis pas du tout

[Texte]

punishment under summary conviction, which I would think would be serious enough for the time being.

I will cite as an example for this meeting—I think many of you from Western Canada are aware of this—farmers who treat their seed for the control of seed-borne diseases and then on occasion, having some bushels left over, either inadvertently or otherwise dump it in with market wheat and ship it.

• 1540

Now on the surface of it, this is a pretty serious violation because you are contaminating grain which to all intents and purposes is going to be used for food. The extent of the punishment up until now has been to fine them or simply declare the carload of grain of no use for anything. So this resulted in a dead loss of about \$3,000 to the farmer, plus the fine. I think these are the sorts of measures which we should contemplate. I would sooner see us enact legislation to seize the man's commodity and punish him in this way. I do not like the idea of socking a guy in jail for two years—that is a long time. For this reason I would move that this subclause be removed. If you think it necessary to do this perhaps three years from now, that is another thing, but I am not prepared to do it now.

The Chairman: May I ask Mr. Newman to comment on the proposed amendment and also to make any other observation which he might wish to make.

Mr. Newman: Mr. Chairman, first of all I would like to emphasize that the indictable offence provides for imprisonment for two years, but this is a maximum and all the circumstances would have to be considered by a judge. I think you are well aware that judges very rarely impose a maximum penalty. Furthermore I should like to point out that very rarely would a person be charged by way of indictment. The circumstances would be carefully considered by law officers of the Crown before a charge were proceeded with by way of indictment. It is most unusual, to say the least. I cannot think of any cases in the recent past that have been proceeded with by way of indictment—I am referring to federal government offences rather than Criminal Code offences—where there was an alternative.

This would be reserved for very serious offences or repeated offences when almost contempt for the statute was shown: I want to emphasize that it is most unlikely that a person would ever be imprisoned for two years—

[Interprétation]

disposé à aller aussi loin, à l'heure actuelle. On nous laisse le paragraphe b) qui nous donne une peine pour une infraction punissable sur déclaration sommaire de culpabilité, ce qui serait suffisant, à l'heure actuelle, à mon sens.

Je vais donner un exemple aux membres du Comité, dont vous êtes peut-être au courant si vous demeurez dans l'Ouest du Canada: les cultivateurs qui emploient un produit contre les maladies dans les proven- des, et à qui il arrive parfois d'inclure ces proven- des avec le blé qui doit être vendu.

C'est une infraction assez grave parce que ce blé doit servir comme aliment, à toute fin pratique. Ce qui arrive, c'est que la mesure de punition, à l'heure actuelle, est une amende, ou bien on déclare que le wagon de blé ne vaut rien. Par conséquent, le cultivateur perd environ \$3,000 en plus de l'amende. Je crois que c'est le genre de mesure que nous devrions peut-être envisager. Je préférerais voir une saisie de la propriété du cultivateur ou du produit et le punir de cette façon. Je n'aime pas du tout l'idée de l'emprisonner pendant deux ans. C'est un assez long moment, en effet. Et alors, pour cette raison, je proposerais qu'on enlève cette disposition. Dans deux ou trois ans, s'il faut le faire, très bien, mais je ne suis pas prêt à le faire tout de suite.

Le président: Est-ce que je pourrais demander à M. Newman de commenter le projet d'amendement et de nous donner son opinion aussi.

M. Newman: Il s'agit d'un maximum et non pas nécessairement de la punition nécessaire. Tout cela devrait être étudié par le juge. Je suis sûr que vous savez tous que les juges imposent très rarement le maximum de la peine. J'aimerais aussi ajouter que ce serait très rare, effectivement, le cas où une personne serait accusée par voie de procédures juridiques. Tout cela devrait être étudié très soigneusement par les fonctionnaires de la Couronne avant de procéder de cette façon. Ce serait très inusité, pour dire le moins. Moi-même je ne me souviens pas d'une seule cause depuis tout le temps où l'on aurait agi de cette sorte, quand il s'agit d'infractions aux lois fédérales plutôt qu'au Code criminel.

On réserverait certainement cela aux infractions très graves ou à la récidive, alors qu'on trouverait justement une mauvaise attitude de la part de l'accusé. Et même si la personne était trouvée coupable, il est impro-

[Text]

even if he were found guilty of an indictable offence under this act.

Mr. Gleave: In the event that this clause were not in the act and some individual, as you have described, repeatedly offended and persisted in doing so, could not that man under due process of law be brought on a charge before a judge?

Mr. Newman: Yes, he certainly could. If subclause (a) were deleted, he could be repeatedly charged under subclause (b), which reads "an offence punishable on summary conviction." The way this is worded at the moment, the maximum penalty would be six months imprisonment and/or a \$500 fine. This might not be adequate under certain circumstances, and that is for you gentlemen to decide.

Mr. Gleave: My question was, would he not have so offended the law that, even without this clause in, he could be brought before a judge?

Mr. Newman: Well, yes, even summary conviction offences are brought before a judge in a court of law. It is a criminal offence.

The Chairman: May we recognize the Minister?

• 1545

Mr. Olson: Mr. Chairman, I understand this was discussed when I was away from the meeting this morning. However, I think it is worth pointing out that this provision here, so far as an offence under this act is concerned, does not deal with the situation described by Mr. Gleave. This deals with the two offences spelled out in clause 8(1) and (2) which says:

8. (1) No person shall obstruct or hinder an inspector in the carrying out of his duties or functions under this Act or the regulations.

(2) No person shall knowingly make a false or misleading statement...

Now taking into account that we are talking about obstruction, fraud and that sort of thing as is pointed out here, it is a pretty serious thing and if, for example, mercury residue is left in the seed and somebody gets poisoned it is, indeed, a very serious thing—there is no question about that.

Now if the maximum sentence were to be six months under summary conviction and it was determined by the court that someone had knowingly committed fraud under clause

[Interpretation]

bable qu'elle serait emprisonnée pendant deux ans.

M. Gleave: Puis-je vous poser une question? Au cas où ces dispositions ne seraient pas incluses dans la loi et qu'une personne aurait récidivé, comme vous venez de le dire, est-ce que vous ne pourriez pas, de par la loi, amener cet homme devant les tribunaux?

M. Newman: Oui; si on enlevait le paragraphe a), on pourrait facilement l'accuser immédiatement, en vertu du paragraphe b), sur déclaration sommaire de culpabilité. A l'heure actuelle, le libellé indique un maximum de six mois de prison et/ou une amende de \$500. Ce ne serait peut-être pas suffisant dans certaines circonstances, mais c'est à vous, Messieurs, de décider.

M. Gleave: Ma question était: est-ce qu'il aurait tellement enfreint la loi que, même sans ces dispositions, vous puissiez le traduire devant un tribunal?

M. Newman: Oui, même pour une déclaration sommaire de culpabilité, on pourrait le traduire devant un juge.

Le président: Nous donnons la parole au ministre.

M. Olson (ministre de l'Agriculture): Si j'ai bien compris, on a discuté cette question pendant mon absence de la réunion, ce matin. Mais cette disposition, en ce qui concerne les infractions à la loi, ne traite pas de la situation décrite par M. Gleave. Cela a trait aux deux infractions précisées à l'article 8, paragraphes 1 et 2, qui dit:

(1) Nul ne doit gêner ou empêcher un inspecteur dans l'exercice des devoirs ou fonctions que lui confèrent la présente loi ou les règlements.

(2) Nul ne doit faire sciemment, oralement ou par écrit, une déclaration fausse ou trompeuse...

Alors, si l'on tient compte du fait que l'on parle d'obstruction, de fraude et de ce genre de chose, et bien qu'on ait signalé qu'il s'agit d'une question très grave—si par exemple, vous laissez un peu de résidu de mercure dans les semences—je crois qu'il faut tenir compte aussi du fait que cela est très grave si quelqu'un s'en empare et s'empoisonne. Il n'y a aucun doute à ce sujet.

La peine maximum serait de six mois, en vertu de la déclaration sommaire de culpabilité. Et si le tribunal estimait qu'une personne avait sciemment été coupable de

[Texte]

8(2) or had obstructed an inspector from carrying out his duties in any way to make sure that this contamination did not get into the food channels, I think the risks involved there, if the man knowingly did that—and that is what it says there—would be great and this would be a very, very serious offence.

I think that we need to have that clause in there because if a person did something, unknowingly or not, connected with the misuse of chemicals, it would also have to be proved that he did, in fact, obstruct an inspector from doing what he needed to do to prevent this hazardous material from getting away; or made a misleading statement that led to the same thing. In my view those are serious and they would be done with the knowledge of the person that he was doing something serious.

The Chairman: If he did all the things suggested he would not be charged under this Act. It would be a criminal offence.

Mr. Gleave: That is my point, Mr. Chairman. The point you have made, Mr. Chairman, is my point, that if he does these things he is subject to the ordinary processes of law. Why not leave it that way?

Mr. Olson: Bill C-154 that we are coming to next also has these maximums put in: first of all, what kind of charge can be laid, and then the maximum that is laid down.

The Chairman: It is my omission. I do have Mr. Danforth on my list and I should have recognized him first. May I do so and then I will recognize you, Mr. Roy?

Mr. Danforth: Mr. Chairman, my point was outlined by the Minister. Having in mind the intent of this Bill, as I understand it, I would be perfectly willing to leave Clause 9 (a) in as it is, providing the preamble in Clause 9 (1) were to read "Every person who...violates any provision outlined in this Act under Clause 8 (1) and (2)..." Then we would have exactly what the Bill intends to convey and would confine the punishment to the very abuse that we are trying to get at.

In my exchange with Mr. Newman this morning, in which he indicated that perhaps there was no violation under any other clause, I would like to refer Mr. Newman to Clause 4 where there is a whole series of regulations that may be made by the Governor in Council which are a part of this proposed Act. As it reads here, any violation in the carrying out of any of the regulations

[Interprétation]

fraude en vertu de l'article 8 (2), ou si cette personne avait gêné un inspecteur dans l'exercice de ses fonctions, pour assurer que cette contamination n'atteigne pas les aliments. Et je crois que, si la personne l'a fait sciemment ou non, et c'est ce que l'on précise, c'est une infraction très grave.

Je trouve qu'il nous faut absolument en tenir compte. Si une personne fait quelque chose sans le savoir, soit le mauvais usage d'un produit chimique par exemple, ou si elle empêche un inspecteur de faire son travail ou fait quoi que ce soit pour empêcher que ces produits soient employés ou a fait une déclaration fausse, j'ai l'impression qu'il s'agit d'une infraction assez grave et qui aurait été commise sciemment de la part de la personne accusée.

Le président: Elle ne serait pas accusée nécessairement en vertu des dispositions de la présente loi.

M. Gleave: C'est justement cela, monsieur le président. Si le coupable a fait ces choses, il serait certainement soumis aux procédures normales de la loi. Pourquoi alors ne pas laisser cela tel quel.

M. Olson: Le bill C-154, que nous allons étudier tout à l'heure, comporte aussi son maximum selon le genre d'accusation. Cela dépend du genre d'accusation.

Le président: Je m'excuse, j'ai oublié que j'avais M. Danforth sur ma liste et j'aurais dû lui passer la parole avant. M. Danforth avant et ensuite M. Roy.

M. Danforth: Merci, monsieur le président. Le ministre a justement souligné le point que je veux soulever. Je serais tout à fait consentant à laisser l'article 9(a) tel quel, à condition que, lorsqu'on dit dans le préambule, à l'article 9(1):

«toute personne qui contrevient... à une disposition de la présente loi»,

on insère, en vertu des paragraphes (1) et (2) de l'article 8, ce qui nous indiquerait clairement ce que le bill veut dire. On condamnerait alors le geste posé et on le punirait.

Après l'échange que j'ai eue avec M. Newman ce matin, où il indiquait qu'il n'y aurait peut-être pas d'infraction en vertu des autres articles, en examinant le bill, j'aimerais bien que M. Newman se reporte à l'article 4 où il y a toute une série de règlements qui peuvent être édictés par le gouverneur en conseil et qui font partie de cette loi.

[Text]

prescribed would make a man liable under Clause 9.

Therefore, Mr. Chairman, the proposition brought forward by Mr. Gleave and the intent of the Bill could be well served if Clause 9, in the preamble, indicated that the provisions to be violated were as outlined in Clause 8 (1) and (2).

The Chairman: Mr. Roy?

• 1550

M. Roy (Laval): Pour revenir à l'objectif premier du bill C-155, je pense que nous pourrions en arriver à une entente respectant l'amendement proposé par M. Gleave. Je pense que le but premier de ce bill est de protéger d'abord les intérêts du cultivateur; voilà ce qu'il ne faut pas perdre de vue.

Nous devons prévoir la perte d'une récolte, qui peut être causée, par exemple, par l'emploi des insecticides ou des herbicides. Voici le fruit de mon expérience de douze ans dans l'emploi de ces herbicides, insecticides et fongicides. Le but de ce bill est de protéger le cultivateur contre les compagnies manufacturières de ces produits, parce qu'avant l'adoption ou avant l'entrée en vigueur d'un tel bill, le cultivateur n'avait aucun recours direct contre la compagnie manufacturière.

Aujourd'hui, je crois que le but premier de ce bill est de donner au cultivateur, un droit de recours direct contre la compagnie manufacturière, parce que vous savez qu'une erreur de concentration peut être celle de la compagnie comme celle du cultivateur. Le but de ce bill n'est pas de pénaliser le cultivateur mais plutôt de lui donner un droit de recours pas l'intermédiaire de l'État, de manière justement à lui donner justice.

Je pense que nous ne devons pas prévoir une pénalité que contre le cultivateur, mais également contre les compagnies manufacturières; parce que si elles constatent que la pénalité est sérieuse, elles amélioreront peut-être leurs services techniques pour la vente de leurs produits. Je connais des compagnies manufacturières d'herbicides et d'insecticides qui vendent leurs produits, mais sans les services techniques qui devraient accompagner ces produits. Souvent des cultivateurs éprouvent des difficultés, subissent des pertes occasionnées par le mauvais emploi de ce produit-là. Ce bill devrait justement, inciter les compagnies manufacturières à développer leurs services techniques de manière non seulement à vendre un produit, mais surtout la bonne recette pour obtenir le but visé par l'utilisation de ces produits.

[Interpretation]

Alors, toute infraction aux règlements prescrits rendrait la personne coupable en vertu de l'article 9, ce qui veut dire, à mon sens, monsieur le président, que la proposition de M. Gleave, ainsi que l'objet du bill, seraient bien servis si le préambule de l'article 9 indiquait que les infractions se rapportent à l'article 8 (1) et (2).

Le président: Monsieur Roy?

Mr. Roy (Laval): To come back to the first objective of Bill C-155, I think we might perhaps reach some sort of an agreement regarding Mr. Gleave's amendment. I think that the prime objective of this bill is first to protect the farmers' interests, and we should not lose sight of this.

We must foresee the loss of a crop that might be caused, for instance, through the use of insecticides or pesticides. I worked in this field for 12 years and this is the experience I have gained from the use of these insecticides, pesticides and fungicides. The purpose of the bill is to protect the farmer against the companies manufacturing these products, because before this Bill was introduced the farmer had no direct claim against the manufacturer.

Today, I think that the prime objective of the bill is to give the farmer the right to a direct claim against the manufacturing firm, because you know that an error in concentration may be committed on the part of the company as well as on the part of the farmer. The purpose of this bill is not to penalize the farmer, but rather to give him the right to make a claim through the government so as to obtain justice.

I think that if provision is made for a penalty clause it should not be directed against the farmer only, but also against the manufacturing companies. If the latter see that the penalty is serious, they will perhaps improve their technical services for the sale of their products. I know firms manufacturing insecticides and pesticides that sell their products without the technical services that go along with them. And very often farmers suffer losses and have difficulties through ill use of those products. This bill should urge manufacturing firms to develop their technical services, not only to sell a product, but especially to provide a good formula in order to achieve the purpose of these products.

[Texte]

Dans l'amendement proposé, je pense qu'on déplace un peu l'objectif de ce bill, qui est la protection du cultivateur. Je voudrais féliciter le ministre de l'Agriculture et ses hauts fonctionnaires d'avoir pris l'initiative de nous soumettre ce bill qui, dans notre région va définitivement contribuer à la protection du cultivateur. Je ne vois pas pourquoi nous enlèverions cet article prévoyant une pénalité; il ne faut pas la voir uniquement contre le cultivateur, mais également contre la compagnie qui manufacture ces produits-là.

M. Côté: Monsieur le président, je ne vois en aucune façon l'utilité de l'amendement, puisque comme il l'indique, M. Gleave craint que la personne impliquée ne soit trop pénalisée. Pourtant depuis le début de l'étude de ce bill, on nous répète qu'on veut protéger le cultivateur, que l'État ne fait pas assez pour la protection du cultivateur; de plus, le bill n'impose pas une peine d'emprisonnement de deux ans, comme l'a spécifié tout à l'heure le représentant du Ministère. Le bill prévoit tout simplement que le contrevenant:

«est passible d'un emprisonnement de deux ans, ou d'infractions punissables sur déclaration sommaire».

La peine maximum de deux ans est juste, et comme il a été dit, il est assez rare que le maximum soit imposé, mais le jugement suit la nature de l'offense. Alors je ne vois pas, pour le moment, l'utilité de l'amendement proposé. Le Bill, tel qu'il est, avec la peine maximum de deux ans d'emprisonnement protège le cultivateur, et je ne crois pas que nous devrions retirer cet article.

M. Lessard (Lac-St-Jean): Monsieur le président, j'aimerais demander à notre conseiller juridique pourquoi prévoir un emprisonnement de deux ans mais pas d'amende.

Ici, il semble que le juge ne pourra pas imposer une amende; il devra forcément condamner le contrevenant à un mois, quinze jours ou deux ans, aucune amende n'est prévue. Elle pourrait être de \$500 de \$1,000 ou de \$2,000. Une amende est-elle possible?

• 1555

Mr. Newman: Mr. Chairman, this is taken care of by the provisions of the Criminal Code where at the discretion of the court a fine could be imposed in lieu of imprisonment or in addition to imprisonment.

[Interprétation]

In the proposed amendment I think that we are getting away somewhat from the objective of the bill which is to protect the farmer. I would like to congratulate the Minister of Agriculture and his senior officials for having taken the initiative of presenting this Bill for our consideration. In our region this bill will definitely contribute to protecting the farmer. I do not see why we should remove the penalty clause because it must not be understood as being meant for the farmer only; it also applies to the company manufacturing the products.

Mr. Côté (Richelieu): Mr. Chairman, personally I do not see any usefulness in the amendment since, as Mr. Gleave has been indicated, he fears that the person involved might be penalized too severely. And yet, since the beginning of our consideration of the bill, it has been said over and over again that we are trying to protect the farmer, that the government is not doing enough to protect the farmer. Moreover, the bill does not impose two years of imprisonment as the Department representative specified a little while ago. The bill simply provides that the offender:

"is liable to imprisonment for two years, or punishable on summary conviction."

The maximum two years penalty is fair, and as was stated a little while ago, it is rather rare that the maximum is imposed, but the sentence depends on the nature of the offence. Therefore, I do not think that the proposed amendment has any usefulness at the present time.

The bill as drafted, with a maximum imprisonment of two years, protects the farmer, and I think this clause should not be withdrawn.

Mr. Lessard (Lac St. Jean): Mr. Chairman, I should like to ask our legal adviser why provision is made for two years of imprisonment while no mention is made of a fine. Here it seems that the magistrate will not be able to impose a fine. He will necessarily have to convict the offender to one or two months imprisonment or one or two years, since there is no mention of any fine. There could be a fine of \$500, \$1,000 or \$2,000. Is there any possibility of having a fine?

M. Newman: Monsieur le président, cela est prévu par les dispositions du code criminel, et à la discrétion du tribunal. On pourrait imposer une amende plutôt que l'emprisonnement.

[Text]

The Chairman: If I may be permitted to make an observation, may I draw attention to the word "liable" in there. It does not say that it is going to be imposed. It does not even say that is the maximum.

Mr. Newman: Yes, that would be the maximum.

The Chairman: But at least he is only liable for it which makes it rather doubtful that it would ever be used. Anyway, the question has been called.

Mr. Olson: May I make three points? I am advised by legal counsel that is a provision common to many acts of this type. It is not some new departure where the law is going to come down any harder in its application under this act than under any other. The other point is the summary conviction: that is the maximum and the only way open to deal with it in this Bill. It has a time limit of six months in so far as laying that charge and the conviction after the event. This could cause us some problems.

Then, as a matter of information, I think we should have the maximum penalty, which this is, spelled out in this Bill as a matter of information to anyone involved, so it would not be necessary to search all of the other sections of the Criminal Code for the determination of what the penalty ought to be. This is not a new practice; it is a common thing done in all the acts of this nature.

The Chairman: Gentlemen, the question has been called. Are you ready for the question?

Mr. Danforth: May I beg the indulgence of the Chairman. I would like the Minister to comment before we vote on this particular amendment, because it is of interest to me, on the possibility of the government's entertaining a change in Clause 9(1) as I outlined previously. Would this change the substance of the Bill or be unacceptable?

Mr. Olson: I am advised, as I said, that this provision—I do not want to repeat myself—is very common in this kind of Bill and to restrict it to one clause would be a departure because when the offences and the maximums that are applicable under them are included in a clause such as this it is referred to the Bill.

Indeed, we have others where the maximums refer not only to the violation of the act but to orders using the act, relying on the

[Interpretation]

Le président: Si on me permet de faire une observation, je crois que l'expression «est passible» ne veut pas nécessairement dire qu'ils doivent être emprisonnés. Est-ce que ça indique que c'est le maximum monsieur Newman?

M. Newman: Oui, effectivement, c'est le maximum.

Le président: Mais en fait, il est passible tout simplement. Mais de toute façon on a demandé le vote, n'est-ce pas?

M. Olson: Puis-je demander trois questions? Le conseiller juridique me dit que ces dispositions se trouvent dans plusieurs mesures législatives de ce genre. Par conséquent ce n'est pas un nouveau départ de notre part où la Loi ne sera pas plus stricte dans l'application de la présente mesure que dans l'application des autres. Et l'autre chose c'est que la déclaration sommaire de culpabilité est aussi laissée ouverte. Par conséquent, il y a une date limite de six mois en ce qui concerne l'intention d'un procès, ce qui pourrait peut-être nous amener la condamnation et nous causer des problèmes.

Je crois que la peine maximum devrait être indiquée clairement dans la loi à titre de renseignement pour toutes les personnes intéressées et par conséquent, ce ne serait pas nécessaire de faire des recherches à travers tous les articles des autres lois et dans le Code criminel pour déterminer ce que devrait être la peine. Ce n'est pas nouveau cela; cela se trouve dans toutes les lois de cette nature.

Le président: Messieurs, on a demandé le vote. Êtes-vous prêts à vous prononcer?

M. Danforth: Puis-je demander au ministre de commenter avant que nous votions sur cet amendement, parce que cela m'intéresse, est-ce que le gouvernement pourrait peut-être changer l'article 9(1) dans le sens où je l'ai indiqué tout à l'heure? Est-ce que cela modifierait substantiellement le bill ou non?

M. Olson: On me dit comme je l'ai déjà dit d'ailleurs que cette disposition—je ne voudrais pas me répéter—mais c'est plutôt habituel de trouver ce genre de disposition dans les lois et alors restreindre la disposition à un seul article serait quelque chose de nouveau. Car, quand les infractions et les maximums qui s'y appliquent sont inclus dans un article comme celui-ci, on le rapporte à la Loi.

Il y en a d'autres où les maximums s'appliquent non seulement à une infraction à la Loi, mais aussi aux ordres qui sont fondés sur

[Texte]

authority of the act. It would be a complete departure.

The other point I wanted to make—hopefully without repeating myself—is that I think it is put in many of these acts so that the maximum penalties and the kind of charge that can be laid under the act is, in fact, in the act so you do not have to search somewhere else for it. As a matter of fact, if it is not put in the act probably the maximums that are laid out in this act would not apply and there would be maximums even beyond what is spelled out here.

Mr. Danforth: This is my very point, Mr. Olson. We are leaving under clause 4 that the Governor in Council can make a whole series of regulations. There are at least seven clauses under which the government may make regulations pertaining to this proposed act. As I read this a violation of any one of those regulations can make the farmer liable to an indictable offence under the provision of Clause 9. This is my point.

If the Bill was designed specifically for penalties for a fraudulent claim or an obstruction of an inspector or something one would normally expect to see penalties for, I would find no difficulty with the Bill, but the fact is it does state “any provision of this Act” and there could be pages of provisions and regulations as set out once the Bill is passed and the regulations constructed and put forward for this Bill.

This is my very point. We are giving a blank cheque, as Mr. Gleave has pointed out. We are giving a blank cheque under Clause 9. It says: “violates any provision of the Act”.

• 1600

Mr. Olson: It has just been drawn to my attention, Mr. Chairman, that most of the regulations that will be laid out under Clause 4 do not deal with control of the farmer, they deal with the Governor in Council controlling the Department; for example, proscribing the procedures to be followed; proscribing the methods to be used in determining the loss; proscribing the amounts; proscribing the terms and conditions of the payments. In Clause 4 I see no place where it gives authority to proscribe offences.

The Chairman: Gentlemen, I wonder if I would be correct in drawing to your attention the fact that we do have an amendment. I realize that the discussion perhaps has to do with another amendment but it might determine how you may wish to vote on this particular amendment. However, I think before

[Interprétation]

l'autorité de la Loi. Ce serait une toute nouvelle entreprise.

Et l'autre chose que je voulais ajouter, sans répéter inutilement ce que j'ai déjà dit, est que je crois qu'on l'a déjà inséré dans plusieurs lois, parce que la peine maximum et le genre d'accusations que l'on puisse porter en vertu de la Loi se trouvent dans la Loi plutôt qu'ailleurs. En fait, si ce n'est pas inclus, les maximums déterminés dans la présente loi, ne s'appliqueraient pas et ce serait des maximums encore plus élevés que ce que l'on précise.

M. Danforth: C'est justement ce que je voulais dire, monsieur Olson. En vertu de l'article 4, le gouverneur en conseil peut établir toute une gamme de règlements qui ont trait à ce projet de loi. Et, si j'ai bien compris, une infraction à n'importe quel règlement rendrait le cultivateur passible d'un acte criminel en vertu de l'article 9? C'est ce que je pense.

Si le Bill a été rédigé en vue de réclamations frauduleuses ou d'obstruction à l'inspecteur ou d'autres choses où normalement on s'attendrait à des peines, je ne verrais alors aucune difficulté avec le bill, mais le fait qu'il déclare «toute disposition de la présente Loi» et qu'il peut y avoir des pages de dispositions et de règlements quand le bill sera adopté, tout dépendra du règlement et des dispositions qui sont adoptées par suite de la Loi. C'est justement ce à quoi j'en venais. Nous donnons carte blanche au gouvernement aux termes de l'article 9. On dit:

«infraction à une disposition de la Loi».

M. Olson: On me signale, monsieur le président, que la plupart des règlements qui découleront de l'article 4 n'intéressent pas précisément cette question du contrôle du cultivateur, il s'agit plutôt du gouverneur en conseil qui peut contrôler les ministères; par exemple d'établir les formalités, les méthodes, l'application de la loi, les sommes, le montant, les modalités des pertes; je ne vois rien, aucune disposition à l'article 4 où l'on accorde l'autorité de prescrire le délit.

Le président: Messieurs, je me demande si je peux vous signaler le fait que nous avons une modification. Je sais que nous sommes en train d'examiner une autre modification, le vote sur cette modification. Ceci déterminera peut-être le fait s'il doit y avoir un autre amendement ou non. Nous devrions peut-être

[Text]

we start anticipating other amendments we should dispose of the amendment before the meeting, which reads as follows:

"That subsection (a) of Clause 9(1) be deleted".

All in favour of the amendment raise your hands. All opposed to the amendment please signify. I declare the amendment lost. Shall Clause 9 carry?

Mr. Danforth: No, Mr. Chairman; I propose another amendment which I will draft, with your permission.

Mr. Douglas: While we wait, I have a question. Perhaps I was a little late getting here and missed my chance, but I was going to ask a question on Clause 9(1)(a) before we stood it.

The Chairman: I recognize you now.

Mr. Douglas: My question has been partly answered, but I still wonder, if the term of two years was intended to be a maximum, why it did not just say that in so many words. Why did they not use the word "maximum" there—"is liable to imprisonment for a maximum of two years"? It just says "for two years". Unless you read the connotation of "liable" in there you can assume that it is two years or nothing. It would be a little clearer to the layman, at least, if the word "maximum" had been used.

I have just one other point. Did you get my first question about why not use the actual word "maximum" in there? My second point is why not put subclause (b) in front of subclause (a)? It looks as if (a) is the one you are supposed to use mostly and (b) is an alternative.

The Chairman: Mr. Newman, do you wish to comment?

Mr. Newman: First of all, Mr. Chairman, I think that Clause 9 (1) (a) is quite clear in that it does provide a maximum. This is language familiar to all lawyers and courts. I do not think any mistake at all could be made in interpretation. As you are well aware, all statutes are not designed to be understood by laymen.

Some hon. Members: Oh, oh.

Mr. Newman: For example, I do not know how many of you are responsible for the

[Interpretation]

passer aux voix sur l'amendement suivant, à savoir:

«Que le sous-alinéa a) de l'article 9 (1) soit éliminé».

Tous ceux qui sont en faveur de l'amendement, veuillez lever la main. Tous ceux qui s'opposent alors à l'amendement? Je déclare que la proposition à l'amendement est rejetée. L'article 9 est-il adopté?

M. Danforth: Monsieur le président, je voudrais proposer une autre modification, que je vais rédiger, avec votre permission.

M. Douglas: Pendant que j'attends, j'ai une question à poser. Je suis peut-être arrivé un peu tard pour poser cette question. Je voulais précisément poser une question sur l'article 9, paragraphe 1, sous-alinéa a), avant l'ajournement.

Le président: Je vous accorde la parole maintenant.

M. Douglas: On a répondu en partie à ma question, mais je me demande encore si l'imposition d'un terme de deux ans voulait dire un maximum, pourquoi ne l'a-t-on pas dit en ces termes. Pourquoi ne pas dire «maximum» à cet endroit, «est passible d'un emprisonnement maximum de deux ans»? La Loi ne dit que: «De deux ans». A moins d'y lire la connotation de «possible», on peut supposer qu'il s'agit de deux ans ou de rien. Ce serait beaucoup plus clair pour le simple citoyen, du moins, si le terme «maximum» avait été employé.

Un autre point, monsieur le président. Avez-vous saisi ma première question au sujet de l'emploi du mot «maximum»? Ma seconde question est celle-ci: Pourquoi n'a-t-on pas changé le b) en a) et le a) en b)? Il me semble que a) doit être surtout employé et b) à titre d'alternative.

Le président: Désirez-vous faire des commentaires, monsieur Newman?

M. Newman: Tout d'abord, monsieur le président, j'estime que l'article 9 (1) a) est très clair. Il assure une peine maximum. Je crois que tous les avocats et tous les tribunaux connaissent bien ce libellé, connaissent bien le langage utilisé dans ces dispositions. Comme vous le savez sans doute, toutes les lois ne doivent pas nécessairement être comprises par les profanes.

Des voix: Ho, ho.

M. Newman: J'ignore par exemple combien de vous êtes responsables de la rédaction de

[Texte]

drafting of the Income Tax Act, but that is a prime example. I cannot understand most parts of it.

An hon. Member: It is tough to understand.

Mr. Newman: This particular provision quite clearly provides a maximum of two years imprisonment, and as I mentioned before the Criminal Code also provides that a fine may be imposed in addition to imprisonment up to certain limits.

Mr. Douglas: I just wanted to clarify further my reason for making the proposal. I think already it has been demonstrated; Mr. Gleave is one and I am another who perhaps are not of normal mentality, or something. Mr. Olson said that one reason for putting this Clause 9 in was to make it clear to people who would be looking at the Act what the punishment might be. Certainly lawyers would not have to do that but it seems to me it would have been clearer for the layman if the word "maximum" had been used.

Mr. Barrett: You seem to be unduly concerned about the Saskatchewan area, Ab. Are they a deadly type people out there that you are concerned about in that area?

Mr. Douglas: I have had a little trouble with some of the chemical companies about some lawsuits and it would have helped if I had known a little more about the law than I do.

Mr. Barrett: We all would.

• 1605

The Chairman: Gentlemen?

Mr. Lind: Mr. Chairman, on Clause 9 (a) and (b), who does it protect; the farmer or the inspector?

The Chairman: Mr. Newman?

Mr. Newman: I like to think it protects the public, both the farmer and the inspector. It protects the farmer to the extent that he knows if he performs any of these acts he is liable to punishment.

Mr. Lind: That is not protecting the farmer.

Mr. Newman: It is down in black and white and the provisions of the Criminal Code as such will not apply. Naturally, it would protect the inspector and it would protect the people in general because it would discourage fraudulent claims.

[Interprétation]

la Loi de l'impôt sur le revenu. C'est le premier exemple de lois que je ne puis pas comprendre moi-même, je vous assure. Je ne puis en comprendre la plupart des parties.

Une voix: C'est dur à comprendre.

M. Newman: Cette disposition prévoit clairement une peine maximum d'emprisonnement de deux ans, et comme je l'ai dit plus tôt, le Code criminel prévoit aussi qu'une amende peut être imposée en plus l'emprisonnement jusqu'à une certaine limite.

M. Douglas: Une autre explication. Je crois qu'on a déjà—monsieur Gleave et moi-même—peut-être n'avons nous pas très bien saisi, peut-être n'avons nous pas une mentalité normale. M. Olson lui-même a dit qu'une des raisons pour lesquelles on insère l'article 9, c'est pour bien montrer à ceux qui consulteront la Loi, à quoi pourrait consister la sanction. Et sûrement les avocats n'auront pas à le faire, mais il me semble que cela aurait été plus clair pour le profane si on avait utilisé l'expression «maximum».

M. Barrett: Il y a dans la région de la Saskatchewan des gens qui ont plus de difficultés à comprendre qu'ailleurs.

M. Douglas: J'ai eu sûrement des difficultés au sujet de poursuites judiciaires avec des compagnies de produits chimiques et cela m'aurait beaucoup aidé si j'avais eu une meilleure connaissance de la loi.

M. Barrett: Et nous tous.

Le président: Messieurs?

M. Lind: Monsieur le président, au sujet de 9 a) et b), parle-t-on de la protection du cultivateur ou de l'inspecteur?

Le président: Monsieur Newman?

M. Newman: J'aimerais croire que cela protège le public avant tout, tant bien que le cultivateur et l'inspecteur. Ces articles protègent le cultivateur en autant qu'il sache que s'il commet l'un de ces délits, il va être passible de sanctions.

M. Lind: Je ne crois pas que le cultivateur est ainsi protégé.

M. Newman: La disposition est là en noir et blanc. Les dispositions du Code criminel comme telles ne s'appliqueront pas. Naturellement cela va protéger aussi l'inspecteur et protéger aussi le grand public car cela va dissuader des réclamations frauduleuses.

[Text]

Mr. Lind: I do not think that is what is in there.

Mr. Olson: I really do not think the point is valid or that it reduces itself to a question of whether we are protecting the manufacturer or the farmer; is that the way you put it? I do not think that is the question at all. This is the application and the penalties that are laid out under the law for anyone who commits an offence under this law, and it is common to all acts that you put that in. It is the application and the administration of the law that is laid out here.

Mr. Lind: It protects the administrator of the law more than anybody else. I think it applies to Clause 8(1) and 8(2) more than any of the offences.

The Chairman: Gentlemen, are there further comments? I have an amendment by Mr. Danforth which reads as follows:

That we amend Clause 9(1) by deleting the words "of this Act" after the word "provision" and inserting the words "as set out under subclauses (1) and (2) of Clause 8.

M. Côté (Richelieu): Je voudrais poser une question d'abord à M. Danforth. Qu'est-ce que l'amendement que vous proposez donnera de plus ou de moins au cultivateur? Cette question s'applique aussi à l'inspecteur. D'après moi, aucun changement n'est apporté au bill, on ne fait que jouer sur les mots. Pourriez-vous me donner des explications à ce propos?

Mr. Danforth: With your permission, Mr. Chairman, if I may illustrate an extreme and exaggerated condition, if a farmer for example is overpaid compensation and he is directed to make restitution at a prescribed amount at a prescribed time and he does not fulfil his obligation to the letter, under the terms of a violation of this provision he is subject to this. It says in Clause 9 "violates any provisions" as set out in the Bill—any provisions, any regulations—any provisions as set out in the Bill. My amendment would make it that certainly a farmer or anyone who is guilty of obstructing an inspector or making a fraudulent claim or interfering in any way should be subject to punishment, and as these are outlined in Clause 8 alone, to my complete satisfaction.

My amendment would confine the violations to anyone who is violating clause 8 only of the bill.

• 1610

M. Côté (Richelieu): Monsieur le président, puis-je revenir sur ce sujet? Je voudrais des

[Interpretation]

Mr. Lind: Je ne crois pas que cela est compris.

Mr. Olson: Je ne pense vraiment pas que cet argument soit valide ou qu'il s'agit simplement de savoir si nous protégeons le fabricant ou le cultivateur; je n'aime pas ce genre de questions du tout, de toute façon. Il s'agit plutôt de l'application et des peines relevant d'une Loi pour quiconque commet un délit aux termes de cette Loi. Et il en va de même pour toutes les lois que l'on adopte. Il s'agit de l'application de l'administration de la Loi.

M. Lind: Elle protège les administrateurs de la Loi plutôt que n'importe qui d'autre. Je crois que cela s'applique à 8(1) et 8(2) plus que tout autre délit.

Le président: Messieurs, y a-t-il d'autres commentaires? J'ai donc votre modification, monsieur Danforth, ainsi qu'il suit:

qu'une modification à l'article 9 (1) éliminant tous les mots après «disposition» et que l'on ajoute «tel qu'établit selon les paragraphes (1) et (2) de l'article 8».

Mr. Côté (Richelieu): I would like to put a question first to Mr. Danforth. What will the amendment you propose give or take away from the farmer? This question also applies to the inspector. In my opinion, no change at all has been brought to the bill. All it amounts to is a play on words. Could you give us an explanation on this matter?

Mr. Danforth: Si vous me le permettez, monsieur le président, si vous me permettez d'utiliser un exemple extrême. Mettons qu'un cultivateur reçoit une indemnité excessive et qu'on lui demande de restituer, de rendre un montant prescrit moyennant une date définie, et qu'il ne remplit pas ses obligations à la lettre aux termes de ces dispositions, il serait donc sujet à une poursuite. On dit dans l'article (9): «contrevient à une disposition du présent projet de loi, à une disposition, à un règlement, à toutes dispositions établies dans le bill. Mon amendement assurerait qu'un cultivateur ou toute personne coupable d'obstruer un inspecteur ou de déposer une réclamation frauduleuse ou d'intervenir de toute autre façon est passible d'une peine telle que déterminée dans l'article 8, et j'en suis satisfait.

Mon amendement se confine aux violations visées par les dispositions de l'article 8 du Bill.

Mr. Côté (Richelieu): Mr. Chairman, may I come back to this issue? I would like to have

[Texte]

explications du conseiller. Lorsqu'il est question d'une disposition, ce pourrait être quelque chose qui n'est pas contenu dans les articles 8(1) et 8(2), quelque chose qui aurait pu apparaître condamnable aux yeux de la personne ou de l'inspecteur, si le tribunal le juge de mauvaise foi. Je pense alors que la disposition ne change rien. L'explication que vous me donnez n'est pas plus précise que le texte écrit actuel. Je pense que ce changement ne nous mènerait pas plus loin.

Est-ce que je me trompe? Qu'en pensez-vous?

Mr. Olson: Mr. Chairman, the hypothetical situation raised by Mr. Danforth is dealt with specifically in Clause 5(5), which says that any excess of compensation may be recovered at any time as a debt due to Her Majesty. The Financial Administration Act deals with how that is collected and that is as far as that kind of situation would go.

Mr. Danforth: We have another similar one under subclauses (5) and (4).

Mr. Howard (Okanagan Boundary): Mr. Chairman, we were told this morning that this clause applies only to clause 8. I cannot understand why there should be an objection to that amendment if it only applies to clause 8. Could we have an opinion from Mr. Newman on that point?

Mr. Newman: Mr. Chairman, the way the clause is presently worded it would apply essentially to clause 8; it might also apply to clause 7(3), which is another example and which reads as follows:

The owner or person in charge of any place or premises referred to in subclause (1) and every person found therein shall give an inspector all reasonable assistance in his power to enable the inspector to carry out his duties and functions under this Act and the regulations and shall furnish him with such information with respect to the administration of this Act and the regulations as he may reasonably require.

Now in my view a person could be charged with failure to observe the provisions of this part of the bill.

Mr. Howard (Okanagan Boundary): Would you be satisfied with changing the amendment to include clause 8 and clause 7(3)?

[Interprétation]

an explanation from the adviser. With regard to a provision it could be something which is not contained in Clauses 8(1) and 8(2), it could be something that might have appeared condemnable, to the person or the inspector, if the court establishes that there was bad faith in the case. In that case, I do not believe that the provision changes anything. The explanation you are giving me is not any clearer than what is written in the bill presently. I think that this amendment would not lead us any further.

Am I wrong? What do you think?

M. Olson: L'exemple hypothétique soulevé par M. Danforth relève spécifiquement de l'article 5, paragraphe 5, où il est dit que toute indemnité excessive peut être récupérée à n'importe quel moment en tant que dette due à Sa Majesté et la *Loi sur l'administration financière* contient des dispositions concernant le remboursement et les modalités vis-à-vis d'une belle situation.

M. Danforth: Eh bien, si vous voulez des exemples, je peux bien vous en donner un autre semblable qui s'applique aux paragraphes (5) et (4).

M. Howard (Okanagan-Boundary): On nous a dit ce matin que cet article 9 ne s'appliquait qu'à l'article 8. Je ne vois pas pourquoi on s'opposerait à cette modification si elle ne s'applique qu'à l'article 8. Pourrions-nous avoir une opinion de M. Newman là-dessus?

M. Newman: Monsieur le président, d'après le libellé actuel de l'article, cela s'appliquerait essentiellement à l'article 8, mais pourrait s'appliquer aussi à l'article 7 (3), qui est un autre exemple et qui se lit ainsi:

le propriétaire ou la personne responsable d'un lieu ou local mentionné au paragraphe 1, et toute personne qui s'y trouve doivent fournir toute l'aide raisonnable en leur pouvoir à l'inspecteur pour lui permettre d'exercer ses devoirs et fonctions en vertu de la présente loi et des règlements, et lui fournir, en ce qui concerne l'application de la présente loi et des règlements, les renseignements qu'il peut raisonnablement exiger. A mon avis, quelqu'un pourrait être accusé d'infraction s'il ne s'est pas conformé à cette disposition de la loi.

M. Howard (Okanagan-Boundary): Par conséquent, on pourrait peut-être modifier l'amendement pour que l'amendement s'applique à l'article 8 et à l'article 7, paragraphe 3.

[Text]

Mr. Newman: Well, Mr. Chairman, I do not think I have any power to be satisfied or dissatisfied.

● 1615

Mr. Howard (Okanagan Boundary): Well, as our legal adviser do you think this would solve the problem?

Mr. Newman: I do not know that there is any problem as such, Mr. Chairman. I do not think it is proper for me to comment on the advisability of amendments of this type.

Mr. Howard (Okanagan Boundary): Well, we are asking for a legal opinion on whether or not this covers all the situations you would want. Is there any reason that it would not?

Mr. Newman: There is a possibility, as was raised, that the regulations might possibly provide some offence for failure to observe the regulations. I am not sure whether they will or not. As you know, the regulations have not yet been drafted. However, there might well be provisions even though it is unlikely from the wording of the enabling powers given by this bill that there would be such regulations. It is possible that there could be some offences created by the failure to observe certain requirements prescribed by the regulation. In my view the amendment might well limit the Governor in Council creating offences by way of regulation. I should emphasize again that the creation of offences by way of regulation is most common. It is not a surreptitious way of putting somebody in a tight spot. This is a very usual procedure.

Mr. Howard (Okanagan Boundary): It seems to me that we have been misled on this because this morning we were told that it applies to clause 8 and now we are told it applies to clause 7(3). Then we are told that it could apply to other clauses, even uncreated clauses or regulations. Now we went ahead this morning on the basis of it applying only to clause 8. Is there some answer for this?

The Chairman: May I recognize Mr. Phillips and then I will go back to the Committee members?

Mr. Phillips: Mr. Chairman, we have discussed the matter of regulations under clause 4 and most of them relate to actions of the Department. However, there is one area in which it will relate to the claim made by the

[Interpretation]

M. Newman: Je ne pense pas que je puisse être content ou mécontent de l'amendement.

M. Howard (Okanagan-Boundary): En tant que conseiller légal, pensez-vous que cela réglerait la question?

M. Newman: Je ne pense pas qu'il y ait de problème comme tel, monsieur le président. Je ne pense pas qu'il m'appartienne de commenter sur l'à-propos d'un amendement de ce genre.

M. Howard (Okanagan-Boundary): Nous voulons avoir une opinion légale en ce moment. Est-ce que cela couvrirait oui ou non toutes les situations possibles? Y a-t-il un motif qui pourrait n'être pas pas couvert?

M. Newman: Il se peut toujours que les règlements fournissent certaines causes de délit supplémentaires pour inobservation desdits règlements. J'ignore si ce serait le cas. Comme vous le savez, les règlements n'ont pas encore été rédigés. Il se peut fort bien cependant, bien que cela soit peu probable, que les dispositions visant les pouvoirs contenus dans la loi créent de tels règlements. Il se peut que certains délits soient créés par l'inobservation de certaines exigences prescrites par le règlement.

Dans ce cas, l'amendement empêcherait alors le gouverneur en conseil de créer des conditions de délits par voie de règlement. La création de causes de délit par voie de règlement est un cas commun. Ce n'est pas une façon de coïncider les gens, c'est une procédure très courante.

M. Howard (Okanagan-Boundary): Il me semble qu'on nous a induits en erreur. On nous a dit ce matin que cela ne s'appliquait qu'à l'article 8. On nous dit maintenant que cela s'applique à l'article 7, 3). Et puis on nous dit maintenant que cela peut s'appliquer aussi à d'autres dispositions figurant même dans les règlements qui n'existent pas encore.

Ce matin, nous pensions que cela ne s'appliquait qu'à l'article 8 uniquement. Y a-t-il une explication à cela?

Le président: Puis-je accorder la parole à M. Phillips, puis je reviendrai aux membres du Comité.

M. Phillips: Monsieur le président, nous avons discuté de la question des règlements en vertu de l'article 4 et la plupart de ceux-ci se rattachent aux initiatives du ministère. Cependant il y a un cas où ils se rattachent

[Texte]

individual—that would be clause 4(a). The individual would be required to make statements about his claim. Clause 8, which makes it an offence to do certain things, reads in part:

No person shall knowingly make a false or misleading statement... in writing in any claim or statement required or permitted by this Act...

Now if a false claim were made in a claim for compensation and it were determined that that were the case then it would be a violation of clause 8. But clause 8 ties in to a regulation made with respect to a claim and, therefore, in my view—I am not a lawyer—because of the way it is written it goes back to clause 8. But clause 8 goes back to the regulations. So it has not really changed anything. It is in clause 8 that mention is made of the regulations and I think it is needed there in relation to a false claim.

The Chairman: May I recognize Mr. Stewart?

Mr. Stewart (Okanagan-Kootenay): Mr. Chairman, I want to deal solely with Mr. Danforth's example of the government seeking restitution from an individual who had knowingly done something. May I stress the word "knowingly" in clause 8 (2). If in fact there was fraud involved there and the "knowingly" made a false statement or misled then, of course, it would be an offence under the proposed act. But one should not presume that it was a fraudulent statement. It could have been an innocent misrepresentation, in which event there would not be premeditated intent to defraud—therefore it would not be a misdemeanor under the proposed act.

The Chairman: Mr. McKinley?

• 1620

Mr. McKinley: Mr. Chairman, it seems to me that clause 7 sets out what an inspector can do and then Clause 8 covers what a person cannot do to obstruct or hinder such an inspector. I think the amendment simply brings it back to clause 8. I do not think it should be allowed to cover everything else. I do not think it even has to cover clause 7 because it simply says what the inspector shall be able to do.

Le président: Monsieur Lessard.

[Interprétation]

aux réclamations faites par des particuliers, soit à 4(a).

Le particulier en question devra faire une déclaration au sujet de sa réclamation. L'article 8 comme tel précise qu'il est délictueux d'enfreindre n'importe quelle disposition de la loi, et se lit ainsi:

Nul ne doit faire sciemment...

... une déclaration fausse ou trompeuse dans une déclaration exigée ou permise par la présente loi...

Ainsi, si une fausse déclaration est faite dans une réclamation pour indemnisation, il s'agit alors d'une violation de l'article 8, concernant les réclamations. Par conséquent, à mon avis, (je ne suis pas avocat) le libellé de l'amendement de l'article revient à 8, et 8 se rattache aussi au règlement, de sorte que l'amendement ne change rien. C'est dans l'article 8 que l'on mentionne le règlement, et en ce qui concerne les fausses réclamations.

Le président: M. Stewart.

M. Stewart (Okanagan-Kootenay): Monsieur le président, pour parler uniquement de l'exemple qu'a donné M. Danforth, on voit que le gouvernement cherche à récupérer les fonds d'un individu, qui a sciemment, et je signale l'expression sciemment, de l'article 8, 2), fraudé. Il y a alors un élément de fraude si cet individu a fait sciemment une déclaration fausse ou trompeuse. Ce serait naturellement un délit aux termes de la loi, mais on ne peut pas présumer qu'il s'agirait, au premier abord, d'une déclaration frauduleuse. Il se peut fort bien qu'il y ait erreur et que le prévenu ou l'individu n'ait eu aucune intention préméditée de commettre une faute. Ce ne serait donc pas un délit aux termes de la loi.

Le président: M. McKinley.

M. McKinley: Monsieur le président, au sujet de ce qu'a dit M. Newman, il me semble que l'article 7 couvre tout ce que devrait faire un inspecteur, et que l'article 8, élabore ce qu'une personne ne devrait pas faire en vue d'empêcher cet inspecteur de faire son travail. Il me semble que l'amendement ne fait que nous ramener à l'article 8. Il ne devrait pas couvrir les autres dispositions. Je pense qu'il ne devrait pas couvrir l'article 7, car ce dernier énumère simplement ce que l'inspecteur devrait pouvoir faire.

The Chairman: Mr. Lessard.

[Text]

M. Lessard (Lac-Saint-Jean): Monsieur le président, en étudiant encore davantage l'article 8, je m'oppose à l'amendement de M. Danforth, parce qu'il ne change absolument rien. L'article 8 englobe en fait tout le Bill. Tout ce qui concernera le Bill est englobé dans l'article 8.

En somme, M. Danforth donnait tantôt l'exemple d'un gars qui devrait rembourser un montant. S'il doit rembourser un montant, il a donc fait de fausses déclarations, ou bien ses déclarations ont été mal interprétées. L'article 8 s'applique alors à tout ce qui est prévu dans le Bill, même aux règlements. Si on voulait exclure les règlements de l'article 9, on n'en serait pas capable parce qu'ils sont englobés par l'article 8.

Du moment où on dit que l'infraction sera appliquée à l'article 8, automatiquement, on inclut tout ce qui se passe dans le Bill. Je pense que c'est exactement ce que M. Phillips vient de dire, et je suis d'accord.

Mr. Lind: May I revert to Clause 7(1) (b), which states:

(1) An inspector may at any reasonable time, (b) require any person in such place or premises to produce for inspection or for the purpose of obtaining copies thereof or extracts therefrom, any books...

I do not think that the inspector has any right at all to do this. I know from experience that officials of various departments of the federal government to come in and ask for the farmer's or businessman's complete general ledgers. They in fact do this. I think "any books" in here gives them the right to do this. I think "any books shipping bills, bills of lading, documents containing mixing instructions, or other documents or papers concerning any matter relevant to the administration of this act or the regulations" should be taken out. How is the farmer going to make copies of all these?

The Chairman: Where are you reading from, Mr. Lind?

Mr. Lind: Clause 7(b). I think "any books" gives them entirely too much latitude. I have had inspectors come in who have no business asking to see a general ledger of a business.

The Chairman: But clause 7 has carried, Mr. Lind.

Mr. Lind: If you do not want to go back to it, all right, Mr. Chairman, but I am arguing

[Interpretation]

Mr. Lessard (Lac-Saint-Jean): Mr. Chairman, on further consideration of clause 8, I am opposed to Mr. Danforth's amendment because it does not change anything. Clause 8 covers the whole Bill. Everything that will concern the bill is covered by Clause 8.

A moment ago Mr. Danforth gave us an example of somebody who would have to reimburse an amount of money. If he has to reimburse a sum of money it is either that he made false statements or that his statements were misinterpreted. Clause 8 would then apply to everything which is provided in the bill and even to the regulations. If we wanted to exclude the regulations from clause 9, we could not do it because they are covered by Clause 8.

When we say that the violation will be applied to Clause 8, everything that is in the Bill is included automatically. I think this is exactly what Mr. Phillips has just said, and it concurs with my opinion.

M. Lind: Monsieur le président, dans le paragraphe (b), il est dit que l'inspecteur peut, à n'importe quel moment, requérir toute personne qui se trouve dans un tel lieu ou local de produire pour inspection, ou pour permettre d'en prendre des copies ou extraits, les livres, connaissements etc. Je ne pense pas que l'inspecteur devrait avoir ce droit, et je sais par expérience, que des fonctionnaires des divers ministères fédéraux entrent chez un fermier ou chez un commerçant et demandent à prendre connaissance de tous les livres. C'est ce qu'ils font. Je pense qu'on leur donne le droit ici, en disant tous les livres, d'agir ainsi. Cette disposition visant les extraits de comptes, les livres, les autres documents devrait être éliminée. Comment d'ailleurs le cultivateur va-t-il pouvoir faire des copies de tous ces documents?

Le président: Qu'est-ce que vous lisez en ce moment?

M. Lind: Je me fonde sur 7, alinéa b) Je pense qu'on leur donne trop de latitude. J'ai vu des inspecteurs qui sont arrivés dans une ferme, dans des locaux, dans une entreprise et qui ont demandé à voir tous les livres, et qui n'avaient rien à faire dans cet endroit.

Le président: Mais l'article 7 a été adopté.

M. Lind: Fort bien, monsieur le président, si vous ne voulez pas y revenir, si vous ne

[Texte]

it. If you do not want to reopen it, all right, I will argue some place else.

The Chairman: I think there would be an opportunity but—

Mr. Lind: All right, I will argue the matter under clause 1. I would like an explanation of what “any books” means, because I have had experience with government inspectors.

Mr. Stewart (Okanagan-Kootenay): I think we are dealing with the amendment at this particular time, Mr. Chairman.

The Chairman: That is true, we are dealing with an amendment.

Mr. Lind: All right, I will open up the matter under clause 1.

The Chairman: All right.

Mr. Pringle: Mr. Chairman, I am unable to follow the reasoning behind the amendment. I too am not a lawyer, but if we in clause 9(1) refer only to clause 8 I can project in my mind sitting in a courtroom listening to a lawyer making great hay out of the confusion that we have created and which he can use as ammunition in a legal case. It seems to me it almost contradicts the intent of the bill to place a clause like clause 8 in the bill and then, what really refers to the rest of the act as far as what the requirements are, to state in the next clause that the violations can only refer to clause 8. Is that not confusing and does this not create a condition where we could provide some additional—to use the word again—confusion in the courts with regard to the sensibility of the act?

• 1625

The Chairman: Mr. Danforth?

Mr. Danforth: Mr. Chairman, I think Mr. Pringle's question is a very valid one. The purport of my amendment is based on the fact that this bill is designed specifically for compensation to the farmer. In any action taken where there is contamination, most of the jurisdiction and the action will be under the Food and Drug Directorate and their Acts rather than under this proposed Act.

Since this Act does deal with farmers and their compensation, my contention in the amendment is that the only violations that are of concern of this Act, are where persons hinder the work of competent and appointed inspectors in their task, and where an

[Interprétation]

voulez pas ouvrir le débat, fort bien. Je trouverai un autre endroit pour faire valoir mes arguments.

Le président: Je pense qu'on pourra y revenir mais...

M. Lind: Fort bien. Je rouvrirai le débat à l'article 1. J'aimerais qu'on me donne une explication. Qu'est-ce qu'on veut dire par «les livres».

M. Stewart (Okanagan-Kootenay): Je crois qu'à ce moment-ci, nous en sommes à l'amendement.

Le président: Oui, précisément.

M. Lind: Parfait, j'en parlerai lors de l'étude de l'article 1.

Le président: M. Pringle.

M. Pringle: Monsieur le président, je ne trouve pas exactement la raison de l'amendement. Je ne suis pas, moi non plus, avocat, mais si dans l'article 9(1), nous nous référons seulement à l'article 8, il semble que je me vois dans un tribunal et que j'entends un avocat qui ne finirait pas de commenter la confusion que nous avons créée, et d'utiliser cette confusion comme munition dans une cause judiciaire, il me semble qu'on contredit presque les intentions de la loi en plaçant, en insérant un article comme l'article 8 dans cette loi.

Puis, ce qui vraiment a trait à toutes les autres dispositions de la Loi du Parlement et des exigences de cette Loi. Et puis déclarons, dans l'article suivant, que les infractions ne peuvent que se rapporter à l'article 8. Est-ce que cela ne créerait pas encore plus de confusion au sujet de la signification, si l'on veut, de la Loi?

Le président: Monsieur Danforth?

M. Danforth: Monsieur le président je crois que la dernière question qui a été posée est très bonne.

Le but de mon amendement est fondé sur le fait que le bill est destiné spécifiquement à indemniser le cultivateur et qu'en toute initiative qui sera prise, lorsqu'il y aura contamination, la compétence reviendra à toute la Direction des aliments et drogues et ne relèvera pas de cette Loi comme telle.

Et comme la Loi dont nous sommes saisis a trait à l'indemnisation des cultivateurs, je sais bien, pour ma part, dans la modification, que les seules infractions possibles qui intéressent cette Loi sont lorsque quelqu'un gêne le travail de l'inspecteur, dans l'exercice de ses

[Text]

attempt is made to make a fraudulent claim, to suppress information or to give misinformation.

Since these are adequately covered under sub-clauses (1) and (2) of Clause 8, my amendment would confine the punishment under this Act to those specific violations. I am very much alarmed having had the experience, as have all gentlemen present, that when these bills pass through the hands of parliamentarians, very often we are not too conversant with the regulations that may be drafted pertaining to the legislation, and that sometimes the penalty clauses refer to regulations where, if the legislators were aware of what the consequence might be, they would at that time have taken violent opposition to them. My amendment strives in this instance, to confine the punishment and the degree of the offence strictly to an attempt by an individual to violate the regulations as prescribed in the normal carrying out of the functions of this proposed Act.

The Chairman: Gentlemen, may I submit for the benefit of the Committee that we are really talking about the offences to obstruct or to make false or misleading statements. I do not think the Committee is concerned as to which Clause it comes under, but if a person obstructs, misrepresents or makes false or misleading statements then, of course, the punishment would be provided for.

We are probably losing sight of the fact that in one case it deals with the offence, and in another case it deals with the punishment.

The Committee really is not concerned with what clause it comes under. If it is a case of fraud or false or misleading statement or an obstruction, whatever clause may apply, it is an offence.

Are we ready for the question?

Mr. Olson: Mr. Chairman, if I may, I was trying to determine in my own mind if we should go back to the drafting people in the Department of Justice and find out what the implications would be with respect to accepting this amendment or some other amendment. What we have to bear in mind here is that this amendment is redundant. It does not really do anything. It does not create any offences. The offences are spelled out in other portions of the act. Indeed, if we took away Clause 9 altogether, there would still be an offence, an offence with which a person could be charged. Then there would be no limitation.

[Interpretation]

fonctions, et d'autre part lorsqu'on tente de faire une déclaration frauduleuse et trompeuse pour supprimer des renseignements ou donner de mauvais renseignements.

Et, comme ces deux cas sont bien couverts aux termes des paragraphes 1 et 2 de l'article 8, mon amendement limiterait la punition aux termes de la loi à ces deux délits. Je sais, comme d'ailleurs tous les députés présents, que lorsque ces bills sont adoptés et passent par les mains des parlementaires, très souvent, nous ne connaissons pas bien les règlements qui peuvent être rédigés et qui peuvent découler de la Loi.

Et, parfois les fonctions s'appliquent à des règlements, alors que les législateurs ne pourraient peut-être pas deviner quelles seraient les conséquences au moment où ils vont adopter les dispositions de la Loi. Mon amendement, par conséquent, essaye, dans ce cas-ci, de confirmer les sanctions et les délits aux tentatives que ferait quelqu'un de violer les deux grandes dispositions de l'article 8, notamment, les fonctions de la Loi.

Le président: Pour la gouverne du Comité, puis-je vous dire que nous ne parlons que de deux choses, quelqu'un qui générerait les fonctions de l'inspecteur et ferait des déclarations fallacieuses, et peu importe le fait que cela relève des articles 3 ou 8 ou d'autres articles.

Si vous gênez les fonctions de l'inspecteur, la sanction sera de toute façon très rude. Je crois que nous perdons de vue le fait que, dans un cas, nous parlons du délit et, dans un autre cas, de la punition. Nous essayons de rattacher cela.

Je ne pense pas que le Comité se préoccupe déjà de l'article dont cela relève, qu'il s'agisse de fraude, de déclaration fallacieuse, d'obstruction, quel que soit l'article, où cela s'applique, c'est un délit. Sommes-nous prêts à passer à la mise aux voix?

M. Olson: Monsieur le président, si vous me le permettez, j'essayais de déterminer si nous devrions renvoyer cela au rédacteur du ministère de la Justice, pour savoir quelles seraient les répercussions, les effets, si on acceptait cette modification ou d'autres modifications. Mais j'ai l'impression que nous ne devons pas oublier ici que cette modification est une tautologie: elle ne crée pas de délit. Les délits sont explicités dans d'autres parties de la Loi et si nous enlevions de fait l'article 9, il y aurait encore un délit qui existerait, un délit qui serait passible d'accusation, et puis il n'y aurait aucune limite.

[Texte]

• 1630

I have explained that we need an indictable offence for the sake of time, because under summary conviction procedure there is only six months, and in my view situations could arise where there would be a time delay, where a passage of six months would, in fact, expire before all of the facts could be ascertained. Clause 9 does not create or spell out offences, because the offences are in other Acts; all it does is limit the penalties under an offence. We are not competent under this proposed Act to change the time limit on a summary conviction and we, therefore, have to rely on the other laws that are administered by the Department of Justice insofar as what the conditions attaching to an indictable offence or a summary conviction may be. That is one thing.

The other thing is that we should not try to raise small offences or what may be determined by the courts as offences that should not carry the maximum penalty, and try to equate that situation, or substitute ourselves for the functions of a court of law that will in fact, hear the evidence as to how serious an offence is and how much penalty ought to be attached to it. The penalties that the courts will have the power to impose, and this is common to all other Acts, have a minimum and a maximum both in terms of dollars and of length of time in prison; that is, insofar as the sentence is concerned.

We are just setting out the kind of charges that can be laid, and for the reasons that I have outlined, and putting the maximum on them, which is common practice; there is nothing new or novel about it at all. Therefore, to accept this amendment to Clause 8 only, having in mind the point that has been raised that that again refers to the regulations and so on, would be redundant and unnecessary and in fact a departure from the way this kind of thing relating to offences and penalties is dealt with in other Acts.

The Chairman: Mr. Peters wished to be recognized?

Mr. Peters: In reference to Clause 9 (3) the Minister has indicated that there is a six months limitation on summary conviction. We are writing into the Clause that summary conviction does not apply under this proposed Act because we have extended it a year. This is really a year and six months we are talking about.

Mr. Olson: That is right; total.

29653—5

[Interprétation]

Comme je l'ai expliqué, nous avons besoin d'un délit passible de condamnation, en vertu d'une déclaration sommaire de culpabilité ou en vertu d'une procédure judiciaire. Il n'y a qu'une période de six mois qui est prévue et, à mon avis, il se peut que dans certains cas il y ait des retards. Et, la période de six mois, le délai de six mois de fait, s'épuiserait avant que tous les faits soient déterminés. L'article 9 ne crée pas de délit, car les délits sont mentionnés dans d'autres lois. Tout ce qu'on fait, en somme, c'est limiter les sanctions relevant des délits prévus. Et, d'après la Loi, nous ne pouvons pas changer les délais pour une déclaration sommaire de culpabilité.

Par conséquent, nous devons tenir des autres lois administrées par le ministère de la Justice, savoir quelles seraient les conditions intéressant un délit passible de sanction, une déclaration sommaire de culpabilité.

Autre chose, il me semble que si nous essayions de soulever ce qui pourrait peut-être être déterminé par les tribunaux comme de petites offenses, ce qui ne devrait pas comporter le maximum de la peine, et si nous essayions de nous substituer aux fonctions d'un tribunal qui, effectivement, entendrait la cause, et déterminerait quelle est la gravité de l'infraction et quelle devrait être la peine imposée, les peines que le tribunal pourrait imposer pourraient s'appliquer à tout, à partir du minimum jusqu'au maximum, quant à l'argent et quant à la sentence aussi.

Nous, nous disons quel genre d'accusations peuvent être portées et nous avons établi un maximum, ce qui est tout à fait habituel. Il n'y a rien de nouveau, ni d'anormal, à ce sujet. Je crois donc que même si nous acceptions cet amendement et que cela se limite à l'article 8, et que l'article 8 se rapporte aux règlements encore une fois, je trouve que cela serait superflu, inutile, et en fait chose autre que ce que nous faisons jusque-là dans les autres mesures législatives.

Le président: Monsieur Peters?

M. Peters: Dans le paragraphe 3 de l'article 9, le ministre nous a indiqué qu'il y a un délai ou une limite de six mois pour la déclaration sommaire de culpabilité. La déclaration sommaire de culpabilité, si j'ai bien compris, ne s'applique pas et, alors, puisque nous l'avons étendue à un an, cela s'appliquerait pendant un an et six mois.

Mr. Olson: Un total.

[Text]

Mr. Peters: Pardon?

Mr. Olson: Total.

Mr. Peters: No, it says:

(3) Any proceedings by way of summary conviction in respect of an offence under this Act may be instituted at any time within one year...

Then, under summary conviction procedure there is a six-month period.

Mr. Williams: This is one year from when the subject matter arose.

Mr. Peters: Yes, but this procedure will give you another six months, as I understand it.

Mr. Williams: I think it would be a total of one year from the time that the subject matter arose.

Mr. Peters: As I read it, you would have to lay the charge within a year.

Mr. Williams: That is correct, yes.

Mr. Peters: You then proceed with the charge and there is a limitation...

Mr. Williams: That is correct.

Mr. Peters: ...on the summary charge. This would give you an extension of time.

Mr. Williams: Partial.

Mr. Peters: It would give you quite an extension of time over the six months.

The Chairman: Gentlemen, if you are ready for the question I will read the amendment.

That Clause 9 be amended. Amend Clause 9 (1) deleting the words after the word "provision" and inserting the words "as set out under subclauses (1) and (2) of Clause 8 of this Act is guilty of"

Amendment negated.

• 1635

Mr. Danforth: Mr. Chairman, may I ask for the number of years and days on that vote?

The Chairman: Four in favour, and nine opposed.

Mr. Danforth: Mr. Chairman, I think there were more than four in favour.

The Chairman: All right, we will call the votes again. All those in favour of the amendment will please signify? I see six.

Mr. Danforth: Thank you, Mr. Chairman.

[Interpretation]

M. Peters: Pardon?

M. Olson: Un total.

M. Peters: Non, on dit:

(3) Toutes poursuites sur déclaration sommaire de culpabilité, en ce qui concerne une infraction prévue par la présente loi, peuvent être intentées à tout moment dans un délai d'un an après la date.

M. Williams: Il s'agit d'un an après que le sujet de la poursuite a été découvert.

M. Peters: Cette procédure vous donnerait six mois de plus tout de même.

M. Williams: La période totale serait d'un an.

M. Peters: Vous devriez plutôt intervenir au maximum un an plus tard.

M. Williams: C'est bien cela.

M. Peters: Vous entamez alors les procédures.

M. Williams: C'est bien cela.

M. Peters: Mais la période serait d'autant plus longue.

M. Williams: Partiellement.

M. Peters: Cela vous donnerait beaucoup plus de six mois.

Le président: Messieurs, si vous êtes prêts à vous prononcer, je vais lire l'amendement:

«Que l'article 9 soit modifié, paragraphe (1), en supprimant après l'expression «dispositions», et en insérant «tel qu'il est décrit aux paragraphes (1) et (2) de l'article 8 de la présente Loi.»

L'amendement est refusé.

M. Danforth: Est-ce que je pourrais demander le vote s'il vous plaît?

Le président: 4 en faveur et 9 contre.

M. Danforth: J'estime qu'il y en avait plus que 4 pour.

Le président: Très bien, nous allons reprendre le vote. Tous ceux qui sont en faveur de l'amendement, veuillez lever la main. Six.

M. Danforth: Merci, monsieur le président.

[Texte]

The Chairman: All those opposed to the amendment?

The Clerk: Nine.

The Chairman: I declare the amendment lost.

Clause 9 agreed to.

We will revert to Clause 1 and Mr. Lind has a question.

Mr. Lind: I want to know how many papers that they can ask for under the general rule of this inspector that comes in. How much time that he can consume of the farmer in this inspection, and how many papers that he can ask for? Because it has been my experience that they ask for more papers than they are entitled to have?

Mr. Olson: Mr. Chairman, Clause 7(1) says:

An inspector may at any reasonable time

And that, of course, has some meaning. Then it also says:

...the inspector has reason to believe will assist him in such investigation...

He would have to be prepared to substantiate his reasons for believing that he needed documents to assist him in the investigation. With those qualifications, and they are there, Mr. Lind, I do not think that that particular Clause does give any limitation. However, they must be relevant to the administration, and the last two sentences read:

relevant to the administration of this Act or the regulations

It seems to me that all of those things together put the inspector under a pretty severe limitation to have to substantiate that he did, in fact, need these things and that he did it at a reasonable time and that he had reason to believe that it would be helpful to him and that it must be relevant to the regulations for the administration of this Act. Those are the limitations that I see in reading that.

Mr. Lind: Mr. Chairman, this still gives the inspector pretty wide powers to demand to see these books, shipping bills and bills of lading at certain times, and it does not say that he will come to the farmer's place of business to see them. He can ask...

An hon. Member: He can enter any place or premises.

Mr. Lind: It says that an inspector may at any reasonable time require any person in such place or premises to produce...

[Interprétation]

Le président: Tous ceux qui s'opposent à l'amendement?

Le greffier: Neuf.

Le président: L'amendement est rejeté. L'article 9 est adopté. Et, maintenant, nous revenons à l'article 1. M. Lind a une question qu'il voulait poser.

M. Lind: Je voudrais savoir combien de documents on peut demander en vertu de la Loi? Combien de temps du cultivateur l'inspecteur peut-il prendre, et combien de documents peut-il lui demander, car d'après mon expérience on demande toujours beaucoup plus de documents qu'on n'a le droit de le faire?

M. Olson: Monsieur le président, on dit:

7. (1) Un inspecteur peut, à tout moment raisonnable,

ce qui indique tout de même quelque chose et, ensuite, on dit qu'il faut que:

l'inspecteur a des raisons de croire que cela facilitera cette enquête,

Il devrait être prêt à donner les raisons ou les motifs pour lesquels il veut ces documents qui l'aideraient dans cette enquête. Les conditions y sont M. Lind et, alors, je ne crois pas qu'il y ait de restrictions, mais il faut que les documents soient pertinents dans l'administration de la Loi, à l'application de la présente Loi ou des règlements. Et tout cela limite essentiellement l'inspecteur étant donné qu'il faudrait prouver qu'il avait vraiment besoin de ces choses, et qu'il l'avait fait à un moment raisonnable, qu'il avait lieu de croire que cela faciliterait son enquête, et il faut que cela s'applique, que cela soit pertinent à l'application de la présente Loi. Voilà les limites ou les conditions que j'y vois.

M. Lind: Cela donne encore, monsieur le président, à l'inspecteur beaucoup de pouvoirs. Supposons que l'inspecteur vienne à la ferme, il pourrait demander...

Une voix: Il peut s'introduire partout.

M. Lind: A tout moment raisonnable, il peut requérir les documents voulus, de toute personne qui se trouve dans un tel lieu ou local.

[Text]

Mr. Olson: It has just been pointed out to me, Mr. Chairman, that he can only ask them to be produced so that he can obtain copies therefrom or extracts. He has no right to take the documents away with him. I think you have to read (a) along with (b) and that is, to answer the first part of your question:

enter any place or premises in which he reasonably believes there is any agricultural product, pesticide or thing that will enable him to carry out any investigation

The Chairman: Are there further questions?

Mr. Lind: But this inspector cannot ask to take these documents away?

Mr. Olson: No.

Mr. Lind: All he can ask is to make copies of them?

Mr. Williams: I presume he can ask, Mr. Lind, but he cannot demand.

• 1640

Mr. Olson: It does not provide him with the authority to take them.

Mr. Williams: There is no authority for him to take them. The only authority provided is to allow him to take copies or extracts from these.

Mr. Lind: How many individuals know that he cannot take these away?

Mr. Olson: I think that the inspector would be well advised to make that known, because certainly any inspector who exceeded his authority would be in great difficulty, not only with the Department, but indeed with the law.

The Chairman: Mr. Gleave.

Mr. Gleave: I wanted to refer back to a question I asked at the first meeting last Tuesday. I asked if we could have information put before the Committee in due course as to how much in terms of man-hours and money is being spent by the Department of Agriculture or the Food and Drug Directorate to investigate and examine these products prior to release, how much was spent in 1965, 1966, 1967, how much is being spent in 1968, and whether we could have this information.

The Minister replied that it could be made available. Do we have that information?

Mr. Olson: Yes, Mr. Chairman. I want Mr. Gleave to know that we obtained this information and perhaps we should have brought it up sooner. I will ask Mr. Williams to

[Interpretation]

M. Olson: On vient de signaler, monsieur le président, que l'inspecteur peut seulement en demander des extraits. Il n'a pas le droit d'emporter les documents avec lui. Reportez-vous à (a) et à (b), pour avoir la réponse à la première partie de votre question:

«pénétrer en tout lieu où il estime raisonnablement qu'il y a des produits agricoles, des pesticides ou tout autre produit susceptible de l'aider dans ses recherches.»

Le président: Est-ce qu'il y a d'autres questions?

M. Lind: Cet inspecteur ne peut pas demander d'emporter les documents?

M. Olson: Non.

M. Lind: Il ne peut que les copier?

M. Williams: Tout ce qu'il peut faire c'est de demander, mais non d'exiger.

M. Olson: Il n'a pas pouvoir d'emporter les documents.

M. Williams: Il n'a pas l'autorisation de les prendre. Nous lui donnons l'autorisation de faire faire des copies, c'est tout.

M. Lind: Et combien de personnes savent qu'il ne peut pas apporter les documents avec lui.

M. Olson: Je pense que l'inspecteur serait bien avisé de communiquer cela, car tout inspecteur qui dépasse ses attributions aura des ennuis non seulement avec le ministère mais aussi avec la loi.

Le président: Monsieur Gleave.

M. Gleave: Je voudrais revenir à une question que j'ai posée à la première séance de mardi dernier. J'avais demandé si le comité pouvait être informé en temps utile sur le nombre d'heures de travail ou d'argent actuellement dépensé au sein du ministère ou au sein de la Direction des aliments et drogues pour examiner toute cette question des produits antiparasitaires, pour les années 1965, 1966, 1967. Combien a-t-on dépensé plus précisément en 1968?

Le ministre a répondu qu'on pourrait nous communiquer ces chiffres. Les avons-nous?

M. Olson: Oui, monsieur le président, je voudrais que M. Gleave sache que nous avons obtenu ces renseignements, nous aurions peut-être dû vous les communiquer plus tôt.

[Texte]

explain one or two of the charts that we have here, and perhaps they could be tabled with the Committee.

Mr. Williams: We have a large chart, Mr. Chairman, which lists the research funds and the manpower. Those are the dollars and the number of man-years devoted by Departments of Agriculture, Fisheries, Forestry, National Health and Welfare, Indian Affairs and Northern Development, National Defence, and by the National Research Council, for the years 1966-1967 and the years 1967-1968. I regret that we did not have the previous year. We were unable to obtain it, but we do have the two latest years, as I say broken down both as to dollars and man-years. It is a rather extensive table which I presume you will wish to have tabled.

There are some gaps in the information, particularly in respect of the Department of National Defence and the National Research Council.

Mr. Peters: Could I ask for clarification of what a man-year is? Two thousand hours, twenty-two hundred hours?

Mr. Williams: Twenty-two hundred and some odd hours, I believe. It is 52 weeks times 37½ hours, insofar as the Public Service is concerned, whatever the product of that is.

In addition to that we have an estimate made of the expenditure of the Canadian pesticide industry on research, and we have another document that gives the estimated expenditure by titles within the Canada Department of Agriculture, Research Branch, namely on research other than product-testing and on product-testing itself. I believe you asked for a breakdown along those lines along with the total, and this is in both dollars and in man-years.

The Chairman: Gentlemen, would there be agreement—I think it is not sufficient to have these tabled—would there be agreement to have this information printed in our evidence and proceedings.

Some hon. Members: Agreed.

The Chairman: Agreed.

Mr. Gleave: Might I ask—we have not had this read before us—if in the opinion of the Deputy Minister or Mr. Phillips there are adequate amounts being spent here and time spent to ensure that we know that what is being distributed is safe to use and safe for distribution.

[Interprétation]

Je vais demander à M. Williams d'expliquer un ou deux des graphiques que nous avons. Peut-être devrions-nous les déposer au Comité.

M. Williams: Nous avons un grand graphique qui montre les dollars et le nombre d'hommes-heures de travail consacrés par l'Agriculture, les Pêcheries, le ministère des Forêts, la Santé nationale et le Bien-être social, les Affaires indiennes et le Nord canadien, la Défense nationale et le Conseil national des recherches pour les années 1966-1967 et 1967-1968. Je regrette que nous n'ayons pas les chiffres des autres années; nous n'avons pu obtenir ces chiffres, mais nous avons ceux des deux dernières années, en dollars et en hommes-heures.

C'est un tableau assez long. Il y a des lacunes ici et là, notamment en ce qui concerne la Défense nationale et le Conseil national des recherches.

M. Peters: Est-ce que vous voulez expliquer ce qu'est une année-homme de travail?

M. Williams: 52 semaines à 7½ heures par jour. Je ne sais pas ce que cela donne au total.

En outre, nous avons fait le calcul des dépenses de l'industrie canadienne des produits antiparasitaires pour la recherche, et d'autres documents montrent les dépenses effectivement employées, par titre, à l'intérieur de la Direction de la recherche du ministère de l'Agriculture, recherches autres que les épreuves de produits et les effets des produits. Il y a ici un total indiqué en années-hommes de travail et en dollars.

Le président: Il ne suffit pas qu'on dépose ces graphiques. Voit-on un inconvénient à ce que ces documents soient imprimés en annexe à notre compte rendu?

Des voix: Entendu.

Le président: Adopté.

M. Gleave: Personne ne nous en a donné lecture jusqu'ici. Mais le sous-ministre, ou M. Phillips, pense-t-il que cela est assez; est-ce qu'on dépense assez d'argent pour que nous sachions à quoi nous en tenir? Est-ce que la distribution, est-ce que les précautions sont suffisantes?

[Text]

Mr. Olson: Mr. Chairman, I do not think it is fair to ask the opinion of the officers in the Department on what is adequate. We will give you the figures and you can decide yourself whether it is adequate. On pesticides the Department of Agriculture through its Research Branch spent on research other than product testing \$2,730,000 and 91 man-years.

On product testing the Department's Research Branch spent \$750,000 and 25 man-years, for a total of \$3,480,000 insofar as dollar expenditure is concerned, and a total of 116 man-years.

• 1645

Clause 1 agreed to.

Title carried.

Bill carried.

The Chairman: Shall I report the bill without amendment?

Some hon. Members: Agreed.

The Chairman: Gentlemen, I would direct your attention to Bill C-154. Shall I read you the title of the bill first? The long title is:

An Act to prevent the introduction or spreading of pests injurious to plants.

and the short title is:

1. This Act may be cited as the *Plant Quarantine Act*.

Your question was, Mr. Pringle?

Mr. Pringle: My question was not relevant to the title. I was asking, in view of the fact that we are meeting again tonight, have you established an adjournment hour for this afternoon? Just for my own information, Mr. Chairman.

Mr. Barrett: I asked the same question. I am glad you brought it up. He completely ignored me. I hope he does not completely ignore you.

The Chairman: If it meets with the approval of the Committee, I would suggest 5.30. Agreed?

Mr. Barrett: No, opposed.

The Chairman: Gentlemen, I would direct your attention to clause 2 of Bill C-154. Are there any question on clause 2?

Mr. Olson: Mr. Chairman, it might be helpful if I made a brief introductory statement.

The Chairman: I recognize the Minister.

[Interpretation]

M. Olson: Je ne pense pas qu'on puisse demander à des fonctionnaires du ministère s'ils pensent que ce chiffre est suffisant ou pas. Nous vous donnerons les chiffres, et vous pouvez décider vous-mêmes si ces chiffres sont suffisants ou non. Pour les pesticides, le ministère de l'Agriculture a dépensé, par l'intermédiaire de sa Direction de la recherche \$2,730,000 et 91 années-hommes de travail pour les essais de produits. La Direction de la recherche du ministère a dépensé \$750,000 et vingt-cinq années-hommes de travail, soit un total de \$3,480,000 et 116 années-hommes de travail.

L'article 1 est adopté.

Le titre est adopté.

Le Bill est adopté.

Le président: Dois-je faire rapport du bill sans amendement?

Des voix: Etendu.

Le président: Nous allons maintenant passer au bill C-154. Est-ce que je vais vous donner lecture du titre du bill pour commencer? Voici:

Loi ayant pour objet d'empêcher l'introduction ou la propagation de parasites nuisibles aux plantes

Le titre abrégé est: «Loi sur la quarantaine des plantes».

M. Pringle: Ma question n'a pas rapport au titre. Je veux demander: vu que nous nous réunissons de nouveau ce soir, avons-nous fixé l'heure d'ajournement pour cet après-midi?

M. Barrett: J'ai posé la même question et le président m'a oublié. J'espère qu'il ne vous oubliera pas.

Le président: Si le Comité n'y voit pas d'inconvénient, je vous propose 5 heures et demie. Nous sommes d'accord?

M. Barrett: Je ne suis pas d'accord.

Le président: Je vous signale l'article 2 du bill C-154. Est-ce qu'il y a des questions au sujet de cet article 2?

M. Olson: Est-ce qu'on peut faire une petite déclaration pour commencer?

Le président: Je donne la parole au ministre.

[Texte]

Mr. Olson: Mr. Chairman, there are some major changes that I will explain in the legislation, but this bill, Bill C-154, short title the *Plant Quarantine Act*, will be supplanting or substituting for Chapter 81, which was An Act to Prevent the Introduction or Spreading of Insects, Pests and Diseases Destructive to Vegetation", or as the short title reads, the *Destructive Insect and Pest Act*. Dated 1910.

The main changes are as follows. Number one, provision is made for the introduction of improved plant quarantine methods and disinfection techniques. Number two, authority is provided to regulate the introduction and movement within Canada of plants and other matter which, while not infested in themselves, constitute a biological obstacle to the effective control of plant pests and diseases.

Thirdly, the authority to restrict from general or specific agricultural use properties or premises which are infested or suspected to be infested as a measure to prevent or control the dissemination of injurious plant pests and diseases.

Fourthly, a provision for the establishment of plant health and crop certification standards for plants or other matter that are to be exported or transported from one area to another within Canada.

Fifthly, authority to establish by Governor in Council the maximum amounts of compensation to be paid for plants or other matter destroyed or restricted from sale under the regulations, or where the use of property or premises is restricted in the interests of plant pest control.

Sixth, provision has been made for an appeal procedure whereby individuals may appeal the amount of compensation awarded under the authority of the bill.

Seven, the authority to establish a fee structure for inspection, quarantine or treatment of plants or other matter carried out under the bill.

Eight, the name of the bill has been changed, as we have explained, from the *Destructive Insect and Pest Act* to the *Plant Quarantine Act*, a name considered to be more descriptive of the authority provided.

The Chairman: Thank you, Mr. Olson. Before we start our questioning on Bill C-154, may I extend an invitation to all members of the Committee and our supporting personnel to join me in my office at 5.30, 247 West Block, for a social break.

Some hon. Members: Thank you.

[Interprétation]

M. Olson: Vous savez qu'il y a de grands changements à la loi, que je vais expliquer, mais le Bill C-154,

Loi sur la quarantaine des plantes. sera substitué au chapitre 81, «Loi ayant pour objet d'empêcher l'introduction ou la propagation d'insectes, de parasites et de maladies nocifs pour la végétation», ou, en abrégé, «Loi sur les insectes destructeurs et les ennemis des plantes», loi de 1910.

Voici les grands changements: premièrement, on prévoit l'introduction de nouvelles méthodes de quarantaine et de désinfection. Deuxièmement, l'autorisation est donnée pour réglementer l'introduction et les déplacements au Canada des plantes et d'autres matières qui, bien qu'elles ne sont pas infestées en elles-mêmes, n'en constituent pas moins un obstacle biologique au contrôle efficace des insectes ou parasites nuisibles aux plantes.

Troisièmement, l'autorisation de retirer de l'usage agricole normal des lots ou propriétés infestés ou qu'on soupçonne être infestés. Quatrièmement, disposition visant l'établissement de normes de certification pour les plantes et autres matières qui peuvent être exportées ou transportées d'une région à une autre, au Canada. Cinquièmement, l'autorisation d'établir, au nom du Gouverneur en Conseil, l'indemnité maximum versée au titre de la destruction des plantes ou de leur restriction aux termes des règlements en ce qui concerne la vente ou dans l'intérêt du contrôle des parasites ou des insectes nuisibles.

Sixièmement, il est prévu une procédure d'appel aux termes de laquelle les particuliers peuvent interjeter appel s'ils ne sont pas satisfaits de l'indemnité votée d'après la loi.

Septièmement, tarifs pour l'inspection, la quarantaine ou le traitement des plantes ou autres matières prévues dans le bill.

Huitièmement, on a changé le nom de la loi, nous l'avons expliqué. Elle ne s'appelle plus «Loi sur les insectes destructeurs et les ennemis des plantes», on l'appelle désormais: «Loi sur la quarantaine des plantes», appellation qu'on trouve plus juste.

Le président: Avant que nous commençons à poser des questions sur le bill C-154, me sera-t-il permis d'inviter tous les membres du Comité et du personnel de soutien à venir à mon bureau à 5 heures et demie, pièce 247 de l'Édifice de l'Ouest pour une petite réception.

Des voix: Merci.

[Text]

The Chairman: Are there questions on clause 2? Mr. Douglas?

• 1650

Mr. Douglas: Mr. Chairman, I just wondered about the other Act that this is supplanting. There is nothing that I can see in the preamble at least which indicates that this is replacing the other Act, or changing the name of the other Act, or repealing the other Act.

Mr. Olson: Clause 14 says that.

Mr. Douglas: Away back at the end?

Mr. Olson: The Destructive Insect and Pest Act is repealed.

Mr. Douglas: That is all right.

On clause 2—*Definitions*

Clause 2 agreed to.

On clause 3—*Prohibition*

The Chairman: Are there questions?

Mr. Danforth: I want to ask, Mr. Chairman, why it says:

Except as provided by this Act and the regulations...

Does this mean the regulations as included in this Act, and if so, why was it stated in this fashion?

The Chairman: Mr. Williams?

Mr. Williams: You may recall that this morning I specified, or at least in reply to a question as to whether these matters applied to government institutions as well as to the general public, I indicated that there were provisions whereby material that would normally be excluded might be allowed in under permit. This is part of the reason why that first section is put in, to allow regulations to be established whereby material that normally might be excluded would be allowed in under permit for special purposes.

The Chairman: Mr. Douglas?

Mr. Douglas: I was wondering why there is this word "from" in the fourth line of clause 3. Why should we concern ourselves about whether or not this stuff is carried from Canada. I think we should be concerned about it, but why should it be in this bill?

Mr. Williams: Mr. Chairman, this is to provide authority to allow us to exercise the agreements that we have entered into under

[Interpretation]

Le président: Y a-t-il des questions sur l'article 2? Monsieur Douglas?

M. Douglas: Je me demandais, monsieur le président, au sujet de l'autre loi, je ne vois absolument rien dans le préambule, au moins, qui indique que cela remplace l'autre loi, qu'on abrège ou qu'on change le nom même.

M. Olson: L'article 14 dit que...

M. Douglas: A la fin?

M. Olson: La Loi sur les insectes destructeurs et les ennemis des plantes est abrogée.

M. Douglas: En effet.

L'article 2: *Définitions*.

L'article 2 est adopté.

L'article 3: *Interdiction*.

Le président: Y a-t-il des questions à poser?

M. Danforth: Pourquoi est-ce qu'on dit:

Sauf les exceptions prévues par la présente loi et par les règlements...

Est-ce que les règlements sont édictés en vertu de la loi et pourquoi alors les a-t-on insérés de cette façon-ci?

Le président: M. Williams?

M. Williams: Ce matin, si vous vous souvenez bien, je l'ai indiqué en réponse à une question, lorsque ces questions se posaient vis-à-vis des instructions du gouvernement ainsi que du public dans son ensemble. Des matières qui seraient normalement exclues pourraient être importées sous permis. C'est une des raisons pour lesquelles nous insérons cette première partie. Pour que nous puissions établir des règlements prévoyant que les matières qui, normalement, seraient exclues, pourraient être importées à des fins spéciales grâce à un permis.

Le président: Monsieur Douglas?

M. Douglas: Je me demandais pourquoi on dit:

au Canada ou hors du Canada

à la quatrième ligne de l'article 3. Pourquoi nous inquiéter de ce que ces matières sont transportées ou non hors du Canada? Je trouve que nous devrions peut-être nous en préoccuper, mais pourquoi l'insérer dans la Loi?

M. Williams: C'est pour nous donner l'autorité de nous acquitter des accords en vertu de l'accord international sur la protection des

[Texte]

what is known as the International Plant Protection Convention, which is an international agreement to which Canada is signatory, under which we enter into agreements with certain countries that we will certify material for export and in turn they provide reciprocal services for us. It is a mutual protection type of arrangement.

Mr. Douglas: That answer is satisfactory, Mr. Chairman.

Clause 3 agreed to

The Chairman: I direct your attention to clause 4. It is a lengthy one; I will not attempt to read it. Are there questions. Mr. Danforth?

Mr. Danforth: Mr. Chairman, I note that most of these regulations as prescribed are what one would normally expect to find under the provisions of this particular bill, but may I ask if there are, or may be made, regulations by the Governor in Council pertaining to a particular area which may be a plot or a property in which a pest may be found which might be detrimental and may spread.

For example, I am thinking of maybe just a real estate development, a farm that is subject to land-holding or something, and it may be found that there are or there could be a spread of nematode, for an example, that could be spread from this particular property. Are there provisions under this bill that the Governor in Council may require a person or persons to take the necessary precautions? Or under this bill can the administration perform these services which are deemed to be necessary and levy a fee against the owners in question?

Mr. Williams: I believe, Mr. Chairman, that the Act provides for all those authorities, if necessary. For example, the use of the land can be restricted under (g) of Clause 4.

Mr. Danforth: Pardon me. Restricted in which way?

• 1655

Mr. Williams: In terms of agricultural use. In other words, let us take your example of the nematodes. The golden nematode can only reproduce if certain host crops are grown on the land. It might be wise, therefore, under certain circumstances to say that these host crops could not be grown on nematode-infested land in order to speed up the clearance of the land.

Mr. Danforth: My proposition is that in using nematode as an example we know it is

[Interprétation]

plantes. Un accord international signé par le Canada, par lequel nous assurons certains pays que nous allons certifier certains produits pour l'exportation et eux font la même chose. C'est pour la protection réciproque des pays.

M. Douglas: La réponse est satisfaisante, monsieur le président.

L'article 3 est adopté.

Le président: L'article 4 maintenant. Il est très long, je n'essaiera pas de vous le lire. Y a-t-il des questions à poser? Monsieur Danforth?

M. Danforth: Monsieur le président, je constate que la plupart de ces règlements sont ce que nous pourrions peut-être nous attendre de trouver en vertu des dispositions d'une loi de ce genre. Est-ce que je peux demander s'il pourrait y avoir des règlements établis par le gouverneur en conseil relatifs à une région ou à une superficie particulière, une parcelle de terrain ou une propriété on trouverait un parasite et qui pourrait être nocif; il pourrait se propager.

Je songe, par exemple, à un lotissement ou à une ferme que l'on garderait en réserve pour le lotissement et où l'on pourrait trouver la propagation de certains parasites; y a-t-il des dispositions, en vertu de cette Loi, prévoyant que le gouverneur en conseil puisse exiger que la personne ou les personnes prennent les précautions voulues? Ou en vertu des dispositions de cette loi, est-ce que l'administration pourrait accomplir ces services nécessaires et ensuite en imputer les frais au propriétaire en question?

M. Williams: Je crois, monsieur le président, que la loi prévoit tous ces pouvoirs au besoin, que l'emploi ou l'usage de la terre peut être restreint en vertu du paragraphe g, de l'article 4.

M. Danforth: Restreint dans quel sens?

M. Williams: En ce qui concerne l'emploi aux fins de l'agriculture. Prenons par exemple, votre exemple des nématodes. Le nématode doré ne peut se propager que grâce à des plantes les favorisant. Il serait peut-être bon, dans certains cas, de dire que ces récoltes ne peuvent pas être cultivées dans des terres infestées de nématodes. Afin d'aider à débarrasser le sol de ce parasite.

M. Danforth: En employant l'exemple du nématode, nous savons qu'il est possible que

[Text]

possible for nematode to be spread by anyone walking across a lot where there is a nematode infestation. My questions are pertaining to land that would not normally be used for agriculture, but which is being held for buildings or land speculation or something of this nature. I am just wondering where the onus is. Certainly the land developer would have no incentive to provide the necessary precautions or the clean-up of the weeds or whatever would be necessary. What position is the Department in under this Act?

Mr. Williams: I believe Clause 8 provides the authority necessary in that under that Clause the Minister, if he believes that there is any pest in any area, may:

... order prohibit or restrict the transportation into or from that area or the movement therein of any plant or other matter that, in his opinion, is likely to result in the spread of such pest.

Mr. Danforth: You cannot take into or take out of, but...

Mr. Williams: And you are not allowed to move it within the area. The Minister can prohibit the movement within it, or the movement therein. For example soil: if there were to be a development in a non-agricultural area, but for example still had a nematode pest in it, under this Clause the Minister could prohibit the movement of soil from that area to another area, or the movement within the area of soil.

The Chairman: Mr. Pringle.

Mr. Pringle: I am interested in the airborne transmission of seeds or plant life which would be considered pests. Is there a weed control act that would take care of that so that airborne transmission, or transfer, whatever you like, would be controlled? I realize that it could not be moved, but how do you regulate the wind?

Mr. Williams: I suppose that we always have to deal with what it is possible to do, and certainly we cannot have the Minister issue an order that the wind cease to blow. We would have to deal with the case as it arose. For example, it might be necessary to kill all the vegetation on the land in order to prevent the wind spreading certain plant elements, or it might be necessary to completely bury it by deep ploughing. I do not know. It would depend upon the circumstances.

Mr. Pringle: Mr. Chairman, thank you very much.

[Interpretation]

quelqu'un traversant un champ infesté de nématodes pourrait propager l'épidémie. Mais, je parlais de terres qui ne sont pas utilisées aux fins agricoles et qui sont gardées en réserve aux fins de lotissements, de spéculation ou quelque chose de ce genre. De qui relève la responsabilité dans ce cas-là? La personne faisant le lotissement n'aurait certainement pas d'intérêt à nettoyer ses terrains. Et, alors, quelle est l'attitude du ministère, en vertu de cette loi?

M. Williams: Je crois que l'article 8 prévoit l'autorisation voulue, dans ce sens que le ministre, s'il a des raisons de croire à la présence d'un parasite dans une région délimitée

peut, par ordonnance, interdire ou restreindre, pour cette région, l'entrée ou la sortie ou le mouvement intérieur de toute plante ou autres matières qui, à son avis, entraînerait probablement la propagation de ce parasite.

M. Danforth: Il n'y a pas moyen d'entrer ou de sortir.

M. Williams: Oui, mais on peut aussi interdire le mouvement intérieur. Par exemple, la terre; s'il y a un lotissement dans une région non agricole mais où l'on trouve le parasite nématode. En vertu de cette disposition, le ministre pourrait empêcher le transport de terre à l'intérieur même de ce terrain ou de ce terrain à un autre terrain.

Le président: Monsieur Pringle.

M. Pringle: Je me demande ce qui en est au sujet de la propagation aérienne, de semences ou de parasites. Existe-t-il une loi qui empêcherait ce genre de propagation aérienne, ou, si vous aimez mieux, ce transfert aérien? Je comprends qu'on ne pourrait pas le transporter délibérément mais comment allez-vous contrôler le vent, tout de même?

M. Williams: Je suppose qu'il faut toujours parler de ce qu'il est possible de faire, monsieur le président. Nous ne pouvons certainement pas demander au ministre d'ordonner que le vent cesse de souffler. Il faudrait que nous étudions le cas s'il se présentait. Par exemple, il serait peut-être nécessaire d'éliminer toutes les plantes pour empêcher la propagation des parasites et de certains éléments de plantes par le vent. Il serait peut-être nécessaire aussi de les enterrer complètement par un profond labourage. Je ne sais pas, cela dépendrait des circonstances.

M. Pringle: Merci beaucoup, monsieur le président.

[Texte]

Mr. Olson: At Clause 4 (c) you will see that it takes care of the treatment deemed necessary which will be prescribed by regulations.

Clause 4 agreed to.

On Clause 5—*Inspectors*

Mr. Danforth: May I ask if the explanation given under Bill No. C-155 is applicable to Bill No. C-154 where we were informed that this means that the Minister may designate any qualified person from the departments, say plant pathology or department of entomology, or any qualified technician who may be involved in this inspection. Is my understanding correct under this term?

The Chairman: Mr. Phillips.

Mr. Phillips: Mr. Chairman, this provides for the designation of qualified people. It does not provide for the hiring of staff. The staff would have to be hired under the Public Service Employment Act. This just provides authority for the Minister to designate these qualified people. We would use the types you indicated, Mr. Danforth, and on occasion provincial inspectors are used and designated under this legislation to assist in the work.

Clauses 5 and 6 agreed to.

• 1700

On Clause 7—*Obstruction of inspector*

The Chairman: Mr. McKinley.

Mr. McKinley: Mr. Chairman, what about a person engaged in experimental work in the growing of seed and grain. Would he be allowed to move samples from one of his own farms to another farm?

Mr. Williams: Mr. Chairman, if it was a prohibited material or a prohibited plant, he would not be allowed to move it other than under permit.

Mr. McKinley: Perhaps I did not make myself clear. What if he moved this from one farm to another and both farms were his?

Mr. Williams: This would doubtless be specified in the permit that he was given to start with, as to what geographical locations the permit applied to.

Mr. McKinley: He would have to apply and receive a permit?

Mr. Williams: That is correct, yes.

Mr. Olson: To have a product in the first instance that was prohibited generally, as Mr. Williams has pointed out, if he were to move

[Interprétation]

M. Olson: Et à l'article 4 (c) vous verrez que l'on prend soin du traitement nécessaire qui peut être prescrit par un règlement.

L'article 4 est adopté.

Article 5—*Inspecteurs*.

M. Danforth: Monsieur le président, puis-je demander si l'explication donnée pour le Bill C-155 s'applique aussi au Bill C-154, parce que, on nous avait dit que le ministre pouvait nommer toute personne compétente faisant partie du ministère, de la pathologie des plantes, la direction de l'entomologie ou toute autre section, si j'ai bien compris.

Le président: Monsieur Phillips.

M. Phillips: Monsieur le président, cette disposition prévoit que le ministre désigne une personne compétente et non pas l'engagement de personnel. Le personnel devra être engagé en vertu de la *Loi sur la Fonction publique du Canada*. Cela donne tout simplement l'autorisation au ministre de nommer ces personnes compétentes. Et, nous emploierions ceux que vous avez désigné et en plus, des inspecteurs provinciaux qui seraient désignés, en vertu de la présente loi, pour effectuer le travail.

Les articles 5 et 6 sont adoptés.

Article 7—*Obstruction faite à l'inspecteur*.

Le président: Monsieur McKinley.

M. McKinley: Et que dire d'une personne qui ferait des expérimentations pour la culture de certains grains ou de certaines plantes. Aurait-elle le droit de transporter des échantillons de sa propre ferme à une autre?

M. Williams: S'il s'agit d'une matière ou d'une plante interdite, il n'aurait pas, il ne pourrait pas le faire sauf s'il a un permis.

M. McKinley: Je me suis mal exprimé, je veux dire s'il va d'une de ses fermes à l'autre.

M. Williams: Cela serait sans aucun doute déterminé par le permis qui lui a été remis qui comprend aussi le lieu géographique auquel s'applique le permis.

M. McKinley: Il doit demander un permis.

M. Williams: C'est exact.

M. Olson: S'il avait d'abord un produit qui serait interdit d'une façon générale, s'il devait déplacer ce produit du premier lieu à un

[Text]

it from the location that was in the first permit, of course that would be an extension of what was in the permit, if it were not already laid down.

The Chairman: Mr. Douglas.

Mr. Douglas: What is the reason for the different wording in these almost identical clauses? I am comparing Clause 8(2) of Bill No. C-155 with Clause 7(2) in this Bill, where in Bill No. C-155 it reads:

No person shall knowingly make a false or misleading statement...

and in Bill No. C-154, Clause 7(2) the word "knowingly" is omitted. Subclause (2) of Clause 7 is much shorter than subclause (2) of Clause 8 in Bill No. C-155. What is the explanation for drafting two things, which I presume are supposed to give the same powers, in such a different way?

The Chairman: One was written on Monday and the other was written on Friday.

Mr. Douglas: They were getting tired.

An hon. Member: I suggest that the word "knowingly" ought to be in there.

Mr. Newman: Perhaps so. I think this might have been an omission by the draftsmen. The word "knowingly" connotes the idea of *mens rea* which is a term well known in criminal law. Without the word "knowingly" a person could well be convicted even if he did not have the required guilty intent.

The Chairman: It would then read, "No person shall knowingly make a false . . ." Would someone care to move an amendment?

Mr. Douglas: I so move.

The Chairman: Are you ready for the question? All those in favour of the insertion?

Clause 7 as amended agreed to.

Clause 8 agreed to.

On Clause 9—*Seizure*

Mr. Peters: I take the same objection on Clause 9 as I did on the previous one that it appears we are giving too much power to the inspector without any limitations. The normal protection of the Bill of Rights does not appear to apply.

The Chairman: Are there any comments?

[Interpretation]

autre, ce serait sans doute, c'était une extension, un prolongement de la portée du permis qu'il avait déjà.

Le président: Monsieur Douglas.

M. Douglas: Je me demande pourquoi le libellé est différent alors qu'on a des articles presque identiques, si l'on revient à l'article 8 (2) du Bill C-155 pour le comparer à 7 (2) dans cette section. On dit dans le Bill 155:

Nul ne doit gêner ou empêcher sciemment...

Ici, dans l'article 7, on a enlevé le mot sciemment. Je me demande pourquoi on n'a pas retenu le mot sciemment dans le Bill 154. Je me demande pourquoi on emploie un libellé différent puisqu'on veut donner des pouvoirs à peu près semblables dans les deux cas.

Le président: Je crois qu'un projet de loi a été rédigé le lundi, l'autre a été rédigé vendredi.

M. Douglas: Ils commençaient à être fatigués.

Une voix: Il me semble que le mot «sciemment» devrait être présent.

M. Newman: Je crois que c'est sans doute une omission, une erreur, il faudrait que le mot sciemment y soit ajouté. Le mot sciemment donne l'idée de la connaissance réelle en droit criminel. Sans le mot sciemment, si quelqu'un n'a pas fait quelque chose sciemment il ne pourrait difficilement être trouvé coupable.

Le président: Par conséquent, on devra lire:—nul de doit sciemment... Il me faut une proposition en conséquence.

M. Douglas: J'en fais la proposition.

Le président: Êtes-vous prêts à passer à la mise aux voix? Ceux qui sont en faveur de l'insertion?

L'article 7 modifié est adopté.

L'article 8 est adopté.

Article 9—*Saisie*.

M. Peters: Je m'objecte de la même façon à l'article 9, que je l'ai fait lors de la loi précédente. Il me semble que l'on donne trop de pouvoir aux inspecteurs sans mettre de limites précises. La protection normale des Droits de l'Homme ne semble pas s'y prêter.

Le président: Y a-t-il quelques commentaires là-dessus?

[Texte]

Mr. Williams: Clause 9(2)(c) does place some limitations on this seizure in other words, if he does seize material, he has to take action within a certain time or else release it from detention.

• 1705

Mr. Danforth: Mr. Chairman, in regard to this 90 day limitation some goods would be absolutely valueless after 90 days.

Mr. Williams: Mr. Chairman, that is why, of course, there are provisions, for the payment of compensation in this Bill.

Mr. Olson: That is something we did not have before this.

The Chairman: Are there further questions? Mr. Douglas.

Mr. Douglas: Is there not quite an essential difference between this Bill and the other one? In the other Bill the prime mover would be the Food and Drug Directorate and here the impetus for this whole thing is completely within the Department.

Mr. Williams: That is correct, Mr. Chairman. The like authority is provided for seizure and detention under the Food and Drugs Act as it relates to the compensation bill, the bill that we have just dealt with.

The Chairman: Are there further questions?

Clause 9 agreed to.

On Clause 10—*Punishment*

The Chairman: Are there any questions? Mr. Danforth.

Mr. Danforth: Clause 10 almost resembles the proposed amendment that I made under Bill No. C-155 and I see it is accorded to this Clause. Why the difference?

Mr. Williams: I think the difference here, Mr. Danforth, is that it covers generally the violation of any provision of this Bill, but it does add to it any order made under Clause 8 which deals with the question that you raised about how to control the movement from, within and to particular areas. It gives that order of the Minister in this specific case particular authority to control people who might wish to, in essence, break a special quarantine area laid down by the Minister.

The Chairman: Are there further questions?

[Interprétation]

M. Williams: Je crois que si vous voyez la teneur de l'article 9, dans le contexte de 9 (2) C, qui impose certaines limitations quant à la saisie, l'inspecteur doit agir à l'intérieur d'un certain laps de temps ou alors lever la saisie.

M. Danforth: Il y a une limite de 90 jours pour la saisie de certains produits, c'est-à-dire que ces produits peuvent être sans valeur après cette date.

M. Williams: C'est la raison pour laquelle, monsieur le président, il y a des dispositions pour le paiement d'indemnités, dans le cadre de cette loi.

M. Olson: C'est une disposition que nous n'avions pas auparavant.

Le président: Y a-t-il d'autres questions? Monsieur Douglas.

M. Douglas: Y a-t-il vraiment une différence essentielle entre cette loi et la précédente? Dans l'autre loi, le principal intéressé était le Directeur des aliments et des drogues, tandis qu'ici, l'intéressé est le ministère même.

M. Williams: C'est exact, M. le président. L'autorité des saisies relève de la Loi sur les aliments et les drogues, comme dans le cas du bill sur l'indemnisation que nous venons d'examiner.

Le président: Y a-t-il d'autres questions?

L'article 9 est adopté.

Article 10—Peine.

Le président: D'autres questions? Monsieur Danforth?

M. Danforth: L'article 10 ressemble de façon presque analogue à la modification que j'avais proposée au terme de l'article 1, du Bill C-155. Je me demande pourquoi cette différence?

M. Williams: Je crois que cette fois-ci, il s'agit d'une disposition générale, qui veut que, outre les délits à tout article de cette loi, on ajoute à n'importe quel règlement découlant de l'article 8, qui traitait justement de la question que vous avez soulevée concernant le contrôle du mouvement de et vers, ou en dehors, de certaines régions. Par conséquent, lorsqu'on donne au ministre l'autorité de contrôler le mouvement de certaines personnes qui voudraient intervenir ou traverser une zone mise en quarantaine.

Le président: D'autres questions?

[Text]

Mr. Danforth: Yes, Mr. Chairman. This brings up the whole point that I raised before. I appreciate the explanation that has just been given, but it states right here:

...fails to comply with or violates any provision of this Act or the regulations... then it states:

...the regulations or any order made by the Minister under section 8...

Is it necessary to designate a section?

It states: "Any provision of this Act."

Mr. Olson: I am not sure that we need the words "or the regulations" in there; that may be redundant. However, as has been pointed out there is a significant difference here with respect to the order that may be given with respect to designating a quarantine area where there was no similar provision in the other Bill. The order would not be, as I understand it, part of the Act nor part of the regulations, and therefore it is pointed out. I think the words "or the regulations" may be redundant.

Mr. Danforth: Mr. Chairman, I will just make this observation and then I will leave the matter. Under the Punishment Clause in the previous Bill and in this Bill it states that anyone is liable under this Act who violates any provision. I interpret that to mean the provisions or regulations as will be set out in the administration of this Act. That was my whole point in trying to limit it in the previous Bill. Now we see the same provision here with an addition.

Using the Minister's words I think it is completely redundant when it points out a specific clause or a specific section and puts particular emphasis on it. I have no fault to find with that emphasis on that particular Clause because I am in accord with it, but it just seems to me that the two are not set out in the same fashion as was indicated earlier.

• 1710

Mr. Williams: I do not think I could argue, Mr. Chairman, as to whether or not this is a legal requirement. I believe that the intent is to make quite certain that the ministerial order that covered a reasonable belief could be accorded the same penalties as an actual provision of the act, and I think it was put in

[Interpretation]

M. Danforth: Cela soulève tout le point que j'avais soulevé auparavant. J'apprécie fort l'explication que M. Williams vient de nous donner, mais on dit, en toutes lettres ici:

Toute personne qui viole n'importe quelle disposition de la loi ou les règlements.

puis:

...Les règlements établis par le ministre en vertu de l'article 8.

Est-il nécessaire de désigner un article en particulier?

Il est écrit: toutes dispositions de cette loi.

M. Olson: J'ignore si nous avons besoin du mot «règlement», mais il y a sûrement une différence considérable dans ce cas-ci quant à l'ordonnance qui pourrait être donnée lorsqu'un inspecteur désigne une région de quarantaine. Car il n'y avait pas de dispositions analogues dans la loi précédente. Sauf erreur, l'ordonnance ne ferait pas partie de la loi, ni des règlements. Par conséquent, il me semble que les mots «ou le règlement» peut être redondant.

M. Danforth: Je vais simplement faire cette observation et je vais laisser tomber la question. Mais, il me semble qu'au terme de l'article sur les peines et infractions dans les lois précédentes et dans cette loi-ci, lorsqu'on déclare que: toute personne est passible de condamnation au terme de la loi, si elle viole n'importe quelle disposition.

D'après mon interprétation, cela signifie: les règlements ou les dispositions seront établis dans l'application de la loi. C'est la raison pour laquelle j'essayais de limiter cela dans la loi précédente. Maintenant, nous voyons la même disposition avec, en plus de cela, une addition. Selon les mots du ministre, il est tout à fait redondant. Lorsqu'on désigne un article particulier, on met l'accent sur cet article. Je ne vois pas pourquoi on ne le ferait pas. Cet article correspond à mon précédent mais il me semble que les deux ne sont pas explicités de la même façon qu'on l'a indiqué plus tôt.

M. Williams: Je ne pense pas que je puisse trouver ou non qu'il s'agit là d'une exigence vitale, d'ordre juridique. Il s'agissait plutôt de s'assurer que l'ordonnance ministérielle pourrait recevoir les mêmes sanctions, les mêmes peines qu'une disposition de la loi. Je crois que c'est la raison pour laquelle il l'a explici-

[Texte]

there to make it absolutely clear because there is some difference in respect of that Clause 8.

I think if one reads it carefully it gives the Minister powers, where he has a reasonable belief that this pest may exist, to put out a ministerial order restricting taking certain action against people who might wish, as I said, earlier, to move soil and so forth. I think it was simply to ensure that this was accorded the same maximum penalties as were actual offences against the act itself but I am not commenting on whether it is legally absolutely necessary or not.

Mr. Gleave: Mr. Chairman, how does it happen that the two years maximum is the magical word here? It seems to keep recurring. Why is this the penalty decided in all these cases whether you decide to use chemical poison or play around with some plants that you should not be playing around with?

Mr. Newman: Perhaps I might make one comment. Two years has importance with respect to where the term of imprisonment is to be served in case the maximum penalty is imposed. If there is a penalty of two years imprisonment, that means the person may serve his term in a federal penitentiary. If it is for less than two years, he is not eligible for a holiday at federal government expense.

Mr. Gleave: So you want to raise him to the proper status, do you? Well, I do not find it very funny to put two years in an act so a man can get to the penitentiary instead of sitting in an ordinary jail.

Mr. Olson: Well, Mr. Chairman, I do not think anyone here finds it very funny to write law so that the intent of that law is, in fact, enforceable. There is nothing funny about it in my opinion, either, but it is one of the obligations that lawmakers have.

Mr. Gleave: Yes, but I still do not follow, Mr. Chairman. If my remarks were discourteous I—

Mr. Olson: They were not.

Mr. Gleave: I think there ought to be a better reason than this to decide to put two years in an act. That is all. A judge on a bench at any time in making a decision as to sentencing someone is deciding on the gravity

[Interprétation]

tée, car il y a peut-être quelques différences en ce qui a trait à l'article 8.

Si vous lisez attentivement l'article 8, on donne certains pouvoirs au ministre, lorsqu'il a des convictions raisonnables que le parasite existe, pour émettre une ordonnance ministérielle ou prendre certaines mesures contre ceux qui voudraient faire ceci ou cela, simplement pour assurer que cela soit, ait la même sanction maximum.

M. Gleave: Monsieur le président, comment se fait-il qu'un maximum de deux ans devient le mot magique ici? Est-ce que ça va être deux ans continuellement, non pas le maximum, on dit simplement deux ans, comment se fait-il que ce soit là la sanction qui a été arrêtée dans tous les cas, qu'on utilise des poisons chimiques ou qu'on joue avec certains produits dangereux, c'est toujours la même sanction?

M. Newman: La raison pour la période de deux ans importe selon l'endroit où la prison ou l'incarcération doit avoir lieu. Si l'emprisonnement maximum est mettons accordé, on n'aime pas employer le mot accorder, est imposé, mettons. S'il y a une peine de deux ans de prison, cela veut dire que le prévenu peut accomplir cette peine dans un pénitencier fédéral, mais si c'est moins que deux ans, il n'est pas admissible d'être incarcéré aux frais du gouvernement fédéral.

M. Gleave: Vous voulez lui donner un statut pertinent n'est-ce pas, mais je ne trouve pas cela très drôle de donner deux années à quelqu'un simplement pour envoyer quelqu'un à un pénitencier au lieu de l'envoyer dans une prison ordinaire.

M. Olson: Monsieur le président, je ne pense pas que qui ce soit ici pense que ce soit amusant de rédiger des lois de sorte que l'intention de cette loi soit applicable. Il n'y a, à mon avis, rien non plus de très amusant là-dedans. Mais c'est une des obligations du législateur.

M. Gleave: Mais, monsieur le président, je ne comprends toujours pas. Si mes observations ont manqué de courtoisie. . .

M. Olson: Non.

M. Gleave: Je crois qu'il devrait y avoir une meilleure raison que cela pour décider d'inscrire dans la loi une disposition imposant une peine de deux ans. Un juge qui siège à un tribunal, lorsqu'il arrête une décision, se

[Text]

of the offence, and I would assume for an act the maximum he is given would have relation to the gravity of the circumstances that surround this act.

Now, it may be more serious to carry around plants that are going to have a potential to destroy a portion of Canadian agriculture than it is to distribute chemicals that are going to poison somebody—that is somebody else's judgment—but I think there should be a reason why, in either of these bills, you say that the man who violates the act shall be subject to two years if we are going to put ourselves in the position of making these kinds of judgments.

Mr. Phillips: Mr. Chairman, I would like to make some comments from my understanding of the situation as I have received it from a law officer of the Crown, and Mr. Newman can correct me if I am in error. My understanding of the two parts of this is that in order to provide for the offences to cover the various situations, and you come to an indictable offence, you have to put the two years in. Without putting some limitation there, you would be exposed to a much greater penalty under the Criminal Code.

• 1715

This is actually restrictive in bringing it back to two years in terms of indictable offences, and this is the consideration; it is restrictive in that sense. Now, you can argue whether it should be two or should be one or should be three, but putting two years in here is a restrictive action and it is to cover cases of fraud, and willful matters. Very rarely is it used, and it is a summary type that is used.

Mr. Gleave: Did I hear an explanation before of whether you need to use an indictable offence in both cases?

Mr. Phillips: Very rarely have we had to use the case. Indeed, it is very difficult to prove an indictable offence because of the fraudulent or willful aspect of it and in administering various laws that have this in when we go to lawyers and say, "Look, this is a very serious offence", they say, "Yes, but it is not an indictable offence. You would have to prove that it was with intent he did this, he willfully did it, an attempt to defraud".

So rarely does this occur, but with it there an occasion arose where through deceit or willful action they brought in material that could damage agriculture or, in the other case, willfully and so on.

Mr. Douglas: With regard to this two year figure that appears when we pass this legisla-

[Interpretation]

prononce sur la gravité du délit et je suppose que dans la loi, le maximum que vous appliquez se rattache à la gravité des circonstances et du délit.

Il se peut qu'il soit plus sérieux de transporter des plantes qui peuvent avoir le pouvoir de destruction, qui peuvent détruire une partie de l'agriculture canadienne que de distribuer des produits chimiques qui peuvent empoisonner les gens. Mais il devrait y avoir une raison pour laquelle dans l'une ou l'autre de ces lois, on dit que celui qui commet une infraction à la loi est passible de deux années d'emprisonnement, si nous voulons arrêter ce genre de chose.

M. Phillips: Monsieur le président, oui, j'aimerais seulement faire certaines observations. Si je comprends bien la situation, et M. Newman peut me corriger si je me trompe, si je comprends bien, il y a deux parties à cette affaire. Afin que les délits puissent couvrir les diverses situations possibles notamment dans le cas d'un délit passible de sanction, il faut imposer deux années, car autrement on s'exposerait à des sanctions beaucoup plus graves aux termes du Code criminel, de fait, cela serait restrictif.

On ramène le maximum à deux ans pour les délits passibles de sanction. Voilà la considération qui entre en ligne de compte, il s'agit d'une peine restrictive, on peut se demander si ça devrait être un, deux ou trois, il s'agit d'une mesure restrictive. C'est pour couvrir des cas de fraude ou de fausse déclaration.

M. Gleave: Est-ce qu'on a donné des explications auparavant? Est-ce que vous définissez le cas de délit passible de sanction?

M. Phillips: Il est très difficile de prouver les délits passibles de sanctions, car l'aspect frauduleux ou l'aspect conscient est difficile à prouver, lorsque nous administrons les lois qui comportent une disposition de ce genre, lorsque nous allons consulter des avocats et que nous disons, c'est là un délit très sérieux, et qu'on répond: Oui, je pense bien, mais ce n'est pas un délit passible de sanction. Il faut prouver que c'est avec intention que le prévenu l'a fait. Il a fait une fraude sciemment, c'est très rare que cela se produise mais néanmoins, il faut qu'on montre que cela a été fait sciemment, de transporter certaines matières qui sont nuisibles à l'agriculture.

M. Douglas: En ce qui a trait au chiffre de deux ans, si nous l'adoptons, et nous avons

[Texte]

tion, if we pass it—and we did pass C-155—we are giving our stamp of approval to that as an appropriate maximum term for offences that might be committed under this act. I would be interested in hearing rationale for that. Why is it two years rather than, say, one year or eighteen months or three years?

Mr. Newman: Mr. Chairman, under the Criminal Code—and I guess I should read from this book. It is a book on Canadian Criminal Procedure by Salhany. It is not the last word, but I think it is accurate, and it says, that under the Criminal Code, there are five general divisions of maximum sentences of imprisonment for indictable offences. They are life, 14 years, 10 years 5 years and 2 years.

There are these five categories and the lowest of all the categories for indictable offences is having a maximum penalty of two years, and I think it is in accordance with the provisions of the Criminal Code that you are providing for an indictable offence but it is for the lowest category of indictable offences.

The Chairman: Are there further questions?

Clause 10 agreed to.

On Clause 11—*Trial of offences.*

Mr. Danforth: Mr. Chairman, may I ask for an explanation of this? I am not just sure to what it pertains when they speak of,

A complaint or information in respect of an offence...may be...tried or determined by a magistrate...

When they speak of an offence do they mean an offence against a regulation of this Act, or what is meant by an offence?

Mr. Olson: Mr. Newman can explain further, but I think it determines the jurisdiction as far as the court is concerned.

Mr. Newman: Yes, this is the purport of this Clause. I think that the honourable member might be confused by the words "complaint or information". These words refer to the document that is filed with the court which sets the proceedings in action. It is either called a complaint or an information, depending on which part of Canada you are in.

Mr. Olson: This is the charge, is it not?

Mr. Newman: The complaint or the information is the actual piece of paper setting out the charge.

29653—6

[Interprétation]

adopté le bill C-155, nous approuvons cela comme peine maximum pour les délits qui pourraient être commis aux termes de la loi. J'aimerais avoir le raisonnement, les raisons dont on s'inspire, pourquoi deux années plutôt qu'une année, dix-huit mois ou trois mois comme sentence maximum?

M. Newman: Monsieur le président, aux termes du Code criminel, je crois que je devrais vous lire un extrait de cet ouvrage sur la procédure criminelle, ce n'est pas la dernière autorité, mais je crois que c'est précis.

Il y a cinq divisions de sentence maximum d'emprisonnement pour les délits passibles de sanctions. A vie, emprisonnement à la vie, 14 ans, 10 ans, 5 ans et 2 ans.

Il y a cinq catégories, la catégorie inférieure, c'est donc un maximum de 2 ans pour des délits passibles de sanctions. Je crois que cela est tout à fait d'accord avec les dispositions du Code criminel. On crée un délit passible de sanction criminelle mais c'est pour la catégorie la plus basse.

Le président: Y a-t-il d'autres questions?

L'article 10 est adopté.

Article 11—Instruction des infractions.

M. Danforth: Puis-je demander une explication de cette disposition? J'ignore au juste à quoi cela se rattache lorsqu'on dit:

un magistrat essayera de déterminer s'il y a eu fausse information, plainte ou dénonciation,

s'agit-il d'un délit contre une disposition de la loi, qu'est-ce que c'est que le délit exactement ici ou l'infraction?

M. Olson: Monsieur Newman pourrait peut-être vous donner plus d'explications mais je crois que cela détermine la juridiction de la Cour.

M. Newman: Oui, justement. A propos de cet article, je crois que le député se demande peut-être ce que veut dire plainte ou dénonciation. Ces expressions ont trait aux documents qui sont déposés au Tribunal et qui déclenchent la poursuite, soit par suite d'une plainte, soit par suite d'une dénonciation selon la région du Canada où l'on se trouve.

M. Olson: Il s'agit de l'accusation, n'est-ce pas?

M. Newman: C'est de fait le document qui établit l'accusation.

[Text]

Mr. Danforth: I appreciate this Mr. Chairman, but my question is whether a complaint or information would be based on an infringement of the regulations of this act as laid down.

• 1720

Mr. Williams: The act, its regulations or an order of the Minister under Clause 8.

Mr. Danforth: My point is this: A man who imported an infestation would not be guilty of an offence provided he complied with the regulations as specified in this act, quarantine, and so on. The very fact that he did import would not be considered an offence?

Mr. Newman: No.

Mr. Danforth: Provided it was under the regulations of this Act.

Mr. Olson: That is correct.

Mr. Williams: I think the purpose here is that the offence might take place at Halifax, for example, and it might be much better for everybody concerned if he were tried in Saskatchewan if he were a resident of Saskatchewan and judge's territorial jurisdiction covered Saskatchewan, but the actual offence might have taken place at the port of Halifax. It might have been at a boat or it might have been at the airport in Montreal, for example, and I think it would be most difficult if it insisted that everybody went back to the place where the offence took place.

Mr. Danforth: I appreciate that.

The Chairman: Are there further questions?

Mr. Lind: Clause 11 reads:

A complaint or information in respect of an offence under this Act may be heard, tried or determined by a magistrate or a justice...

Is this a justice of the peace?

Mr. Newman: It is a justice as defined in the Criminal Code.

Mr. Lind: Well, what is—

Mr. Newman: I am sorry; I do not have a copy of the Criminal Code with me.

Mr. Lind: Well, I am not a lawyer. I do not know what you are talking about.

Mr. Newman: It might well mean a justice of the peace. I could check on that point and let you know if you wish.

[Interpretation]

M. Danforth: Oui, mais s'agit-il d'une plainte ou d'une dénonciation fondée sur l'infraction prévue au règlement de la loi, aux dispositions de la loi?

M. Williams: Ou d'une ordonnance du ministre aux termes de l'article 8.

M. Danforth: Le fait que quelqu'un importe par exemple une matière contaminée, est-ce que cela pourrait être un délit contraire aux dispositions de la loi, le fait que quelqu'un importe, cela ne serait pas un délit par conséquent, pourvu que cela relève des dispositions de la loi, voilà quelle était ma question.

M. Newman: Non.

M. Danforth: Pourvu que cela tombe sous le coup de la loi.

M. Olson: C'est exact.

M. Williams: La poursuite peut avoir lieu à Halifax par exemple et il vaudrait peut-être mieux que le procès ait lieu en Saskatchewan, si le prévenu habite la Saskatchewan, mais le délit peut fort bien avoir eu lieu au port d'Halifax, soit à la sortie d'un bateau, soit à l'aéroport de Dorval, par exemple, et je crois qu'il serait très difficile si l'on insistait pour que le procès ou la poursuite ait lieu là où le délit a été commis.

M. Danforth: Oui, je comprends.

Le président: D'autres questions?

M. Lind: L'article 11:

Une plainte ou dénonciation relative à une infraction prévue par la présente loi peut être entendue instruite ou jugée par un magistrat ou un juge de paix...

M. Newman: C'est un juge de paix tel que défini dans le Code criminel.

M. Lind: Quel est...

M. Newman: Je n'ai pas d'exemplaire du Code criminel.

M. Lind: Je ne suis pas avocat, je ne sais pas de quoi vous parlez de toute façon.

M. Newman: Il se peut fort bien que cela signifie un juge de paix, il faudrait que je le vérifie et que je vous le fasse savoir, si vous le voulez.

[Texte]

Mr. Clermont: Mr. Chairman, I would say that might be *un juge de paix*.

Mr. Newman: Yes, it would seem to me that it would be a justice of the peace.

Mr. Lind: Then further, if this charge is laid at 5 o'clock on Friday afternoon, can this fellow be detained by a justice of the peace?

Mr. Newman: That is a very complicated question with respect to arrest and detention. I think it would be most unusual for anyone to be arrested for a violation under the provisions of this type of statute. Only in rare cases, very rare cases, would this occur. The normal way is to serve a summons as you would for a traffic violation. At least in offences that are conducted by the federal Department of Justice arrest is very rarely used except in narcotics cases, and so on. In an administrative type of statute such as this arrest would not be the normal procedure.

Mr. Lind: What about cases in connection with the growing of poppies or marijuana?

Mr. Newman: This would be—

An hon. Member: It is different—in the Food and Drugs Act.

Mr. Lind: It is in the Food and Drugs Act.

The Chairman: Are you finished, Mr. Lind?

Mr. Lind: Yes.

The Chairman: Mr. Gleave?

Mr. Gleave: Mr. Chairman, I do not see why you specify justice of the peace. Most of them have very little knowledge in law. Why not leave them out and why not let the information be laid before a magistrate who has some knowledge in law?

Mr. Olson: I think, Mr. Chairman, we would like to check that.

Clause 11 stood.

On Clause 12—Appeal.

Mr. Pringle: Clause 12, in part, says:

Where the compensation awarded to a person for any plant or other matter destroyed or prohibited or restricted from sale or for any restriction of the use of

29653—6½

[Interprétation]

M. Clermont: Je pense qu'il s'agit du juge de paix.

M. Newman: Oui, c'est ce qu'il me semble.

M. Lind: Plus loin, monsieur le président, j'ajoute que si une plainte est déposée à cinq heures le vendredi soir, est-ce qu'un juge de paix peut détenir quelqu'un pendant la fin de semaine?

M. Newman: C'est là une question très compliquée. Concernant les arrestations et les détentions, je crois qu'il serait très inusité que quelqu'un soit appréhendé pour avoir enfreint ce genre de loi. Il s'agirait d'un cas extrêmement rare, la procédure normale c'est d'avoir une sommation comme dans le cas des infractions au Code de la route, notamment dans le cas d'une enquête faite par le ministère de la Justice. On procède très peu aux arrestations, sauf dans le cas du commerce des narcotiques, mais dans un cas de loi administrative comme celle-ci, je crois que l'arrestation ne serait pas la procédure normale.

M. Lind: Dans le cas de transport de marijuana ou d'autres narcotiques? Cela relève...

M. Newman: Cela serait...

Une voix: C'est différent dans la Loi sur les aliments et drogues.

M. Lind: C'est dans la Loi sur les aliments et drogues.

Le président: Avez-vous terminé monsieur Lind?

M. Lind: Oui.

Le président: Monsieur Gleave?

M. Gleave: Je ne vois pas pourquoi monsieur le président, on parle d'un juge de paix. La plupart des juges de paix connaissent très peu le droit, pourquoi ne pas les éliminer, pourquoi ne pas laisser la plainte ou dénonciation être portée devant le magistrat qui connaît le droit?

M. Olson: Je crois, monsieur le président, que nous aimerions vérifier cela.

(L'article 11 est réservé.)

Article 12—Appel.

M. Pringle: L'article 12 dit:

12. (1) Lorsque l'indemnité, accordée à une personne pour une plante ou autre matière détruite ou dont la vente est interdite ou restreinte ou pour une res-

[Text]

any property or premises is less than the maximum compensation prescribed under this Act...

I am having difficulty locating where the maximum compensation is stated. Could I have that paragraph, sir?

• 1725

Mr. Williams: Clause 4(h) is the one, and it reads as follows:

4. (h) for the awarding of compensation by the Minister for any plant or other matter destroyed or prohibited or restricted from sale or for any restriction of the use of any property or premises pursuant to this Act, and prescribing the terms and conditions upon which any such compensation may be awarded and the maximum amounts of any such compensation;

Mr. Pringle: So we do not really state the maximums, we leave that to the Minister, and this last subclause then refers to the maximum that the Minister may prescribe. Is that correct?

Mr. Williams: Prescribed by the Governor in Council, but awarded by the Minister.

Mr. Pringle: Yes, that is right. I am sorry.

Mr. Williams: The limitations will be prescribed by the Governor in Council but it will be awarded by the Minister.

Mr. Pringle: Thank you, Mr. Chairman.

The Chairman: Are there any further questions?

Mr. Danforth: Mr. Chairman, I appreciate the intent of this particular clause but as I read it, the appeal deals only with cases where, in the opinion of the injured party, the compensation awarded is not great enough. However, I have knowledge of instances where there were grave doubts in the minds of persons involved whether or not their commodities were impounded or quarantined justifiably. Is there a clause in this bill under which a person may appeal the decisions of an inspector or inspectors in this particular instance? I know that there has been an involvement with both provincial and federal inspectors. I do not see in this bill any clause making it possible for an injured party to appeal the decision of an inspector to quarantine or carry out any other provisions of this proposed act.

Mr. Williams: Mr. Chairman, I believe that is correct. There is not provision other than

[Interpretation]

triction quelconque de l'utilisation d'un bien ou local, est inférieure à l'indemnité maximum prescrite en vertu de la présente loi

J'ai peine à trouver où l'on parle d'indemnité maximum dans la Loi. Qui peut me citer le paragraphe?

Mr. Williams: Je crois que c'est 4, paragraphe h:

4. h) prévoyant l'attribution par le Ministre d'une indemnité pour une plante ou autre matière détruite ou dont la vente est prohibée ou restreinte ou pour toute restriction à l'utilisation d'un bien ou local, en conformité de la présente loi, et prescrivant les modalités selon lesquelles cette indemnité peut être accordée ainsi que le montant maximum d'une telle indemnité;

Mr. Pringle: Nous n'indiquons donc pas le maximum, nous laissons au ministre le soin de déterminer le montant maximum. Est-ce exact?

Mr. Williams: Prescrit par le gouverneur en conseil.

Mr. Pringle: Vous avez raison.

Mr. Williams: Le montant serait déterminé par le gouverneur en conseil et accordé par le ministre.

Mr. Pringle: Merci, monsieur le président.

Le président: D'autres questions? Monsieur Danforth.

Mr. Danforth: Monsieur le président, je peux comprendre quelles sont les intentions de cet article. Mais l'appel ne porte que sur les cas où, de l'avis de la personne lésée, l'indemnité est suffisante. Mais je songe à des cas où les personnes en cause se demandaient si la mise en quarantaine des produits était justifiée. Y a-t-il un article de ce bill qui permet à une personne d'interjeter appel de la décision faite par un ou plusieurs inspecteurs? Je sais que dans certains cas cela intéresse à la fois les inspecteurs provinciaux et les inspecteurs fédéraux. Je ne vois aucune disposition dans la Loi qui permette à une partie d'interjeter appel de la décision d'un inspecteur d'imposer la quarantaine ou une autre disposition de ce projet de loi.

Mr. Williams: C'est exact, je crois, monsieur le président. Il n'y a pas de disposition, sauf

[Texte]

the unstated one, that he can appeal to the Minister. However, no court can overrule, as I understand it, any decision made by the Minister or by the department, with the Minister's authority, in respect of the imposition of quarantines. The law has given to the Minister the right to provide quarantines.

Now he does have the right of appeal against no compensation. If, for example, he claims compensation on the grounds that his land was incorrectly impounded and the Minister rejects that claim he can then appeal the fact that he received no compensation or insufficient compensation.

Mr. Danforth: Mr. Chairman, this is not my point.

Mr. Williams: I appreciate that Mr. Danforth. I would say there is none, that the proposed act gives the Minister the ultimate power to reach a decision whether or not land should be placed under quarantine, for example.

Mr. Danforth: I will use an example. Suppose an importer imports 5,000 rose bushes for sale to retail outlets and at the port of entry an inspector places his entire shipment under detention. If the person owning the shipment in transit is under the impression that he has been detained without justice, what recourse has he? Has he an appeal, can he request that the goods be given a subsequent inspection, can he ask that other inspectors be brought in—what course of action is open for him to follow?

Mr. Williams: As I say, Mr. Danforth, he has, rightly or wrongly—I am stating the case now—no appeal outside the department. He can appeal to the Minister obviously, although that is not stated as a right in this bill. Obviously he can appeal to the Minister. But his protection lies in the fact that if this material has been incorrectly quarantined and he has suffered damage he can appeal to the courts the fact that the compensation he did receive was insufficient for the damage that he suffered, or that he received no compensation.

• 1730

It does not give a court or any outside body authority to override the decision of the inspector who may have to make, I am sure you will appreciate, an on the spot decision so that this product may be retained at the port of entry rather than disseminated throughout the country where it might cause a great deal of difficulty. But it does have the appeal provision that any damages that he suffered are appealable.

[Interprétation]

la disposition tacite de pouvoir en appeler au ministre. Mais il n'y a aucun tribunal qui puisse annuler une décision arrêtée par le ministre ou par le ministère, au nom du ministre, relative à l'application de la quarantaine. La Loi donne au ministre le droit d'imposer la quarantaine.

Cependant, le cultivateur a le droit d'appel contre l'absence d'indemnité. S'il réclame de l'indemnité parce que sa propriété a été mise en quarantaine et que le ministre rejette sa cause il peut toujours interjeter appel de l'absence d'indemnité ou d'indemnité insuffisante.

M. Danforth: Ce n'est pas ce à quoi je veux en venir.

M. Williams: Je dirais qu'il n'y en a pas. Le projet de loi donne au ministre, le pouvoir de prendre une décision, savoir si oui ou non certaines terres doivent être mises en quarantaine ou non.

M. Danforth: Voici un exemple. Mettons qu'un importateur importe 5,000 rosiers et que tout ce chargement soit mis en quarantaine. Le propriétaire du chargement a l'impression que ses biens ont été détenus injustement.

Quel recours a-t-il? Est-ce qu'il peut logger un appel? Est-ce qu'il peut demander une autre inspection? Est-ce qu'il peut demander que d'autres inspecteurs viennent vérifier?

M. Williams: Comme je l'ai dit, c'est un fait, il n'a, à tort ou à raison, aucun droit d'appel en dehors des cadres du ministère. Il peut en appeler au ministre, bien que cela ne soit pas indiqué dans la Loi.

Il est protégé du fait que, si ces produits ont été injustement mis en quarantaine et qu'il a subi des pertes, il peut en appeler devant les tribunaux que l'indemnité qu'il a reçue est insuffisante vu les pertes subies ou qu'il n'a reçu aucune indemnité.

La loi ne donne pas au tribunal ou à toute organisation extérieure l'autorité d'annuler la décision de l'inspecteur, qui peut avoir à prendre une décision sur place, de sorte que le produit soit détenu au port d'entrée et empêcher qu'il se répande à travers le pays où il pourrait causer des problèmes énormes. Mais il y a la disposition prévoyant l'appel notamment contre tous les dégâts ou les pertes qu'il a pu subir.

[Text]

Mr. Danforth: Mr. Chairman, since, under this bill, the department will be given sweeping powers—it is no secret that under this proposed act they can absolutely control the movement of many, many plants, seeds, cuttings, and vegetation of all kinds—would it not seem logical to incorporate a section, under which a man who is placed at a great inconvenience because of the action of a particular inspector would have some recourse—requesting re-inspection or a subsequent re-evaluation of the problem—or is he at some later date to be left at the mercy of some court which will assess what they feel is his financial liability? It seems too one-sided to me.

Mr. Olson: Mr. Chairman, I will ask Mr. MacLachlan to deal with that in some detail but I think it should be pointed out that this compensation clause is in here for the first time and if something like that should happen now he will have a right under the law to apply for compensation, which he did not have before.

That is about all I want to say, Mr. Chairman.

Mr. Danforth: Mr. Minister, may I point out that there are many incidents where compensation would never adequately cover a loss. I am speaking, for example, of a canning company importing several million tomato plants and being stopped at the border. A delay of only two weeks would make it an impossible situation and the consequent results would be disastrous to many farmers as well as to the canning company. It is my contention that no compensation could adequately cover a loss of this type. I know that this is an extreme case but I am concerned that there is no appeal from an appointed inspector interfering to this degree in the normal business activities of an individual or firm without any redress except going to the courts and demanding monetary compensation. It seems to me that we would be amiss in our duties here if we did not provide at least an appeal from this course of action.

Mr. Olson: Briefly and in practical terms, is there any way that you think that a court could get those tomato plants released quickly enough to make use of them?

Mr. Danforth: I am not just referring to a court, Mr. Minister. I am thinking of a certain inspector who, perhaps in all sincerity, makes an evaluation of possible damage that an import or transfer could cause. It could well be that under certain circumstances it might appear to that inspector that such damage

[Interpretation]

M. Danforth: Monsieur le président, comme le ministère, aux termes de la Loi, aura de vastes pouvoirs, et pourra notamment contrôler le mouvement de bon nombre de plantes, de graines, de plantes végétales de toutes sortes, ne semble-t-il pas raisonnable d'insérer un article en vertu duquel une personne lésée par une décision de l'inspecteur aura, pour recours, le droit de demander une nouvelle inspection ou une réévaluation de la décision du premier inspecteur, ou sera-t-il simplement plus tard laissé à la merci du tribunal qui devra déterminer quelles ont été ses pertes financières?

M. Olson: Je vais demander à M. MacLachlan de vous fournir plus de renseignements. Il convient de signaler que l'article visant l'indemnité est inséré pour la première fois et si une telle chose se produit on a le droit, en vertu de la Loi, de demander une indemnisation, ce qui n'existait pas auparavant. C'est à peu près tout ce que j'ai à dire.

M. Danforth: Mais en fin de compte, monsieur le ministre, il y a bien des cas où l'indemnité ou l'indemnisation ne couvrira pas suffisamment une perte. Je songe à des sociétés de conserves alimentaires, par exemple, qui importent plusieurs millions de plants de tomates, qui sont détenus à la frontière. Un retard de deux semaines peut créer une situation impossible et entraîner des conséquences désastreuses pour bon nombre de cultivateurs ainsi qu'à ces sociétés. Aucune indemnité, je crois, ne peut compenser des pertes de ce genre.

Il s'agit d'un cas extrême, mais je me préoccupe du fait qu'il n'y a pas de recours contre une telle ingérence d'un inspecteur dans l'activité commerciale normale d'une personne ou d'une entreprise, à moins d'aller devant le tribunal et demander une indemnité. Il me semble que nous manquions à notre devoir si nous ne donnions pas au moins l'occasion d'interjeter appel.

M. Olson: Du point de vue pratique, monsieur le président, croyez-vous que le tribunal pourrait faire relâcher les tomates suffisamment tôt pour que vous puissiez les utiliser?

M. Danforth: Je ne parle pas seulement d'un tribunal, monsieur le ministre, mais d'un inspecteur qui, en toute sincérité, fait l'évaluation d'un tort ou d'un dommage possible qu'un importateur pourrait causer. Il se peut fort bien que dans certaines circonstances, l'inspecteur croit qu'il y ait possibilité de dom-

[Texte]

could be caused. However, the injured party might take violent exception to this and disagree. In such cases, in my opinion, he should have some recourse, even if it is only to ask another inspector to give an opinion. In nearly every other instance of a business transaction there is such recourse. Even in disputes we have arbitration. Here we have something which is tantamount to a dictatorship: a man says certain goods shall not move because, he says, they are not fit. I think that the man who owns the goods should have the prerogative of saying, "I do not agree, Mr. Minister. Can I save these goods inspected by another inspector?"

• 1735

Mr. Olson: Well, that is done all the time. We get a wire immediately anything is put under detention—not that it is spelled out in the Bill but that is what happens in practice.

Mr. Danforth: I appreciate that but it is not spelled out in the proposed act, it is not law, it is not covered in the regulations and sometimes, Mr. Minister, it is not practice either.

The Chairman: Gentlemen, it would appear to me that this discussion might go on for a few minutes yet. Dr. MacLachlan would like to make a statement and I know that you would not want to deprive him of the necessary time to do that. I think probably it is time to adjourn.

Gentlemen, I want to ask your concurrence in one thing. It would appear that we will complete Bill C-154 shortly after the supper break. I think Bill C-157 is in keeping with the bills that we have been dealing with, although I am not sure that we listed them in that order. Could I have the agreement of the Committee to call Bill C-157 and then Bill C-156 which has to do with the Animal Contagious Diseases Act.

Mr. Danforth: We have no objection, Mr. Chairman.

Some hon. Members: Agreed.

The Chairman: When we complete Bill C-154 is it agreed that we call Bill C-157—An Act to regulate products used for the control of pests and the organic functions of plants and animals.

Some hon. Members: Agreed.
Clause 12 stood.

The Chairman: Would you please return promptly at 8 o'clock.

The meeting is adjourned.

[Interprétation]

mages alors que la personne lésée, serait en désaccord total. Il devrait certainement y avoir recours, si ce n'est que de demander à un autre inspecteur de donner son opinion.

Dans presque tous les autres cas de transactions commerciales, il existe cette possibilité. Ici, nous avons une dictature parce que l'inspecteur, qui prétend qu'ils sont inacceptables, refuse de laisser passer les produits. J'é trouve que la personne en question devrait pouvoir dire s'il n'est pas d'accord et de demander la permission de faire inspecter par un autre inspecteur.

M. Olson: Cela se fait couramment. On nous indique toujours, par télégramme, lorsqu'il y a une mise en quarantaine. Même si ce n'est pas dans la Loi, c'est ainsi que cela se passe en pratique.

M. Danforth: Mais si ce n'est pas dans la Loi ni dans les règlements, elle n'est parfois pas appliquée non plus, monsieur le ministre.

Le président: Il me semble, messieurs, que la discussion pourrait se prolonger encore quelques minutes. Le docteur MacLachlan aimerait faire une déclaration à ce sujet. On ne voudrait pas l'en empêcher. Puisque nous en sommes arrivés à l'heure prévue pour l'ajournement, je voudrais vous demander qu'il semble que nous pourrions terminer le bill C-154 après le dîner. Le bill C-157, je crois, a trait aux bills dont nous avons discuté aujourd'hui. Est-ce que je pourrais avoir l'assentiment du Comité pour étudier le bill C-157, avant le bill C-156 qui a trait à la *Loi sur les épizooties*?

M. Danforth: Aucune objection, monsieur le président.

Des voix: D'accord.

Le président: Et alors quand nous aurons terminé le bill C-154, nous passerons au bill C-157?

Des voix: D'accord.
(L'article 12 est adopté.)

Le président: Je vous demanderais de revenir à 8 heures précises, s'il vous plaît.

[Text]

EVENING SITTING

• 2007

The Chairman: Gentlemen, when we rose for the dinner hour, we had stood Clause 11 of Bill C-154, and I believe that Mr. Newman has some information for us at this time. Mr. Newman.

Mr. Newman: Mr. Chairman, there seems to have been a problem in the construction of Clause 11. By using the words "magistrate or justice", it would seem that this would give jurisdiction to a justice to hear a charge laid under a clause of this Bill or the regulations.

I have been in touch with Mr. Thorson, the Associate Deputy Minister of Justice, and the Head of the Legislation Section in the Department of Justice, and he has informed me, and we discussed the matter and were in accord, that this clause does not give jurisdiction to a justice or magistrate to hear a case under this Bill. It merely provides that if a case is heard by a justice or a magistrate, he could adjudicate upon it notwithstanding that the offence arose outside of his territorial jurisdiction. As to whether he had what we could call substantive jurisdiction, the right to hear the case in the first place even if it were in his territorial jurisdiction, we would have to look at the provisions of the Criminal Code and legislation included within its ambit such as the provincial Summary Convictions Act, and this would determine who would have the right to hear the case.

• 2010

If the case were proceeded with by way of indictment, a magistrate might or might not have jurisdiction, depending upon the election of the accused. If it were to be proceeded with by way of summary conviction, I believe that the procedure would be to have it heard by a magistrate, and not a justice of the peace. But these provisions are provided for in the Criminal Code, and an offence under this proposed act would be treated exactly the same as an offence under any other act which creates summary conviction offences.

The Chairman: Is this explanation satisfactory to the Committee, Mr. Douglas?

Mr. Douglas: Does this mean that there may be cases when neither a magistrate nor a justice of the peace would be able to hear a case?

Mr. Newman: Is it possible that if the accused elects to have his case heard by a

[Interpretation]

SÉANCE DU SOIR

Le président: Nous avons quorum. Lorsque nous avons ajourné pour l'heure du dîner, nous avons réservé l'article XI du Bill C-154. Je crois que M. Newman a des renseignements à nous communiquer maintenant. Monsieur Newman.

M. Newman: Monsieur le président, il semble y avoir un problème dans la rédaction de l'article XI. En employant l'expression «magistrat ou juge de paix» cela semble donner le ressort à on pourrait croire qu'un juge de paix peut entendre une accusation portée en vertu de la présente loi ou des règlements qui l'accompagnent.

J'ai communiqué avec monsieur D. S. Thorson, sous-ministre adjoint du ministère de la Justice, et chef de la section des Mesures législatives, qui m'a informé, lorsque nous avions discuté de la question, et nous étions d'ailleurs d'accord, que cet article ne donne pas, à un juge de paix où à un magistrat, le droit d'entendre une cause en vertu de la présente Loi. L'article prévoit tout simplement que si une cause est ainsi entendue, le juge de paix ou le magistrat pourrait rendre une décision à ce sujet même si l'infraction s'est produite en dehors du domaine de son ressort.

Quant à savoir s'il avait la compétence voulue, soit le droit dès le début d'entendre la cause, il faudrait examiner alors les dispositions du Code criminel ainsi que les mesures législatives qui s'y rattachent, comme par exemple, la Loi provinciale sur les déclarations de culpabilité sommaire.

Si on va de l'avant en intentant une poursuite, le magistrat pourrait ou non avoir juridiction en la matière, le tout dépendant du choix que ferait l'accusé. Si la cause devait se poursuivre par voie de déclaration de culpabilité sommaire, c'est un magistrat et non pas un juge de paix qui devrait entendre la cause.

Ces dispositions sont prévues au Code criminel, et une infraction commise à l'encontre de cette loi serait traitée exactement de la même façon qu'une infraction en vertu de n'importe quelle autre loi.

Le président: Est-ce que cette réponse satisfait le comité? Monsieur Douglas.

M. Douglas: Monsieur le président, est-ce que cela veut dire qu'il y a des cas où ni un magistrat ni un juge de paix, ne pourrait entendre une telle cause?

M. Newman: Il est possible que, si l'accusé choisit de faire entendre sa cause par un tri-

[Texte]

higher tribunal, the higher tribunal would have jurisdiction, but that would only be in the cases where there was procedure by way of indictment.

Mr. Douglas: Would the provision which this clause envisions of allowing a case to be heard in the area in which the plaintiff lives still be applicable if the case had to go to a higher court?

Mr. Newman: Yes.

The Chairman: Are there any further questions?

Clause 11 agreed to.

The Chairman: Gentlemen, Clause 12 was the subject of our considerations before the lunch hour. Dr. MacLachlan was about to make a statement on this particular clause, and I recognize Dr. MacLachlan now.

Dr. D. S. MacLachlan (Director of Plant Protection Division, Department of Agriculture): Gentlemen, I will try to be quite brief in this. I believe the matter of detention of material was brought up and this was the subject of the discussion. I should point out that detention, in the case of this bill, is used in cases where material is arriving at a border and the infection or insect found in this material is such that a determination cannot be made immediately as to the direct cause of the problem. So, what is required here is that the inspector first of all is reasonably certain that a disease is present which does not occur in the country—or a disease of quarantine significance, we call it—and samples have to be taken from this material and examined microscopically in the laboratory.

It is not considered a good practice to have this material move into the country for fear of spreading the disease or insects around the country before a determination is made. So, this is generally the case where detention is used, and in most cases this is for a relatively short period of time—sometimes only a matter of hours, sometimes a day, a day and a half. Our inspectors are quite aware of the implications of detaining material such as tomato seedlings for a period of, say, a day and a half. And in general our procedure at ports where perishable materials are brought in is that these identifications are made quite rapidly, and in such cases the detention may be removed in a very short time.

With regard to the right to appeal for re-inspection, this is normally covered in the regulation, and our present regulations contain a clause which gives the importer the right to appeal for re-inspection. In all cases

[Interprétation]

bunai supérieur, que le tribunal supérieur ait alors la compétence voulue, mais ça ne serait que dans le seul cas où une poursuite serait intentée au criminel.

M. Douglas: Est-ce que ces dispositions prévoyant que la cause peut être entendue dans la région qu'habite le requérant s'appliquent même si un tribunal supérieur doit entendre la cause?

M. Newman: Oui.

Le président: D'autres questions?

L'article 11 est adopté.

Le président: Messieurs, l'article 12 a fait l'objet d'une étude avant le dîner et le témoin, M. MacLachlan, se préparait à faire une déclaration à ce sujet. Je lui donne maintenant la parole.

M. D. S. MacLachlan (Directeur de la Division de la protection des végétaux, ministère de l'Agriculture): Messieurs, j'essaierai d'être très bref à ce sujet. Je crois que la question de rétention du matériel a été abordée, et qu'elle a fait l'objet d'une discussion. En vertu de la présente Loi, un objet peut être retenu lorsqu'il arrive à la frontière et que l'infection est telle qu'il est impossible de déterminer immédiatement la cause du problème. L'inspecteur doit d'abord être raisonnablement certain qu'il y a une maladie et que cette maladie ne se retrouve pas, à ce moment-là au pays. Il doit prélever des échantillons qui seront ensuite examinés au microscope.

Il n'est pas de bonne guerre de permettre l'entrée de ce matériel dans le pays, par crainte de propager la maladie ou les insectes, avant d'en avoir déterminé la nature exacte.

Dans de tels cas, on aurait recours à la rétention. D'habitude c'est pour une période de temps relativement courte, parfois c'est pour quelques heures seulement, parfois une journée ou une journée et demie.

Nos inspecteurs savent ce qui peut se produire s'ils retiennent, par exemple, des plants de tomates pendant une journée et demie. Règle générale, notre façon de procéder dans les ports où arrivent les denrées périssables est des plus expéditives.

En ce qui a trait au droit d'appel pour une nouvelle inspection, cette situation est prévue par le règlement. Nos règlements actuels comportent une disposition qui donne à l'importateur le droit de demander une nouvelle ins-

[Text]

this re-inspection is carried out almost immediately. There are cases, of course, where re-inspection cannot be of any direct benefit to the importer because of the problem with identification. Some of this just has to be done in a laboratory, and an immediate re-inspection would not solve the problem. But I can assure you that our inspectors are quite aware of the problems with perishable materials, and we try to process these as quickly as possible.

• 2015

The Chairman: Thank you, Dr. MacLachlan. Are there further questions? Mr. Danforth.

Mr. Danforth: Mr. Chairman, I would like to thank the Doctor for his explanation. It has done much to explain the situation to me. The Doctor in his explanation spoke of regulations for an appeal. Certainly I do not see these regulations incorporated in this bill. May I ask where the regulations may be found?

Dr. MacLachlan: As indicated in the previous clause, the Governor in Council has the right to make regulations in regard to the bill. Among these regulations, which are drawn up, is one which provides for the right of the importer to request re-inspection.

Mr. Danforth: Mr. Chairman, with that explanation, if it is normal procedure that this safeguard be incorporated in the Act, then I certainly would withdraw any objection I have to Clause 12.

The Chairman: Thank you, Mr. Danforth. Are there further questions?

Mr. Howard (Okanagan Boundary): Are we ready to deal with the second part of Clause 12?

The Chairman: Yes.

Mr. Howard (Okanagan Boundary): On the matter that an action should be brought within three months, is that sufficient time in view of the fact all the ramifications of a decision might not be known immediately, and might not be known for some time? I realize that it says further down that an appeal may be made within a longer period with the leave of the Assessor, but I wonder whether this is enough time.

[Interpretation]

pection. Dans tous les cas, cette réinspection se fait presque immédiatement. Il se trouve évidemment des cas où la réinspection ne pourrait servir directement l'importateur en raison du problème d'identification.

Certaines vérifications doivent se faire en laboratoire, et une réinspection immédiate ne réglerait pas le problème.

Je puis vous assurer toutefois que nos inspecteurs sont parfaitement au courant du problème engendré par les denrées périssables et que nous essayons de les régler le plus vite possible.

Le président: Merci beaucoup, monsieur MacLachlan. Y a-t-il d'autres questions? M. Danforth.

M. Danforth: Je remercie le docteur pour cette explication ce qui m'a grandement aidé. Mais, dans son explication, il a parlé des règlements relatifs aux appels. Je ne vois pas ces règlements dans le projet de loi. Est-ce que je puis demander où ils se trouvent?

M. MacLachlan: Comme on l'a indiqué dans l'article précédent, le gouverneur en conseil a tout autorité pour établir des règlements sous l'égide de la loi et parmi ces règlements, qui sont établis, il y en a un qui prévoit le droit de l'importateur d'exiger ou de demander plutôt une réinspection.

M. Danforth: Monsieur le président, vu ces renseignements, si cette sauvegarde devait être incluse dans la Loi, je retirerais toutes les objections que je pourrais avoir contre l'article 12.

Le président: Merci beaucoup. Y a-t-il d'autres questions?

M. Howard (Okanagan-Boundary): Est-ce que nous sommes prêts à étudier la seconde partie de l'article 12?

Le président: Oui.

M. Howard (Okanagan-Boundary): En ce qui concerne une action devant être intentée en dedans de trois mois, je me demande si le délai est suffisant étant donné que toutes les conséquences ne pourraient pas être connues immédiatement et pourraient ne pas l'être pendant un certain temps?

Je sais qu'on précise un peu plus loin, qu'on peut interjeter appel dans un délai plus long avec l'assentiment de l'évaluateur. Je me demande cependant si nous prévoyons suffisamment de temps?

[Texte]

Mr. Williams: I am afraid, Mr. Chairman, I am not able to give a specific answer as to whether this is enough time. The thinking, of course, was, as the questioner pointed out, that if there is reasonable cause to ask for a longer time, then that request can be granted.

The problem here is that without some limitation on time evidence tends to become much more difficult to gather and much more difficult to assess. The thinking was that it would be wise to put a limitation on it, in order that information could be obtained with greater dispatch and probably with greater accuracy.

The Chairman: Does that answer your question, Mr. Howard?

Mr. Howard (Okanagan Boundary): As I am not a specialist in this field, I suppose it does, but it seems to me if it happens very often it is not very wise to have a situation where one has to apply to the Assessor for a special condition in order to have the case heard. I wonder whether three months is a long enough period. Somebody more directly related to the agricultural field might come up with an opinion as to whether that is enough time or not.

Mr. Stewart (Okanagan-Kootenay): I would think this section relates to the time in which your appeal must be launched, not concluded. As long as you have written saying that you are going to appeal, that is enough.

Mr. Williams: Exactly.

The Chairman: Are there further questions on Clause 12?

Clause 12 agreed to.

On Clause 13—*Rights of provinces or of Governor in Council not affected.*

The Chairman: Are there questions concerning Clause 13?

Mr. Danforth: Mr. Chairman, I would like to have this broken down in simple language so that we do not have to resort to mental gymnastics in order to interpret it. I have read this clause through several times and I am still not sure that I know all its implications.

The Chairman: Who will do the explanation?

Mr. Williams: Perhaps I can give the simplest explanation; it may not be a breakdown of the nature that was requested; it simply means that theoretically this Act cannot assume any rights and functions that the provinces presently have under other statutes or by any other reason.

[Interprétation]

M. Williams: Je crains, monsieur le président, que je ne puisse donner une réponse précise quant à savoir si le délai est suffisant. Évidemment, comme on l'a dit, on peut toujours demander une extension de temps. Mais le problème ici est que si l'on ne limite pas le délai, la preuve deviendra assez difficile à obtenir et plus difficile à évaluer. Et, nous avons songé qu'il serait bon de limiter le délai afin que tous les renseignements disponibles puissent être obtenus beaucoup plus rapidement et avec beaucoup plus d'exactitude.

Le président: Est-ce que cela répond à votre question, monsieur Howard?

M. Howard (Okanagan-Boundary): Je suppose que oui, vu que je ne suis pas un spécialiste dans ce domaine. Mais je me demande que si cela se reproduit souvent, il ne serait pas sage que dans une situation semblable on ne doive pas avoir recours à l'évaluateur pour obtenir un traitement spécial afin de procéder. Je me demande si trois mois suffisent. Une personne connaissant le domaine de l'agriculture pourrait peut-être nous donner une opinion à savoir si le temps est suffisant?

M. Stewart (Okanagan-Kootenay): Je crois que cet article a trait au moment où il faut lancer l'appel et non pas au moment où il doit être jugé. C'est suffisant.

M. Williams: Exactement.

Le président: Y a-t-il d'autres questions concernant l'article 12?

L'article 12 est adopté.

Article 13—*Les droits des provinces ou du gouverneur en conseil ne sont pas affectés.*

Le président: Y a-t-il des questions au sujet de l'article 13?

M. Danforth: Monsieur le président, j'aimerais bien qu'on délimite l'article en termes simples afin de ne pas être obligé de faire de la gymnastique mentale pour l'interpréter. Je l'ai lu plusieurs fois, et je ne suis pas sûr d'avoir saisi toutes ses implications.

Le président: Qui veut l'expliquer?

M. Williams: Je pourrais peut-être donner l'explication la plus simple; même si elle n'est pas aussi fouillée. En théorie, on dit que la Loi ne peut pas assumer les droits et les privilèges acquis des provinces.

[Text]

Mr. Danforth: In other words, if...

Mr. Williams: I am afraid if we get to the "other words", I am in trouble; we will have to refer to Mr. Newman.

Mr. Newman: I was number one in my class in law school in obscure answers. I do not know if I could make it any simpler?

• 2020

An hon. Member: Did you draft the document?

Mr. Newman: No, I did not.

Mr. Phillips: This section says what Mr. Williams has indicated. We had great difficulty during the drafting to decide whether it should be in or not. The only reason it is in is that it is in the current Act and it was decided that it should not be removed in case there was any question about whether this Act was attempting to change the constitutional requirements.

Mr. Danforth: Encroachment on jurisdiction.

Mr. Phillips: That is right, and it was just repeated in there so that there would not be any question.

Mr. Danforth: In other words, then, in interpreting this, this bill is in addition to the legislation governing the pesticides and the spreading of pests within the provincial boundaries; this in addition to any such current legislation?

Mr. Phillips: Yes, I would say so.

Mr. Williams: And also it does not prohibit them from passing legislation that would control the pests that are controlled under this Act as long as they apply that control within provincial boundaries. It does not require them to, nor does it prevent them from doing it.

Mr. Danforth: In other words, they could have additional safeguards.

Mr. Williams: They could even have the identical safeguards, Mr. Danforth.

Mr. Olson: Mr. Chairman, may I interject here briefly. Under Section 95 of the BNA Act, or what is now the Constitution of Canada, the provinces have almost equal authority to pass laws and regulate agriculture. This is to prevent any dispute constitutionally as to who has the rights.

[Interpretation]

M. Danforth: En d'autres mots...

M. Williams: Si on en arrive aux «autres mots», je vais avoir des difficultés. Nous devons nous en remettre à M. Newman.

M. Newman: Je suis arrivé premier dans ma classe de droit pour les réponses obscures. Je ne crois pas que je pourrais encore le simplifier.

Une voix: Avez-vous préparé ce document?

M. Newman: Non.

M. Phillips: Cet article dit exactement ce que M. Williams a indiqué. Au cours de la rédaction du projet nous avons eu une grande difficulté à décider si oui ou non on introduirait cet article. La seule raison pour laquelle on l'a inséré, c'est qu'il se trouve dans la Loi actuelle et il a été décidé de ne pas l'enlever au cas où on se demanderait si cette Loi tentait de changer ces exigences constitutionnelles.

M. Danforth: Empiètement de juridictions.

M. Phillips: C'est exact. Et on a fait insérer cet article afin de décourager les questions.

M. Danforth: En d'autres termes, en interprétant, ce projet de loi complète la Loi qui réglemente les pesticides et les épidémies à l'intérieur des limites des provinces. Ceci en sus de toutes les mesures législatives actuelles.

M. Phillips: Je dirais oui.

M. Williams: Et cela n'empêche pas les provinces d'adopter des mesures législatives pour contrôler ou réglementer les pesticides, régis par la présente Loi à condition qu'elles s'appliquent à l'intérieur des frontières provinciales; cet article ne les force pas à légiférer ni ne les empêche de le faire.

M. Danforth: En d'autres termes, les provinces peuvent créer des sauvegardes additionnelles.

M. Williams: Elles pourraient avoir les mêmes mesures.

M. Olson: M. le président, si vous me permettez d'intervenir à ce moment-ci; en vertu de l'article 95, de l'Acte de l'Amérique du Nord britannique qui est devenu maintenant la Constitution du Canada, les provinces ont un droit égal de légiférer en matière d'agriculture. Ceci empêche toute discussion constitutionnelle quant au contrôle ou à la réglementation.

[Texte]

Mr. Douglas: Why, then, is not a similar clause required in the other bills, say Bill C-155 and Bill C-157.

Mr. Olson: There is a significant difference between Bill C-155 and Bill C-154, because Bill C-155 is designed so that we have the authority to pay compensation. This, of course, is for control of plants and quarantine measures and that sort of thing.

The Chairman: Are there further questions?

Mr. Olson: Perhaps I can make it a little clearer. In other words, we will have authority under this proposed act to do a whole lot of things, other than laying down the rules for paying compensation; making orders for restrictions and so on.

Mr. Douglas: It seems to me that there could be just as much conflict with provincial jurisdiction in any one of these bills as there is in another one.

Mr. Olson: No, I do not think that I can quite agree with that.

Mr. Douglas: There could be in the next one.

Mr. Olson: Yes, in the next one there could be, but not in the one we have just passed.

The Chairman: Are there further questions?

Clauses 13 to 15 agreed to.

Mr. Stewart (Okanagan-Kootenay): Mr. Chairman, I don't like to digress, but I think the word "knowingly" should be inserted as an amendment in clause 7(3) between the words "shall" and "remove". Subclause (3) of Clause 7 would then read, "Except as provided by this Act no person shall knowingly remove from detention..." This is following my friend Mr. Douglas' comment on subclause 2, because obviously there could be a situation where someone might unwittingly remove, without knowledge of its detention, a good that had been seized.

Mr. Olson: The practical question is, how could you remove something without knowing it.

• 2025

Mr. Stewart (Okanagan-Kootenay): I, as an employee, presumably not taken to know everything that my superior authorizes, could unwittingly remove something, which, in fact, had been placed under detention.

[Interprétation]

M. Douglas: Pourquoi une disposition semblable n'est-elle pas requise dans les autres bills, par exemple C-155, C-157?

M. Olson: Il y a une différence marquée entre 155 et 154. Car 155 est conçu en vertu d'une autorité visant à payer une indemnité. Ce projet-ci prévoit le contrôle des plantes et des mesures de quarantaine, etc....

Le président: Y a-t-il d'autres questions?

M. Olson: Je pourrais peut-être rendre la chose plus claire. En d'autres mots, nous aurons l'autorité en vertu de ce projet de loi de faire toute sortes de choses en plus du versement d'indemnités ou du règlement régissant l'indemnité, des restrictions, etc....

M. Douglas: Il me semble qu'il y aurait autant de conflits envers la juridiction provinciale que dans les autres projets de loi.

M. Olson: Non, je ne suis pas tout à fait d'accord.

M. Douglas: Dans le prochain projet de loi.

M. Olson: Oui, dans celui que nous allons étudier, peut-être, mais pas dans celui-ci.

Le président: Y a-t-il d'autres questions?

Les articles 13 à 15 sont adoptés.

M. Stewart (Okanagan-Kootenay): Monsieur le président, je n'aime pas faire des digressions mais je crois que les mots «en toute connaissance de cause» devraient être insérés dans l'article 7 (3) entre les mots «doit» et «soustraire». Le paragraphe se lirait alors ainsi:

«Nul ne doit en toute connaissance de cause soustraire à la rétention...»

Ceci fait suite au commentaire de M. Douglas sur le paragraphe 2, il se pourrait que quelqu'un puisse enlever, sans avoir eu vent de la saisie, les marchandises en rétention.

M. Olson: Comment pourrait-on le faire sans le savoir?

M. Stewart (Okanagan-Kootenay): Si, en tant qu'employé, je ne suis pas nécessairement au courant de tout ce que mon employeur a autorisé. Et en tant qu'employé, j'aurais peut-être pu inconsciemment enlevé quelque chose qui, en fait, aurait été placé en rétention.

[Text]

Mr. Williams: Mr. Chairman, when material of this nature is placed under detention, it is very clearly marked that it is under detention. Large tags are placed on all separate bundles, containers, or whatever it is. If it is a piece of land that is quarantined, quarantine notices are posted. I suppose that it is possible with a piece of land, but I think it would be very difficult with material that was under detention for anybody to move it knowing that was under detention.

Mr. Stewart (Okanagan-Kootenay): If in fact he did not know that it was under detention, it would be in contravention of the act for him to unknowingly remove it. I do not want to be academic here, but it would be better inserted than left out. That is only my thought. I think that without the word in there one could not raise any defence at all.

The Chairman: Gentlemen, is the objection withdrawn?

Mr. Stewart (Okanagan-Kootenay): I will think it should be included. I am not going to make an issue of it, but I would prefer to see it included.

The Chairman: May I draw to your attention a little typographical error in the third line of Subclause 2 of Clause 10,

...to establish that it was committed by an employee or agent....

This should read "...it was" instead of "...is was..."; it should be a "t" instead of an "s".

Clause 1 agreed to.

Title agreed to.

The Chairman: Shall I report the Bill as amended?

Agreed.

The Chairman: Thank you, gentlemen.

Gentlemen, I think it would be appropriate to say at this time that we are pleased with the progress we have made in completing two bills. We refer for your consideration Bill C-157. I think it would be appropriate to decide at this particular time about what time you would like to adjourn our deliberations. Ten o'clock?

Mr. Barrett: You are not on the farm now, you know. There is a 37½ hour week prevailing in the Province of Ontario.

Mr. Olson: Mr. Chairman, the only reason that I suggest that is that normally we would have sat in Committee of the Whole until 10 o'clock and this is a transfer of those duties to this Committee.

[Interpretation]

M. Williams: Quand les produits de ce genre sont retenus, c'est indiqué clairement. On met de larges étiquettes sur tous les réceptacles, containers ou autres pour les distinguer. Quand un terrain est mis en quarantaine, on met des affiches. Je suppose qu'il serait possible d'entrer dans un champ, mais ce serait extrêmement difficile d'enlever du matériel ou des produits de rétention sans en avoir connaissance.

M. Stewart (Okanagan-Kootenay): S'il ne le savait pas, il contreviendrait à la Loi malgré tout s'il le faisait inconsciemment. Ce n'est pas une question académique, mais tout simplement, j'ai l'impression qu'il serait bon d'inclure ces mots plutôt que de ne rien faire. C'est ma pensée. Je crois que sans ces mots, il ne serait pas possible de se défendre.

Le président: Messieurs, est-ce qu'on retire l'objection?

M. Stewart (Okanagan-Kootenay): Je crois toujours qu'on devrait inclure. Je ne veux tout de même pas en faire une question d'importance capitale, mais j'aimerais qu'elle figure dans le paragraphe.

Le président: Est-ce que je pourrais vous signaler une erreur typographique? Dans l'article 10, paragraphe 2—au texte anglais:

To establish that it was committed ce devrait être «it» au lieu de «is» tout simplement. La correction ne se fait pas au texte français.

L'article 1 est adopté.

Le titre est adopté.

Le président: Dois-je faire rapport du Bill avec amendements?

Adopté.

Le président: Messieurs, je crois qu'il serait opportun de signaler maintenant que nous sommes satisfaits du progrès accompli jusqu'ici. Nous avons terminé l'étude de deux projets de loi. Nous vous soumettrons aussi le bill C-157—je crois que c'est maintenant le moment venu de décider quand nous voulons mettre fin à nos délibérations. Vers 10 heures? Vous voulez siéger jusqu'à 10 heures?

M. Barrett: Nous ne sommes pas sur une ferme, n'oubliez pas que dans la province de l'Ontario, la semaine en vigueur est de 37 heures et demie.

M. Olson: Monsieur le président, la seule raison est que normalement nous aurions dû siéger en comité plénier jusqu'à 10 heures et il y a transfert de tâches à ce comité.

[Texte]

The Chairman: Nine o'clock was suggested, ten o'clock was suggested. Would 9.30 p.m. be acceptable to the Committee?

Some hon. Members: Agreed

Mr. Clermont: Accepting the fact that we must approve the Bill before that.

The Chairman: We will not put any strings on it, whatsoever.
Clause 1 stood.

The Chairman: Shall I read the title.

An Act to regulate products used for the control of pests and the organic functions of plants and animals

The short title is as follows:

This Act may be cited as the *Pest Control Products Act*.

• 2030

I think at this juncture the Minister may wish to make a brief statement.

Mr. Olson: Mr. Chairman, this proposed Act, of course is a new Act, but it is a replacement for the Act that you will find repealed in Clause 13, that is, the Pest Control Products Act, Chapter 209 of the Revised Statutes of Canada. In general terms the bill brings the Pest Control Products Act of 1939 up to date. It is framed in the same general context as the Pest Control Products Act but its provisions apply to pesticides and other control products generally in order to serve as effectively as possible the national interest in the agricultural industry as well as other areas where these products are used.

The increased use of pesticides and associated products and the greater concern over their potential for harm—as well as good—necessitates a broader authority for regulation than in the past. This is provided by the addition of authority to regulate the manufacture, handling and advertising of such control products. Authority is also included to regulate manufacturing establishments in relation to prescribed control products for export or interprovincial movement. The present Act only provides for the regulation of the product *per se* with respect to composition, packaging and labelling.

In addition to pest control products—that is, pesticides—the bill also applies to other control products and products to be used in conjunction with or to supplement pesticides and control products. The present Act provides only for the regulation of pest control products.

[Interprétation]

Le président: On a dit 9 heures, et 10 heures. Est-ce que 9 heures et demie serait une formule acceptable pour le Comité?

Des voix: D'accord.

M. Clermont: A condition qu'on adopte ce projet de loi avant l'ajournement.

Le président: Nous n'allons pas mettre de condition d'un façon ou d'une autre.
L'article 1 est réservé.

Le président: Dois-je donner lecture du titre?

Loi ayant pour objet de réglementer les produits utilisés pour détruire les parasites et agir sur les fonctions organiques des plantes et des animaux.

Le titre abrégé est le suivant: la Loi peut être abrégée comme suit:

Loi sur les produits antiparasitaires

Le ministre désire peut-être maintenant faire un bref exposé.

M. Olson: Bien entendu, monsieur le président, il s'agit là d'une nouvelle loi qui remplace la loi qui est abrogée dans l'article 13, chapitre 209, les Statuts révisés de 1939, qui s'intitule:

Loi sur les produits antiparasitaires

La loi est libellée de la même façon que la Loi sur les produits antiparasitaires. Et pour servir le plus efficacement possible les intérêts nationaux dans l'industrie de l'agriculture et dans les autres industries où l'on utilise les produits antiparasitaires, l'utilisation accrue des pesticides et des autres produits antiparasitaires et les effets nuisibles qui peuvent en résulter nécessitent une réglementation plus sévère. C'est ce qu'assure d'ailleurs l'autorité visant à réglementer la fabrication ou la manutention et la réclame de ces produits antiparasitaires. On comprend aussi l'autorité visant à réglementer les établissements de vente ainsi que le mouvement interprovincial, et l'importation et l'exportation. La loi actuelle ne prévoit que la réglementation du produit pour la composition, l'emballage et l'étiquetage.

Outre les produits antiparasitaires et les pesticides, la Loi s'applique aussi à d'autres produits de destruction ou de contrôle devant être utilisés comme additifs aux produits antiparasitaires et aux pesticides. La Loi actuelle ne porte que sur les produits antiparasitaires, alors que la définition de cette

[Text]

While the definition of authority is broad and may overlap the jurisdiction of other federal statutes such as the Food and Drugs Act and the Fertilizers Act, it is the intention to avoid dual control by Governor-in-Council-exempt regulations.

The bill has also been drafted in a current form to embody the regulatory, administrative and other provisions common to federal commodity statutes.

The Chairman: Thank you, Mr. Olson. Are there any questions on Clause 2? Mr. Danforth.

Mr. Danforth: Mr. Chairman, I would like to ask a question based on the statement by the Minister. I note that this bill is to regulate pests and the organic functions of plants and animals. May I ask, Mr. Chairman, if this includes chemicals that are used to stimulate certain functions in animals. Naturally I am thinking of a chemical such as stilbestrol. Are these chemicals also included under this bill? It deals with the organic functions of the animals.

Mr. Olson: The points that the particular product which you mentioned, stibestrol—or diethylstilbestrol—is not a pest control product and this, of course, is the Pest Control Products Act.

Mr. Danforth: It deals with the organic functions.

Mr. Olson: The residue that is involved there would be covered in a different Act. I am advised that it would be in the Feeds Act. For the purposes of determining residue in food, it would be in the Feeds Act. For the purposes of determining residue in food, it would be under the Food and Drugs Act.

Mr. Williams: If I might add a word, Mr. Chairman, the intent here is to control those products which at present are not controlled. At present stilbestrol is controlled by two acts, namely, the Feeds Act and the Food and Drugs Act. The types of commodities to which reference is made here are such things as growth stimulants for plants, sprout inhibitors and the various chemicals that are used for the chemical suckering of tobacco, for example; things of this nature that really do not fall into any other broad category.

• 2035

Mr. Danforth: If I may, Mr. Chairman, I would like to ask a supplementary on that subject. I am aware of the controls for a

[Interpretation]

autorité est assez vaste et empiète sur certaines autres lois fédérales comme la Loi sur les engrais chimiques et la Loi sur les aliments et drogues. On tente d'éviter que le gouverneur en conseil ait à formuler des règlements doubles. La Loi a été rédigée de façon à incorporer d'autres dispositions administratives propres aux lois de ce genre. La loi touche à des produits de ce genre.

Le président: Merci, monsieur Olson. Y a-t-il des questions sur l'article 2? Monsieur Danforth.

M. Danforth: Monsieur le président, j'aimerais poser des questions sur la déclaration que vient de faire le ministre. Je constate que ce bill vise à contrôler les produits antiparasitaires et les fonctions organiques des plantes et des animaux. Est-ce que cela comprend les produits biologiques? Je songe notamment à certains produits chimiques comme le stilbestrol. Est-ce que ces produits chimiques seront aussi compris dans la Loi, car cela a trait aux fonctions organiques des animaux.

M. Olson: Ce qui importe, c'est que le produit que vous avez mentionné n'est pas un produit antiparasitaire. Par conséquent, la Loi ne s'applique qu'aux produits antiparasitaires.

M. Danforth: Elle se rapporte aux fonctions organiques.

M. Olson: Je crois donc que ce produit relèverait d'une loi différente. Et on me dit que cela relèverait de la Loi relative aux aliments du bétail. Si on voulait déterminer les résidus dans les aliments, cela relèverait de la Loi sur les aliments et drogues.

M. Williams: J'aimerais ajouter aux explications que l'objectif du bill c'est de réglementer les produits qui, à l'heure actuelle, ne sont pas contrôlés. Le produit que vous avez mentionné est couvert par deux lois: la Loi sur les aliments et drogues et la Loi relative aux aliments du bétail. Le genre de produit dont il est question ici comprend les choses destinées à stimuler la croissance des plantes, des produits chimiques visant à enrayer certains parasites, des produits chimiques pour améliorer la qualité du tabac, des produits chimiques de ce genre qui ne relèvent pas d'une catégorie générale comprise dans une autre loi.

M. Danforth: Une question complémentaire. Je suis au courant d'une mesure de contrôle qui existe pour le stilbestrol. Mais les lois

[Texte]

commodity such as stilbestrol under the two previous Acts, but if I recall correctly those Acts deal with the actual use of the chemical and provisions for its use and my understanding of this bill is that it deals with the distribution, advertising and packaging of products. I am at a loss to know whether...

Mr. Williams: I think you will find, Mr. Chairman, that the other Acts cover those aspects, namely, the packaging, distribution and manufacture of those types of products. As the Minister pointed out in making his statement, there is some overlap between this and other Acts and it is intended that these will be segregated into the various areas of responsibility by Governor-in-Council-exempt regulations. In other words, certain products may be exempt from this bill if they are controlled under another Act.

Mr. Danforth: Thank you.

Mr. Williams: If it might be helpful, other examples of the type of product that we propose should come under this bill are plant growth modifiers, sprout inhibitors, potato top killers, fruit stop-drop sprays, emulsifiers, stickers and stabilizers for use with pesticides and other control products.

The Chairman: Mr. Downey?

Mr. Downey: Supplementary to Mr. Danforth's question, while he mentioned stilbestrol I think we should possibly consider the heat control chemical or substance which they use in A (d). Where would this fit into...

Mr. Williams: If it is in feed it is covered under the Feeds Act. It is also covered under the Food and Drug Act.

Mr. Downey: I understand.

Mr. Olson: May I also suggest at this point that that is one of the reasons these particular products would be in the regulations, so that they can be changed from time to time rather than spelling them out in the statute, because technology and the names of some of these products keep coming along and administratively it would be far more useful if we could change them without having to go back to Parliament to change the particular products that would be controlled in the statute.

The Chairman: Mr. Peters?

Mr. Peters: May I ask if this covers steroids?

Mr. Williams: It would depend upon the use to which they were put. If steroids were to be associated in general with pesticides or

[Interprétation]

qu'on vient de mentionner, si j'ai bonne mémoire, ont trait à l'utilisation des produits chimiques. Si je comprends bien la Loi, elle a trait à la distribution, à la réclame et à l'emballage des produits.

M. Williams: Vous constaterez, monsieur le président, que les autres lois couvrent ces aspects, notamment l'emballage, la distribution et la fabrication de ce genre de produit. Comme le ministre vient de le signaler, il y a chevauchement entre cet aspect de la loi et d'autres aspects. Et on espère que le gouverneur en conseil pourra voir à quel secteur de responsabilité s'applique telle ou telle chose. Autrement dit, certains produits seront peut-être exemptés de la présente loi s'il y a un contrôle qui relève d'autres lois.

M. Danforth: Je vous remercie.

M. Williams: Un autre exemple qui pourra vous être utile: le genre de produits qui devraient relever de la Loi, c'est les produits chimiques destinés à tuer les mouches-à-patates, à accélérer la croissance des fleurs, etc.

Le président: Monsieur Downey?

M. Downey: Question complémentaire à celle de M. Danforth. Elle concerne le stilbestrol. Est-ce que nous ne devrions pas considérer et tenir compte aussi des produits chimiques destinés à contrôler la chaleur?

M. Williams: Si ces produits relèvent de la Loi, ils relèvent de la Loi relative aux aliments du bétail, de même que de la Loi sur les aliments et drogues.

M. Downey: Je vois.

M. Olson: J'aimerais aussi signaler que l'une des raisons pour lesquelles ces produits figurent dans les recueils législatifs afin que l'on puisse les modifier à l'occasion plutôt que de les expliciter dans les lois, c'est que les noms de ces produits changent rapidement au fur et à mesure que des progrès technologiques sont accomplis. Nous trouvons que cette forme administrative est plus utile si nous pouvons ne pas énumérer nécessairement dans la loi les produits qui seront contrôlés.

Le président: Monsieur Peters?

M. Peters: Est-ce que la loi s'applique aux stéroïdes?

M. Williams: Cela dépend de l'utilisation que l'on fera de ce produit. Si on doit utiliser les stéroïdes à des fins antiparasitaires, il se

[Text]

pest control products they could then be controlled under this bill but, depending upon their use, they could also be controlled under other Acts.

The Chairman: Are there any further questions?

Clause 2 agreed to.

On Clause 3—*Manufacture, etc., under unsafe conditions*

The Chairman: Are there any questions?

Mr. Olson: I think, Mr Chairman, I should give a bit of an explanation here. This is a new provision that permits the regulation of manufacturing, handling or use of control products in relation not only to preserving their intended composition but also to prevent adverse effects that might be caused through inappropriate handling in use. For example, cross-contamination could arise through the use of common mixing equipment for the different pesticides. The storage of control products with foods could cause adulteration of the food, and the use of a pesticide on food crops at harvest time could cause illegal residues.

The Chairman: Are there any further questions?

M. Roy (Laval): Cet article prévoit-il par exemple, qu'une meunerie qui vend de la moulée, ne pourra entreposer également des herbicides ou des insecticides, avec la moulée?

Mr. Olson: Mr. Phillips will answer that.

Mr. Phillips: The Feeds Act would cover any product going into a feed. There would be dual control if it were a pest control product and a feed. We could use both the Pest Control Products Act and the Feeds Act for the control of a feed containing a pest control product.

• 2040

M. Roy (Laval): Dans le texte de l'article il est écrit:

Nul ne doit fabriquer, emmagasiner, présenter, distribuer ou utiliser un produit antiparasitaire dans des conditions dangereuses.

Il me semble que l'expression «conditions dangereuses» est assez vague. Actuellement,

[Interpretation]

peut alors que le produit relève de la Loi. Cela dépendra de la formule d'utilisation.

Le président: Y a-t-il d'autres questions là-dessus?

L'article 2 est adopté.

Article 3—*Fabrication, etc., dans des conditions dangereuses.*

Le président: Y a-t-il des questions là-dessus?

M. Olson: Je crois que je dois donner un mot d'explication. En l'occurrence, il s'agit là de nouvelles dispositions qui permettent de réglementer la fabrication, la manutention, l'utilisation de ces produits, non seulement pour protéger leur composition, mais aussi pour prévenir tout effet nuisible qui pourrait être causé par certaine manutention malhabile: contamination, par exemple, par l'utilisation d'un matériel-mélange pour les divers produits parasitaires, entreposage de ces produits avec des aliments qui peuvent altérer la qualité des aliments et causer des résidus illégaux.

Le président: Y a-t-il d'autres questions?

Mr. Roy (Laval): Does this clause make provisions, for instance, that a feed mill selling feed shall not be allowed to store weed-killers or insecticides along with the feed?

M. Olson: Monsieur Phillips, voulez-vous, je vous prie, répondre à cette question?

M. Phillips: Je crois que ce serait la Loi relative aux aliments du bétail qui contrôlerait tous les produits ou les composants ou les additifs utilisés dans les aliments. Il y aurait un double contrôle ou une double forme de réglementation; s'il y a là un produit antiparasitaire, on pourra utiliser la Loi sur les produits antiparasitaires, et la Loi relative aux aliments du bétail pour contrôler les aliments comprenant certains produits antiparasitaires.

Mr. Roy (Laval): The clause states the following:

No person shall manufacture, store, display, distribute or use any control product under unsafe conditions.

"Unsafe conditions" is a rather vague expression. Right now, is it not true that feed

[Texte]

les meuneries ne vendent-elles pas des pesticides en même temps que des mélanges de moulées qu'ils fabriquent eux-mêmes sur place? Et si tel est le cas, pourront-elles continuer d'opérer ce genre de commerce? Il me semble que l'interprétation de «dans des conditions dangereuses», peut porter confusion dans ce cas.

The Chairman: That appears in Clause 3(1), the third line.

Mr. Phillips: Mr. Chairman, under the current Feeds Act, for example, there are regulations dealing with a similar product which we have discussed, diethylstilbestrol. Indeed, no one may register a feed with this product in it unless they observe certain precautions which are spelled out with respect to mixing and unless they ensure that another feed does not follow in the mixer without the mixer being cleaned out. That currently appears in the Feeds Act with respect to diethylstilbestrol. The same provision applies if there is another product in the feed of a like nature to diethylstilbestrol that could cause similar problems. So, there is a provision in terms of feeds.

Turning now to this particular clause as Mr. Olson indicated it covers the situation of manufacture and use and it is designed to provide more control over the pesticide manufacturing plant. This is the area where particular reference will be made to ensure that pesticides are manufactured in a safe manner and stored in a safe manner.

The Chairman: Are there any further questions?

M. Roy (Laval): Selon le Bill, la meunerie pourrait-elle continuer de vendre des herbicides ou insecticides ou des produits antiparasitaires? Parce que dans la Loi on dit:

Nul ne doit fabriquer, emmagasiner, présenter, distribuer...

Or une meunerie distribue ces produits et cette opération a lieu au même endroit que là où elle fabrique les moulées actuellement. J'aimerais avoir l'assurance qu'ils pourront continuer le même genre de commerce: moulées et produits antiparasitaires.

Mr. Phillips: Yes. There is no intention of eliminating the sale of these products by feed mills. However, there is the intention—if care is not being taken in the handling of them—to see that care should be taken that feeds are not contaminated.

[Interprétation]

mills set pesticides along with feed mixes which they produce themselves on the spot? And if this is the case, will they be allowed to continue to operate and to sell their products? It seems that the interpretation of this provision "under unsafe conditions" may lead to confusion in this case.

Le président: Cela figure à la troisième ligne de l'article 3 (1).

M. Phillips: Il y aurait des règlements visant des produits similaires, aux termes de la Loi relative aux aliments du bétail, dont le diéthylstilbestrol. Personne ne peut enregistrer un aliment contenant ce produit, à moins de faire observer certaines précautions qui sont bien prescrites pour les mélanges, et à moins de s'assurer que le mélangeur est bien nettoyé. C'est le cas de la Loi sur les aliments du bétail, quant au diéthylstilbestrol. Il en va de même s'il y a d'autres produits ou d'autres composants dans les aliments qui peuvent éventuellement causer des problèmes analogues à ceux que peut causer le diéthylstilbestrol. Par conséquent, il y a maintenant le problème des aliments ou des provendes.

Mais si l'on en vient maintenant à cette disposition, comme M. Olson l'indique, on couvre la situation de la fabrication, de l'utilisation, et l'article vise à assurer un plus grand contrôle sur les fabriques de produits antiparasitaires. Et voilà surtout où on met l'accent, pour assurer simplement que les pesticides sont fabriqués de façon sûre et entreposés de façon sûre.

Le président: Y a-t-il d'autres questions?

Mr. Roy (Laval): According to the bill, will the feed mill be allowed to continue selling these pest control products? We read in the bill that:

No person shall manufacture, store, display, distribute...

Now, feed mills distribute these products and this operation takes place in the same manufacturing unit where feeds are produced. I would like to have the guarantee that they shall be able to continue to sell feeds and pest control products at the same time.

M. Phillips: On ne compte nullement éliminer la vente de ces produits par les minoteries ou les moulins. Mais néanmoins, dans la manutention, on est d'avis qu'il faudrait prendre certaines mesures de prudence pour voir à ce que les aliments ne soient pas contaminés.

[Text]

The Chairman: Are there any further questions?

Mr. Olson: Mr. Chairman, I think I ought to give a further explanation with respect to Clause 3 (2). This subclause provides new authority bearing upon deception. This is only indirectly covered in the present Act and it will permit more specific control over certain labelling, advertising and packaging practices which are presently regulated with some difficulty. For example, the use of numbers in the brand and name of the products which bear no relation to the strength of the products but could be construed as doing so, or potentially hazardous compounds packaged in containers which resemble other commodities. That is under subclause (2) of Clause 3.

The Chairman: Mr. Danforth?

Mr. Danforth: I have one question on this matter, Mr. Chairman. Could there be an infringement of patent rights when it states that on these packages the character, quantity, composition and the value must be shown? I am thinking of particular chemicals which are the result of a complicated formula. Is there any protection for the formula be incorporated on the package?

Mr. Phillips: In that particular area, Mr. Chairman, it is essentially in the current form. With respect to whether there is protection for the manufacturer in relation to patents, I would assume there is no change because the Pest Control Products Act has been in effect since the 1930's.

• 2045

Mr. Danforth: Would the very fact that perhaps a patent is pending, or there is not a patent procured as yet, preclude the registering of a chemical if the manufacturer is not disposed to put the formula on the package?

Mr. Williams: Are you referring, Mr. Danforth to Clause 3 (2)?

Mr. Danforth: Yes, sir.

Mr. Williams: It is my understanding that Clause 3 (2) does not require him to put it on, but it requires him not to put anything on that would mislead people in respect of its composition. It does not require him to state the composition of it. It just says that he cannot say something is in it that is not in it.

Mr. Danforth: Am I to understand, then, that it is not necessary under the regulations

[Interpretation]

Le président: Y a-t-il d'autres questions?

M. Olson: Monsieur le président, je crois qu'il y a une autre explication que je dois donner aux termes de l'article 3, paragraphe (2). Ce paragraphe prévoit une nouvelle autorité qui n'est qu'indirectement comprise dans la loi actuelle et qui permettra une réglementation plus spécifique sur l'emballage, l'étiquetage et la réclame, par exemple, pour l'utilisation de chiffres ou de nombres dans la marque de commerce, qui n'ont aucun rapport avec la force du produit, mais qui pourraient donner cette impression. Il s'agit là du paragraphe (2) de l'article 3.

Le président: Monsieur Danforth?

M. Danforth: Monsieur le président, est-ce qu'il pourrait y avoir des infractions de commissions contre les brevets et les droits lorsqu'on dit que l'on doit indiquer la quantité, la nature, la composition et la valeur sur les paquets, sur les emballages? Je songe par exemple à certains produits chimiques dont la formule est assez compliquée. Je me demande simplement s'il existe une protection pour la fabrication, en l'occurrence, ou est-ce que la formulé doit être indiquée sur l'emballage même, sur le paquet?

M. Phillips: Dans ce domaine, monsieur le président, cela dépend si la protection du fabricant qu'intéressent les brevets n'est pas changée. La loi sur les produits antiparasitaires existe depuis les années trente. Je ne pense pas qu'il y ait jamais eu de changement.

M. Danforth: Si un brevet n'avait pas été encore accordé, est-ce que cela pourrait empêcher d'enregistrer un produit chimique si le fabricant n'est pas disposé à indiquer la formule sur le paquet?

M. Williams: Est-ce que vous êtes rendu au paragraphe 2 de l'article 3?

M. Danforth: Oui, monsieur.

M. Williams: Si je comprends bien, le paragraphe 2 de l'article 3 n'oblige pas le fabricant à indiquer la formule sur le paquet, mais simplement à ne pas faire de fausses déclarations. On n'est pas obligé d'indiquer la composition, mais simplement de ne pas dire qu'il y a quelque chose dedans qui n'y est pas.

M. Danforth: Dois-je comprendre, par conséquent, qu'il n'est pas nécessaire, aux termes

[Texte]

to illustrate on the package the composition or the formula?

Mr. Williams: I think that as a general statement we do not require the formula. We may require the ingredients, but without the percentages of each. The normal procedure is that the more important ingredients should be listed. This is largely a poison-control measure and things of this nature, as a protection to the public so that the public is aware or the doctors will be aware in an emergency case as to what the ingredients are; and also guarantees as to efficacy and things of that nature.

Clause 3 agreed to.

The Chairman: On Clause 4—Import, export sale, etc., of control products. Are there questions on Clause 4? Mr. Danforth.

Mr. Danforth: I am particularly interested in this Clause, Mr. Chairman, for two specific reasons. Number one, I wish to have outlined the procedures pertaining to the registering for use in Canada of a chemical. Secondly, I wish to know the procedures when there is available outside the country a chemical which is believed will perform functions advantageous to a producer in Canada—whether or not it is possible under this proposed Act for him to obtain a permit to use such chemicals, or is this prohibited?

In this day and age, when chemicals are ever increasing in their use and value, Canadian producers are, because of past history, prohibited in many instances from using chemicals which could be of direct benefit to production. Since this Clause deals with this might we have some background information on these two areas?

Mr. C. H. Jefferson (Director of Plant Products Division, Department of Agriculture): Mr. Chairman, with respect to the registration procedure it would likely be very much as at present. Generally it is this: the person wishing to offer a pest control product is obliged to apply for registration and submit information with respect to his product along the following lines: a description of the product in terms of its composition, a description of the purposes for which he wishes to sell it, and the directions for use—these would be the claims and the directions for use—and, if it is a new product, evidence to support his claims that when the product is used as directed it

[Interprétation]

des règlements, d'indiquer sur l'emballage la composition ou la formule?

M. Williams: Nous n'obligeons pas le fabricant à indiquer la formule. Les ingrédients peuvent être, mais sans nécessairement les proportions. La procédure normale veut que les ingrédients les plus importants soient énumérés. C'est surtout là une mesure de réglementation, une mesure de contrôle pour protéger le public, afin que le public connaisse, ou que les médecins connaissent, les ingrédients en cas d'urgence.

L'article 3 est adopté.

Le président: Article 4: Importation, exportation, vente, etc. de produits de protection. Y a-t-il des questions sur l'article 4? Monsieur Danforth.

M. Danforth: Je m'intéresse notamment à cet article-là, monsieur le président, pour deux raisons bien précises. Tout d'abord, j'aimerais qu'on m'explique la filière que doit suivre l'enregistrement pour l'utilisation, au Canada, de produits chimiques et, deuxièmement, j'aimerais connaître la façon de procéder s'il existe en dehors du pays un produit chimique qui peut être utile ou avantageux à nos producteurs canadiens. J'aimerais notamment savoir si, aux termes de la loi, il serait possible de pouvoir utiliser ces produits chimiques ou si cela est interdit?

Je crois qu'à l'heure actuelle, alors que les produits chimiques deviennent de plus en plus utilisés et de plus en plus chers aussi, les Canadiens, dans bien des cas, ont interdit l'utilisation de produits chimiques qui auraient pu avantager la production directement. Puisque l'article porte justement sur cette question, je me demande si nous pouvons avoir certains renseignements de base là-dessus.

M. C. H. Jefferson (directeur de la division des produits végétaux, ministère de l'Agriculture): En ce qui a trait à la procédure d'enregistrement, aux formalités d'enregistrement, elles seraient les mêmes qu'à l'heure actuelle. Quelqu'un qui désire offrir un produit antiparasitaire doit présenter une demande d'enregistrement et donner des renseignements au sujet de ce produit, soit: une description du produit au point de vue composition, une posologie des conditions d'utilisation, et s'il s'agit d'un nouveau produit, des preuves pour appuyer ses revendications, à savoir que lorsque le produit sera utilisé, il aura les effets qu'il prétend qu'il aura, preuve montrant que

[Text]

will perform in the manner in which he claims it will, evidence that when it is so used it will not result in serious damage to the health of livestock, for example, humans, and nowadays in terms of wildlife, that it will not be damaging to useful plants, again when it is used in accordance with the directions for use.

● 2050

This information supplied by the manufacturer is of his own generation, if you like, produced within the corporate structure, but in addition a great deal of it has been provided by private research organizations that specialize in developing information for their clients. In the case of evidence on usefulness, a good deal of that comes from work which is done in Canada on research stations of the Department of Agriculture.

We satisfy ourselves that this information does confirm that the product will be useful, that it will be practical under Canadian conditions and will not create a health hazard. Incidentally, talking about health, we are concerned here about the residue problem relative to the provisions of the Food and Drugs Act and the advice of the Department of National Health and Welfare is relied on in interpreting the data and in interpreting its significance in the Canadian context. Does that answer satisfactorily the first question, Mr. Chairman?

The Chairman: Mr. Danforth?

Mr. Danforth: Mr. Chairman, I would like him to continue and deal with number two and then I may pose some questions afterwards.

The Chairman: Could you give us a brief review of your second question?

Mr. Danforth: Yes, my second part was that I am very much concerned about the fact that there seems to be a tremendous time lapse between when certain chemicals in other countries are accepted and used before it is possible for primary producers to either get the permit to import this commodity into Canada or have it available for use. Are there any procedures whereby a primary producer may obtain a permit to import this for experimental purposes? What are the mechanics behind this particular aspect of the use of these chemicals?

Mr. Jefferson: At the present time, Mr. Chairman, an individual user who may wish

[Interpretation]

lorsque le produit sera utilisé, il n'aura aucun résultat nuisible ou d'effet nuisible sur la santé, par exemple, du bétail, des humains, et sur la faune; qu'il n'aura pas d'effet nuisible sur des plantes utiles. Encore une fois, lorsque le produit sera utilisé selon la posologie indiquée ou le mode d'emploi indiqué.

Ces renseignements doivent être fournis par le fabricant, de son propre chef. Outre cela, des organismes privés de recherche peuvent fournir les renseignements à leurs clients, au nom de leurs clients, dans le cas de preuves et de témoignages sur l'utilité du produit. Ces témoignages émanent la plupart du temps des travaux qui sont accomplis au Canada dans les stations de recherche du ministère de l'Agriculture.

Nous sommes convaincus que ces renseignements confirment que le produit sera utile et qu'il sera conforme aux conditions canadiennes, qu'il ne créera pas de menace à la santé, et, soit dit en passant, à propos de santé, nous nous préoccupons en l'occurrence du problème des résidus, conformément aux dispositions de la *Loi sur les aliments et drogues*, et l'avis du ministère de la Santé nationale et du Bien-être social nous permettra d'interpréter les données et la signification de ces données dans un contexte canadien.

Est-ce que cela répond de façon satisfaisante à la première question qu'on a posée, monsieur le président?

Le président: Monsieur Danforth?

M. Danforth: Monsieur le président, j'aimerais que le témoin puisse répondre à la question n° 2. Je pourrais peut-être y revenir et poser d'autres questions.

Le président: Pouvez-vous répéter votre deuxième question?

M. Danforth: Bien. Je me préoccupe du fait qu'il semble y avoir beaucoup d'écart de temps entre la période à laquelle ou la date à laquelle, les produits chimiques sont utilisés à l'étranger et acceptés à l'étranger avant que nos producteurs primaires ici, au Canada, puissent obtenir le permis d'importer ce produit au Canada ou de pouvoir s'en servir de quelque façon. Je me demande s'il y a une façon de procéder en vertu de laquelle le producteur primaire peut obtenir un permis d'importation, et quels sont les rouages, quel est le mécanisme, pour obtenir l'utilisation de ce produit à l'heure actuelle.

M. Jefferson: Un usager particulier qui désire importer un produit antiparasitaire qui

[Texte]

to bring in a pest control product which has not been registered for sale in Canada may do so. There is no prohibition against his importing such a product for his own use—provided his use is not for sale—if it is used on his own premises for his own purposes. There is some concern about this present situation, and the proposed Bill would provide authority to prohibit such importations where the use of a product would result in damage to third parties through the creation of residues, for example, or damage to wild-life, livestock or beneficial plants.

Mr. Danforth: Mr. Chairman, may I ask a supplementary? Dealing with the second answer first, may I ask whether, in the registration of these products or their licensing for import into Canada, it is a rule of the government to accept the registration or information furnished by the country of export?

To put it another way, if a chemical is used extensively, say, in the United States for a certain specific purpose and this chemical is not registered in Canada, or is not used in Canada, if an application comes for registration by the manufacturer, is the Canadian government disposed to accept the qualifications and certification of another country in this regard, or do we have to go through the preliminary of the information as outlined in your first answer?

Mr. Jefferson: Mr. Chairman, the answer to that is yes and no. The problem that we are faced with is interpreting the approval in another country in terms of Canadian conditions. It is not so much a matter of questioning the validity of the decision that was made for registration or use in another country; it is in determining whether or not the criteria that were used and the evidence available would be applicable to our climatic conditions, methods of use, crop rotation, and the other environmental factors that determine whether or not its use is going to be efficacious in Canada and safe within the limits that are prescribed.

• 2055

Delay occurs in having this transfer of information that can be reviewed in the Canadian context to determine whether or not the product does meet the basic requirements for safe and effective use in Canada.

Mr. Danforth: Mr. Chairman, I have other questions along this line, but I am prepared

[Interprétation]

n'est pas enregistré pour la vente au Canada, peut le faire. Il n'y a pas d'interdiction. Rien ne l'empêche d'importer ce produit pour son propre usage, pourvu qu'il ne s'en serve pas pour la vente, qu'il s'en serve à ses propres fins sur sa propriété. Cependant, on s'inquiète quelque peu de cette situation et le bill envisagé permettrait d'interdire cette importation lorsque l'utilisation du produit risquerait de créer des dommages pour une tierce partie par la création de résidus, d'effets nuisibles pour des plantes utiles au bétail ou à la faune.

M. Danforth: Monsieur le président, une question supplémentaire? D'abord, au sujet de cette deuxième réponse, puis-je demander si lors de l'enregistrement de ces substances ou de l'octroi d'un permis visant leur importation au Canada, est-ce que le gouvernement, de façon générale, accepte l'enregistrement ou les renseignements fournis par le pays exportateur?

Autrement dit, si des produits chimiques sont beaucoup utilisés aux États-Unis maintenant, pour certaines fins particulières, et si ce produit chimique n'est pas enregistré ou utilisé au Canada, si le fabricant présente une demande, est-ce que le gouvernement accepte la certification, l'enregistrement, les renseignements d'un autre pays à cet égard, ou est-ce qu'il faut de nouveau suivre toute la filière préliminaire que vous avez exposée dans votre première réponse?

M. Jefferson: Monsieur le président la réponse est oui et non. Le problème qui se pose, en l'occurrence, c'est celui d'interpréter l'approbation donnée dans un autre pays vis-à-vis ces conditions qui existent au Canada. Il ne s'agit pas tellement de mettre en doute la validité de la décision qui a pu être faite pour l'enregistrement ou l'utilisation dans un autre pays; il s'agit plutôt de déterminer si les critères utilisés et les preuves disponibles peuvent s'appliquer à nos propres conditions climatiques, aux autres méthodes d'utilisation, au roulement des récoltes et à d'autres facteurs relatifs au milieu qui déterminent si oui ou non l'utilisation de ce produit sera sans difficulté ou menace au Canada.

Voilà ce qui peut causer un délai, notamment dans le cas de la transmission de renseignements qui peuvent être révisés dans le contexte canadien pour déterminer si oui ou non le produit est conforme aux conditions de base pour une utilisation sûre et efficace.

M. Danforth: Monsieur le président, j'aurais d'autres questions à poser dans ce

[Text]

to pass now in favour of other gentlemen if I may be allowed to return.

The Chairman: Yes, I will recognize Mr. Gleave; I am not crowded at the moment, I will recognize Mr. Gleave and then back to you and Mr. Peters.

Mr. Gleave: Thank you. This brings me back to the question I posed earlier this afternoon, in answer to which some information was given concerning the amount of money we had spent in investigating the sources of these kinds of pesticides. I think we cannot make an evaluation of what a pesticide will do and what its effect will be on the surrounding area unless we do some basic investigation into its source and the effect the various ingredients will have. The information I asked for last Tuesday is, what kind of investigation do we carry out in these areas?

Mr. Olson: Mr. Chairman, if I may answer in a preliminary way, the statistics we provided today in response to your question gives you a pretty good indication of how much we spend in terms of dollars and man-hours on pest product testing, and then on how much we have spent on research into the area of pesticides other than product testing. Then there is some further testing that is done by departments other than the Department of Agriculture that was also laid out in the information we filed today.

Mr. Gleave: If you are going to judge the quality of a chemical that is coming in, say, from overseas or from across a line—and they come both ways—do you test these chemicals at the plants in Canada, or do you test their reactions and then use this as a basis for judging chemicals that you import? If I caught the answer to the question, you almost said: “Well, we judge what happens after they are brought in”, but this may be a bit late. How do you arrive at a decision on what to let in, or what to permit to be manufactured and distributed in Canada?

Mr. Olson: Mr. Chairman, there are several considerations that would be involved in our reaching that decision. In the first instance I suppose it is a technical decision based, first of all, on the evidence that is presented to us wherever it may come from, and relating that to Canadian conditions, and I can give you a number of examples. One, of course, is the diet; how much of the particular food is used in the diet.

[Interpretation]

domaine, mais je suis prêt à céder la parole à d'autres. Je pourrai revenir là-dessus un peu plus tard.

Le président: J'accorde la parole à M. Gleave. Je n'ai pas une liste très longue pour ce moment, et puis je reviendrai à vous.

M. Gleave: Merci. Ceci me ramène à la question que j'avais posée plus tôt cet après-midi. On nous a donné certains renseignements sur des dépenses que nous avons faites afin de faire enquête sur les sources de ce genre de pesticides. A mon avis, nous ne pouvons pas deviner quels seront les effets des produits antiparasitaires sur le milieu immédiat, à moins de faire des enquêtes sur la provenance et sur les effets des divers ingrédients. Par conséquent, les renseignements que j'ai demandés, jeudi dernier, sont les suivants: Quel genre d'enquêtes faisons-nous, en l'occurrence?

M. Olson: Monsieur le président, si vous me permettez de répondre de façon concise, les données statistiques que nous vous avons fournies aujourd'hui, en réponse à votre question, vous indiquent assez bien combien nous dépensons d'argent et d'heures-hommes à faire des relevés et des enquêtes et comment nous dépensons en frais de recherches dans le domaine des pesticides outre l'utilisation du produit. Et il y a aussi des essais qui sont faits par d'autres services du ministère de l'Agriculture et le résultat de ces essais a été mentionné dans les renseignements que nous vous avons transmis aujourd'hui.

M. Gleave: Si vous voulez arrêter une décision sur la qualité des produits chimiques, par exemple, qui viennent d'outre-mer ou d'outre frontière, et les deux s'appliquent, est-ce que vous faites l'essai de ces produits chimiques fabriqués au Canada? Est-ce que vous vérifiez les produits importés d'après les réactions obtenues? Si j'ai bien compris votre réponse, vous avez presque dit: «Nous attendons pour voir quels sont les effets, une fois que ces produits ont été importés». Mais il est peut-être trop tard. Comment en venez-vous à une décision quant à ce qui peut être importé ou fabriqué ou distribué au Canada?

M. Olson: Monsieur le président, plusieurs considérations entrent en ligne de compte. Tout d'abord, je suppose qu'il s'agit là d'une décision d'ordre technique fondée sur les preuves qui ont été fournies quelle qu'en soit la provenance, se rattachant ensuite aux conditions canadiennes, et je puis vous citer bon nombre d'exemples. Notamment, la diète; combien de tel ou tel aliment est utilisé.

[Texte]

The second one, for example, is whether it was tested in an area of where there is very high rainfall and this was to be used in a dry area. Southern Alberta where I come from is a good example, the conditions are not the same at all because the rainfall could wash these plants clean under normal conditions and then that would not happen. That is not all that is involved, but I think it should be made clear that the regulations insofar as the use and approval of using these chemicals in Canada are decided in Canada. But we do in fact use or take into account the evidence that is presented to us on the basis of trials that are made wherever the chemical has been tested, whether it is in the United States, or any other place.

• 2100

So I think what you have to appreciate is that if conditions are the same, there may not need to be a great deal of further testing. But if they are not the same, climatic conditions and other conditions that are pertinent to this situation, then we may on the basis of a technical evaluation need to do some additional testing. Perhaps Mr. Phillips or Mr. Jefferson may want to add something, but we have to be satisfied that these same results can be expected under Canadian conditions as the results where they were, in fact, tested.

The Chairman: Have you any further comment? Mr. Jefferson?

Mr. Jefferson: Mr. Chairman, agricultural pesticides, particularly those that are used in field applications of one kind or another, apply more and more to livestock applications too. The effectiveness of the pesticide is conditioned very greatly by the management practice that is used, and it is becoming more and more necessary to have at least one season's trial of use under Canadian conditions to determine whether or not the product will be satisfactory. For field application pesticides, a period of perhaps two or three years is more usual.

I might add too, Mr. Chairman, that many of the pesticide manufacturing companies are international in character and when a new product is originated and enters a test scheme, whether it originates in Germany, Japan, the United Kingdom or the United States, it in all likelihood will get into Canadian trials long before it reaches commercial stage in any country. The thing that holds up its introduction perhaps for commer-

[Interprétation]

Deuxièmement, par exemple, si le test est fait dans une région où il y a une forte précipitation et que le produit doit être utilisé dans une région plutôt aride comme dans le sud de l'Alberta, d'où je viens, les conditions ne sont pas les mêmes du tout qu'ailleurs, parce que la précipitation pourrait fort bien nettoyer ces plantes dans des conditions normales. Ce n'est pas tout ce qui est en cause, mais je crois qu'il convient de bien savoir que les règlements intéressant l'application, l'utilisation et l'approbation pour l'utilisation de ces produits chimiques au Canada, font l'objet d'une décision au Canada. Mais nous tenons compte des preuves qui nous sont présentées par suite des essais qui ont été faits dans le pays où le produit chimique a été vérifié, qu'il s'agisse des États-Unis ou d'un autre pays.

Ce qu'il faut bien savoir c'est que si les conditions sont les mêmes, peut-être n'aurons-nous pas besoin de faire beaucoup d'autres tests, mais si les conditions ne sont pas les mêmes, les conditions climatiques et autres qui sont propres à la situation, il se peut que compte tenu d'une évaluation technique, nous devions faire d'autres essais. Peut-être M. Phillips ou M. Jefferson voudront-ils ajouter quelque chose. Il faut que nous soyons convaincus que les mêmes résultats, les mêmes effets pourront être réalisés dans les conditions canadiennes que là où on a fait les examens.

Le président: Avez-vous des commentaires, monsieur Jefferson?

M. Jefferson: Monsieur le président, les pesticides agricoles, surtout ceux qu'on emploie dans le champ, et cela s'applique de plus en plus au bétail, l'efficacité du pesticide est conditionnée par la méthode administrative qu'on emploie, et de plus en plus, il devient nécessaire de faire au moins un essai d'un an, en vertu des conditions canadiennes pour déterminer si oui ou non le produit sera satisfaisant. Pour les pesticides à être employés dans le champ, une période de deux ou trois ans est plus usitée.

Je pourrais aussi ajouter, monsieur le président, que plusieurs des fabricants de pesticides sont internationaux, et lorsqu'un nouveau produit est mis sur le marché ou est produit, mettons qu'il ait son origine au Japon, aux États-Unis ou ailleurs, il aura des essais au Canada, de toute façon, bien avant qu'on n'en arrive à l'étape de commercialisation dans n'importe quel pays. Ce qui empêche peut-être la commercialisation au Canada

[Text]

cial use in Canada, more than in some other countries, is that perhaps more care is taken to assure that its use will be compatible with our Canadian way of doing things.

Mr. Gleave: The thing I am thinking of in essence is control, that is, in the ability of the user to use it without doing more than he intends to do, if you follow what I mean. That is, he wants to destroy certain insects or certain things and in the process, as I have observed it, he quite often destroys a great deal more. Do you conduct investigations or follow through to see that there is not a residue left or that it is not destroying a great deal more than what is its real intent?

Mr. Jefferson: Mr. Chairman, the program of monitoring the use of pesticides in the environment within the context of agriculture and the impact of use in forest applications is a developing one, and a good deal more information in the monitoring sense is being developed now than say even 10 years ago. So that there is a follow-up procedure which measures not only the residue level but the effective use in terms of the ecological system in which we live.

In this legislation there would be authority to withdraw pesticides which this type of experience had shown were creating problems and hazards in excess of those which we are prepared to tolerate. Does this help answer that?

• 2105

Mr. Gleave: Yes it does. This actually is what I am concerned about as much as anything, that surely we know we can take a given chemical and we can destroy what we want to destroy, but we destroy a great deal more as well which we do not want to destroy. This is what I am concerned about in this field, that we be selective and exercise the control and if a particular chemical is not going to be selective enough we rule it out until we get one that is selective enough. This is what I am concerned about.

Mr. Peters: A good example is where you try to kill the dandelions on a lawn. In getting rid of the dandelions, you get rid of all the clover and the neighbour's blueberry bushes, and your roses and everything else.

What I would like to know is what facility do we have available for chemical testing, not so much how it works. The company will say it contains in analysis so much and so much and so much. What facilities do we have to arrive at this chemical analysis.

[Interpretation]

plus qu'ailleurs, c'est que peut-être on prend beaucoup plus soin de vérifier que son usage, son utilité soit compatible avec les méthodes canadiennes.

M. Gleave: Ce à quoi je songe essentiellement, c'est le contrôle, la réglementation, soit la capacité de celui qui l'utilise de l'employer sans faire plus qu'il n'avait l'intention de faire, si vous savez ce que je veux dire. Il veut détruire certains parasites, certains insectes ou certaines choses, et au cours de ce procédé, il détruit probablement beaucoup plus. Est-ce que vous conduisez des enquêtes pour savoir si un produit ne laisse aucun résidu ou pour savoir s'il détruit beaucoup plus que son objectif, que son objet?

M. Jefferson: Monsieur le président, le programme de réglementation des pesticides dans le milieu même de l'agriculture et dans l'application forestière évolue toujours. Et dans le sens du contrôle, on obtient beaucoup plus de renseignements aujourd'hui qu'il y a dix ans. Par conséquent, on suit de très près la méthode et la procédure pour mesurer non seulement le niveau de résidu, mais l'efficacité en ce qui concerne le régime écologique dans lequel nous vivons.

Dans cette mesure législative se trouverait une autorisation pour retirer les pesticides qui, d'après l'expérience créeraient des problèmes et des menaces dépassant ce que nous sommes prêts à tolérer.

Est-ce que cela répond à votre question?

M. Gleave: Oui. C'est un peu ce qui me préoccupe autant que n'importe quoi. C'est qu'assurément nous savons que nous pouvons prendre un produit chimique et détruire ce que nous voulons détruire, mais nous détruisons beaucoup plus que nous voulons et que nous n'avons pas l'intention, que nous ne voulons pas détruire. C'est ce qui me préoccupe dans ce domaine. Choisissons ce que nous voulons détruire et exerçons un certain contrôle. Si un produit chimique n'est pas suffisamment conforme à son objet, éliminons-le jusqu'à ce que nous en ayons un qui le soit.

M. Peters: Un bon exemple, c'est lorsque vous essayez de détruire les mauvaises herbes dans le gazon et que vous détruisez tout le reste, vos rosiers y compris.

Ce que je voudrais savoir, c'est qu'est-ce que nous avons à notre disposition à l'heure actuelle, pour un essai clinique. Non pas pour savoir comment cela fonctionne, mais au cas où la compagnie dirait que dans leur analyse on a tant de proportion de telle chose. Quelles sont les dispositions que nous avons pour en arriver à l'analyse chimique?

[Texte]

Mr. Jefferson: Mr. Chairman, the Department has analytical facilities, two laboratories of its own, one in the West and one in Ottawa, staffed with chemists and other analysts who are able to determine the composition of formulations so that a comparison can be made between what they actually contain and what they are represented to contain.

Mr. Peters: What tolerance would you consider to be reasonable?

Mr. Jefferson: The tolerance varies with the product and with the precision of the resolving power of the analytical technique available. By and large it would range—percentages can be misleading here—anywhere from a part of a percentage to perhaps a plus or minus 10 or 15 per cent.

We also have biological testing facilities, in other words to test the biological response quite apart from what the chemical might be.

Mr. Peters: This tolerance that you have, will that depend on rate of application? Some of these are very highly effective for many things that would not have too much of a tolerance. Like the dandelion spray. Maybe it should not get rid of clover, but it does if you apply it a little heavier than you are supposed to. If you have ever put it on, you have a bar, you run it across the ground, it depends whether you go faster, or whether your wife does it, or how it is conducted. There is a normal tolerance of application.

Mr. Jefferson: In terms of the provisions of the bill, there would be authority here to regulate with respect to this particular point that you are raising. It would have an effect on the composition of the strength if you like, of the formulation.

I think perhaps the point, Mr. Chairman, that is being raised here is that a very highly concentrated material, an old one, nicotine sulphate 40 per cent, for example, which we have lived with for a long, long time, is a very potent material and if it is used indiscreetly in a very small amount it can be extremely damaging. The authority would be here if the circumstances were so dictated to not permit that powerful a product to be available for people to misuse or with which to have accidents. I think the authority would be here to regulate, to make products safer in that context.

• 2110

Mr. Peters: I have another question. Mr. Danforth mentioned the fact that in specialized fields—I think suckering tobacco and

[Interprétation]

M. Jefferson: Monsieur le président, le ministère a des installations d'analyse, deux laboratoires qui lui appartiennent un dans l'Ouest et l'autre à Ottawa, dont le personnel se compose de chimistes et d'autres analystes qui peuvent déterminer la composition des formules des produits afin de pouvoir comparer ce que ces produits contiennent et ce qu'on prétend qu'ils contiennent.

M. Peters: Quelle est la tolérance admissible?

M. Jefferson: La tolérance varie selon le produit et selon la précision même de résoudre la technique analytique. Dans les grandes lignes, les proportions évidemment peuvent nous tromper, mais tout cela peut varier d'une partie des proportions jusqu'à plus ou moins 10 p. 100. Nous avons aussi des installations pour les essais biologiques, pour vérifier les réactions biologiques.

M. Peters: La tolérance que vous obtenez, est-ce que cela dépend de la mesure d'emploi, la quantité appliquée? Il n'y aurait pas tellement de tolérance, n'est-ce pas? On ne prétend peut-être pas que cela va détruire, mais en fait elle le fait. C'est peut-être une des choses qu'on n'est pas censé détruire, n'est-ce pas? Si vous l'appliquez, cela dépend si vous allez vite ou non, ou si votre femme le fait, ou aussi la façon de le faire.

M. Jefferson: Selon les dispositions du bill, il y aurait pouvoir pour réglementer en ce qui concerne le point particulier que vous soulevez.

Il y aurait effet sur la composition, sur la force de la formule.

Le sulphate de nicotine dont nous nous servons depuis plusieurs années est très fort et si on l'employait sans discernement en très petite quantité, cela pourrait être dangereux. Le pouvoir nous serait donné, si les circonstances étaient telles que cela serait justifié, de ne pas permettre un produit aussi puissant dont les gens pourraient se servir et qui pourrait être cause d'accident. Nous aurions toute autorisation voulue pour réglementer l'emploi de ce produit.

M. Peters: M. Danforth a mentionné le fait que dans les domaines spécialisés, le tabac et autres domaines hautement spécialisés, on

[Text]

probably other very specialized fields were mentioned—work is done in universities and in private operations in the United States or other countries. Do we anticipate allowing control by independent bodies? For instance, a large farmer may want to try a plot of it, or try some experimenting by himself. Is there provision for us to supervise his own campaign? This is not in the manufacturing sense. It is in the consumer sense.

Mr. Olson: Could I refer you to clause 5(f), Mr. Peters?

Mr. Peters: Yes, that answers it.

The Chairman: Mr. Danforth had a question.

Mr. Danforth: As a first supplementary question, may I ask in the laboratory work on this, do you have, accurate quantitative analysis as compared to qualitative analysis?

Mr. Jefferson: Mr. Chairman, I would say the answer to that is yes. In both the qualitative and the quantitative sense the analytical techniques are quite good and getting better.

Mr. Danforth: Mr. Chairman to return to my original line of questioning. Is it more difficult for a private individual or a new firm in Canada to obtain a registration for a chemical to be used as compared to an established international company?

Mr. Williams: Mr. Chairman, it might be more difficult for a new firm to obtain it because they would not be familiar with it, but the difficulty would not arise simply because they were a new firm. We must presume that if it is a new firm, they are relatively unaware of the techniques and so forth of making applications, but it is only on that basis that I am making that statement.

I would suggest that if it is a very small firm, they might have more difficulty than a very large firm, because despite the size of the firm in general we require the same level of information depending upon the potential danger of the product. Once again, if it appears to be a potentially dangerous product or a product that may be of little use to the farmer, we may require much more exhaustive information than if, on the face of it, it appears to be a very useful and relatively harmless product.

[Interpretation]

effectue un certain travail dans les universités et certaines opérations aux États-Unis et dans d'autres pays. Est-ce que nous prévoyons qu'il y aura une certaine réglementation de la part d'organismes indépendants si le propriétaire d'une grande entreprise agricole, par exemple, veut tenter une expérience par lui-même? Est-ce qu'on prévoit une surveillance de ces essais? Non pas dans le sens de la fabrication, mais dans le sens du consommateur, de la consommation.

M. Olson: Puis-je vous demander de vous reporter au paragraphe 5 (f), monsieur Peters?

M. Peters: Oui, la réponse y est.

Le président: M. Danforth avait une question à poser.

M. Danforth: Monsieur le président, comme première question supplémentaire, est-ce que je pourrais demander si dans le travail de laboratoire qui s'accomplit, vous obtenez une analyse quantitative exacte, quantitative par rapport à l'analyse exacte qualitative?

M. Jefferson: Je dirai, monsieur le président, que la réponse est affirmative, dans les deux sens, qualité et quantité.

Les techniques analytiques sont excellentes et progressent et s'améliorent toujours.

M. Danforth: Pour revenir maintenant aux questions que je posais auparavant, est-il plus difficile pour un particulier ou une société au Canada d'obtenir l'enregistrement pour l'emploi d'un produit chimique, en comparaison à une compagnie déjà établie qui serait internationale?

M. Williams: Monsieur le président, ce serait peut-être plus difficile pour une nouvelle compagnie de l'obtenir, car on ne connaîtrait pas la compagnie, mais les difficultés ne surgiraient pas en raison du fait qu'il s'agit d'une nouvelle compagnie. Nous devons présumer que s'il s'agit d'une nouvelle compagnie, ils ne connaissent peut-être pas toutes les techniques de demander l'enregistrement. Mais c'est seulement en raison de cela.

S'il s'agit d'une très petite société, elle aurait peut-être beaucoup plus de difficultés qu'une grande société, car peu importe l'importance de la société, nous exigeons le même genre de renseignements selon la possibilité de menace du produit. Encore une fois, si le produit peut être dangereux ou si le produit n'est pas d'une grande utilité pour le cultivateur, nous exigeons beaucoup plus de renseignements que si au prime abord le produit semble utile et relativement anodin.

[Texte]

In general we follow the practice that if our production research people are of the view that any new chemical may be of value to the Canadian farmers, these production research people in general obtain authority to work with it and will provide information under Canadian conditions that is supplementary to any information that may be required from the manufacturer. But this once again is a judgment decision by our production research people based upon research findings elsewhere in the world, based upon our own preliminary research findings in which they may wish to test a product very quickly to get it into use in Canada, and based once again upon their assessment of its potential value to the Canadian agricultural public.

Mr. Danforth: I have another supplementary question, Mr. Chairman. In the allocation of a chemical, for example, to a research station, can this product that is allocated for testing be an unregistered product or must it be registered?

Mr. Williams: It does not need to be registered at that stage.

Mr. Danforth: Mr. Chairman, I think Mr. Williams is quite aware of a specific problem that we are facing in this regard. An attempt has been made to register a certain chemical for six years. It seems that all the preliminary qualifications have been met, although there is a difference of opinion between the departmental men who applied the chemical as a test and the various primary producers who have been using the chemical and feel that it lives up to all the prescribed specifications. I wonder if there is any way such a stalemate can be resolved.

• 2115

Mr. Williams: Under the present legislation, yes. The stalemate can be resolved by the people who wish to use this chemical if they obtain it on a prescription basis from the manufacturer. In other words, under the present legislation there is no restriction on a person using a product on a prescription basis. That is to say, I can go to a drug store and order almost anything that is not illegal under any other Act—such as the Act dealing with dangerous poisons or hazardous substances—and ask the druggist to make it up and I can put it on my tomatoes, my cucumbers, or whatever I might wish to put it on. However, in the case in question our research people are continuing to do work on this product and, as I am sure you are aware, we

[Interprétation]

En général, nous suivons la pratique par laquelle, si nos chercheurs estiment qu'un nouveau produit chimique peut être utile aux cultivateurs, d'habitude ce personnel obtient l'autorisation de travailler sur ce produit pour obtenir les conditions strictement canadiennes et ensuite exiger les conditions supplémentaires nécessaires de la part du fabricant. Encore une fois, ce travail est fait par nos chercheurs en se fondant sur ce qui a été fait dans les autres pays et aussi dans le domaine où ils voudront établir de nouveaux essais, selon la possibilité de valeur pour le peuple canadien.

M. Danforth: Une autre question supplémentaire, monsieur le président. Dans l'allocation d'un produit chimique, à votre station de recherches, par exemple, est-ce qu'un produit livré aux essais et à la recherche, est enregistré ou non?

M. Williams: Il n'est pas nécessaire qu'il soit enregistré à cette étape-là.

M. Danforth: Je crois que M. Williams connaît très bien un problème précis auquel nous faisons face à cet égard. On tente d'enregistrer un certain produit chimique depuis six ans. Il semble qu'on ait rencontré toutes les exigences préliminaires sauf qu'il y a divergence de vues entre les fonctionnaires du ministère qui ont appliqué ou qui ont fait l'essai du produit et les divers agriculteurs qui ont employé le produit chimique et qui semblent croire que toutes les exigences prescrites vis-à-vis de ce produit chimique ont été rencontrées. Je me demande s'il y a moyen de résoudre cette impasse.

M. Williams: En vertu de la présente loi, oui, il est possible de contourner cette impasse, par ceux qui veulent employer ces produits chimiques, ils peuvent l'obtenir sur ordonnance directement du fabricant. En vertu de la présente loi, il n'y a aucune restriction pour la personne qui veut employer un certain produit sur ordonnance. C'est-à-dire que je pourrais aller me présenter à une pharmacie et demander à peu près tout, sauf ce qui serait illégal en vertu d'une autre loi, telle qu'une loi sur les poisons ou les substances dangereuses et l'appliquer sur mes concombres ou mes tomates ou n'importe quelle autre plante. Mais dans le cas qui nous préoccupe, nos chercheurs continuent à travailler sur le produit. Et à l'heure actuelle,

[Text]

have conflicting evidence with which to face the administrators of the Pest Control Products Act.

On one side we have statements from producers that this product is useful to them. On the other hand we have presumably scientific evidence based on carefully controlled studies conducted by our research station at one of our large labs and it has produced evidence—I do not think we should refer to the product—which does not substantiate some of the evidence that has been put forward by producers. At the present time the work is continuing. That is all I can say, Mr. Danforth.

Mr. Danforth: Mr. Chairman, in reply to Mr. Williams' allegation with respect to this specific problem, I am quite aware that the research station is co-operating and I am fully aware of the problem. However, I hope that in some way this matter can be resolved so that we can arrive at a solution. It seems to me that a six year delay in trying to have a chemical registered is unduly long.

There is one further question I would like to ask. Mr. Williams said that producers may be able to obtain this chemical under a prescription. If such is the case, where does the line of control of the use of a chemical fall? If the primary producer is using an unregistered chemical, is he prohibited from selling his produce? Is he subjected to extraordinary inspection of his produce? Where is the line of demarcation? Where do we go from here on this?

Mr. Williams: At the present time under the current Act the line of demarcation lies basically with the word "sale" rather than the word "use." This bill proposes to change that; it is a question of the use of the product rather than the sale of the product. At the present time it is a question of the sale of the product being prohibited under the Act.

Presumably if a person wishes to go into a drug store and ask the druggist to mix up such and such chemicals, he is entitled to do so as long as they are legal chemicals, and he is entitled to do whatever he might wish with these chemicals to his own crops. This is always subject, of course, to the proviso that if they produce a residue that is unacceptable to the Food and Drug Directorate, he will not be allowed to sell those crops.

Mr. Danforth: Would he be subject to compensation?

Mr. Williams: No, because under the compensation section that we have dealt with it

[Interpretation]

comme vous le savez, nous avons des preuves divergentes qui ont été présentées aux fonctionnaires chargés de l'application de la Loi sur le contrôle des produits antiparasitaires.

D'une part nous avons des déclarations d'agriculteurs prouvant qu'il s'agit d'un produit utile et d'autre part, nous avons des preuves scientifiques fondées sur des essais précis effectués par nos stations de recherche qui nous ont prouvé le contraire des témoignages avancés par les producteurs. A l'heure actuelle, le travail se continue. C'est tout ce que je peux dire, monsieur Danforth.

M. Danforth: Dans l'allusion faite par M. Williams à ce produit particulier, permettez-moi de dire que je suis tout à fait au courant du fait que la station de recherches collabore. Et j'espère qu'on trouvera moyen d'arriver à une solution, car un délai ou un retard de six ans pour obtenir l'enregistrement d'un produit chimique, me semble un peu trop long.

Il y a une autre question que je voudrais poser à M. Williams, monsieur le président. Il a dit que les producteurs pourraient peut-être obtenir le produit chimique en vertu d'une ordonnance. Si tel est le cas, monsieur le président, où se trouve la ligne de démarcation de la réglementation du produit chimique? Si l'agriculteur emploie un produit en vertu d'une ordonnance, lui défend-on de vendre sa récolte? Ou doit-il subir une inspection extraordinaire? Où se trouve la ligne de démarcation? Où allons-nous?

M. Williams: A l'heure actuelle, la ligne de démarcation en vertu de la loi courante, la loi actuelle, se trouve dans l'expression «vente», plutôt que dans l'expression «emploi». Le présent bill veut changer tout cela. C'est-à-dire que nous voulons réglementer l'emploi plutôt que la vente, du produit prohibé. L'on pourrait peut-être présumer que si une personne entrait dans une pharmacie et demandait au pharmacien de lui préparer tels et tels produits chimiques, en autant que les produits sont légaux, il pourrait le faire. Il pourrait les employer tel que bon lui semblerait sur sa propre terre. Évidemment, s'il y avait des résidus qui ne seraient pas acceptables pour la Direction des aliments et drogues, on ne lui permettrait pas de vendre ses produits.

M. Danforth: Est-ce qu'il pourrait avoir droit à l'indemnité?

M. Williams: Non, car en vertu de l'article visant l'indemnisation, seuls les produits ou

[Texte]

only applies to registered pesticides that have been approved and used in accordance with the basis for their approval.

• 2120

Mr. Danforth: But would he not be using registered chemicals?

Mr. Williams: I do not believe those chemicals per se are registered. If, for example, he asked for a 50-50 mixture of kerosene and salt and he were to take that home and apply it for the purpose of sterilizing the soil in order that he could grow some products in it later on and it resulted in excessive quantities of salt in the eventual product—which I may say is highly unlikely—the product would not be allowed on the market. However, I do not believe he would be in conflict with any of the laws of the country because he asked the druggist to mix kerosene and salt together and he took it home and applied it to some soil and later grew a crop in that soil.

Mr. Danforth: I would like to continue this line of questioning, Mr. Chairman, because it is a very important clause in this bill.

I know it depends on the type of chemical and what it is being used for, but may I have some indication of what is generally considered the normal time for a product to be registered after there has been a definite application for it?

Mr. Jefferson: Mr. Chairman, if all the data that is required to make an evaluation is available with the application the process of review would probably be completed in a period of not more than three months. It involves putting this information through the research branch of the Department of Agriculture, through the Food and Drug Directorate of the Department of National Health and Welfare, through the Canadian wildlife service and perhaps the Department of Fisheries and possibly some other agencies that have a peripheral interest in the consequences of the use of the product. No two cases are alike.

Mr. Olson: May I add, Mr. Chairman, that all of those things are based—and in the time that has been explained by Mr. Jefferson—on the assumption that we get approval after submitting it for approval. If at any point there is rejection of it then, of course, it is not possible to give any norm as to how long it will take to get approval.

Mr. Danforth: I can well appreciate this, Mr. Chairman, but there is quite a difference between three months and six years.

[Interprétation]

les pesticides enregistrés et approuvés, employés selon le mode d'emploi approuvé, entreraient dans les dispositions de la Loi.

M. Danforth: Et alors, est-ce qu'en fait il ne se servirait pas de produits chimiques enregistrés?

M. Williams: Je ne crois pas que ces produits sont, par essence, enregistrés. Si, par exemple, il demande un mélange moitié-moitié de kérosène et de sel, mettons, par exemple, pour stabiliser le sol afin de pouvoir ensuite faire de la culture. Si, plus tard, il y avait trop de sel dans la récolte, ce qui est peu probable, on ne permettrait pas au produit d'être vendu. Cependant je ne pense pas que l'agriculteur contrevienne à une quelconque loi canadienne, du seul fait qu'il aurait demandé au pharmacien de mélanger le kérosène et le soufre.

M. Danforth: J'aimerais poursuivre, M. le président, car je crois qu'il s'agit d'une disposition très importante de ce projet de loi. Je sais que cela dépend du genre de produits chimiques que l'on emploie, et du but auquel on le destine. Mais est-ce que je peux avoir une indication de ce que l'on considère normalement comme étant le délai normal d'enregistrement d'un produit, une fois la demande faite?

M. Jefferson: Monsieur le président, si toutes les données requises pour faire l'évaluation sont disponibles en même temps que la demande d'enregistrement, la révision serait probablement terminée dans un délai de trois mois au plus. Il s'agit de transmettre ces renseignements à la direction des recherches du ministère de l'Agriculture et ensuite au Directeurat des aliments et des drogues du ministère de la Santé nationale et du Bien-être social et ensuite au Service canadien de la Faune et possiblement au ministère des Pêcheries et aussi à une autre agence qui serait de près ou de loin intéressée aux produits. Il n'y a pas deux cas qui se ressemblent.

M. Olson: Puis-je ajouter, M. le président que toutes ces choses ont été expliquées par M. Jefferson, sur l'assurance d'obtenir l'approbation envers tous ces sujets. Il n'y a pas de délai normal, car si à un moment donné on rejette la demande, il est très difficile de préciser combien de temps cela prendrait pour obtenir l'approbation.

M. Danforth: Je le comprends mais il y a toute la différence au monde entre trois mois et six ans.

[Text]

Mr. Olson: Yes, but I think the assumption here is that this product will and ought to have been approved and in fact it was not.

Mr. Danforth: This is my concern. One further question, Mr. Chairman. If a product were refused registration and an indication was given as to the reason for its refusal, an alteration were made in the product—perhaps a change in a basic ingredient that was causing concern—could it be resubmitted for registration?

Mr. Williams: Yes, Mr. Chairman.

Mr. Danforth: If I may, Mr. Chairman, I would like to get back to this sale under a formula, as Mr. Williams has pointed out, as a method of moving this chemical in use by the primary producers. Will such action be prohibited or is it foreseen that this course of action will be stopped under the provisions of the present Act.

Mr. Williams: I think this will depend upon the nature of the ingredients. If the ingredients consist of any of the products that are controlled by this Act it will be stopped. If they do not consist of products that are controlled by this Act—such as salt and kerosene, which I have mentioned and which I do not think we intend to control under this Act—it will not be stopped. There could be a long list of what we might call the common chemicals.

• 2125

Mr. Danforth: If I understand you correctly, Mr. Williams, if the formula included any one of the basic chemicals over which there could be concern, they could be prevented from sale on the grounds set out in this bill?

Mr. Williams: They could be, yes, under this proposed Act.

Mr. Danforth: Thank you, Mr. Chairman.

The Chairman: Thank you. Are there any further questions? Mr. Gleave?

Mr. Gleave: I do not know if this comes specifically under this bill, but the thing that concerns me in the area in which I live is that if you go to buy a chemical you will find this brand name or that brand name; it is this or it is that.

I wonder if we can get to the point in the sale of chemicals where we are dealing with fertilizers. If you buy fertilizer it is marked 11-48-0 or 11-55-0, and you know what com-

[Interpretation]

M. Olson: Oui, mais je crois que vous présumez que le produit en cause aurait dû être approuvé et le fait est qu'il ne l'a pas été.

M. Danforth: Voilà ce qui me préoccupe. Une autre question, monsieur le président. Si l'on refuse un produit à l'enregistrement et qu'une indication ait été donnée au sujet des raisons de ce rejet. Après modification de la formule, pourrait-on alors faire une nouvelle demande d'enregistrement?

M. Williams: Oui, monsieur le président.

M. Danforth: Si vous me le permettez, monsieur le président, pour revenir maintenant à la question de la vente. Selon la formule que M. Williams a signalée comme étant un moyen de transporter le produit chimique employé par les producteurs, prévoit-on l'interdiction d'une telle méthode en vertu des dispositions de la nouvelle loi?

M. Williams: Je crois que tout cela dépend des ingrédients et de leur nature. Si les ingrédients consistent en des produits qui sont interdits ou réglementés par la présente loi, on les arrêtera. S'il s'agit de produits qui ne sont pas réglementés par la présente loi, par la nouvelle loi, tels le kérosène ou le sel, je ne crois pas que nous ayons l'intention de les contrôler. On ne les arrêtera pas. Il se pourrait qu'il y ait une longue liste d'autres produits chimiques que nous pourrions peut-être désigner du nom de «produits chimiques communs».

M. Danforth: Si je vous comprends bien, en fait, la formule qui contient l'un des quelconques produits chimiques de base qui nous préoccupent, on pourrait en empêcher la vente en vertu des dispositions de ce bill.

M. Williams: Oui, c'est exact, il se pourrait, en vertu de la nouvelle loi.

M. Danforth: Je vous remercie, monsieur le président.

Le président: Merci beaucoup. Y a-t-il d'autres questions?

M. Gleave: Je ne sais si cela relève de la présente loi, mais ce qui me préoccupe c'est, du moins dans la région où je demeure, lorsque l'on achète des produits chimiques, on parle de telle marque ou de telle marque.

Ce que je me demande c'est, est-ce que nous pourrions en arriver au point, dans la vente des produits chimiques, de nous introduire dans le domaine des fertilisants, des

[Texte]

ponents are contained in that bag, you know what it is composed of. It is composed of certain things that you want to buy in fertilizer and you can assess it. Is it possible to do this with regard to chemicals? Can these products be labelled—never mind their brand name, I am not interested in that, it does not mean a thing to me—so that I will know what that chemical is composed of and its ability to do the job I want it to do?

Do you propose to exercise any control over labelling so that a farmer will know what he is buying? I can tell you that not only is the farmer concerned, our technical people and our universities are concerned about the fact that the farmer is faced with a myriad of names which do not mean anything to him. If the chemical composition were shown then perhaps knowledge could be built up so that the farmer would know what he was buying and what it would do.

Mr. Jefferson: Mr. Chairman, I wish the matter of pesticide chemicals was as simple as fertilizers. If there were only three active ingredients in the range of available pesticides as there are nitrogen, phosphorus and potash in fertilizers, then we could have such simplicity, but when there are some 350-plus different active ingredients that are classed as pesticides each one has to have a different name. The current provisions of the Pest Control Products Act—and they are carried into this new bill—make it mandatory that every pesticide list in the guarantee statement and in the name statement of the product, whether it is dicamba or something else, shows the chemical or generic name of the active ingredients and the percentage content. The Act does not prevent people from using a trademark but every label must bear the name of the chemical in generic terms and the percentage of active ingredients that are present, the ingredients that count.

Mr. Olson: Mr. Chairman, I wonder if I could refer Mr. Gleave to subclause (4) of Clause 3. It reads:

A control product that is not packaged, labelled or advertised as prescribed or is packaged, labelled or advertised contrary to the regulations shall be deemed to be packaged, labelled or advertised contrary to subsection (2).

[Interprétation]

engrais? Si vous achetez un engrais marqué 11-48-0 ou 11-55-0 vous savez exactement quels sont les composants, la proportion du produit ensaché. Vous savez que l'engrais se compose de certaines choses que vous voulez trouver dans un engrais. Vous pouvez en évaluer l'importance. Est-ce possible à l'égard des produits chimiques? Est-ce que nous pourrions avoir l'étiquetage des produits, peu importe la marque? Car elle ne veut rien dire. Mais, ce que je veux savoir c'est quels sont les composants du produit chimique et s'il est capable d'agir conformément à mes désirs.

En vertu de cette loi, est-ce que vous vous proposez d'exercer une réglementation de l'étiquetage, afin que les cultivateurs puissent savoir de quoi il s'agit. Non seulement les cultivateurs sont-ils préoccupés de cette question, mais les chercheurs de nos universités sont préoccupés par le fait que les cultivateurs font face à toute une gamme de noms ou de marques qui ne veulent rien dire. Et alors si nous en arrivions au point de faire figurer la composition chimique, le cultivateur saurait peut-être à quoi s'en tenir et quoi faire.

M. Jefferson: J'aimerais bien, monsieur le président, que cette question des produits chimiques ou des pesticides chimiques soit aussi simple que celle des engrais. S'il n'y avait que trois composants, trois ingrédients actifs dans la gamme disponible des pesticides, tout comme il y a le nitrogène, le phosphore, et la potasse pour les engrais. Ce serait très simple. Mais étant donné que nous avons plus de 350 ingrédients qui sont classés comme des pesticides et que chacun a un nom qui lui est propre, les dispositions de la loi sur les produits antiparasitaires à l'heure actuelle et qui se retrouvent dans la nouvelle loi, font que chaque pesticide doit comporter dans la déclaration de garantie, qu'il s'agisse de dicamba ou non, les noms génériques ainsi que la proportion contenue dans le produit. La loi n'empêche pas les gens d'employer une marque de commerce. Mais chaque étiquette comprend aussi le nom générique du produit chimique de chacun des ingrédients actifs. C'est ce qui compte.

M. Olson: Je me demande si je pourrais référer M. Gleave au paragraphe 4 de l'article 3, qui se lit:

«Un produit antiparasitaire qui n'est pas emballé, étiqueté ou annoncé comme prescrit ou est emballé, étiqueté ou annoncé d'une façon contraire aux règlements est censé être emballé, étiqueté ou annoncé d'une façon contraire au paragraphe (2).»

[Text]

Mr. Gleave: In your opinion, Mr. Olson, does this solve the problem which I have posed?

Mr. Olson: I think it answers your question.

• 2130

Mr. Gleave: I am not sure it answers the farmer's problem.

The Chairman: Mr. Roy?

Mr. Roy (Laval): I just have one question. I would like to come back to your statement, Mr. Gleave, about fertilizers. We can talk about a 10-10-10 grade, and it may say 10-10-10 on the bag but you can use a different source of nitrate; you can use aluminum nitrate or you can use sodium nitrate. They are different sources of nitrate but they are both the same. You can use muriate of potash or you can use sulphate of potash, but on the bag it is marked 10-10-10.

Mr. Gleave: That is what I am concerned about here, Mr. Chairman.

The Chairman: Mr. McKinley do you have a question?

Mr. McKinley: Thank you, Mr. Chairman. On the licensing of new products along this line, is there ever pressure put on the government by competitors of this product, or would-be competitors of this product, not to have it licensed?

Mr. Olson: I would not guarantee pressure is never brought, but I hope it is never effective.

The Chairman: Gentlemen, are there further questions?

An hon. Member: I have some further questions, if I may.

The Chairman: It would appear that we have completed our day's deliberations. Shall Clause 4 stand?

The meeting is adjourned to the call of the Chair on Thursday morning at 9.30.

M. Lambert (Bellechasse): Monsieur le président, pourrais-je ajouter un mot?

Le président: Oui.

M. Lambert (Bellechasse): Alors, je me souviens d'avoir protesté lors des premières séances du Comité, à l'effet que nous ne recevions pas de version française des procès-verbaux du Comité. J'ai reçu, aujourd'hui, pour la première fois, le fascicule n° 12 publié dans les deux langues. Je n'aime pas faire de reproches, mais quand je suis satisfait, je tiens à dire merci.

[Interpretation]

M. Gleave: Monsieur le président et monsieur le ministre, est-ce que cela règle le problème, à votre avis?

M. Olson: Je crois que cela donne réponse à votre question.

M. Gleave: Je ne suis pas sûr que cela réponde aux problèmes des cultivateurs.

Le président: Monsieur Roy?

M. Roy (Laval): Pour revenir à la question de M. Gleave. A la condition d'un niveau de 10-10-10, même si vous trouvez cela sur l'emballage, vous pourriez peut-être employer une proportion différente de nitrate ou d'ammoniaque. Et la même chose est vraie pour les autres. Quant au potasse, par exemple, vous pourriez avoir...

M. Gleave: C'est ce qui me préoccupe ici, monsieur le président.

Le président: Monsieur McKinley, vous avez une question à poser?

M. McKinley: Monsieur le président, je me demandais, en ce qui concerne le permis donné pour les nouveaux produits, s'il y a parfois des représentations de faites auprès du gouvernement par les concurrents de ce produit, pour que le produit ne soit pas enregistré?

M. Olson: Je ne dirais pas qu'il n'y en a jamais de faites, mais j'espère qu'elles ne seront jamais efficaces.

Le président: Y a-t-il d'autres questions, messieurs?

Une voix: J'aurais d'autres questions à poser, monsieur le président.

Le président: Il semble donc que nous ayons terminé nos délibérations de la journée. Est-ce que l'article 4 est réservé? La réunion est donc levée jusqu'à la convocation du président, jeudi matin, à 9 h 30.

Mr. Lambert (Bellechasse): Mr. Chairman, may I add a few more words?

The Chairman: Yes.

Mr. Lambert (Bellechasse): I remember I protested during the first sittings of our Committee to the effect that we were not receiving the French version of the Committee proceedings. Today I received for the first time Proceedings No. 12 which is bilingual. I do not like to criticize but when I am satisfied I like to say thank you.

[Texte]

Alors, si cette façon de procéder est maintenue pour l'avenir, j'en suis très heureux, car ainsi, nous aurons les deux versions en même temps et nous pourrons tous discuter sur un pied d'égalité. Alors, grand merci.

Le président: Merci monsieur Lambert.

Thank you, Mr. Lambert. Thank you, gentlemen. The meeting is adjourned.

[Interprétation]

So if this way of proceeding is maintained in the future, I can tell you that I am very happy, because we shall thus have both versions at the same time and we shall all be able to carry on the work on an equal footing. A very big thank you, then.

The Chairman: Thank you, Mr. Lambert.

Merci messieurs. La séance est levée.

MINUTES OF PROCEEDINGS

THURSDAY, January 30, 1969.
(18)

The Standing Committee on Agriculture met at 9.37 a.m. this day, the Chairman, Mr. Beer, presiding.

Members present: Messrs. Barrett, Beer, Clermont, Cobbe, Côté (*Richelieu*), Danforth, Douglas, Downey, Gauthier, Gleave, Howard (*Okanagan Boundary*), Lambert (*Bellechasse*), La Salle, LeBlanc (*Rimouski*), Lessard (*Lac-Saint-Jean*), McKinley, Moore (*Wetaskiwin*), Peters, Pringle, Roy (*Laval*)—(20).

Witnesses: From the Department of Agriculture: The Honourable H. A. Olson, Minister; Mr. S. B. Williams, Deputy Minister; Mr. C. H. Jefferson, Director of Plant Products Division.

The Committee resumed consideration of Clause 4 of Bill C-157, the Pest Control Products Act.

The Chairman read a telegram from the Canadian Agricultural Chemicals Association which referred to its request to appear before the Committee on Bill C-157.

Following some discussion, Mr. Gleave moved:

That the request of the Canadian Agricultural Chemicals Association to appear before the Committee be granted.

After further discussion, the motion was carried on a show of hands: YEAS 16, NAYS 0.

It was agreed that, when the Association appears, it would present a written brief and then be available for questioning.

Clause 4 was allowed to stand.

The Committee entered upon consideration of Bill C-156, An Act to amend the Animal Contagious Diseases Act.

[Interpretation]

PROCÈS-VERBAUX

JEUDI 30 janvier 1969.
(18)

Le Comité permanent de l'Agriculture se réunit ce matin à 9 h. 37, sous la présidence de M. Beer, président.

Présents: MM. Barrett, Beer, Clermont, Cobbe, Côté (*Richelieu*), Danforth, Douglas, Downey, Gauthier, Gleave, Howard (*Frontière d'Okanagan*), Lambert (*Bellechasse*), La Salle, Leblanc (*Rimouski*), Lessard (*Lac-Saint-Jean*), McKinley, Moore (*Wetaskiwin*), Peters, Pringle, Roy (*Laval*)—(20).

Témoins: Du ministère de l'Agriculture: L'honorable H. A. Olson, ministre; M. S. B. Williams, sous-ministre; M. C. H. Jefferson, directeur de la Division des produits végétaux.

Le Comité reprend l'étude de l'article 4 du Bill C-157—Loi sur les produits antiparasitaires.

Le président lit un télégramme de la *Canadian Agricultural Chemicals Association* relatif à la demande de cette dernière de comparaître devant le Comité au sujet du Bill C-157.

Après débat, M. Gleave propose:

Que l'on autorise la *Canadian Agricultural Chemicals Association* à comparaître devant le Comité.

Le débat se poursuit, puis la proposition est adoptée, par un vote à main levée, par 16 voix à 0.

Il est décidé que, lorsque l'Association comparaitra, elle présentera un mémoire écrit et sera ensuite interrogée par le Comité.

L'article 4 est réservé.

Le Comité passe à l'examen du Bill C-156—Loi modifiant la Loi sur les épizooties.

On Clause 1, Mr. Williams gave a statement.

Following questions answered by the Minister and Mr. Williams, Clause 1 was allowed to stand.

At 11.50 a.m., the Committee adjourned to the call of the Chair.

Sur l'article 1, M. Williams fait une déclaration.

Après des questions auxquelles répondent le Ministre et M. Williams, l'article 1 est réservé.

A 11 h. 50 du matin, le Comité s'ajourne jusqu'à nouvelle convocation du président.

Le secrétaire du Comité,

Michael A. Measures,

Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday, January 30, 1969

• 0936

The Chairman: Gentlemen, I see a quorum. While our witnesses have not arrived as yet, there is an item or two that I think we might discuss.

I have received a wire from the Canadian Chemical Manufacturers and in view of the fact we are studying Bill No. C-157 which is the bill concerning the chemical manufacturers, I think I should present it to the meeting. It reads as follows:

MR B S BEER M.P. CHAIRMAN
STANDING COMMITTEE ON
AGRICULTURE
PARLIAMENT BLDGS OTTAWA ONT
RE OUR TELEGRAM CONCERNING
OUR REQUEST TO APPEAR BEFORE
THE STANDING COMMITTEE IN RES-
PECT TO BILL C-157 WE WOULD AD-
VISE FOR YOUR FURTHER INFORM-
ATION THAT OUR CONCERN LIES
WITH THE LACK OF A RIGHT OF
APPEAL UNDER THE ACT SHOULD A
REGISTRATION BE REFUSED STOP
AND WITH CLAUSE 5 SUB-CLAUSE
(D) AND (E) OF THE BILL AS
REGARDS THE REGULATIONS

J CHEVALIER EXEC SEC

The members of the Committee are alerted and you may wish to bring forth certain questions.

Mr. Pringle: What are the subclauses, please?

The Chairman: Clause 5, subclause (d) and (e). There is also the question of right of appeal in the event that the registration is declined.

Gentlemen, when we met last on Tuesday we were considering Clause 4. While it would be nice to proceed, I do not think we should do so until our witnesses arrive. Is there anything that any member wishes to discuss concerning the business of the Committee? Mr. Gleave?

[Interpretation]

TÉMOIGNAGES

(Enregistrement électronique)

Le jeudi 30 janvier 1969.

Le président: Messieurs, nous sommes en nombre. En attendant l'arrivée de nos témoins, il y a une ou deux choses dont nous pourrions peut-être parler.

J'ai reçu un télégramme de l'Association canadienne des fabricants de produits chimiques, et étant donné que nous étudions le Bill C-157, qui a trait aux fabricants de produits chimiques, je pense que je devrais vous lire ce télégramme:

M. B. S. BEER, DÉPUTÉ, PRÉSIDENT
DU COMITÉ PERMANENT DE L'AGRI-
CULTURE, ÉDIFICES DU PARLEMENT,
OTTAWA (ONT).

RAPPEL: NOTRE TÉLÉGRAMME RÉ-
LATIF À NOTRE DEMANDE DE COM-
PARAÎTRE DEVANT LE COMITÉ PER-
MANENT À L'ÉGARD DU BILL C-157, A
TITRE DE RENSEIGNEMENT SUPPLÉ-
MENTAIRE, NOUS NOUS INQUIÉTONS
SURTOUT DE L'ABSENCE DE DROIT
D'APPEL DANS LA LOI, POUR LES
CAS OÙ L'ENREGISTREMENT EST RE-
FUSÉ, AINSI QUE DE L'ARTICLE 5,
PARAGRAPHE D) ET E) DU BILL
À L'ÉGARD DU RÈGLEMENT.

J. CHEVALIER, SECRÉTAIRE DE DI-
RECTION.

Les membres du Comité sont ainsi préve-
nus, et vous voudrez peut-être poser certaines
questions.

M. Pringle: De quels paragraphes s'agit-il,
s'il vous plaît?

Le président: Il s'agit des paragraphes d) et e) de l'article 5, ainsi que de la question du droit d'appel dans les cas où la demande d'en-
registrement est refusée.

Messieurs, lors de notre dernière réunion, mardi, nous en étions à l'étude de l'article 4. Il serait bon de pouvoir continuer mais je ne crois pas que nous devions le faire avant que nos témoins n'arrivent. Y a-t-il quelque chose qu'un député aimerait discuter en ce qui concerne les travaux du Comité? Monsieur Gleave?

[Text]

Mr. Gleave: This is not quite clear to me. Do the Canadian Chemical Manufacturers wish to appear?

The Chairman: They have requested to appear.

Mr. Gleave: Have we made a decision on it? I do not think so. I think if they wish to appear they should have the opportunity to do so and make their position known. I may not agree with whatever their position is, but they should have an opportunity to state it, it would seem to me.

The Chairman: I think that particular question should be discussed further in the presence of the witnesses when they arrive. They may feel that there is no need, or that there is need, but I think we should be advised by our witnesses before we take any decision here in the Committee. Mr. Cobbe?

Mr. Cobbe: Mr. Chairman, what did you take from the telegram; that they were willing to appear, or that they did not want to appear?

The Chairman: Oh, I think they would like to appear.

Mr. McKinley: They asked to appear, did they not?

The Chairman: Yes, I would say they asked to appear. Mr. Clermont?

• 0940

M. Clermont: Selon le télégramme, les compagnies manufacturières de produits chimiques prétendent qu'elles n'ont pas de droit d'appel en vertu de la loi. Est-ce bien ce qu'elles prétendent?

The Chairman: No, they...

M. Clermont: Il est prévu à l'article 5 que le gouverneur en conseil peut établir des règlements.

Or dans le Bill, il n'y a rien qui dit que le gouvernement n'établira pas une procédure d'appel si un brevet se voit refusé. Comment peuvent-elles venir à la conclusion qu'il n'y a pas de droit d'appel? L'article 5 commence en disant:

Le gouverneur en conseil peut établir des règlements...

The Chairman: Your point is well taken. I do not think they meant to infer that there was no provision in Clause 5 for the right of

[Interpretation]

M. Gleave: Il y a une chose dont je ne suis pas tout à fait certain. L'Association canadienne des fabricants de produits chimiques a demandé à comparaître?

Le président: Oui, elle a demandé à comparaître.

M. Gleave: Avons-nous pris une décision à ce sujet? Je ne le pense pas. Je crois, personnellement, que s'ils veulent comparaître, on devrait leur donner l'occasion de le faire et de nous faire part de leur opinion. Je ne serai pas nécessairement d'accord avec leur point de vue, mais il me semble qu'on devrait leur donner l'occasion de l'exprimer.

Le président: Je crois que cette question particulière devrait être étudiée dans plus de détail lorsque les témoins seront ici. Les témoins estimeront peut-être que la chose est nécessaire ou qu'elle ne l'est pas, mais je crois que nous devrions avoir l'avis de nos témoins avant de prendre une décision au Comité. Monsieur Cobbe?

M. Cobbe: Monsieur le président, comment avez-vous compris le télégramme? D'après vous, est-ce qu'ils veulent comparaître ou non?

Le président: Je crois qu'ils veulent comparaître.

M. McKinley: Ils ont demandé à comparaître, n'est-ce pas?

Le président: Oui, il me semble bien. Monsieur Clermont?

Mr. Clermont: Mr. Chairman, according to the telegram, the companies manufacturing chemical products claim that they have no right of appeal under the Act. Is this what they are in fact stating?

Le président: Non, ils...

Mr. Clermont: Clause 5 provides that the Governor in Council may make regulations. In this bill there is nothing that says that the government will not establish an appeal procedure if registration is refused. How can they come to the conclusion that there is no right of appeal? Under Clause 5 we see that:

The Governor in Council may make regulations...

Le président: Vous avez probablement raison. Je crois qu'ils ne voulaient pas insinuer qu'il n'y a pas de disposition d'appel

[Texte]

appeal. They are saying that in the Bill there is not the provision nor the right of appeal, and then they also question Clause 5 (d) and (e).

M. Clermont: En ce qui regarde la présence de témoins devant le Comité, je ne crois pas que nous devions attendre l'assentiment des représentants du ministère de l'Agriculture. Si les membres du Comité décident de se rallier à la suggestion de M. Gleave, c'est à eux de prendre la décision d'inviter ou non des témoins à venir témoigner devant ce Comité. On n'a pas de guide ou de conseil à recevoir. Nous sommes seuls habilités à décider si un tel groupe ou une telle personne doit paraître devant ce Comité pour nous éclairer sur la législation que nous avons à étudier.

The Chairman: I quite agree except for one thing, and that is that the witnesses are here to advise and they may feel that there is ample provision for appeal; also that their fears in so far as Clause 5 is concerned could be allayed for several reasons.

M. Clermont: Oui, monsieur le président, mais il est dans l'intérêt des membres de ce Comité de connaître l'opinion du secteur privé. Vous dites que les responsables du ministère de l'Agriculture croient que le bill couvre tous les aspects de la question, mais ce n'est pas un certificat suffisant pour nous. Je crois que, quand un groupe, une association ou des individus responsables ont manifesté l'intention de venir témoigner à ce Comité, il est de notre devoir, de notre responsabilité, de leur en donner l'occasion; autrement on pourra nous accuser de discrimination contre ce groupe ou ces personnes-là.

Mr. Barrett: I suggest, Mr. Chairman, that we take five marks off all these gentlemen and sit them in the corner for a little while for being late.

Hon. H. A. Olson (Minister of Agriculture): We have an explanation if you would like us to give it.

The Chairman: Your observation has been noted, Mr. Barrett. For the benefit of those who have just come in, I have presented to the Committee a telegram which I have received from the Agricultural Chemicals Association. I felt in view of the fact that we were discussing Bill C-157 and the possibility of making progress with it, I owed it to the

[Interprétation]

à l'article 5. Ils prétendent qu'il n'y a pas de droit d'appel dans le bill même. Et ensuite, ils ont des doutes au sujet de l'article 5 d) et e).

Mr. Clermont: With regard to having witnesses appear before the Committee, I do not think we should wait for the consent of the representatives of the Department of Agriculture. If the members of the Committee decide to support the suggestion made by our colleague, Mr. Gleave, it is up to them to take the decision as to whether or not to invite witnesses to appear before this Committee. We have no guidelines or advice to receive. We alone are entitled to decide whether such-and-such a group or such-and-such a person is to appear before the Committee to enlighten us on the legislation before us.

Le président: Je suis d'accord, sauf que les témoins sont ici justement pour nous aviser. Ils sont peut-être d'avis qu'il y a amplement de dispositions pour ce droit d'appel et que les craintes en ce qui concerne l'article 5 pourraient être apaisées pour plusieurs raisons.

Mr. Clermont: Yes, Mr. Chairman, but it is in the interest of the members of this Committee to know the opinion of private enterprise. You say that officials from the Department of Agriculture believe that the bill covers all aspects of the question, but that is not sufficient warranty as far as we are concerned. I think that when a group, or an association, or responsible individuals have made known their intention to come before the Committee, it is our responsibility to give them this opportunity. Otherwise, we might be accused of discrimination against that group or those persons.

M. Barrett: Je suggère que nous punissions ces messieurs en les mettant dans le coin, monsieur le président, parce qu'ils sont en retard.

L'hon. H. A. Olson (ministre de l'Agriculture): Nous avons de bonnes raisons.
